PART V.—LAND-GRANT COLLEGES AND UNIVERSITIES, YEAR ENDED JUNE 30, 1932

By WALTER J. GREENLEAF
Specialist in Higher Education

As indicated in the directory on page 371, the 69 land-grant colleges and universities are located in every State in the Union and in three Territories. Originally these institutions were known as "agricultural colleges", or "colleges of agriculture and mechanic arts", because by the act of 1862 the Federal Government granted them certain tracts of land for an endowment for the purpose of promoting "the liberal and practical education of the industrial classes". While these institutions teach such branches "as are related to agriculture and the mechanical arts" those subjects now represent only a portion of the curricula offered in them. At present, therefore, the term "land-grant colleges and universities" is superseding other terms. A number of institutions have recently dropped the word "agricultural" from their names retaining the title "State college" rather than "State agricultural college".

THE 69 LAND-GRANT COLLEGES AND UNIVERSITIES

[* Indicates a State university as well as land-grant college]

	Location	Name of institution	President
1	Alabama, Auburn	Alabama Polytechnic Institute	Marion J. Funchess.
2	Alaska, College	Alaska Agricultural College and School of Mines.	Charles E. Bunnell.
3	Arizona, Tucson	*University of Arizona	Homer L. Shantz.
4	Arkansas, Fayetteville	*University of Arkansas	John C. Futrall.
5	California, Berkeley	*University of California	Robert G. Sproul.
6	Colorado, Fort Collins	Colorado Agricultural College	Charles A. Lory.
7	Connecticut, Storrs	Connecticut State College	Charles C. McCracken.
8	Delaware, Newark	*University of Delaware	Walter Hullihen.
9	Florida, Gainesville	*University of Florida	John J. Tigert
10	Georgia, Athens	*University of Georgia [1]	Steadmen V. Sanford.
11	Hawaii, Honolulu	University of Hawaii	David L. Crawford.
12	Idaho, Moscow	*University of Idaho	Mervin G. Neale.
13	Illinois, Urbana	*University of Illinois	Arthur H. Daniels, acting.
14	Indiana, Lafayette	Purdue University	Edward C. Elliott.
15	Iowa, Ames	Iowa State College of Agriculture and Mechanic Arts.	Raymond M. Hughes.
16	Kansas, Manhattan	Kansas State College of Agriculture and Applied Science.	Francis D. Farrell.
17	Kentucky, Lexington	*University of Kentucky	Frank L. McVey.
18	Louisiana, Baton Rouge	*Louisiana State University	James M. Smith
19	Maine, Orono	*University of Maine	Harold S. Boardman.
20	Maryland, College Park	*University of Maryland	Raymond A. Pearson.
21	Massachusetts, Amherst	Massachusetts State College	Hugh P. Baker.
22	Massachusetts, Cambridge	Massachusetts Institute of Technology.	Karl T. Compton.
23	Michigan, East Lansing	Michigan State College of Agriculture and Applied Science.	Robert S. Shaw.
24	Minnesota, Minneapolis	*University of Minnesota	Lotus D. Coffman.
25	Mississippi, State College	Mississippi State College	Hugh Critz.

THE 69 LAND-GRANT COLLEGES AND UNIVERSITIES—Continued

	Location	Name of institution	President
26	Missouri, Columbia	*University of Missouri	Walter Williams.
27	Montana, Bozeman	Montana State College	Alfred Atkinson
28	Nebraska, Lincoln	*University of Nebraska	Edgar A Burnett.
29	Nevada, Reno	*University of Nevada	Walter E. Clark.
30	New Hampshire, Durham	*University of New Hampshire	Edward M Lewis.
31	New Jersey, New Brunswick	Rutgers University	Robert C. Clothier
32	New Mexico, State College	New Mexico College of Agriculture and Mechanic Arts.	Harry L. Kent.
33	New York, Ithaca	Cornell University	Livingston Farrand.
34	North Carolina, West Raleigh	North Carolina State College of Agriculture and Engineering.	Eugene C. Brooks, V.P.
35	North Dakota, State College	North Dakota Agricultural College	John H. Shepperd.
36	Ohio, Columbus	*Ohio State University	George W. Rightmire.
37	Oklahoma, Stillwater	Oklahoma Agricultural and Mechanical College.	Henry G. Bennett.
38	Oregon, Corvallis	Oregon State Agricultural College	William J. Kerr.
39	Pennsylvania, State College	Pennsylvania State College	Ralph D. Hetzel
40	Puerto Rico, Rio Piedras	University of Puerto Rico	Carlos E. Chadron.
41	Rhode Island, Kingston	Rhode Island State College	Raymond G. Bressler.
42	South Carolina, Clemson College	Clemson Agricultural College	Enoch W. Sikes.
43	South Dakota, Brookings	South Dakota State College of Agriculture and Mechanic Arts.	Charles W. Pugsley.
44	Tennessee, Knoxville	*University of Tennessee	James D. Hoskins, acting.
45	Texas, College Station	Agricultural and Mechanical College of Texas.	Thomas O. Walton.
46	Utah, Logan	Utah State Agricultural College	Elmer G. Peterson
47	Vermont, Burlington	*University of Vermont	Guy W. Bailey.
48	Virginia, Blacksburg	Virginia Polytechnic Institute	Julien A. Burruss.
49	Washington, Pullman	State College of Washington	Ernest O. Holland.
50	West Virginia, Morgantown	*West Virginia University	John R. Turner.
51	Wisconsin, Madison	*University of Wisconsin	Glenn Frank.
52	Wyoming, Laramie	*University of Wyoming	Arthur G. Crane

NEGRO LAND-GRANT COLLEGES

1	Alabama, Normal	State Agricultural and Mechanical Institute	J. F. Drake.
2	Arkansas, Pine Bluff	Agricultural, Mechanical, and Normal College.	John B. Watson.
3	Delaware, Dover	State College for Colored Students	R. S. Grossley.
4	Florida, Tallahassee	Florida Agricultural and Mechanical College.	J. R. E. Lee.
5	Georgia, Savannah	Georgia State Industrial College	B. F. Hubert.
6	Kentucky, Frankfort	Kentucky State Industrial College	R. B. Atwood.
7	Louisiana, Scotlandville	Southern University and Agricultural and Mechanical College.	J. S. Clark.
8	Maryland, Princess Anne	Princess Anne Academy	T. H. Kiah.
9	Mississippi, Alcorn	Alcorn Agricultural and Mechanical College.	L. J. Rowan.
10	Missouri, Jefferson City	Lincoln University	Charles W. Florence.
11	North Carolina, Greensboro	Negro Agricultural and Technical College.	F. D. Bluford.
12	Oklahoma, Langston	Colored Agricultural and Normal University.	I. W. Young.
13	South Carolina, Orangeburg	State Colored Normal, Industrial, Agricultural and Mechanical College	M. F. Whittaker.
14	Tennessee, Nashville	Agricultural and Industrial State Teachers College.	W. J. Hale.
15	Texas, Prairie View	Prairie View State Normal and Industrial College.	W. R. Banks.
16	Virginia, Ettricks	Virginia Normal and Industrial Institute.	John M. Gandy.
17	West Virginia, Institute	West Virginia State College	John W. Davis.

[1] The University of Georgia and all its branches constitutes the "University System of Georgia" Philip Weltner, chancellor, Atlanta, Ga.

There is no homogeneity in the group of 69 land-grant colleges. Twenty-three are State universities; 3—Cornell, Massachusetts Institute of Technology, and Rutgers—are essentially privately controlled institutions which have been designated by their respective States as land-grant institutions to receive Federal aid in certain departments; several of the Negro colleges are primarily normal schools or teachers colleges with small emphasis on agriculture and mechanic arts. Even if grouped in several different classifications, the institutions within a single group would not be comparable as to size, enrollment, endowment, or service. However, these institutions have one common factor—they are aided by the Federal Government to the extent of $17,512,064 annually. Details of distribution are shown in table 30.

A condensed summary of data concerning these institutions is shown in table 24—Comparative Summary. In this summary the land-grant institutions are compared with 1,464 colleges and universities throughout the United States including outlying parts. It should be noted that the totals for all higher education in part V of this bulletin include institutions in outlying parts as well as for the continental United States. Totals in other parts of this bulletin are for continental United States only and exclude outlying parts. This procedure is necessary in comparing land-grant colleges and universities with all higher education, since three of the land-grant institutions are located outside of the continental United States, in Alaska, Hawaii, and Puerto Rico. Percentage figures for the 52 institutions for white students compared with 1,464 institutions are shown. That the group of land-grant institutions is outstanding in higher education is revealed by certain significant conclusions drawn from comparisons.

The land-grant institutions employ a fifth of all men and a tenth of all women who are resident teachers in higher education. Reduced to a full-time basis, they employ 26 percent of the men and 17 percent of the women faculty members in higher education. (Consult table 24, sec. I, column 4.)

Of all undergraduate and graduate students in college in the United States, the land-grant institutions enroll about 1 of every 5 men and 1 of every 8 women students. A substantial portion of students taking correspondence courses or extension classes are likewise enrolled in the land-grant institutions. While there are few secondary students in these institutions, most of the correspondence courses and extension classes below college grade are offered by the land-grant colleges. (Consult table 24, sec. II, column 4.)

The 52 institutions for white students specialize in certain curricula. If enrollments in the several specialities are limited to those in schools or colleges devoted to these specialities, the land-grant

colleges and universities enroll 97 percent of all agricultural students in the United States, 92 percent of all students in veterinary medicine, 91 percent of all students in architectural engineering, 85 percent of all women in home economics, 65 percent of all men in forestry, 55 percent of all mining engineering students, 54 percent of all civil engineering students, and nearly half of all other engineering students and journalism students. Likewise among the graduate students, 27 percent of all men and 19 percent of all women in graduate work are enrolled in the land-grant institutions. More than half of the graduate work in the fields of agriculture, engineering, fine arts, library science, medicine, pharmacy, and veterinary medicine, is offered in the land-grant institutions. (See table 24, sec. III, columns 2–13.)

First degrees awarded by the land-grant institutions and by others, hold in general the same ratio shown for enrollments. In the following fields more than half of the master's degrees granted in the United States in 1932 were awarded by land-grant colleges and universities—agriculture, architecture, engineering, home economics, library science, medicine, pharmacy, and veterinary medicine. With the addition of commerce and business, the same statement holds true for the awarding of doctor's degrees. (See table 24, section III, columns 14–22.)

The curricula elected by the students enrolled in land-grant institutions for the past 7 years are shown in a percentage analysis of enrollments and degrees in table 24, section IV. Each year for 7 years figures on enrollments and degrees have been received and tabulated independently. The fact that variations in percentage figures are small indicates a certain reliability of the data. By interpreting these data the following generalizations may be made: Agriculture, forestry, home economics, and architecture are holding their own with respect to enrollments, but fewer degrees are being awarded in agriculture. Veterinary medicine is being favored by more students; the percentage of enrollments has more than doubled in 7 years, and more degrees are being awarded. Arts and sciences continue to be popular with more than a third of land-grant students enrolled, and a definite increase in both enrollments and degrees in 1932. Commerce and business courses show a definite decrease in the past year over the preceding years with respect to both enrollments and degrees. Education courses continue to gain in both enrollments and degrees, in spite of the oversupply of teachers. Engineering as a whole fluctuates but little, but within the field, architectural, civil and electrical engineering have lost students while chemical engineering has gained. Definite declines are shown in fine arts, music, journalism, law, and dentistry. Pharmacy shows little change, but medicine continues to be increasingly popular as a profession.

For the first time information on the numbers of students preparing to teach is shown in detail for 52 land-grant institutions in table 27 and summarized in table 24, section 5, for land-grant institutions compared with 1,464 colleges and universities in the United States. Of the undergraduate students in the entire United States more than twice as many women as men are planning to enter the teaching profession. Among the graduate students, however, practically equal numbers of men and women are registered, both for the United States as a whole, and for the group of land-grant institutions. Larger numbers of students are in training to teach in the senior or regular high schools than for other types of schools. Considering the teaching of special subjects only, the larger numbers in the United States are in home economics, physical education and health, public-school music, and commerce and business; in the land-grant institutions the larger numbers are in home economics, agriculture, and physical education and health.

FINANCES

About one-fourth of all receipts for higher education in 1931–32 went to the 52 land-grant institutions for white students. The data show that these colleges and universities received 27 percent of all educational and general funds, 12 percent of dormitory and dining hall charges, 23 percent of all athletic receipts, 27 percent of receipts from student-health services, bookstores, and student unions, and 24 percent of all receipts for extension of physical plants. While tuition rates are low in these institutions, there are fees which students pay and the total of tuition and fees in the land-grant institutions amounts to more than $19,000,000, or one-eighth of all such charges in the United States in 1931–32. Forty-nine percent of the receipts from all public sources—i.e., Federal Government, States, counties, and cities—went to the land-grant institutions—more than $86,000,000. As for property, the land-grant institutions own 15 percent of all higher educational property in the United States, 17 percent of campus and farm investments, 19 percent of college buildings and improvements, 29 percent of college equipment, but smaller proportions of endowment and student aid funds.

For individual land-grant colleges and universities, detailed statistics are shown in tables 25 to 30, inclusive, for staff members, student enrollments, students preparing to teach, Morrill-Nelson funds, 1862 land-grant funds, and Federal funds summarized. For further institutional details consult part IV of this volume, where land-grant colleges and universities are included generally with the publicly controlled institutions except three—Cornell, Rutgers, and Massachusetts Institute of Technology—which are included with the privately controlled institutions.

Student enrollment in the land-grant institutions is seldom a definite figure since there are so great a number and variety of activities. When a single figure is given it generally refers to students who are in resident work on the campus, and excludes all other students that the institutions serve—for instance, correspondence students, extension students, secondary pupils, short-course students, and those attending other farmers' institutes. In the 52 land-grant institutions for white students, the resident enrollment including undergraduates, specials, and graduate students for 1931–32 was 128,343 men and 56,011 women. How these students were distributed among the institutions is shown in table 26, columns 7 and 8. Land-grant institutions with more than 10,000 students are: University of California at Berkeley and Los Angeles, 20,361 students; University of Minnesota, 13,997; University of Illinois, 12,814; and Ohio State University, 12,025. The median size of the fall enrollment in 52 institutions was 2,094 with extremes from 126 students in Alaska to 18,342 in California.

MORRILL-NELSON APPROPRIATIONS

Each year since 1912 the Federal Government has appropriated $50,000 to each State for the support of the land-grant colleges and universities. Forty-eight States and three territories now participate in the fund which totals $2,550,000 annually. In general the fund must be used during the fiscal year for which it is appropriated, and disbursements are allowed in seven different fields for salaries and facilities. The distribution of expenditures among these seven fields is left to the institution, and considerable variation is shown for different colleges. (See table 28.) For the 52 land-grant institutions for white students, the percentages of the fund in the 7 fields of work are as follows:

Field of work	Percentage of fund expended
Agriculture	18
Engineering and mechanic arts	29
English language	11
Mathematical science	8
Natural and physical science	27
Economic science	6
Teacher preparation in agriculture, etc	1

APPORTIONMENT OF MORRILL-NELSON APPROPRIATIONS TO NEGRO LAND-GRANT COLLEGES

Seventeen States maintain separate land-grant institutions for white and Negro students. Morrill-Nelson funds are required to be divided between these institutions in each State on an equitable basis, usually according to a census classification. Amounts received by the several institutions are detailed in table 28. The basis for division of the Morrill-Nelson funds in the different States is as follows:

ALABAMA—Division is "based from year to year upon the ratio of the number of each race of legal school age to the population of school age in the State."

ARKANSAS—Division is eight-elevenths to the University of Arkansas, and three-elevenths to the Negro college at Pine Bluff.

DELAWARE—By joint resolution of the legislature (1891) "the State treasurer is directed and required to pay annually to the trustees of the State College for Colored Students—20 percent, one-fifth part of the sum * * *."

FLORIDA—The funds are equally divided between the white and Negro land-grant colleges.

GEORGIA—By joint resolution (1890) "one-third of said fund shall be for the colored students, and two-thirds for the whites * * *."

KENTUCKY—The fund is divided on a basis of the "ratio which the school census of colored children taken in the State bears to the school census in both races." Since 1893 the ratio has been 14.5 percent to 85.5 percent.

LOUISIANA—Division is on a basis of the State census of educable children between 6 and 18 years of age.

MARYLAND—Division is on a basis of total population census.

MISSISSIPPI—The legislature provided (1892) that the funds be divided between the land-grant colleges for white and colored students in the proportion that the whole number of educable children in the State of each race bears to the whole number of educable children of both races.

MISSOURI—In 1891 the division was fixed at one-sixteenth for the benefit of Lincoln University (Negro) and fifteen-sixteenths for the State university including the school of mines.

NORTH CAROLINA—By implication the provisions of the Morrill Act were accepted and approved by the legislature in 1891, and divided "into the exact ratio in this State of the white population to the colored, and this provision to apply to the current and all succeeding appropriations."

OKLAHOMA—By an act March 10, 1899, Oklahoma divided the fund so that the Negro college receives one-tenth of the appropriation.

SOUTH CAROLINA—In 1890 the legislature provided that the fund—shall be equally divided between the land-grant institutions for white and for Negro students.

TENNESSEE—On a basis of scholastic population the Negro land-grant college receives six twenty-fifths, or 24 percent of the fund.

TEXAS—By act of 1890 Texas apportioned three-fourths of the fund to the institution for white students, and one-fourth to the Negro land-grant college.

VIRGINIA—The legislature has apportioned one-third of the fund to the Negro land-grant college, and two-thirds to the institution for white students.

WEST VIRGINIA—By provision of legislature, the Negro land-grant college has received $10,000 annually from Morrill-Nelson appropriations since 1912 (20 percent).

Proportion of appropriation received by Negro land-grant colleges in 1931–32.

Alabama	36.41	Missouri	1/16
Arkansas	3/11	North Carolina	33
Delaware	20	Oklahoma	10
Florida	50	South Carolina	50
Georgia	1/3	Tennessee	24
Kentucky	14.5	Texas	25
Louisiana	39.33	Virginia	1/3
Maryland	20	West Virginia	20
Mississippi	56.54		

LAND-GRANT FUNDS OF 1862

The Federal land-grant funds of 1862 are in the nature of endowment funds and not direct annual appropriations. These funds are invested by the several land-grant institutions in safe securities which yield reasonable rates of interest. Until April 13, 1926, these funds were required to earn 5 percent interest but on that date the act was amended to read—that "Such funds shall yield a fair and reasonable rate of return, to be fixed by the State legislatures, and that the principal thereof shall forever remain unimpaired." These funds which are detailed for each land-grant institution in table 29 total $22,496,957 and in 1931–32 yielded a return of $1,021,621 on invested funds, and $68,711 from rentals, deferred payments, etc. Nine-tenths of this income is expended for teachers' salaries.

In addition to these Federal appropriations and endowments, there are other Federal funds which are received by the land-grant institutions. These funds include land-grant funds other than 1862 funds, Hatch-Adams funds, Smith-Lever funds, Smith-Hughes funds, Clarke-McNary funds, Purnell funds, Capper-Ketcham funds, and additional cooperative extension funds. The grand total of all Federal money received by the land-grant institutions in 1931–32 was $17,512,064. The 17 Negro land-grant colleges received $354,716.

58743—35——25

TABLE 24.—COMPARATIVE SUMMARY

PART 1.—FACULTY

Officers, teachers, extension workers, etc. (excluding clerks)	1,464 institutions[1]	In 52 land-grant institutions		In 17 Negro land-grant colleges	Total in all 69 land-grant institutions
		Number	Percent		
1	2	3	4	5	6
In general administration: President, deans, registrars, financial officers, librarians, and other officers	13,706	1,480	10.8	205	1,685
In resident instruction in charge of classes:					
College, professional, and graduate instructors, including critic teachers	88,487	15,599	17.6	487	16,086
Subcollegiate, secondary, excluding training school	2,973	211	7.1	146	357
Total, excluding duplicates:					
Men	66,055	13,205	20.0	368	13,573

Summer session, men and women	26,291	5,071	19.3	391	5,462
In extension service					
Correspondence courses	3,696	1,513	38.8	12	1,525
Extension class and course instruction	5,144	967	18.8	76	1,043
Agricultural and home economics extension	2,042	1,836	89.9	192	2,028
County, home, and club agents	4,056	4,040	99.6	36	4,076
In organized research:					
Agricultural and experiment station staff	2,989	2,989	100.0	0	2,989
Staff in all other organized research	1,489	596	40 0	0	596
Grand totals:					
Number of staff members reduced to full-time basis:					
Men	71,952	18,924	26.3	490	19,414
Women	29,237	4,974	17.0	316	5,290

STUDENTS OF COLLEGE GRADE					
In residence work:					
Regular and conditioned undergraduates—matriculated, including candidates for first professional degrees:					
Men	592,815	114,350	19.3	2,474	116,824
Women	420,495	49,732	11.9	3,123	52,855
Special and unclassified students—nonmatriculated, men and women	74,166	2,951	4.0	101	3,052
Graduate students.					
Men	48,209	13,119	27.2	0	13,119
Women	28,149	5,247	18.6	0	5,247
Grand totals, excluding duplicates:					
Men	660,176	128,343	19.2	2,544	130,887
Women	468,940	55,011	11.4	3,154	59,165
Total	1,158,116	184,354	15.9	5,698	190,052
Number in attendance the third week of the first semester, or fall term	843,577	166,908	19.8	5,012	171,920
Number who were enrolled in the freshman class (the first year of college work of any type above high-school grade)	308,107	47,457	15.4	2,229	49,686
Number in military drill	76,602	48,462	63.3	1,025	49,487

STUDENTS OF COLLEGE GRADE—CON.					
In nonresidence work:					
Number in correspondence courses:					
Men	36,096	13,226	36.6	49	13,275
Women	56,874	14,526	25.5	133	14,659
Number in extension classes:					
Men	64,711	31,464	48.6	328	31,792
Women	108,466	24,054	22.2	2,016	26,070
STUDENTS NOT OF COLLEGE GRADE					
In residence work.					
Secondary or preparatory school students:					
Men	20,591	1,163	5 6	795	1,958
Women	16,087	485	3.0	791	1,276
In short courses of 4 days or more:					
Men	22,001	19,272	87 6	296	19,568
Women	10,164	7,540	74.2	98	7,638
In nonresidence work·					
In correspondence courses·					
Men	14,745	14,745	100 0	0	14,745
Women	5,692	4,349	76.4	0	4,349
In extension classes.					
Men	86,430	82,855	95.9	2	82,857
Women	68,218	64,931	95 2	108	65,039
Total	174,921	166,880	95.4	110	166,990

See footnotes on p. 386.

TABLE 24.—COMPARATIVE SUMMARY—Continued

CHAPTER IV

STATISTICS OF NURSE-TRAINING SCHOOLS

1930–31 [1]

THERE ARE NEARLY twice as many nurses in training now in the United States as there were 11 years ago, according to reports made to the Office of Education by the nurse-training schools for the year 1930–31.

More than 100,000 student nurses were reported enrolled by a total of 1,844 schools. The Office of Education sent inquiry blanks to a total of 1,925 schools listed in the hospital number of the Journal of the American Medical Association and other sources. Statistics on training of nurses were last collected by the Office of Education for the year 1926–27.

SCHOOLS

This report for 1931 includes data for 89 more schools than reported 11 years ago in 1920, and 47 more than in 1927. This represents a 5.1 per cent increase in the 7-year period and 2.7 per cent in the four years from 1927 to 1931. No schools are reported from the State of Nevada. Data are given separately for the 1,778 schools connected with general hospitals and 66 schools maintained by hospitals for the insane. The number of schools reporting at different periods since 1880 is presented in Table 1 and the number of schools by States are given in summary Tables 7 and 8.

TABLE 1.—*Comparative statistics of nurse-training schools 1880–1931*

Year	Schools	Nurse-pupils	Graduates	Capacity of hospitals (beds)	Average daily number of patients
1	2	3	4	5	6
1880	15	323	157	----------	----------
1884–85	34	793	218	----------	----------
1889–90	35	1,552	471	----------	----------
1894–95	131	3,985	1,498	----------	----------
1899–1900	432	11,164	3,456	84,227	----------
1904–05	862	19,824	5,795	145,506	----------
1909–10	1,129	32,636	8,140	214,597	----------
1914–15	1,509	46,141	11,118	256,325	185,408
1919–20	1,755	54,953	14,980	321,619	252,823
1926–27	1,797	77,768	18,623	359,077	276,194
1930–31	1,844	100,419	25,971	428,472	325,319

[1] The tabulations for this bulletin were made by Miss Maude Farr of the Office of Education.

STUDENTS

The 1931 data show 100,419 students in training for the nursing profession, an increase of 45,953, or 82.7 per cent, over the number reported in 1920 and of 29.1 per cent over those studying in this field in 1927. Of the total number of students, only 0.84 per cent are men.

Of the 97,907 students in general hospitals, 575, or 0.59 per cent, were men, but of the 2,512 students connected with hospitals for the insane 273, or 10.87 per cent, were men. Training courses for men nurses were reported by 42 general hospitals and 23 hospitals for the insane.

GRADUATES

There were 25,971 graduates from schools for nurses in 1930–31 of which 524 were trained in hospitals for the care of the insane. Of the 361 men graduates, 300 were from general hospitals and 61 from hospitals for the insane.

LENGTH OF COURSE

The usual length of the nurse-training course in general hospitals is now three years. The increase in the length of course is shown by the fact that in 1927 only 85.6 per cent of the schools reporting had 3-year courses, while in 1931 this percentage was 89.7 Only two schools reported 4-year courses both in 1927 and 1931. Of training schools connected with hospitals for the insane, a smaller percentage reported 3-year courses in 1930 than in 1927. This is due to a decrease in the number of schools of this type.

TABLE 2.—*Distribution of nurse-training schools according to length of course offered*

Years in course	General hospitals						Hospitals for the insane					
	1920		1927		1931		1920		1927		1931	
	Schools	Per cent	Schools	Per cent	Schools	Per cent	Schools	Per cent	Schools	Per cent	Schools	Per cent
1	2	3	4	5	6	7	8	9	10	11	12	13
Less than 1 year	26	1.5	14	0 8	24	1.34	------	------	------	------	1	1.52
1 to 1 9 years	18	1.1	17	1.0	11	0 64	------	------	1	1.3	2	3.03
2 to 2.9 years	179	10.7	215	12.5	146	8.21	23	26 4	9	12.0	11	16.67
3 to 3.9 years	1,439	86 5	1,474	85 6	1,595	89 70	64	73.6	65	86.7	52	78.78
4 years or more	3	.2	2	.1	2	0 11	------	------	------	------	------	------
Total	[1] 1,665	------	1,722	------	1,778	------	[2] 87	------	75	------	66	------

[1] 2 schools did not report the length of course offered.
[2] 1 school did not report the length of course offered

EDUCATIONAL REQUIREMENTS FOR ADMISSION TO NURSE-TRAINING COURSES

The educational requirements for admission to nurse-training courses have been steadily rising. Most of the schools connected with general hospitals in 1920 required only one year of high-school work. In 1927 fully one-third required completion of the high-school curriculum, one-third two years of high-school work, and the other third, one year of high-school work. By 1930, however, 87 per cent of the schools connected with general hospitals required the completion of a high-school course. When the question as to the educational requirement for admission was answered by the words "high school," the answer has been interpreted, as in previous years, to mean the completion of a 4-year course

Of the schools connected with hospitals for the insane, 54 per cent required only one year of high school for entrance in 1920 but in 1930, 64 per cent required completion of a 4-year course for admission.

TABLE 3.—*Distribution of nurse-training schools according to the educational requirements for admission in 1920, 1927, and 1931*

[1] Previous training in nursing required for these special schools.

MINIMUM AGE REQUIRED FOR ADMISSION

Between 1927 and 1931 there was very little change in the minimum age requirement for admission to nurse-training schools. Practically 90 per cent required the student to have reached the age of 18. Although 25 per cent had set 19 years as the minimum age in 1920, this upper age limit was required by only 6 per cent of the schools in 1930.

TABLE 4.—*Distribution of nurse-training schools according to the minimum age requirements for admission*

[1] Eight schools did not report on age requirements for admission.

NUMBER OF HOURS OF DUTY REQUIRED DAILY

The number of hours of duty required daily as a part of the nurse-training course in general hospitals has been steadily decreasing for the last 35 years. In 1896 the 8-hour day was in effect in less than 2 per cent of the schools. By 1920 a third had reduced the number of hours of duty to 8, and in 1931 two-thirds of the schools required only 8 hours.

In schools connected with hospitals for the insane, however, about a fourth of the schools require 12 hours' duty and another fourth 10 hours. A little less than a third require only 8 hours on duty.

REMUNERATION

The data on the remuneration for nurses in training have been changed to give the pay per month instead of per year since many schools reported data in this way and did not give the number of months in the course. In compiling Table 6 on the monthly allowance basis, data reported by the year were divided by 10, assuming that the course was for 10 months. In training schools in general hospitals 15 per cent of the schools apparently offer no remuneration for services during training in any year of the course. About 45 per cent pay less than $10 per month during the first year, and more than 50 per cent pay between $10 and $15 a month during the second and third years of the course. The remuneration is much higher in schools connected with hospitals for the insane, 48 per cent paying between $25 and $50 a month during the first year.

DETAILED STATISTICS FOR EACH INSTITUTION

Since an excellent study giving detailed information for a large number of nurse-training schools has been published by the National League of Nursing Education under date of January 1, 1931, and is available for purchase from the league for $1.50, the detailed statistics which have been published by the Office of Education in previous years have been omitted. Data for any institution, however, are available from an unpublished table on file in this office.

READERS *interested in nursing education may also wish to consult "Nursing," Guidance Leaflet No. 15, published by the Office of Education. This leaflet, especially prepared for the use of guidance advisers in high school and college, reviews briefly the scope of nursing as a profession, qualifications, opportunities, compensation, registration, student expenses, and the services of the professional organizations of nurses. It lists colleges and universities offering nursing degrees and gives references to literature relating to nursing as a career.*

CHAPTER V

STATISTICS OF PRIVATE ELEMENTARY SCHOOLS FOR THE YEAR 1930–31

Prepared by RUSSELL M. KELLEY, Assistant Statistican, and ROSE MARIE SMITH in the Division of Statistics of which EMERY M. FOSTER is Chief; and by BESS GOODYKOONTZ, Assistant Commissioner of Education

REPORTS MADE TO the Office of Education by State departments of education show an enrollment of 21,278,593 children in elementary schools during 1929–30. Between two and three million other children attend private elementary schools. Estimates for the year 1929–30 put the total private elementary school enrollment at 2,255,430.[1] The Department of Education of the National Catholic Welfare Conference reports 2,222,598 pupils enrolled in the elementary schools that are affiliated with the Roman Catholic Church.[2] Evidently about 1 elementary school child in every 10 in this country goes to a private school.

This study was made with a view to securing actual enrollments and additional information concerning the education of these more than two million children who attend private elementary schools. A questionnaire was sent by the Office of Education to more than 9,000 private elementary schools for which names and addresses could be obtained. Replies were received from 6,815 schools, including 592 nonsectarian schools, 269 affiliated with Protestant denominations, and 5,954 Roman Catholic schools. In these replies the actual enrollment by individual schools totals 1,802,947 pupils, or 79.5 per cent of the number estimated by this office from various reports. Of these, 1,730,670 pupils were in Roman Catholic schools. This is 77.9 per cent of the total reported by the Department of Education of the National Catholic Welfare Conference to be in elementary schools of the Roman Catholic Church. Whereas the estimates previously reported by this office gave only enrollments, this inquiry secured such information as the types of administrative control of private elementary schools, the number of teachers employed in them, the enrollments by grade and sex, and the length of school term.

The cooperation of other private schools is invited in making successive reports more nearly complete.

[1] Office of Education Bulletin, 1931, No. 20, Vol II, Ch II Statistics of State School Systems, 1929–30, p. 75, Table 38 The estimates are made by the Office of Education from data submitted by State departments of education, the National Catholic Welfare Conference, private schools themselves, and reports from city school systems

[2] Directory of Catholic Colleges and Schools, 1932–33. National Catholic Welfare Conference, Department of Education, 1312 Massachusetts Avenue NW, Washington, D C Supplementary Table A, page 11, taken from this directory summarizes information by States for the Catholic elementary schools.

ENROLLMENTS IN PRIVATE ELEMENTARY SCHOOLS

By States.—Table 1 shows that according to the reports from 6,815 schools, the private elementary school enrollment reported in this study is about 8 per cent of the total public and private elementary school enrollment in the United States. In some States the percentage runs much higher, with New Hampshire and Rhode Island each reporting more than 20 per cent of their elementary school pupils in private schools, Connecticut, Delaware, and Massachusetts reporting slightly more than 15 per cent, and eight other States and the District of Columbia, all east of the Mississippi River, reporting between 10 and 15 per cent in private schools. New York State, with 293,337 children attending private schools, leads all States in total private elementary school enrollment. Pennsylvania is next with 254,459 enrolled.

Wyoming	3	586	43,341	43,927	1.3

The States varied in actual number of schools reporting from 822 in New York and 701 in Pennsylvania to 2 in Wyoming. No schools in Nevada replied.

By affiliation or control.—As shown in Table 2, most private elementary schools have some denominational affiliation or control. Of the 6,815 schools reporting, 6,223, or 91 per cent of the total, were either affiliated with or controlled by some religious denomination. Of these the Roman Catholic schools accounted for 1,730,670, or nearly 96 per cent of the pupils. The Friends schools reported the next largest number with 4,967, or about 0 3 per cent. Roman Catholic schools reported from every State but Nevada; Episcopal schools from 22 States; Methodist schools from 21; Seventh Day Adventist from 16; Presbyterian and Baptist each from 14; Friends from 10; Lutheran from 6; and Congregational from 5.

The 592 nonsectarian schools accounted for nearly 3 per cent of all the children enrolled in private schools. New York with 127 schools, Massachusetts with 61, California with 49, Pennsylvania with 48, and New Jersey with 42 were the leaders in the number of these schools reporting. It is probable that all, or nearly all, of these schools charge some tuition. Four hundred and seventeen replied on the questionnaire that there were regular tuition charges.

TABLE 2.—*Affiliation or control of private elementary schools*

State	Denominational affiliation or control																		Nonsectarian		Total private elementary school enrollment

[1] Denominations reporting fewer than 10 schools have been placed in 1 group and classified as miscellaneous sects

By sex.—On the whole there is little difference in the numbers of boys and girls attending private elementary schools. Of the total enrollment 49.6 per cent are boys, 50.4 per cent are girls. In public elementary schools the proportion for boys and girls is 51 per cent and 49 per cent, respectively.

Table 3 shows considerable variation in the enrollment of boys and girls in the schools affiliated with different denominations. The Congregational, Friends, and Methodist schools have larger numbers of girls in their schools; the Episcopal schools have a larger number of boys. These figures somewhat reflect the situation among private elementary schools in regard to boarding departments for children of elementary school age in that more boarding departments are provided for girls than for boys. Of 662 schools reporting boarding departments, 288 were for girls, 151 for boys, and 223 for both girls and boys.[3]

TABLE 3.—*Private elementary school enrollment by sex*

By grades.—Table 4 distributes the total enrollment in private elementary schools in the various grades, including the kindergarten. Much the largest enrollment is in the first grade. The next three grades enroll considerably fewer than the first, but the number remains approximately the same through the fourth grade, beginning then a steady decline through the eighth grade. This indicates that private elementary schools are not principally primary schools, nor grammar schools, nor any other limited grade organization, but tend on the other hand to include the normal elementary school range.

[3] A circular is available in the Office of Education which lists private schools reporting boarding departments for children of elementary school age.

[1] Includes nursery school enrollment.

At the bottom of Table 4 is shown the per cent each grade's enrollment is of the total private elementary school enrollment, and with this are presented similar data for public elementary school enrollment. Private school enrollment percentages are notable for their regularity of decrease; for the evidence they give of less retardation than is usually attributed to public-school first grades, as shown by the 19.5 per cent of public-school children enrolled in first grades; and for the fact that the enrollments in upper grades do not drop so rapidly as do those in public elementary schools.

Kindergarten-nursery school enrollment showed a total of 39,663 reported from 962 schools. The per cent kindergarten enrollment is of the elementary school totals in private schools is considerably less than that in public schools.

NUMBER OF TEACHERS IN PRIVATE ELEMENTARY SCHOOLS

Not all of the schools which returned the questionnaire reported the number of teachers employed. Those that did, 5,829 in number, reported a total of 40,650 teachers employed in private elementary schools (Table 5), an average of about 7 teachers per school. Only 69 per cent of the pupils reported as enrolled in Roman Catholic schools are accounted for in this table. If this average holds true for all schools, it is probable that approximately 60,000 teachers were teaching in private elementary schools in 1930–31.

TABLE 5.—*Number of teachers in private elementary schools and size of schools*

Affiliation or control	Schools reporting on this item	Number of teachers	Enrollment	Pupil-teacher ratio	Average number of pupils for each school
1	2	3	4	5	6
Denominational:					
Baptist	14	42	975	23 2	69. 6
Congregational	8	36	810	22. 5	101. 2
Episcopal	47	215	2, 887	13. 4	61. 4
Friends	22	226	3, 139	13 9	142. 7
Lutheran	11	39	1, 026	26. 3	93. 3
Methodist	29	85	1, 664	19. 6	57. 4
Presbyterian	24	118	2, 305	19. 5	96. 0
Roman Catholic	5, 251	37, 020	1, 526, 474	41. 2	290. 7
Seventh Day Adventist	29	79	1, 833	23. 2	63. 2
Nonsectarian	394	2, 790	33, 816	12. 1	85. 8
Total	5, 829	40, 650	1, 574, 929	38. 7	270. 2

The number of pupils per teacher in all of the schools reporting averages 39. The average for all except the Roman Catholic schools is considerably below this—approximately 13 pupils per teacher. The Roman Catholic schools with an average of 41 pupils per teacher more nearly approximate the public elementary school average of 37 pupils per teacher in cities of 10,000 population and more.

SIZE AND ORGANIZATION OF PRIVATE ELEMENTARY SCHOOLS

Public elementary schools in cities of 10,000 population and more averaged 416 pupils per school in 1929–30.[4] Table 5 shows that the Roman Catholic schools average 291 pupils. The other elementary schools are on the average much smaller, enrolling an average of 84 pupils.

Many variations are found in the grades included in the private elementary schools. Many begin with kindergarten and continue through the eighth grade; others include the first six grades only; and others are parts of schools which include all eight grades and at least some of the high-school grades.

Of the 962 schools reporting kindergartens, 122 were kindergartens or nursery schools only.

A tabulation of the grade organization of the private elementary schools of the first 12 States alphabetically showed the following organizations in the 1,166 schools included:

Elementary only	Number of schools
Nursery only	5
Nursery and kindergarten	3
Kindergarten only	18
Kindergarten and elementary, or nursery, kindergarten, and elementary, through grade 6 or less	19
Kindergarten and elementary, or nursery, kindergarten, and elementary, through grade 8	91
Elementary through grade 6 or less	17
Elementary through grade 8	708
Total	861

Elementary and high schools	Number of schools
Kindergarten, elementary, through 1, 2, or 3 years of high school	26
Kindergarten, elementary, and 4 years of high school	48
Elementary, all or part, through 1, 2, or 3 years of high school	76
Elementary, all, or part, through 4 years of high school	155
Total	305

LENGTH OF SCHOOL YEAR

Not all of the schools reported the length of their school year. However, the medians for four groups are listed below in Table 6. For the Roman Catholic schools, 1,000 were selected at random throughout the States reporting and taken as a sampling of the total 5,954 included in the study.

TABLE 6.—*Length of the school year*

Affiliation or control	Number of schools reporting	Median number of days in school year
Nonsectarian, free	65	183.4
Nonsectarian, tuition	417	172.0
Protestant	200	179.5
Roman Catholic	1,000	183.9

[4] Office of Education Bulletin, 1931, No 20, Vol. II, Ch. III. Statistics of City School Systems, p. 18.

In 1929–30, 34 States and the District of Columbia reported an average school year in their public elementary schools of 171.8 days. In the same year 775 school systems in cities of 10,000 and more reported an average school year of 186 days. The median school year in private schools falls between these two group averages.

SUPPLEMENTARY TABLE A.—*Summary of statistics of Catholic elementary schools* [1]

State	Number of schools	Teachers			Enrollment			
		Religious	Lay	Total	Boys	Girls	Unclassified	Total
1	2	3	4	5	6	7	8	9
Continental United States	7,923	53,384	4,861	58,245	884,235	911,267	427,096	2,222,598

CHAPTER VI

THE EDUCATION OF EXCEPTIONAL CHILDREN [1]

Prepared by EMERY M. FOSTER, Chief, Division of Statistics, and JULIA E. ISDELL and ROSE MARIE SMITH, Statistical Clerks, and ELISE H. MARTENS, Senior Specialist, Education of Exceptional Children, and BEATRICE MCLEOD, Senior Specialist in the Education of Physically Handicapped Children, Division of Special Problems

THE ECONOMIC DEPRESSION has wrought much confusion. Yet out of all the havoc that has accompanied its onslaught upon educational progress there has come one good thing. We have been forced to sit down and to examine ourselves and our schools; to evaluate our practices, item by item, by the searching standards of social needs; and, if there be found any chaff, to sift it from the wheat.

The education of exceptional children should not be spared such a scrutiny. If there have grown up developments that are not giving value received, then they should give place to better things. If, on the other hand, special educational facilities for exceptional children are yielding results that are of vital value both to the child and to society, then they have earned a place in the school program that should be safeguarded. The two years from 1930 to 1932 have been marked by a spirit of inquiry in this direction, frequently accompanied by a sympathetic understanding of the problems involved and an unwillingness to make any unnecessary retrenchments; but sometimes, too, unfortunately accompanied by a spirit of ruthless attack upon what seemed to the uninformed to be nonessentials.

The outcome of it all has been that special day schools and classes for exceptional children are thus far holding their own and in some respects even making significant progress. Curtailments have been made in a number of cities, but so also have additions been made in other cities, while the large majority of school systems are holding their programs steady. Of 482 cities with population of 10,000 or above, reporting to an inquiry relative to this problem, 70 report eliminations or serious curtailments. Of 797 cities with a population of from 2,500 to 10,000, 37 report such eliminations. In this latter group, however, it must be remembered that due to the small school population the provisions for exceptional children have always been meager if indeed they existed at all. On the other side of the picture

[1] Exceptional children include 8 major groups: (1) The blind and the partially seeing; (2) the deaf and the hard of hearing; (3) the crippled; (4) the delicate (anæmic, tuberculous, and cardiac cases); (5) the speech defective; (6) the mentally deficient; (7) the mentally gifted; (8) the socially maladjusted (incorrigible and delinquent).

we find 22 cities which have made additions to their programs. Despite the general economic condition, the provision of special educational facilities for handicapped children has here been recognized as a sound economic investment. To help a child to help himself is one of the wisest policies accepted in every sphere of human life. If it applies to any one type of individual more than to another, it is probably to the child who because of physical, emotional, or mental handicap cannot keep pace with his normal fellows in the ordinary school.

State residential schools must of necessity be carried on, for cases of extreme mental deficiency, of blindness, of deafness, and of serious delinquency demand institutional care. The lack of adequate appropriation for the maintenance of such institutions may affect the quality of the physical provisions made or of the instruction given or of both these items. Private residential schools have no doubt suffered most, with perhaps the exception of those that receive a large share of their income from State funds. Tuitions, endowments, and other private sources of revenue are likely to show a marked decrease in times like these. Consequently many of the smaller schools are not able to weather the storm and must close their doors.

The situation as it has developed within the past 2 years in various phases of special education is more specifically described in the following pages. It will be discussed under three main topics: (1) General considerations, (2) city day schools and classes, (3) residential schools. Under the first of these some of the significant developments in the field will be pointed out. The two remaining sections present statistical data, with brief discussion of the same.

GENERAL CONSIDERATIONS

The education of exceptional children is inevitably tied up with problems of child welfare and with legislation as well as with education proper. Adequate provision for a serious physical handicap, an extreme mental retardation, or a deep-seated personality maladjustment frequently requires special social as well as educational treatment. Either one of these may require special legislation. The items of progress mentioned below involve all of these.

White House conferences.—The White House Conference of 1930 centered Nation-wide attention upon the child. Children who are mental, physical, or social deviates were given special consideration in the deliberations of the conference, and their cause was emphasized in the clause of the Children's Charter which reads as follows:

> For every child who is blind, deaf, crippled, or otherwise physically handicapped, and for the child who is mentally handicapped, such measures as will early discover and diagnose his handicap, provide care and treatment, and so train him that he may become an asset to society rather than a liability.

Expenses of these services should be borne publicly where they cannot be privately met.

The volumes of material published by the conference during the past 2 years are familiar to all. Attention may be called to the fact that, of some 30 volumes published to date, 4 are devoted entirely to the interests of one or more groups of exceptional children and contain a veritable library of information regarding social and educational provisions that are being made and that need to be made for them. These volumes are as follows:

1. Special Education: The Handicapped and the Gifted.
2. Organization for the Care of Handicapped Children.
3. The Delinquent Child.
4. The Handicapped Child.

But the influence of the National White House Conference extended beyond the confines of its own meetings and publications. One of the most vital results issuing therefrom lay in the organization of State and county White House conferences designed to study more localized conditions and needs. In 1931 and 1932 such conferences were held in 30 States, with others scheduled for 1933, and again the handicapped or the exceptional child has been given a vital place on the program. If these conferences did nothing more than open the eyes of the public to the fact that there is a problem of exceptional children within the borders of their own States, they might be deemed worth while. Fortunately some of them went beyond this and brought about definite constructive action furthering the cause of handicapped children.

Legislation.—No attempt will be made here to analyze all the legislation enacted during the past 2 years affecting the status of exceptional children. A few outstanding examples will serve as illustrative of existing trends. Indiana was the first State to hold a White House Conference (in January 1931). The Indiana Legislature meeting in that year acted upon a bill providing for the identification and training of retarded children and of problem children. The State had already given legislative authorization and support to special classes for physically handicapped children. The addition of legislation for the mentally retarded and behavior problems was a distinct step in advance.

Maryland has begun to put into operation a State program for the examination, classification, and education of physically and mentally handicapped children. Legislation enacted in 1931 provides that the State board of education shall set up standards with reference to these matters and that the State shall make contribution to the expense incurred locally. A State director of the work has now been appointed.

Massachusetts in 1930 enacted a law providing for home instruction of crippled children. In 1932 the legislature amended the law so as

Lisbon. A few other institutions had already taken similar action earlier, but in many places these doubly handicapped children are still struggling along as best they can in one or the other type of institution without having any special provisions made for them. As to the blind and the deaf of approximately normal intelligence, so far as is known there have been no new accessions during the past 2 years to the State schools for these two groups. All States make some provision for them either in their own schools or in schools of neighboring States.

State supervision.—One of the provisions of prime importance to the State-wide welfare of exceptional children is the inauguration of a plan for the administration and supervision of special education through the State department of education. Especially is such a program needed for rural communities, which must depend in large measure upon the State for stimulation and support in their educational development. Prior to 1930 each of 11 States had provided for a bureau or division within the State department of education having as its responsibility the promotion, organization, and supervision of special schools and classes. These States were Alabama, California, Connecticut, Massachusetts, Michigan, Minnesota, New York, Ohio, Pennsylvania, Wisconsin, and Wyoming. To this group have now been added Delaware and Maryland, thus increasing the total from 11 to 13.[2] Other States are contemplating the organization of similar bureaus. It is true that in not all the States mentioned do the assigned divisions exercise fully the supervisory functions needed for all types of exceptional children. Yet there is much fine work being done and there is no doubt that the activities of the State departments are resulting in the increase of special facilities provided by local school systems.

Teacher training.—If exceptional children are to be educated aright, teachers must be prepared to understand and to provide for their special needs. A survey [3] made in 1931 of 600 institutions scattered throughout the country revealed some 75 in which courses were offered definitely designed to prepare teachers for some phase of the field of special education. Some of the institutions showed very comprehensive offerings, through which teachers could prepare themselves for work with one or more groups of exceptional children. Others were more restricted, specializing in the education of a single type. In addition to these 75 institutions, a large number of colleges and universities are of course including in their courses in education some consideration of individual differences and special handicaps or

[2] See Organization for Exceptional Children within State Departments of Education for a description of the programs of these bureaus. (U.S. Office of Education, Pamphlet No. 42, 1933.)

[3] Opportunities for the Preparation of Teachers of Exceptional Children. U.S. Office of Education Bulletin, 1931, no. 21.

to extend the provision to all "physically handicapped" children who need such facilities. Massachusetts has also recently (in 1931) made a requirement for the mental and physical examination of all delinquents between the ages of 7 and 17 before commitment is made to any of the State training schools; and in the same year the existing law relating to the examination of children who are 3 years or more retarded in mental development was amended to include provision for examination of children retarded to a less degree. These are exceedingly important items of legislation in the field of child guidance.

Alabama has made more stringent its requirements for the enrollment in the State Institute for the Deaf and Blind of all deaf and blind children between 7 and 16 years of age, and has raised from 10 to 12 years the total time of attendance required.

California, Kansas, Minnesota, Virginia, and Wisconsin are among the other States which have within the past 2 years given legislative attention to the education and welfare of one or more groups of handicapped children. The development points to an increasing recognition of the place of these young people in the social life and an attempt to make more adequate and yet sanely economical provision for them.

State residential schools.—State residential schools for the mentally deficient, the blind, the deaf, or the delinquent should be considered an integral part of the educational program of the State even though they are not connected with local school systems. In each case the goal is to effect such training as will eliminate or at least reduce to a minimum the liability incurred by a given handicap, and to return the child to society as a self-supporting, self-respecting citizen. Even with the mentally deficient, much has been accomplished in fitting them for return to the community, while many of those who cannot be so returned learn to take their places in the institutional life and to make a real contribution to its activities. It is therefore important that each State provide facilities for the proper care of these groups.

All but three States now have State institutions for the mentally deficient. Up to 1930 New Mexico had been the most recent addition to the list, having provided in 1929 for the first unit of the Home and Training School for Mental Defectives at Los Lunas. In 1931 Utah joined the ranks by opening the Utah State Training School at American Fork. Arizona, Arkansas, and Nevada are now the only States remaining which do not have separate State schools for the feeble-minded. Organized groups of socially-minded individuals are persistently at work, however, to bring about their establishment in these States also.

The problem of the blind-feeble-minded and the deaf-feeble-minded is always a difficult one to solve. Opinions differ as to where such children belong. In New Jersey a class for the blind has recently been organized in the State colony for feeble-minded males at New

endowments without, however, giving special courses in methodology or technique of teaching the various groups.

It is certain that the provisions now made for such special courses are inadequate. On the other hand, it would be unsound and uneconomical for every teacher-preparing institution in the country to add to its curriculum specialized work in psychology and methods for various types of exceptional children. The present trend is happily in the direction of creating intensive training centers. Specific institutions, named by State authority as official training centers for special education, are given the responsibility for organizing and developing the curriculum for maximum service. Ohio State University, State Teachers College in Milwaukee, Michigan State Normal College at Ypsilanti, and State Teachers College in San Francisco may be cited as examples. In addition to these there are the excellent courses given by or under the auspices of various agencies of highly specialized type, such as certain schools for the deaf or the blind, as well as associations interested in the welfare of a particular group.

Curricular development.—Consistent effort is being made to analyze the curricular needs of exceptional children, and to improve upon past methods of approach. For the deaf the techniques of teaching speech and language are constantly being scrutinized by students of the education of the deaf; for the blind devices for bringing nature and art and science more intimately within their experience are being sought; for the speech defective research in causative and remedial methods is in progress; for the gifted curriculum enrichment is an outstanding challenge; and for the mentally deficient we need activities that will be of very practical and yet, too, of enriching value.

Much of the material which has been developed is still in mimeographed form. Perhaps this is as it should be, even without consideration of the cost of publication. Courses of study are not static, but in a constant process of evolution, even with normal children upon whose education we have been intent for generations and centuries. Special methods and curricula for exceptional children are a much more recent addition in our educational history, and we hesitate to put into permanent form that which will be changed next year or the year after. During the past 2 years some excellent materials have been developed, among them being handbooks in the correction of speech,[4] and outlines or courses of study for mentally deficient children.[5] With the latter group the activity unit, through which all subjects of the curriculum are coordinated through a common center of interest, has always been stressed by the most understanding and progressive teachers, but it is increasingly being recognized by all

[4] These have been received from the California State Department of Education, from the San Francisco public schools, and from the Detroit public schools.

[5] Perhaps the most recent ones are those developed in the public schools of Minneapolis, Minn., Rochester

teachers of mentally deficient children as a much more effective method of instruction than the separation of subject matter into compartments having little or no relation to one another.[6]

Mental hygiene service.—No provisions for exceptional children are complete without clinical facilities for diagnosing and treating personality difficulties. The application of mental hygiene is an indispensable factor in the adjustment of children's problems of behavior, whether those problems are tied up with mental or physical or emotional deviations, or whether they are primarily due to environmental situations. Community child guidance service is increasingly being offered to children who need its help, although it has not yet penetrated into nearly all the areas where children's problems abound. In 1928 the National Committee for Mental Hygiene reported 492 clinics in the country giving psychiatric service to children. By 1931 this number had increased to 624, of which 232 were fully equipped child guidance clinics providing psychological, psychiatric, and social service. More than 50,000 children had been examined and treated in the course of the year. Yet even with such an increase in the amount of clinical service available, there were in 1931 fourteen States in which there was still not a single clinic of this type reported.

Another approach to the application of mental hygiene principles is through the preparation of teachers, already mentioned. The provision of highly specialized service for every problem of behavior which arises in the school is just as unnecessary as it is economically impossible. Through the years teachers have handled—or attempted to handle—their own disciplinary problems, but they did so all too often without the insight into the experiences of childhood that helps to bring about a satisfactory adjustment. Teacher-training institutions are recognizing the need of making classroom teachers conscious of the principles involved in mental hygiene. According to recent surveys, approximately 50 are offering regular courses in mental hygiene, while a much larger number report that the subject is presented in some form in connection with various courses.

Mental hygiene is not so much a subject as it is a method or a point of view. If prospective teachers can be imbued with its principles as they apply to teacher-child and parent-child relationships, they could become powerful forces in detecting early the symptoms of undesirable behavior in children and in helping to eradicate the causes before serious developments occur. Specialized help of the clinician can then be reserved for extreme cases of maladjustment beyond the reach of the teacher.

[6] See U.S. Office of Education Bulletin, 1933, no. 7, for a symposium on Group Activities for Mentally Retarded Children.

Research.—In the beginning of this chapter attention was called to the fact that the present economic situation has forced us to evaluate our educational services in order that any necessary retrenchments might be made where they will be least harmful. Evaluation may be of two kinds. It may be the result of quick judgment, of opinion, even of prejudice. Or it may be the result of careful analysis of values, based so far as possible upon scientific research. Obviously the latter is the only justifiable method.

Not every school system has the facilities for carrying on systematic research. It need not for this reason, however, yield the right to its consideration. Studies made elsewhere frequently furnish the needed data quite as well as any that might be carried on locally. And if several investigations of the same problem give approximately the same results, the evidence is so much the more convincing.

The education of exceptional children is one of the many fertile fields of research through which we seek the way to improvement of our practices, and we have scarcely grazed the surface of its possibilities. Yet numerous studies have been made that are worthy of note, and during the past biennium there have been indications of increased activity in this direction. The causes and treatment of delinquency have always been a challenge to the research student, and increasing data are accumulating to show conclusively the need of early preventive treatment. It would be impossible to cite all the valuable research which has been carried on in this field. Perhaps one of the most recently published bits of evidence is that which resulted from an evaluation of the clinical activities of a city school system,[7] showing the positive results accruing therefrom.

Also in the field of mental deficiency scientific research is no new project. Most of it has been confined, however, to the medical and psychological phases of the problem, with less attention given to a critical appraisal of educational methods. At the present time at least two studies are in progress which are designed to evaluate the work of special classes for mentally deficient children. Both of these are being carried on under the practical conditions of city school administration—one in New York and the other in Minneapolis. It is hoped that the results of these studies will be of value in determining future policies with reference to segregating subnormal children in small classes suited to their apparent needs.

Published investigations in the field of mental deficiency appearing during this biennium are too numerous to mention, but they include

[7] Adjustment of Behavior Problems of School Children. United States Office of Education Bulletin, 1932, no. 18.

surveys of occupational accomplishments of subnormal children,[8] psychological study of subnormal children in special classes as compared with those in regular classes,[9] critical evaluation of the curriculum of the special class,[10] intensive investigation of birth injury as a possible cause of mental deficiency,[11] inquiry into the problems involved in the training of teachers,[12] and various others of psychological, medical, or educational import.

In the field of physical handicaps, too, growth in research is evident. Both experimental studies and critical surveys have appeared on the psychology and education of the deaf, the crippled, the blind, and the speech defective.[13] Much more is in progress in various centers and under the sponsorship of various associations and foundations. The comparative value of different methods used in teaching these handicapped children and of different plans of organization of their school work is a problem that increasingly challenges our attention.

The field of gifted children shows the greatest dearth of investigatory studies, even as it also shows the least provision made in the schools. A few university centers are engaged in special study of this neglected group of our exceptional children, among them being New York University, Northwestern University, and Stanford University. But on the whole educators need still to be awakened to the tremendous responsibility of finding the best way to prepare these children for community, State, and national leadership in the cause of true social progress.

National organizations interested in exceptional children.—In 1930 more than a score of national or international organizations functioned in the interests of one or more groups of exceptional children. To this

Rogers, James Frederick. The Speech-Defective School Child. Washington, D.C., Government printing office. 31 p. (Office of education Bulletin, 1931, no. 7.)

number have now been added two more recent ones. In 1931 the National Congress of Parents and Teachers organized a section on the exceptional child and a committee chairman was appointed to direct the work of the National Congress in this field as well as to encourage and to assist State officials in the promotion of State programs for exceptional children.[14] In the same year a Department of Special Education was established in the National Education Association, taking its place beside numerous other departments devoted to specific purposes. Both these newly created agencies are functioning actively and should be able to accomplish much, the one with teachers, the other with parents. A complete program for exceptional children cannot be realized without the whole-hearted support and cooperation of both parents and teachers. There is a real significance in the birth of these two newest organizations during the same year. If to the efforts of teachers and parents we can add the farsighted planning of educational administrators, of leaders in teacher-training institutions, and of educational research agencies, then we may look forward to an era of progress in the education of exceptional children such as has never been known before.

CITY DAY SCHOOLS AND CLASSES

The place of special education, or the education of exceptional children, is unquestioned in the programs of city school systems. It is a generally accepted principle that every child should be educated in the normal environment of his own community unless his condition is so extreme that he demands institutional care. While there is some difference of opinion as to what constitutes so extreme a condition, particularly with regard to degrees of blindness and deafness, yet it is evident that city school systems are on the whole increasingly accepting their responsibility for all types of exceptional children, although in some instances the economic situation may have caused a temporary retrenchment in the facilities offered.

Even in the midst of the depression some cities have found it possible to make substantial additions to their programs. In Jersey City, N.J., for example, a new bureau of special service has been organized, the chief responsibility of which is to provide personnel and clinical service for cases of social maladjustment and delinquency. In the same city a new school building for crippled children was erected in 1931 designed to meet the needs of the city in this direction for the next 10 years. The recently established Bureau of Child Guidance in New York is a part of the educational system of that city, and is probably too well known to need much comment here.

[14] A number of State congresses of parents and teachers also have at work committees on exceptional children.

The opening of such schools as the Ann J. Kellogg School in Battle Creek and the David Smouse Opportunity School in Des Moines bears witness to the interest and support of private enterprise for the cause of exceptional children. A score of other cities report additions to the number of special classes for mentally deficient, crippled, sight-defective, deaf, and other handicapped children.

But not a single addition for gifted children is reported. In fact, special facilities in this field seem to have been one of the first points of attack, for so far as can be ascertained the number of cities providing for special instruction of gifted children, as well as the total number of children enrolled for such instruction, is materially less than it was 5 years ago. Perhaps special classes for gifted children are not the best means of meeting the problem. One hesitates to say what the specific technique should be. Yet it is interesting to note that in both Cleveland and Los Angeles, the two pioneer cities in which the education of gifted children has advanced the farthest, the number enrolled in special classes exceeds that given in the report of several years ago.

The general development of special classes for 6 of the 8 groups of exceptional children may be seen from table 1. Each one of these shows a consistent increase, even when one allows for the fact that the 1932 data include all cities with a population of 2,500 or more, while previous data are limited primarily to cities with a population of 30,000 or more. With the exception of classes for the mentally deficient, special facilities for exceptional children are not so commonly found in the smaller towns that the comparison of data for various years would be seriously affected.

The speech defective and the gifted are not included in the table because there are no available figures for previous years that are strictly comparable. Moreover, at least for the speech defective the incompleteness of the returns in 1932 is a clear indication that the number reported does not adequately represent the actual enrollment for speech correction. The number reported as being so enrolled is 22,735; but on the basis of the number and the type of cities which report programs of speech correction without giving the actual number of pupils enrolled, it is safe to estimate that the total enrollment is from two to three times as large. The number of gifted children reported in 1932 is 1,834.[15]

[15] According to a study made in 1928–29, there were 52,112 children being given work in speech correction, and 3,883 children in classes for the gifted. In comparing these figures with those secured by the Office of Education in 1932 one must consider the possibilities of error arising from such factors as the lack of standardization of terminology, the varying interpretations given to questionnaire responses by different investigators, and conditions influencing the number and the type of cities responding. The 2 sets of figures are, therefore, not strictly comparable.

TABLE 1.—*Development of special schools and classes in city school systems reporting enrollments for same*

[NOTE —All enrollments given below are from statistical reports gathered by the United States Office of Education]

A—BLIND AND PARTIALLY SEEING CHILDREN

Year	Number of States	Number of city systems reporting special schools or classes	Number of pupils enrolled
1	2	3	4
1922	12	44	(1)
1927	18	80	4,465
1932	20	95	5,308
B—DEAF AND HARD-OF-HEARING CHILDREN			
1922	16	74	2,911
1927	22	83	3,515
1932	24	116	4,434
C—MENTALLY DEFICIENT CHILDREN			
1922	23	133	23,252
1927	32	218	51,814
1932	39	483	75,099
D—CRIPPLED CHILDREN [3]			
1930	22	81	13,120
1932	24	[3] 145	16,166
E—DELICATE CHILDREN (ANAEMIC, TUBERCULOUS, AND CARDIAC CASES)[2]			
1930	27	81	19,153
1932	28	135	24,020
F—SOCIALLY MALADJUSTED CHILDREN (TRUANT, INCORRIGIBLE, OR DELINQUENT)[2]			
1930	20	44	9,543
1932	24	58	14,354

[1] Data not available
[2] Data previous to 1930 not available.
[3] 31 additional cities report home instruction for 68 children

In table 2 is given the total number of cities and States from which special education of any kind was reported in 1932, whether or not pupil enrollment was included in the data supplied. It will be noted that the number of cities as given in table 1 under each group of exceptional children is materially increased in table 2. In other words, many cities reported that they provided special facilities for one or more groups of exceptional children, but did not report data regarding enrollment.

TABLE 2.—*Total number of cities and States from which public day schools and classes for exceptional children were reported, 1931–32*

Type of children	Number of States	Number of cities	Type of children	Number of States	Number of cities
A. Blind and partially seeing [1]	23	113	F. Socially maladjusted (incorrigible, delinquent)	26	70
B. Deaf and hard of hearing	28	144	G. Speech defective	20	101
C. Mentally deficient	40	515	H. Mentally gifted	11	18
D. Crippled	27	[2] 195			
E. Delicate (anaemic, tuberculous, cardiac cases)	29	149			

[1] The National Society for the Prevention of Blindness reported 409 sight-conservation classes existing in September 1932 in 118 cities in 22 States.
[2] Including all cities reporting home instruction.

Many of the cities were able to give the number of pupils in average daily attendance and the total cost for instruction (salaries and supplies) for various types of classes for exceptional children. The average annual cost per pupil of each type in cities of different sizes is given in table 2 A. It apparently costs on the average about $350 a year for the instruction of a blind or deaf pupil in a city day school class; about $200 for a partially seeing or crippled pupil; from $150 to $160 for a mentally deficient or socially maladjusted pupil and $125 for a delicate pupil. Costs seem to be higher in cities of more than 100,000 population than in those not so large.

TABLE 2A.—*Annual cost per pupil in average daily attendance for instruction of exceptional children in city schools, 1931–32*

Type of class	Group I		Group II		Group III		Group IV		Total	
	Number of cities reporting	Average cost per pupil	Number of cities reporting	Average cost per pupil	Number of cities reporting	Average cost per pupil	Number of cities reporting	Average cost per pupil	Number of cities reporting	Average cost per pupil
1	2	3	4	5	6	7	8	9	10	11
Blind	7	$387.13	2	$180.20	0	.....	0	.....	9	$363.40
Partially seeing	28	203.29	21	166.88	7	$159.46	0	.....	56	197.99
Deaf	38	361.58	25	251.40	16	256.01	4	$314.14	83	343.37
Mentally deficient	43	157.84	74	152.18	112	120.65	87	126.65	316	152.67
Socially maladjusted	25	168.85	6	126.14	2	212.92	4	139.42	37	167.64
Delicate	30	126.69	38	118.12	14	129.23	3	107.93	85	125.40
Crippled	33	203.78	29	167.92	15	124.96	2	132.43	79	198.29

In tables 7 to 11 the data for individual States and cities are presented in greater detail. Again it must be kept in mind that incomplete data reported affect the tabular array. In each of these tables a blank means merely that no report was made on a given item, not necessarily that there was no report which could be made. The result would mean that the summary figures given are only a conservative estimate of the extent to which special education has found its way

into city school systems. They do, however, yield an indication of trends that are of statistical value.

In the detailed table for individual cities (table 11) the following items need to be pointed out:

1. The attempt has been made to differentiate special supervisors and principals who give full-time service to one or more types of exceptional children from supervisors and principals whose major responsibilities are with regular elementary grades but who give some time also to certain types of special education. The latter are not included in the tables. Thus the principal of a regular elementary school for so-called normal children which provides one or more classes for exceptional children is not considered a principal of special education; but the principal of a school devoted entirely to crippled children or to mentally deficient children or to various types of exceptional children is included in the statistical data. So also only those special supervisors and directors who give all or the major part of their time to the mentally deficient or the sight defective or any other single group or all groups of exceptional children have been considered in designating the cities which report special supervision. For this item the data reported on the statistical blanks were supplemented by other sources of information at hand.

2. It will be found that for some cities and even for some entire States the average daily attendance reported for certain groups is greater than the enrollment. This is due to the fact that many children are transferred to special schools or classes after the term has begun. Their enrollment has already been counted with the school from which they came, but their attendance is in the special school or class to which they go. This factor must be taken into consideration in interpreting the figures given.

3. For schools devoted to all types of physical handicaps, such as the David Smouse Opportunity School in Des Moines, and for those caring for both mental and physical deviates, such as the Ann J. Kellogg School in Battle Creek, it is sometimes impossible to report separate data for each group with regard to teachers and expenditures, since the school is administered as a unit and the same teachers frequently serve to some extent at least more than one type of child. In such cases only estimates could be made at best.

4. Two columns are given to "number of school buildings" and "number of classes exclusive of school buildings." The former is to be interpreted as buildings which are given over entirely to purposes of special education, without including any regular classes. The latter is to be interpreted as single classes or groups of classes existing in school buildings the major part of which is devoted to regular grade work. The distinction was made with a view to determining the extent to which exceptional children are housed in the same buildings

with normal children and the extent to which they have been separated into buildings of their own.

5. For speech-defective children no figures for average daily attendance are given, since instruction in this field is not quite parallel to that given for other types of exceptional children. Speech correction is usually carried on for one, two, or more periods per week, said periods varying in length from approximately 15 minutes to an hour. There is no such thing as a "speech-correction class" in the same sense in which there is a class for mentally deficient, for the crippled, or even for the partially seeing.

6. The same omission is made for crippled children in those cases in which the instruction is reported as given at home by home teachers. Here, too, average daily attendance has little real significance since home instruction consists of only part-time teaching limited to one or more periods per week.

7. A large number of smaller cities provide for a very limited number of crippled children home instruction which is frequently given after school hours by one of the regular teachers. These are included in the detailed statistical table only if the number reported as so taught reaches five. Thirty-one cities reporting provision for fewer children than this are listed in one of the footnotes to table 11. The total number of children cared for by these 31 cities is 68.

8. Cities which indicated that special instruction existed for particular groups but which did not report data of statistical significance regarding personnel are not included in the detailed table. The names of such cities are listed in footnotes in the appropriate sections of table 11.

In summarizing the statistical data for city day schools and classes, one might say that the most extensive provision is made for mentally deficient children, more than 75,000 of whom are enrolled in special classes of 483 cities in 39 States. Thirty-two additional cities not reporting personnel bring the total up to 515, distributed among 40 States. The next group is probably the speech defective, though accurate figures of enrollment for speech correction are not available. More than 24,000 delicate children who are anæmic or tuberculous or who present cardiac difficulties have been given special attention in 135 cities of 28 States, with 14 additional cities not reporting enrollment. Special facilities for approximately 15,000 children who present serious problems of behavior have been established in 70 cities, 58 of which report an enrollment of 14,354. More than 16,000 crippled children are being given special instruction either at school or in their homes by 195 cities in 27 States. The groups of handicapped children which show the smallest representation in special classes of public day schools are the blind and the partially seeing, on

the one hand, and the deaf and the hard of hearing on the other hand, while special classes organized for gifted children are least significant of all.

The extent of provision to be made in public day schools for any type of exceptional children depends of course upon the incidence of the children in question and upon facilities available in public residential schools. According to the best estimates that have been made of the number of children belonging in each group, the provisions are as yet not nearly adequate for any one of them.[16] However, the progress which has been made in the midst of difficult situations is encouraging and points to the stabilization of special education as an essential feature of the American educational program.

RESIDENTIAL SCHOOLS

Residential schools for exceptional children are, as has already been indicated, a vital part of the educational system, taking over the training of children who because of some extreme condition need a specialized type of education or institutional care, but for whom adequate community facilities are not available. The groups served in greatest measure by such schools are the blind, the deaf, the socially maladjusted or delinquent, and the mentally deficient and epileptic. Hospital facilities for crippled and for tubercular children are increasing. The majority of these, however, are still functioning under private rather than State auspices, although in most cases any teachers assigned to be in immediate charge of hospital instruction are paid by public educational authorities.

Statistics on four major types of State and private residential schools were gathered for the year 1930–31. These are presented in detail in tables 12 to 16, on pages 70 to 85. Some of the significant facts revealed by the survey follow.

RESIDENTIAL SCHOOLS FOR THE DEAF

1. In 44 States and the District of Columbia there are schools for the deaf either publicly or privately controlled and supported. The remaining 4 States (Delaware, Nevada, New Hampshire, and Wyoming) have made legal provision for the education of deaf children in residential schools of neighboring States.

2. The total number of schools reporting in these 44 States is 85, 57 of which are under public and 28 under private control. Private control, however, does not necessarily mean exclusively private financial support. Some of these privately controlled institutions derive their maintenance largely from the State, which either makes an appropriation for their support or pays tuition for pupils sent to

[16] See publications of the White House Conference for figures on incidence

the respective schools. This is particularly true in Massachusetts, New York, and Pennsylvania. In fact about 50 percent of the income of all private schools reporting is derived from State funds.

3. Eight States maintain separate schools for deaf Negroes. These are Alabama, Kentucky, Maryland, North Carolina, Tennessee, Texas, Virginia, and West Virginia. In five other States (Arkansas, Florida, Georgia, Mississippi, and South Carolina) there are separate departments for Negroes conducted as integral parts of the respective institutions.

4. There is an increasing tendency toward placing the education of deaf children in residential schools under the supervision of the State department of education or of public instruction. Of the 57 public institutions, 11 are now under the control of the State board of education. Moreover, many of the private schools are open to the inspection of State educational officials, and placement of pupils in these schools is subject to their approval. Thus a growth of coordinated educational service for deaf children throughout the State is apparent.

5. The total number of pupils enrolled in 1930–31 in the 85 public and private schools reporting is 14,890.[17] This figure for the year 1927–28 (also for 85 schools) was 14,067; for 1922–23 (for 80 schools reporting) it was 11,454. The number of deaf children being educated in residential schools seems therefore to show a consistent increase. This may indicate both a growth in the facilities available and a greater care in locating and guiding children who need the training offered in a residential school.

6. The condition of hearing was given for 11,108 pupils. More than 2,600 of these were reported as only partially deaf, or hard of hearing. The line of demarcation between the so-called "totally deaf" child and the "partially deaf" child varies according to standards established in respective States. The 2,696 cases reported as partially deaf are probably children who have very little hearing and need training in speech, language, and lip reading; or they may come from communities in which no public-school provision is made for the hard-of-hearing child. Many of them could no doubt be educated in day classes for the hard of hearing if such existed in their home schools

7. The age distribution given for 13,096 pupils shows 87 to be under 5 years old. This would indicate that a beginning has been made in the early training of the young deaf child who has no opportunity for home or nursery-school instruction in day classes. A much larger number (2,250) are between 5 and 9 years, and are thus

[17] In October 1932 according to the report of the executives of American Schools for the Deaf the number of pupils enrolled was 15,430.

still at an early age being started on the long arduous road of learning speech and language under a tremendous handicap.

8. Industrial training plays a large part in the education of the deaf, although academic work is also pursued at least through the elementary grades. Ten percent of the students enrolled were reported as being in high school. Among the vocational courses offered are (in order of frequency of mention) domestic arts and sciences, general shop work, carpentry, printing and lithographing, shoe making and repairing, agriculture, painting and paper hanging, metal work, baking, tailoring, barbering, beauty culture, and typewriting.

9. The average cost for instruction per deaf pupil enrolled in 46 institutions reporting the necessary items was $197.30. The cost for other current expenses, including board and room, was $341.89. The sum of these two figures is $539.19, which represents the total cost for education and care.

RESIDENTIAL SCHOOLS FOR THE BLIND

1. Responsibility for the education of the blind rests largely with the residential schools, since very few city school systems maintain day classes for this group of handicapped children. In each of 41 States there is at least one such residential school,[18] either publicly or privately controlled. The remaining 7 States have no schools of their own but have made legal provision for the education of blind children in residential schools of neighboring States. These are Delaware, Nevada, New Hampshire, Maine, Rhode Island, Vermont, and Wyoming.

2. Of the 58 institutions reporting for the year 1930–31, 47 are under some form of State control, while 11 are privately controlled. As with the deaf, so with the blind we find considerable State financial support given to some of the private schools through special appropriations or tuitions paid for pupils so assigned. So also the relationship between the residential schools for the blind and the State department of education is increasingly recognized as a vital factor. In a number of cases officials of State departments of education take the same responsibility for the inspection or supervision of these schools as with respect to schools for the deaf. This is especially true in those States in which a bureau or division for the education of exceptional children has been developed within the State department of education.

3. Separate schools for blind Negroes are maintained in 9 States, i.e , Alabama, Arkansas, Louisiana, Maryland, North Carolina, Tennessee, Texas, Virginia, and West Virginia. Four other States (Florida, Georgia, Kentucky, and South Carolina) conduct separate departments for Negro and white pupils within the same school.

[18] In 16 cases deaf and blind children are provided for in different departments of the same school.

4. Statistics for 1930–31 show an enrollment in all schools reporting of 5,530. Of this number 25 are under 5 years of age, 818 are from 5 to 9 years old, while 1,293 are 18 years of age or older. In 1927 the enrollment reported for the same number of schools was 5,304. Again, therefore, we see a slight increase in the number of exceptional children being cared for in residential schools.

5. The condition of sight was reported for 5,010 pupils, as follows:

Totally blind (with hearing)	2,186
Partially blind (with hearing)	2,812
Deaf and blind	[19] 12

The line separating the blind child from the partially seeing varies somewhat according to standards established in cities providing sight-saving classes for partially seeing children. There is also a variation as to the standard of admission to residential schools for the blind. The 2,812 children reported as "partially blind" are probably potentially blind cases, or cases with so little light perception that they need to be educated by the tactile method. These are not to be confused with cases of partially seeing children who are ordinarily found in sight-conservation classes and who can be taught by visual methods.

6. Aside from the regular elementary-and high-school work offered in residential schools, vocational courses reported are in order of frequency as follows: Music; general shop work; domestic arts and sciences; basketry, fiber furniture, and chair caning; broom, brush, and mop making; dressmaking and tailoring; loom work, weaving, and rug making; piano tuning; mattress making.

7. In 1930–31 it cost approximately $684 to care for and to educate each pupil in the schools reporting for blind only. The per capita cost of instruction in these schools was $213.91; that of other current expenses was $470.31.

RESIDENTIAL SCHOOLS FOR MENTALLY DEFICIENT AND EPILEPTIC

1. Separate State institutions for mentally deficient and epileptic now exist in every State of the Union except Arizona, Arkansas, and Nevada. The one most recently established is the Utah State Training School, which opened its doors in October 1931 and had on its rolls during the first year 157 individuals.

2. In the 45 States making provision for these groups of handicapped persons there are 77 State institutions. The District of Columbia also has a public institution of this type located at Laurel, Md. Sixty-seven of these institutions are for mentally deficient only or for mentally deficient and epileptic, while 11 are for epileptics only.[20] Practically all of them accommodate both children and adults. They are regularly administered by some State agency outside the

[19] Fourteen additional cases of blind-deaf children are reported by schools for the deaf.

[20] In addition there are a few public residential schools for mentally deficient children under county or city administration. Two of these are included in table 3.

department of education—such as a board of control, department of public welfare, or a separate board of trustees responsible to State officials. In a few States (notably Maryland, Massachusetts, New York, and Pennsylvania) an agency with functions more directly related to mental hygiene and mental diseases is in charge.

3. The number of private schools existing for mentally subnormal children is not accurately known, but according to available records there are at least 150 of them scattered throughout the country. Of these only 50 furnished the information requested in the statistical study made for the year 1930–31.

4. Most of the private institutions have limited enrollments, though a number of them are doing excellent work in the training of the children entrusted to their care. Two of the largest ones are Elwyn Training School (in Pennsylvania) which has an enrollment of more than 1,000, and the Training School at Vineland (in New Jersey) with an enrollment of about 600. These two schools draw large amounts of their income from State funds through the payment by the State of tuition for children placed. Most of the other private schools are maintained entirely from private sources.

5. Statistical information regarding total population of the State institutions for mentally deficient and epileptic is furnished periodically by the Bureau of the Census of the United States Department of Commerce. The primary concern of the Office of Education is the educational provision made for children of school age enrolled in all such residential schools whether public or private in nature. Of the 80,000 or more inmates of all these institutions, about 18,000 are between the ages of 5 and 14, and 13,000 more are between the ages of 15 and 17. These are the people who need to be given the best possible training during formative years in order that as adults they will be able to make some limited contribution to institutional life if they cannot be returned to the community.

6. Reports on enrollment in the schools maintained within the State institutions were incomplete. Available figures, however, indicate that in both public and private schools of this type at least 3,300 children were engaged in sense training or kindergarten work and between 10,000 and 11,000 were in the elementary grades. The combination of these two figures represents about 76 percent of the total number of children of elementary school age (5 to 14 years). In addition to the regular work of the elementary grades, training in household duties, in music, in physical education, general shop work, and various other vocational subjects is given in many institutions to all who can profit by such activities.

7. Items necessary for computing per capita cost were reported by 50 public and 24 private schools. The per inmate cost for total current expenditures was $248.51 in the public institutions and $524.28

in the private ones. The per pupil cost of instruction alone in the public schools was $51.83; in the private schools it was $120.05. No doubt the wide discrepancy between the figures for the two types of schools is due partly to the difference in size of total enrollment, the very small schools necessarily incurring a larger per capita cost than the larger ones. It is also true, however, that some of the private schools have been more progressive in their educational methods than have been some of the State schools in which little has been done save to give custodial care. This fact, too, may account to some extent for the larger per pupil expenditure. Other factors influencing this situation are salary schedules, size of classes, and type of pupils for whom educational facilities are maintained.

RESIDENTIAL SCHOOLS FOR DELINQUENTS

1. Of all residential schools, those for delinquent children seem as yet farthest removed from the general educational programs of the States, although progress is being made in the development of true educational ideals in their administration. All too often, however, the emphasis is still being placed upon punishment and correction rather than upon guidance and education.

2. It is usual to find the administration of these institutions placed under boards of control, departments of correction, of public welfare, or similar agencies. The State department of education has practically nothing to do with them. The extent to which child guidance ideals function in their programs depends upon the vision of the individuals comprising the administrative personnel. If as in some States (including California, Illinois, Massachusetts, Minnesota, New York, Ohio, Pennsylvania) there is a bureau of juvenile research or other State agency specifically charged with the study and treatment of behavior disorders among children, both in and out of institutions, one is more likely to find a wholesome approach to the problem of the delinquent who for his own sake and for the sake of society needs to be separated temporarily from the community and be given the type of guidance that can come only through a 24-hour-day program. If on the other hand the concepts of the outworn "reform school" are still attached to the institution, with emphasis placed upon restraint rather than upon the encouragement of legitimate outlets for self-expression, one can hope for little constructive help to come from it in its effect upon the life of the boy or girl entrusted to its care.

3. Probably because so many of the institutions involved still have not adopted the educational point of view in dealing with their problems, it has been difficult to secure the data needed to formulate a comprehensive survey of the situation. Repeated requests sent to

those not reporting failed to bring replies. Of approximately 175 institutions believed to exist, some report was available from 117 public schools and 30 private schools.

4. Most of these private schools receive considerable financial support from the States for the care of the children committed to their supervision. In fact, over 60 percent of the total income of all private schools reporting is derived from public funds. Thus, regardless of where the responsibility for juvenile delinquency lies, the public treasury provided in 1930–31 seven eighths of the funds used for the care and education of this group. The total amount so reported was almost $14,500,000.

5. Because of the incomplete nature of the data available, the summary figures given cannot be considered final. Moreover, the turnover of the population in these schools is so great from week to week and almost from day to day that it is difficult to arrive at accurate figures regarding the size of the total enrollment. On the basis of the data reported it is estimated that more than 57,000 young people were enrolled at some time during the year in these institutions. Approximately 70 percent of these were boys and 30 percent were girls. The average daily enrollment in school classes for the same year was about 34,000.

6. The public institutions giving information as to racial status enrolled 25,976 white and 4,958 Negro pupils, and the private schools reported 7,620 white pupils and 1,297 Negroes. The ratio is approximately 1 Negro to 5 whites. In the total population 5 to 20 years of age in 1930, as reported by the Bureau of the Census, there was only about 1 Negro to 8 whites. Nearly all the pupils in these schools for delinquents are between these ages.

7. The average number of pupils for the year and the total expenditures for current expenses were reported by 68 public institutions and 14 private schools. The per capita cost for current expenses (including instruction) computed on the basis of these figures is $390.39 for public schools and $428.63 for private schools.

STATISTICAL SUMMARY FOR ALL SCHOOLS AND CLASSES REPORTED

In table 3 is presented the total situation for both residential and day schools and classes in the United States so far as it has been reported. It seems safe to say that approximately 250,000 exceptional children are receiving the benefits of instruction in special schools or classes of either residential or day school type and that more than 13,000 teachers are engaged in such instruction. A sum of more than $20,000,000 was reported as expended during the year for instructional purposes.

The numbers seem large, yet the need is much larger. If the American ideal of an education for every child according to his need is to be met, then there can be no halting in our program until it includes the many hundreds of thousands—even millions—of children who are still outside the pale of special educational facilities, yet whose need of them is urgent. The goal can be expressed in no more effective way than in the simple sentence made famous by the White House conference: "We must not leave one of them uncared for."

TABLE 3.—*Summary for the United States for State and private residential schools for exceptional children, 1930–31, and for special schools and classes in city school systems, 1931–32*

Item	Blind and partially seeing	Deaf and hard-of-hearing	Mentally deficient	Socially maladjusted (uncorrigible and delinquent)	Delicate children	Crippled children	Speech defective	Mentally gifted	Total

tate and private residential institutions for crippled children are not included in this study The number of these is small
The number of additional cities reporting special provisions but giving no enrollment figures or enrolling fewer than 5 pupils is as follows Blind and partially seeing, 18; deaf ard-of-hearing, 28; mentally deficient, 32, socially maladjusted, 12; crippled children, 50, delicate children, 14, speech defective, 65, mentally gifted, 4.
This should not be interpreted as 1,082 different cities, but as so many different day-school units of provision for special education in city school systems
For schools and city school systems reporting this item.
Expenditures.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D. C, February, 1933.

SIR: One of the seven objectives of education adopted by the committee on the reorganization of secondary education was "worthy home membership." Adoption of this objective has led to a reexamination of provisions for homemaking education. I have called a number of regional conferences at which educational leaders and scientists in various fields of knowledge have considered the problems of the home and homemaking education. In order that the many persons who were not able to attend these conferences might have the benefit of the discussions, the addresses representing various points of view have been digested in the following Symposium on Homemaking Education. I think that an entirely new course in homemaking education may result from the philosophies advanced in these papers. Consequently, I recommend that this manuscript be published as a bulletin of this office.

Respectfully submitted.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR

FOREWORD

At the call of the United States Commissioner of Education, six homemaking conferences were held during the past two and a half years. The first of these, national in character, was held by the Office of Education in Washington, D. C., on December 6–7, 1929. This gathering recommended "that the United States Commissioner of Education be requested to call a series of regional conferences in other parts of the United States to consider further the place and function of home economics in American education, the curriculum content of home economics in the schools and higher institutions, and that small selected groups of representative administrators and home economists be invited to attend the conferences."

Complying with these recommendations, Commissioner Cooper called the first regional conference at Cincinnati, Ohio, March 21–22, 1930. This conference was attended by leading educators from Ohio, Pennsylvania, Illinois, Indiana, Tennessee, Kentucky, and West Virginia. Their deliberations are briefly reported in Office of Education Circular 16, 1930. And the June, 1930, number of SCHOOL LIFE contains the address by Robert N. Chenault, director of the Richard Harding Memorial School, Richard City, Tenn., on "How Home Economics Improves Home Life"

On November 10–11, 1930, at the Iowa State College of Agriculture and Mechanic Arts, Ames, in cooperation with the University of Iowa, the second regional conference was held with the West North Central States—Minnesota, Iowa, Missouri, North and South Dakota, Kansas, and Nebraska. Four of the major addresses of this conference were published in Office of Education bulletin entitled, "Home and Family Life in a Changing Civilization." The demand for this bulletin soon exhausted the supply, and the issue is now out of print.

In April, 1931, the third regional conference of the Inland Empire States, including Washington, Oregon, Idaho, Montana, and Wyoming, was held at Spokane, in cooperation with the State College of Washington and the State University of Idaho.

On May 2–3, 1932, 350 leading educators of the New England States, including the six State commissioners of education, gathered at the Massachusetts State College, Amherst, Mass., to discuss "The Place of Homemaking in a Program of Education."

The worth of these regional homemaking conferences is aptly expressed by the following New England commissioners of education:

Dr. Walter E. Ranger, Rhode Island Commissioner of Education, in opening the discussion of the New England homemaking conference, said:

Homemaking can not be confined to a careful arrangement of subject-matter and different methods used in the various schools. The needs of our youth and people should serve as a basis for determining our homemaking efforts and projects. . . Perhaps education and the press have shown less respect for the home than for the school, and that we have thought less of ourselves than of others. In homemaking there is an opportunity to conserve the integrity of the home by bringing about a greater honor for it. This respect for one's home is basic to State, national, and world loyalty. In fact, it is the very genesis of patriotic citizenship, and therefore the school curriculum should give to household arts a larger place, just as we hope that the school will provide a larger practical education.

Dr. Ernest W. Butterfield, Commissioner of Education, Connecticut, chairman of the committee to submit some significant suggestions of the New England conference and their subsequent outcomes, reported:

We express to Doctor Cooper, United States Commissioner of Education, our appreciation of a well-planned, effectively organized, and productive New England conference on homemaking.

We declare to Doctor Thatcher, President of the Massachusetts State College, that we have enjoyed his hospitality and that of his institution of learning.

This conference further recommends that at the State conferences proposed, we, the members of this conference, define and declare the scope and the extent of school courses and educational instruction that we hold essential for adequate homemaking.

This conference also recommends that its members, in their public addresses, in their private discussions, and in their conferences with those who direct the financial and administrative policies of our public schools and other educational institutions, declare that, in a changing civilization of all educational offerings the social sciences are most important, that we may live together well; next in importance are the arts, the skills, and the recreations, that we may live happily; then the vocations, that we may live prosperously; and last, the academic subjects, that we may live traditionally.

Dr. Payson Smith, Commissioner of Education of Massachusetts, in closing the New England homemaking conference stated:

The one blessing I would like to have come to the schools of Massachusetts this year is not the blessing of money, rather that the resources tied up in our teachers might be released.

How rich the work of our schools would be this year if the resources of our teachers might be fully realized; and I say that too of our homes. There is no laboratory anywhere so promising as the laboratory of the home itself. We ought to cultivate a faith in education as it is related to that institution. We believe that education can change social conditions, that it can bring about better human relationships, provided that confidence and hope can be added to it Then, there is nothing that we may not achieve.

My word to Doctor Cooper is one of appreciation for the suggestions as to what we ought to be doing; for filling our hearts with hope and confidence that we may move forward to improve that most basic of all institutions, the home.

As a result of the recommendations made by Doctor Butterfield's committee, two New England States have already held homemaking conferences with representatives from their respective educational, civic, and welfare organizations to consider the place and policies for the new homemaking education.

This conference was followed by one held at Minneapolis, with the National Congress of Parents and Teachers, on May 16. Home economics representatives from the Federal departments, the American Home Economics Association, public schools of Minneapolis and St. Paul, Minn., and the University of Minnesota presented to parents, representative of America, their philosophies of homemaking education, which appear in the volume entitled "Homemaking" published by the National Congress of Parents and Teachers.

The aim of this bulletin is to set forth some of the views on the needs for homemaking education as expressed by those attending the various conferences, and who are laboring with the educational, economic, and social problems surrounding present home life, with the hope that the constructive suggestions made by these experts will lead to the building of a homemaking program which will develop in boys and girls alike an appreciation for, and a desire to participate in, the daily activities of home life, as well as an intelligent understanding of the factors involved in sound home life.

The Commissioner's challenge to those responsible for the homemaking program is vigorously supported by leading social scientists in their clear-cut analyses of the forces now at work which are bringing about serious changes in present home and family life, if perhaps not disintegrating influences that are bearing down upon the Nation's institution fundamental to its future security. These pronouncements are met by proposals from school administrators, home economists, and two outstanding parents for educational adjustments imperative to the achievement of a comprehensive educational program for better home life in America.

EMELINE S. WHITCOMB,
Senior Specialist in Homemaking Education.

A SYMPOSIUM ON THE NEW HOMEMAKING EDUCATION

THE CHALLENGE

Needed: A Comprehensive Educational Program for Better Home Life in America

I. AS THE UNITED STATES COMMISSIONER OF EDUCATION SEES IT

WILLIAM JOHN COOPER

If homemaking is to justify its place in the curriculum, it must prepare young men and young women to make homes. This it does not do fully now, nor does it reach hardly any of the men. I am thinking of courses that will involve the fundamental sociological principles underlying the making of homes, of those principles which underlie a very happy married life, and of those facts which are necessary for one to know if he would raise children successfully.

To embody all of these things in courses of instruction will take much planning. It is in the interest of doing this sort of thinking that we are holding these conferences. Your help and enthusiasm are invited. If we can only make a successful beginning of this work I feel that it will be worth doing, at least on trial, to show the way in which it can be done.

The change in the economic position of women has brought many new problems, some of which affect men as well as women. The attitude of the average man toward marriage and the home must be changed if we are to retain permanence in the home life with the economic influences gone. A happy marriage now is largely a question of psychology.

I know that some have abandoned the home-economics philosophy which devotes most of the time to teaching skills in food and clothing, but I fear that there is still in most schools too much time spent in the development of skills. This is not true only of home economics but of other school subjects. In our teaching, we have failed to realize that, in the last decade or two, society has undergone great changes. Teachers are not alone in this. Periods of unemployment come because business men lack the vision to see and understand economic and social changes. Large-scale production and increased efficiency in all lines of industry must eventually be followed

ing vacations he had the double job of driver and timekeeper for a road-building contractor, and under the guidance of the parental-school superintendent, Tony put his money in the bank. At high school he played on the football team, coming "home" every night to the parental school, where he did his chores for his board and room. Strangely enough, Tony began to be invited out to parties in the neighborhood in spite of his parental-school history He was a good looking chap—clean-built and clean-spoken. Mothers of girls told the parental-school superintendent they had no fear of Tony's being anything but a gentleman.

Tony finished high school and is now at college. He plans to be a teacher and an athletic coach. Every summer he comes back and works for his contractor friend and puts his money in the bank. A year ago he had an offer to play semi-professional baseball. He wrote home to the parental school that he could use the money all right, but as a future teacher he "didn't care to do the things those guys did," so he guessed he would build roads again.

Tony's case emphasizes the importance of the home life as an educational factor. What made Tony "sick to his stomach" amid the ducks and hens of his south Seattle home? The arithmetic he had learned? What made him decide he didn't care to play semiprofessional baseball? The geography and history he had studied? Nobody would seriously say so.

Rather was it the life he had led—the regular hours, the well-cooked food, the frequent shower baths and the plunges in the lake, the wholesome play, the thoroughgoing work, the clean linen, the interest of friendly teachers, the ambition to be one himself—these things made Tony a new boy. He was getting arithmetic and geography and history at the regular day school he first attended, but the school's influence was slight when compared to the influence of the filth of the ducks and hens, and of the nightly trips to the railroad yards for coal and grain.

The fact is that the school is only one segment, can hope to be only one segment, of the total cycle of the educational experience of the child. Any scheme of education will fail that does not connect the school with the other segments, that does not take into account the other educative agencies in the child's life—the home first, the church, the streets and playfields, the theaters, the news stands, and all the rest; but the greatest of these is the home, for it, in a measure, controls all the rest.

CHARLES A. RICE

Superintendent of Schools, Portland, Oreg.

Home economics should be in the course of study of every girl. It should be considered a part of her education. Every girl needs training in sewing and cooking, and in better and more healthful living. She needs a knowledge of practices enabling her to live more intelligently, to rear children more wisely, and to adjust herself to the community with a maximum of efficiency.

by shorter working hours—a shorter day or shorter week—or by prolonged periods of unemployment unless foreign trade can be developed to utilize this surplus for other goods.

It is to improve our vision and change our ideas, and not to give a specific program, that regional conferences on home economics have been called.

The time is here when education must part from its hard and fast division of subjects and attack projects. I know of no reason why the project method should not have a determining effect toward parenthood later. If this is done, it will be necessary to make over homemaking education. Instead of being considered a fad or frill of the curriculum, to be dismissed when hard times come, it will become one of the last things to be dispensed with.

When homemaking education ministers to boys and girls, and to 100 per cent of them as work in which they must all participate, then it will be an indispensable subject. We are looking forward to that day, and it is toward that end that we are holding regional conferences to see what we can get from you who are working in the field. Many of you are anxious to do these things, and we are hoping that your curriculums will come to the point where they will take in the whole family and will include subjects which are necessary for the boys as well as for the girls. To justify its existence in the school curriculum, homemaking education must teach young men and women how to make homes.

II. AS SUPERINTENDENTS OF SCHOOLS SEE IT

WORTH MCCLURE,

Superintendent of Schools, Seattle, Wash.

Education is not something inflicted from without. It is something that buds from within, as I shall show in the following illustration:

Tony was assigned to the parental school by the juvenile court with his older brothers. They had been caught more than once stealing coal and grain from the freight cars in the railroad yard. Tony's father was vociferous in his denunciations of his wayward sons, just a bit too vociferous, but the juvenile authorities could not prove that he sold the coal and fed the grain to his chickens and ducks, so they did the next best thing, which was to take the boys away from him and send them to the parental school.

When Tony was 11, he was released to go home one Monday morning. On Wednesday he was back at the school. He liked it better than home, he said, but he was sent home again regardless of his protestations. After another couple of days he was back again. "I can't stand it at home," he said, "It's so dirty there. They throw their garbage out in the back yard and the ducks and chickens come right into the kitchen, and it smells so I can't eat. I get sick to my stomach. Honest, I'll run away if you don't let me stay here!" Tony was allowed to stay. When he finished the eighth grade, he was a big strapping fellow and he was given a job to work for his board and room while he attended high school. Dur-

Too few of our girls are enrolled in home-economics courses in high school. The numbers have been increasing slowly in our own school system in recent years. We often wonder why the number is not larger. Is it because home economics is a required subject for all girls in the seventh and eighth grades and, when these pupils get to high school, they desire to leave behind the things they had in grade school and take something new and different? Are they "fed up" on cooking and sewing? Are girls who take these subjects in high school considered by other students too domestic and left outside of the group who are considered "society" in the school? Or is there some other reason? Our task is to locate the reason and try to remove it.

Classroom instruction in home economics should keep pace with the changing order of things in the world about us. No longer can the schools proceed with a smug complacency, considering only things inside the classroom—the textbook, the course of study as an abstract guide, or the program of recitations, disregarding the moving, changing world outside. Even if we train in a definite, practical way for functioning now, when the student leaves school the procession will have moved so far forward that he will be several steps behind. Frequent adjustments are therefore necessary.

The home no longer furnishes the odd jobs and chores that formerly kept girls employed and gave training in habits of industry. As a result, to-day leisure time hangs heavy and idle hands find mischief to do. A century ago the home in which the girl was reared transformed the raw materials of clothing and food into the finished product for the wardrobe and table.

Regardless of these changes in the duties of the home to-day, there are the same former home responsibilities that some one must carry—spending wisely for the necessities of the family, caring for the health of its members from day to day, promoting correct and wholesome relationships among them; in short, providing training which was formerly given by the wise mother. These tasks, and others, can not be neglected if we would pass on to each succeeding generation those things that make civilization better and more refined.

Constant adjustments are necessary in home-economics training to set right standards, give a sense of values, reach into the poorest home and through it help the parent toward things that are higher and better, and realize that home is more than an aggregate of shelter, food, and clothing. Progress rests largely on home standards, and home economics is a most important factor in setting the standards of the home.

There is unrest and confusion in the world to-day. Society is more complex than it has ever been. Production exceeds consumption. Either we have too many workers or not enough consumers, or the consumers do not have needs and wants enough. Their

buying power is too limited. Since uncertainty and unrest exist outside of the home, anything that the schools can do to make the homes of the Nation orderly, systematic, contented, efficient, and attractive is very much worth while.

The future depends largely on our young people. If they are trained properly they will play their part courageously and their genius will help solve many of the most intricate problems that society has ever faced. The first requisite of a human life is the need to be fed and clothed, to be healthy, and to be clean. The health and happiness of the household are largely in a woman's hands, be she mother, wife, sister, or daughter. Is it too much to hope that some day household economics will no longer be an elective subject but will be required of every girl who is graduated from high school?

III. AS COLLEGE PRESIDENTS SEE IT

ROSCOE W. THATCHER

Former President, Massachusetts State College, Amherst

Collegiate training is preparation for living, in homemaking education, as truly as in any other type of education. Preparation for living involves living with others, not merely the performance of daily routine tasks. The acquisition of handicraft skill in the latter ought not, in my judgment, to constitute any major part of the time or effort of a college student. Preferably, it ought to precede the college course, but if this is impossible it must be done in postgraduate days, much as is required by the medical interneship.

Collegiate education in home economics ought to be on the same level as collegiate education in any other field. It should be based on sound fundamental training in the physical, biological, and social sciences, with the application of this to the vocation of homemaking shown by special home-economics instructors, whose vocational or professional pride will insure high standards of approach and of technique in their courses. The professional side of the problem involves the preparation of teachers and research workers for advancing the field of knowledge and the levels of instruction in home economics. I believe that the time has come when this should be recognized as on the same basis of preparation and standards as any other field of vocational education and requires provision for graduate school work which shall afford high-grade preparation for professional workers in the field of home economics.

In short, vocational education in homemaking has a distinct place in the educational program of our country at every level from the short course of the trade school to the graduate school of a university. While it may be a little time yet before it is classed as one of the

"learned professions" it certainly has arrived at the place where it is one of the "pursuits of life" for which the Morrill Act of 1862 intended to establish a "liberal and practical education."

JAMES L. MCCONAUGHY

President, Wesleyan University, Middletown, Conn.

Whatever the profession of college graduates, an overwhelming majority of them, men and women, are going to be homemakers. They are going to be married and are going to establish homes and rear families. It is the time when boys and girls are thinking of marriage and the establishment of a home, and it is a wiser age in which to bring such questions to the fore than in the high-school age.

Certainly it is true that if the people who are not immediately concerned with the school profession are going to have any concern about educational matters from the standpoint of sound home life, the college graduates of to-day are the ones who are going to give that leadership of to-morrow

The more we can suggest to young people that the establishment of the right kind of relationships between husband and wife, and between child and father, without religious or moral dominance, the better it will be for all of us. I regret the freedom of modern youth to-day, but the open frankness with which boys and girls can discuss such matters is vastly better than the smirk which used to go with a morbid attitude toward sex. I think we are making real progress, and that is going to help us with the problem of training.

The girl of to-day is as well educated as the boy she marries. She is also economically independent. The day is gone when a woman looks to her husband for an economic status. A man is not conferring a great favor on a girl when he asks her to marry him. There is a partnership that goes into marriage to-day which is vastly different from that of yesterday.

These are days of great opportunity, of challenging responsibility for all of us, whether as fathers or mothers, or as teachers in schools or in colleges, to help these boys and girls who are going to be the founders of what should be the very best of homes to-morrow.

I believe increasingly, the college, as I know it, is conscious of the need of training, or trying to do something along that line. College is a preparation for life—for marriage and for making a home—rather than for the making of a living. Much time should be devoted to education at the college level for marriage, parenthood, and family life. Women's colleges are doing much more along this line than men's colleges at present. The departments of physiology, hygiene, psychology, physical education, and sociology can contribute much to this important field of education.

Modern life has radically changed marriage. One of the most potent tests in the eyes of society at large was the kind of a home that college graduates were going to have. If the home does not bear testimony to the kind of broad training for social responsibilities which they should have attained from the college experience, something is radically wrong in the way in which the college is discharging its responsibilities. The ideal home and family is one in which two elements are mingled—the element of emotion and the element of brains. The type of marriage where you pick out your mate by the scales lays a very poor foundation for a relationship for life that mingles the emotions as much as the finest type of marriage does. Fundamentally, this problem simmers down to an individual need, and recognition of the fact that there is a responsibility and opportunity of helping boys and girls of college age to achieve for themselves, with the help of older people, the establishment of their own homes and families.

155503°—33——2

THE FORCES AFFECTING HOME LIFE ANALYZED BY SOCIAL SCIENTISTS

I. THE ECONOMIST

KARL E. LEIB

Professor of Commerce, University of Iowa

A. FAMILY SATISFIES HUMAN WANTS

If we approach the study of the effect of recent economic changes upon home and family life by first asking what wants of human beings home and family life tend to satisfy, we have at least set up a definite method of approach to our problem.

In speaking of home and family life, this paper refers to a cooperative organization, socially approved and sanctioned, having among its primary purposes the rearing and protection of children; the gratification of the need for affection; and the provision for comfort, protection, and seclusion. Such an organization may also secure economic advantage for its members, facilitate the winning of social favor, lead to sympathy and assistance in common interests, and provide an agency for education or training. . . .

The next question to be considered is: What changes, for the purpose of our discussion, may be considered as having recently taken place within the United States? It will perhaps be best to select those which show a significant shifting of conditions affecting the family, whether the shift has been taking place over a period of several generations or whether it has become noticeable within the last few years.

B. CHANGES AFFECTING HOME AND FAMILY LIFE

The survey of recent economic changes which was completed under the auspices of the National Bureau of Economic Research in February, 1929, represents the opinion of a carefully selected committee, headed by Herbert Hoover, and composed of business men, educators, economists, statisticians, Government officials, and representatives of the more prominent associations and learned societies. Their studies were carried on under unusually favorable conditions. From their conclusions have been selected certain changes whose nature, effect, and significance in their relation to the family may now be considered.

1. POWER-DRIVEN MACHINERY

We readily accept the statement that we are living in a period in which production is based upon an increasing use of power, but it is

doubtful whether we as yet can fully grasp the implications of such a situation. Since 1850 we have been engaged in the process of substituting power for labor. We have been transferring skill from the man to the machine. By such devices as the drilling jig, the drill press, and the automatic lathe, we have made possible the production of thousands of units of output where but one was possible before. Accuracy of measurement within millionths of an inch has made possible interchangeability of parts which has centralized production and minimized delay in making repairs.

In order to provide the capital necessary for large-scale production it has been necessary to change the form of the business organization from the individual enterprise to the corporation and thus to make possible the utilization of even small savings for the furtherance of business. The capitalization of the average steel industry in 1850 was approximately $50,000. To-day the United States Steel Corporation has a capitalization approximating $2,000,000,000 and the Supreme Court of the United States has held that this tremendous organization is not a monopoly in a sense which would justify its dissolution in an action based upon the Sherman Antitrust Act, because it controls less than half the output in its own line of business. Other great businesses familiar to us are of almost equal importance in our organization for production.

Through the growth of corporate activity, management has been gradually separated from ownership of capital, and the majority of the owners of common stock in many of our great enterprises have neither voice nor interest in the direction of the affairs of the business, so long as the dividends are regularly paid. The management and direction of industry are rapidly evolving into a specialized and highly technical profession for which years of intensive study and training as well as practical experience seem likely to be necessary within the near future.

The introduction of electrical machinery since 1900 has pushed out the margin of the territory to which power may be transmitted from the source of generation. From a local use the distance advances to 50, 100, 200 miles and more as modern methods of insulation and improved apparatus are introduced. The power of the waterfall in the mountain is transmitted to the city on the plains and people congregate and build their dwellings about the centers of production and transportation.

The occupation of the people changes. The proportion of total population to be found in the cities goes, by 10-year periods, from 29 per cent in 1880 to 35 per cent in 1890, 40 per cent in 1900, 46 per cent in 1910, 51 per cent in 1920, and 56 per cent in 1930. People tend to group themselves near those locations where employment is to be had. Consequently cities spring up at centers of production or dis-

tribution. Power is increasingly substituted for the simpler forms o labor and people become makers, tenders, and supervisors of machines Production of goods to satisfy human wants has become predomi nantly a machine process and the groups of machines used for pro duction are located in such a manner as to secure the best possibl balance between the cost of securing raw materials at the factory an transporting finished products to the consumer. Production and trans portation centers complement each other and a New York, a Chicago or a Philadelphia becomes a beehive of industry and a congested center of population.

This substitution of power for labor and concentration of labor in centers of production and transportation have had their effect upon production. Power is equivalent to a greater supply of labor. The division of labor and the supervision of machines by men would have increased production even though there had been no change in methods or technique, assuming the existence of an adequate and remunerative market. Along with the increase in available labor has come an improved technique of management, however, which has enormously increased the possible effectiveness of labor. The achievements of Taylor and of the students of management who followed him have now become so well known that it is unnecessary to recount them. It is sufficient to say that practically every great nation which is interested in manufacturing has made a study of modern American methods and has to some extent adopted them.

It therefore becomes possible to create tremendous quantities of manufactured goods in a remarkably short period of time. Annual production increased from $1,000,000,000 in 1849 to $11,000,000,000 in 1899 and $63,000,000,000 in 1925. The value of income from crops and animal products on farms in the United States was estimated by the United States Department of Agriculture at about $12,000,000,000 in 1925. The occupation by which most of our wants are satisfied is now closely and unavoidably related to manufacturing activity.

2. GROWTH OF MARKETS

Increased markets were necessary to absorb the tremendous output which improved methods of production had made possible. Various methods of stimulating wants and providing increased purchasing power were developed. Stimulated by the needs of an expanded productive organization and increased wealth, as well as by the necessity for increased credit, our banking system grew in power and resources. With the introduction of the Federal Reserve System new forms of currency were made possible and the purchasing power of a gold dollar in the vaults of the Federal Reserve banks may be multiplied considerably by the time it takes the form of loans made to customers of the Federal Reserve member banks.

Through bank credit it has become possible to procure ready cash without being compelled immediately to dispose of other forms of property in which money may be invested, and it is also possible to utilize future income before it has actually been realized.

The development of installment buying, whereby goods of reasonably long life and stable value may be purchased and payment spread over a considerable period of time, has been one of the interesting developments of the past few years. We may regard with apprehension the possibility that inexperienced buyers may be misled by ill-founded delusions of wealth and may consequently make injudicious purchases, but if experience up to the present time can be relied upon, there are at least some fields in which such a system of credit may be useful.

3 IMPROVED MEANS OF COMMUNICATION

Along with accumulation of wealth and increased buying power there has been a development of improved means of communication. Railroads, automobiles, paved highways, and even airplanes have made possible greater and greater increases in the speed with which commodities may be moved to market. The increased speed and facility with which raw materials may be assembled for purposes of manufacture and new processes by which perishable commodities may be preserved during transportation have helped to push out the boundaries of possible markets. It should be remembered in this connection that the area which can be included within marketable distance of a given point increases not as the direct proportion involved in the increase of speed, but rather as the proportion between the squares of the original and the increased speed. The real significance of the transition from the ox team to the silk train and from foot travel to the airplane is greater than is generally realized. It is true, of course, that the consuming power of a market does not increase in direct relation to its area; but within areas of more or less equal density of population and relatively constant earning power the effect of increased speed of transportation would be great.

An interesting feature of an increasingly mechanized civilization has been the development of what may be termed "mass services." The committee on recent economic changes of the President's Conference on Unemployment mentions the application of the philosophy of large-scale production to service functions and gives the following as illustrations: Travel, entertainment, education, insurance, communication, and the facilities of hotels, restaurants, delicatessen stores, steam laundries, and public libraries. This development is interesting in that it provides an occupation for many persons who find themselves displaced by machine processes and perhaps significant in that many of the functions now carried on as organized services were formerly incidental to home and family life.

4. RISE IN THE STANDARD OF LIVING

With an increasing real wage and increasing public expenditures for social services it seems clear that the standard of living or quantity and variety of goods and services which are within the reach of an ordinarily capable and industrious person has also increased. Hours of labor are likely to be less in industry than on the farm, the 8-hour day has become general, and talk of the 5-day week is more frequent than in times past. With the increase in the value of electric household appliances [1] from $38,748,242 in 1919 to $72,933,274 in 1927, with 4,303,388 washing machines sold from 1923 to 1927, inclusive, with $82,000,000 worth of electric refrigerators (estimated) sold in 1927, and 21,630,000 automobiles registered in 1928, it would seem easier to argue that men are freed from drudgery by machines than that men are being enslaved by machines.

The fact that Bureau of Commerce figures showed 7,500,000 radio sets in use in homes on January 1, 1928, indicates a standard of living and possibilities of leisure which the idealized laborer of an idyllic agricultural civilization might have found it interesting to contemplate.

Our newspapers and even the much-abused movies have done much to spread the desire for such a mode of life to less fortunate peoples. China, Malaysia, and India—to say nothing of more modernized nations in South America and Europe—have had opportunities to see and envy the possessions of what they believe to be the typical American. It is true that at the same time they have been given impressions which are not so flattering to our character and mode of life, but a demand for the good things of life is being created which must in time be felt and reckoned with.

5 UNBALANCED ECONOMIC SYSTEM

The vast extent of present-day markets and the tremendous scale of modern production have brought about a degree of interdependence in our national life which is still hard to realize. One manufacturer of low-priced automobiles decided not so long ago to make a decided change in model. For months, pending the production of the new car, his factories were closed while new machinery was being installed and new processes prepared. The result was that the total freight-car loadings for the whole United States fell off to a marked degree and dealers all over the country were left with money invested in showrooms in which there were no cars to show and sales forces who had nothing to sell. Employment in Detroit was seriously curtailed and markets for raw materials were affected.

---

[1] Under household appliances are included vacuum cleaners, flatirons, domestic ranges, air heaters, percolators, toasters, waffle irons, and grills.

A change in the style of women's clothing, resulting in the use of less material, has seriously affected the market for cotton and threatened the continued existence of the present form of organization for production in the woolen industry. The farmer alone has preserved something of his former independence, but the farmer without modern machinery, automobile, radio, or mail-order catalogue would lead a troubled life. The prosperity, and even the comfort, of each of us has come to depend upon the soundness and prosperity of our whole productive system.

If this be so, it behooves us to look to it that no pains be spared to maintain that prosperity. What progress are we making in that direction? Intelligent guidance of such a complicated system requires a better understanding of its characteristics. Not only does it seem probable that a new profession, that of business management, must be evolved, but better education of the public in general is necessary if the skilled manager is not to find his efforts balked through lack of understanding and sympathy on the part of the general public. The increased sums which are being spent on education, increased enrollment in our schools and universities, and the development of schools and colleges for the intensive study of business and of our economic system are steps toward a planned control of production and a more intelligent adaptation of effort to needs which should ultimately lead to increased welfare for all.

Desirable as this end may be, it will be necessary to have a more exact knowledge of the consuming habits of the public and a more definite control of production than has been possible up to the present time in order that definite purposes and standards may be set up and that they may be supported by popular sentiment.

6. CHARACTERISTICS OF CHANGED ECONOMIC SYSTEM

Thus we find ourselves in a civilization which is remarkable for the kaleidoscopic variety and rapidity of its changes. Almost before we have adjusted ourselves to one set of surrounding conditions another is upon us with new problems and conditions to be met; and yet in this dynamic system with its constantly forming new combinations certain continuing tendencies are apparent. From the rural independence of the pioneers we shift to specialization and interdependence; from the farm and the accompanying small-scale units of production we change to the factory and the large city with its congested population; from simplicity to scientific complexity. The institutions—economic, political, and social—which had their inception in an agricultural society with a comparatively stable and widely distributed population are carried on in a period of industrial production by an extremely mobile and intensely concentrated population.

7. EFFECT OF ECONOMIC SYSTEM ON HOME AND FAMILY

Against these two backgrounds, agricultural and industrial, let us project our conception of home and family and judge, if we can, what conditions gave rise to such a grouping of individuals, what values were to be found in it, whether these values are now to be found to the same extent, and, if they are not, what new values have arisen or what old ones may be expanded and accentuated.

At this point it might be well to repeat the warning that the family here discussed is the family as it exists in our own homes or those of our neighbors. It is composed of a man and a woman with perhaps one or more children. It is of value in so far as it aids them in more satisfactorily living out their existence or in so far as such an existing relationship is desirable from the point of view of other individuals who compose the society of the age in which they live. It is not an emotional concept evolved out of wishes, imagination, and romance as depicted by the poetry of the Victorian age. Its desirability is modified by the nature and attitude of the individuals who compose it, and by the surrounding circumstances in which they live.

In the past, the family was strengthened by the fact that it was the customary form of organization for production and that the home was in many instances the workshop. In an agricultural civilization the wife performs part of the labor in the fields when necessary, cares for many of the domestic animals, prepares the meals, maintains the home as a place of shelter and rest, and rears the children who are potential laborers. She is a partner in the actual work of production and her disabilities growing out of her sex have a minimum effect upon her value as a worker in the common endeavor. This same condition seems to have been true during the earlier industrial development when weaving was done in the home and even the wife of the miller commonly operated the mill during the sickness or absence of her husband. In the early craft guilds, wife and husband were both members, and in case of the husband's death the wife and not the heirs succeeded to the management of the business. In fact, it would seem that only in comparatively recent years has it been possible for women of the working classes to confine their activities to housekeeping and childbearing.

8 THE STATE'S INTEREST IN THE FAMILY

The State had a twofold interest in the maintenance of the family during this period. In the first place, the family was essential to the system of production by which the wealth of the State was produced. In the second place, a large population was desirable not only for its labor value but also in order to provide adequate man power for large armies which were essential for national protection. For centuries, a wealthy nation without a powerful army would have been an irresist-

ible source of temptation to its neighbors. Hence it was perfectly natural that the concept of the State as a third party to the contract of marriage should be advanced and that legal safeguards should be placed about so important a relationship. Penalties were placed upon irregular relationships. The disintegration of a marriage was permitted only with reluctance, and alimony not only provided safeguards for mother and children, but came dangerously close to being invoked as a penalty.

Before the growth of a power industry the home was also the medium through which certain services were rendered to the child, which are now to a great extent provided by other agencies. Food was produced and prepared, clothing was created from wool produced by the family flocks, and the child was nursed and treated for most of its illnesses by the mother. Such education as it received in trade or craft skill was largely imparted at home until the growth of the apprenticeship system. The home was also the agency through which the customs of society were transmitted.

Under former conditions, certain economic advantages were associated with the foundation of a home. The social and legal system was such that the husband was in fact, as well as in theory, the head of the family. In many instances his wife brought with her a gift of property which became his. He was both manager and owner of wealth produced by their joint efforts. The manner of life was such that little expense was connected with bringing children into the world and the children themselves contributed material services to the family business at a very early age. The father either made use of the children as laborers or apprenticed them to others and received a large part of their wages. Expense for food and clothing was relatively small.

9 THE COST OF RAISING CHILDREN

At present the father exercises much less control over family property and little more than moral suasion over conduct. Dowries have gone out of fashion and in many cases, either by law or by mutual consent, the wife retains her separate property. Children come into the world at considerable expense, contribute little or nothing to the family income, and under modern standards and at present price levels for food and clothing represent a serious outlay of capital. The cost of rearing a child to maturity varies greatly according to its position in life, but $5,000 would certainly be a modest figure and one father has estimated that each of his daughters, at the close of her college career, represented an investment of $20,000. The advantage secured at the age of 50 by the single man who saves his money and puts it out at compound interest is perfectly apparent and helps to explain how the family, from the dollars and cents point of view, may be regarded as a liability rather than an asset. Where

agriculture remains the chief occupation of the people there is no need to worry about race suicide, but the factory worker, living in an apartment, finds the problem worthy of consideration.

The home is no longer the workshop. The old cottage industries, such as weaving, lace making (perhaps as common to the nunnery as to the home), cheese making, and shoe making and repairing, have been taken to industrial plants where motors and machines duplicate the work of human hands. From the production point of view the home bids fair to become a luxury rather than a necessity. Just as ownership and management of capital tend to become separate functions in large-scale production, so the work place has been taken out of the home and has been enlarged and built up into the factory.

Nor is this all. Because of the tremendous importance of the home in an agricultural system, social attitudes and legal provisions were developed which punished the individual severely for variations from ideal home-minded behavior. As a practical matter, alimony became almost a matter of course if a marriage were broken and the wife happened to be minded to demand it. In many instances some social stigma followed the dissolution of a marriage relation which had become unbearable and an actual source of danger to the health and sanity of the contracting parties. Children as well as parents had to bear their share of this burden. Both husband and wife found their social contacts and their activities and modes of recreation seriously restricted because of the relation which had been assumed. However justifiable such restrictions may have been or may be, the fact remains that any person intelligent enough to realize their existence will weigh them before assuming them.

10. HOW VALUABLE IS THE HOME TO-DAY?

Does the fact that the home no longer bears its old relation to economic life, that some of its functions have disappeared or have been taken over and developed by other agencies, or that certain disadvantages and sacrifices may be associated with its maintenance indicate that it has become of doubtful value? Those who see only the apparent increase in the divorce rate, the decreasing birth rate, and other signs of what they consider increasing moral laxity are inclined to view it with alarm, but there is another side to the picture.

The young people of to-day are sometimes accused of being iconoclasts, without courtesy, modesty, or reverence. If there be weight to the accusation, nevertheless there is a certain wistful idealism beneath the skepticism with which their inexperience and distrust of cliques is concealed. The whole world has passed through an experience during the last two decades in which many of our accepted standards were overthrown or reversed, and what had been right became wrong and what had been wrong became right. Add to this the fact that with increasing education we are taught to attempt to

think out questions which the ignorant must leave to authority; that science has taught us that many things which we held to be accepted facts are not even tenable theories; that modern improvements are daily displacing outworn processes; and it is not to be wondered at if questions be raised which to an older generation in a more static environment seemed sacrilege.

It is not the truth, however, which need fear investigation and it may be that in the end the questioning of previously accepted canons will bring a more complete understanding and a more intelligent appreciation of the values upon which home and family have survived. Romantic conceptions must not be allowed to interfere with the intelligent analysis of conditions nor to set up false standards which help to beg the question. It is no service to man or woman to build up an expectation of happiness based on misrepresentation of human nature and the basic conditions of existence. It is not as a dreamer, seeking compensation for his own heartbreak, which should be our goal. Rather it should give us an intelligent appreciation and, if possible, a happy adaptation to what Jack London called the hard, irrefragible facts.

Management engineers have developed a tool known as the "job analysis." It involves the scientific determination of purpose and an equally careful study of the simplest and best way of directing energy to the achievement of that purpose. Such a study of home and family life at the present time with the proper resultant modifications of our social, legal, industrial, and educational systems would be of tremendous value in our national life.

C. SOCIAL VALUES RESULTING FROM HOME AND FAMILY LIFE

What values, then, remain to make home and family worth the effort and sacrifice by which their existence is achieved?

In the first place, here is a tried and proved method of relationship between man and woman which would seem to involve fewer possibilities of harm or danger than any which has yet been evolved. No temporary association will give the community the interest, the confidence of status, the freedom from distraction, the conditions that make for physical and mental health, and the possibility of mutual understanding and sympathy that can be found in the best types of home and family. In view of the training and standards of conduct which the majority of us have accepted, no other relationship can be maintained with the same assurance of continuing self-respect. In this field, as in any other, moderation and self-control have their values, and a series of emotional pyrotechnics may be an unsatisfying and dangerous substitute for a clearer and steadier flame.

If the rearing of children be considered as a worthy or gratifying activity and not a mere incident, there is as yet no agency which

can operate as efficiently as a properly organized family. Judges and heads of charitable institutions have testified that more seems to be necessary to the proper development of a child than mere provision for its physical wants. Interest, affection, appreciation, and intimate understanding can be more freely supplied by even ignorant parents than by the most intelligent and efficient of professional nurses. Affection may degenerate into indulgence, but artificial affection never passes current for the real article. Our schools and nurseries may guide, direct, and educate, but there is a human relationship possible in the home which it is surprisingly difficult to generate elsewhere. The home has a clear purpose in contributing to the rearing of healthy, intelligent, and well-adjusted children.

1. HOME AS A PLACE FOR REST AND RELAXATION

The increasing complexity and the nervous wear and tear and intense competitiveness of our modern industrial system would emphasize the value of the home as a possible center of rest and recreation. Here may be given the opportunity for recuperation which must be had if the human mechanism is to stand the strain of changes in diet and conditions of life. Relaxation of tense nerves, opportunities for quiet study and planning, hobbies which vary the monotony of some types of occupation, proper diet and exercise for the maintenance of physical efficiency, all these give possible developments in usefulness which the home may provide. The argument that the presence of children does not favor such conditions and that the apartment hotel may give the same advantages without the disadvantages is common enough. But no hotel or restaurant gives the individual dietary service which the home may provide. A plan for proper care and development of children without unnecessary pain and distraction for adults is surely not beyond attainment.

Even though some of the economic advantages of a home have been lost in the development of a new type of organization for production, some benefits remain. Two may not be able to live as cheaply as one in a modern home, but there is good reason to believe that two may live in a home more cheaply and much more satisfactorily than in two entirely separate establishments furnishing anything near the same degree of utility and comfort. Combination of certain items of expense for food, light, space, and heat should surely make possible a decrease in the total expenditure. The benefits of efforts during leisure time which result in an increase in living comfort may be shared by two as easily as they may be enjoyed by one.

2. THE NEED FOR MORE THAN SATISFACTION OF ECONOMIC WANTS

It is undeniable that something more than the mere satisfaction of economic wants is vital to a well-rounded and happy existence. There are human needs which must be met, and in the home lies the

opportunity for the creation of the essential gratification of these most important cravings. Here may be provided recognition for the qualities which outsiders may be slow to appreciate. Honesty, kindliness, gentleness, and trustworthiness may be held at their true worth and the little triumphs of outside life may be doubled in value by the fact that they are perceived and shared by those whose good opinion is of value. Affection should be found here and certainty of understanding and sympathy. If these values are not present, we need more knowledge of the reasons which prevent their development and of the technique by which their existence may be favored and promoted.

New experience and some of the greatest adventures of life are surely to be found in the home. The man or woman who has known the unquestioning faith and loyalty of a child or who has faced death or seen it patiently and bravely risked knows that those who live for themselves alone live incompletely. These experiences are facts of life and not romantic fictions. How far does education go in fitting us to bring out in a home the best of which we and it may be capable?

Here lies the challenge to our knowledge and abilities. There seems little question that with the further development of industry we may greatly increase the sum total of goods which may be produced for the satisfaction of human wants. Millions of people are still unsatisfied. There is room in our productive system for utilization of the efforts of every individual if that effort be properly planned and intelligently directed. Women in greater and greater numbers are seeking to find again their places in the productive system, from which in the earlier development of the machine age they were temporarily ousted. There is no reason why they should not again assume a position calling for the exercise of their utmost abilities and permitting them some choice as to the direction in which they will exercise their capacities. If they find happiness in devoting their entire time and attention to home and children, they should have that opportunity. If, on the other hand, they find that under modern conditions many of the functions formerly inevitably connected with the home are now better cared for by outsiders, that children are not the chief interest in their lives, and that childlessness leaves them free for other interests, or that an appreciable portion of their life span is still available after the duties of child bearing and rearing have been performed, then they should not be thrust aside from modern activity under a pretext of gallantry or with a contemptuous reference to home as the woman's sphere. It seems quite probable that there will be not only room for them but also need for them in the economic world.

In office work, as statisticians, as dietitians, in the professions, the work of women is daily becoming more essential. In work calling for

delicate manipulation, such as the handling of small machine parts, in the artistic and literary world as well as in science and education, their services are needed. Our institutions must adapt themselves to this need. The problem of maintaining home values and yet permitting other interests and occupations should not be unsolvable.

D. EXTENSION OF HOME-ECONOMICS TRAINING

If the profession of homemaking can be studied with the same intelligence that the problems of industry are approached the future would seem more certain. If the home of the future can be based upon the voluntary cooperation of independent and self-respecting persons rather than upon social coercion and if the purpose of a home and the attitudes and methods which seem best fitted to the attainment of that purpose can be carefully studied and understood, we may hope to give real education for homemaking.

II. THE SOCIOLOGIST

ANDREW G. TRUXAL
Assistant Professor of Sociology, Dartmouth College, Hanover, N. H.

A. WHICH POSITION?

In any consideration of the family as a social institution, we might take one of three positions. We might join with those who think that they have sung the swan song for another venerable and at one time necessary social institution. The family is going, they say, and we might just as well recognize the fact. These critics, thinking they have stripped this institution of all the functions which at various ages have been claimed for it, say that unless we can find additional services that the family can perform, some more effective agency might well be substituted for it. In the second place, there are those conservative-minded folk who, shutting their eyes to the changes that have been occurring around them, strike out in all directions with vague and meaningless shibboleths, like "the sanctity of the family," "The family is the rock of ages upon which our civilization has been erected," "The strength of America lies in its homes: Destroy the home and you can destroy the foundation of our social structure."

If we had to choose between these two positions, I, for one, would certainly choose the former with all its fantastic reasoning to the latter with all its sentimental and meaningless dribble. But, there is no necessity for us to accept either of them. We can choose the third position, which is to follow the reasoning of those who in a realistic fashion face the multiplicity of changes that have brought about our present society and the concomitant changes that have occurred in the family with the idea of accepting the changes and

making such adjustments to them as seem, in the nature of the case, to be inevitable.

In human society, almost all conceivable types of marriage have been tried at one time or another under varying circumstances. We have plenty of anthropological and ethnological evidence for all variations in the form of the family from the most temporary to the most permanent varieties of union. Whatever the form, however, there has always been marriage in human society, as contrasted with mere mating among the animals, and there has always been some kind of family, however transient and temporary.

B. FUNCTIONS OF THE FAMILY

Just what have been and are the functions of the family? In a supercritical age, when all human institutions are being called before the bar of a pragmatic test, and accepted or discarded on the basis of the results of that test, it seems highly desirable for us to ask the question. To answer it, however, we must look at the family not merely as it is but as it has been. To begin with, the family has performed an economic function. There are those like Sumner, Starcke, and others who would maintain that this was probably the original primary reason for marriage. "Woman becomes indispensable to man 'not on account of an impulse (sex attraction) which is suddenly aroused and as quickly disappears, but on account of a necessity which endures as long as life itself, namely the need of food.'" Marriage is primarily a form of cooperation in self-maintenance and its bond is tighter or looser according to the advantages of the partnership under existing circumstances.[2]

No one will question the rôle that economic cooperation has played in marriage and the family. But, with the old household functions of the woman removed by the mechanization and standardization of life, the economic functions of the woman in the home as complementary to those of the male have disappeared. Not only has the patriarchal conception of the family disappeared in this age of woman's rights, but woman has taken her place alongside man in the factory, the trades, and the professions. She has declared not merely her personal independence but her economic independence as well. "Woman's entry into industry, the trades, and the professions increased from 14.7 per cent in 1870 to 24 per cent in 1920. For married women the percentage employed in 1890 was 4.6 as compared with 9 in 1920. In the professions alone, there were 13.3 per cent of the women and girls engaged in all nonagricultural pursuits as compared with 6.4 per cent in 1870." [3] And this is a movement which will doubtless continue, if anything, with accelerating speed.

---

[1] Sumner, W. G., *and* Keller, A. G. The Science of Society. Vol. 3, Yale University Press, 1927. pp. 1505–1568.

[2] Lindquist, Ruth. The Family in the Present Social Order, p. 19.

The home as a self-sufficing economic unit in which the father, the mother, and the children performed mutually complementary, economic functions is gone. Furthermore, woman is no longer necessarily an economic liability—there is no longer any economic necessity for her to enter the marriage bond. However, it is still true, among certain classes at least, that the wage earnings of both father and mother are necessary in order to maintain higher and higher standards of living, to give the children the most in educational opportunities. Especially is it true that the earnings of the woman prove to be extremely valuable in the case of factory workers to tide over periods of unemployment, sickness, or accident, or any other of the exigencies of modern industrialism to which the male worker is susceptible. Granted that this is not a desirable situation, the fact remains that the work of man and woman is still economically complementary, although in a different sense than under a former agricultural state of society, as a mere cursory reading of a study like Lynd's "Middletown" will reveal.

Suppose we grant that the economic foundation and function of the family have disappeared. Does anyone want to see a return to a home where the wife and mother is a household slave, or a fellow worker in the fields with her husband? There are some few people who yearn for a return of the home as a self-sufficing economic unit. But even those like Borsodi conceive of that situation not as a return to the soul-destroying labor of a previous era but a home thoroughly mechanized, making use of every available household labor-saving machine. But if a Borsodi home is to be the home of the future, we fail to see the trend.

A second important function which the family has performed in social evolution is that of the reproduction of the race. No attempt is being made through our discussion to differentiate sharply between the interwoven problems of marriage and the family. When we speak of reproduction we are thinking of two things: The sex relation and, incidental to it, the production of offspring. In the whole of man's social development, marriage has had the effect of creating a form of union of the sexes which has operated to canalize and regulate that extremely powerful human urge, the sex drive. If we did not have marriage, and the Western World understands that to mean monogamic marriage, we should certainly have to invent or create an institution to regulate the relationship of the sexes and to keep within some limits the expression of the sex drive. To be sure, the institution we have has been far from perfect in this regard. The volume of extramarital sex relationship is large, when we consider that reliable estimates place the number of venereally infected people as high as 10 per cent of the total population, most of which infection results from what society regards as illicit sex relations. But the larger

question is not how inadequately has marriage canalized the sex drive but how great would be the socially harmful effects of not having such an institution.

The second aspect of reproduction is the production of offspring. The human race is bisexual; offspring are the result of the relation between the sexes. Whether or not there is a biological basis for a so-called parental instinct, or whether it is the end product of habit growing out of association, the fact remains that there exists a tie between parents and offspring which is at the basis of the family. One might grant on rational grounds that this means of reproduction is an extremely wasteful, even silly, method of continuing the race. But the hopes of science to simplify the process by artificial processes of fertilization of ova and the growth of the embryo in artificial media, with the possibility, according to Aldous Huxley, of producing 96 identical products at the same time, such hopes are about as chimerical in the present state of knowledge as the far-better known, synthetically prepared foods which have been promised to us in convenient pellets. Such convenient means of securing physical sustenance would indeed be a great boon for our millions to whom the soda-fountain lunch counter has become an inevitable part of daily routine—a decided disaster for those to whom eating is still a ceremony and an art.

But suppose again that we grant that the relation of the sexes and consequent reproduction of the race do not of necessity imply the existence of a family. A third service which the family has performed is that of being the primary group, to use Cooley's well-known phrase, in which the child gets his earliest education and socializing habits. In simpler societies this was an extremely important service. The tendency in modern societies has been to take these functions away from the home and family. At the beginning of our national history, the home was the usual place for receiving the elementary instruction. The public-school system as we know it to-day is an American achievement of the nineteenth century. Three hundred years ago the institutional education of children began with the college. The age has been steadily pushed downward. First, the Latin or grammar school, then the public elementary school, then the kindergarten, and finally, now, the nursery school. Thus has much of the educational function, together with the socializing function of the family, been taken from the home.

Other traditional functions of the home and family have been disappearing, to use the words of Lawrence Frank:

> The care of the sick and the maintenance of health have become institutionalized in hospitals, sanatoria, and clinics, aided by visiting nurses and related personnel who render the care formerly given by members of the family.

Childbirth is increasingly taking place in hospitals, and the care and nurture of the child is likewise moving outside of the home to the clinic, nursery school, kindergarten, summer camp, playground, and youth organization. . . .

For recreation and leisure-time activities, the home has already yielded to the theater for plays and moving pictures, to clubs and associations and commercialized amusements of all kinds. . . .

The provision against the proverbial rainy day is being cared for by social and governmental schemes of pensions, allowances, and tax-supported services.

In the religious sphere, the home and the family are becoming an increasing object of concern on the part of church leaders, while the old-time intimate religious life of the family appears to be fading out or losing much of its former importance and significance.[4]

And Mr. Frank has by no means catalogued all the other functions which have been previously or are now associated with the family. One very important one has been the alliance between marriage and the family and property. We have passed the stage when woman was regarded as property; many European peoples still cling to the bride price and the dowry. With us, the whole problem of inheritance of property, the property rights of woman and children are tied up with the family.

Then there are other functions, such as the less tangible and concrete ones as the affectional and romantic functions of marriage and the family, the gratification of one's vanity, the feeling that one belongs to an intimate group.

Margaret Mead, the authoress of that delightful book "Coming of Age in Samoa," insists that the one universal function of the family is the status-giving, child-rearing function.

When modern writers say that the family among us has lost its function, they merely mean that the western European patriarchal family, which was once a social-economic and industrial unit of a high degree of self-sufficiency, is breaking down, that its disciplinary and educational functions have been taken over by the State and its industrial functions preempted by modern machine production. But all of these are merely functions of the family in our own immediate history—not inalienable functions of the family in human society. . . .

It is worthy of note that were State responsibility for children to be substituted for the present family organization, we would again obtain a type of guaranty for children which the present weak bilateral family fails to give.[5]

After such a lengthy and doubtless tiresome analysis of the functions which the family has performed, it would seem as though the present American family had lost its chief reasons for existence. Yet people are still marrying and founding families. From 1890 to 1920, the percentage of the population 15 years and over that was married increased 4.6 per cent. In spite of all reasoning to the contrary to demonstrate that the function of marriage and the family have one

[4] Annals of the American Academy of Political and Social Science, March, 1932. The Modern, American Family. p. 97

[5] Ibid. The American Family. pp. 27-28.

by one been stripped from it, people go on marrying and establishing families.

Accompanying this increase in the proportion of the population married has been another trend, namely, increase in the divorce rate, or a growing number of family breakdowns. Much has been made of the American divorce rate as compared with other nations. Our divorces are increasing three times faster than our population. We feel ashamed of our record in this regard—and yet with a rapidly changing society, with increased rights for women—with the disappearance of the economic dependence of woman on man—with marriage a completely voluntary act, and above all, with our complete and almost total disregard for *education* for *marriage* and *family making*—I say, with these things in mind, we might have expected a rising divorce rate.

Failure has dogged our footsteps in attempts to solve this problem through more stringent divorce legislation. With the exception of States such as Nevada, Arkansas, and Idaho, the general trend in State divorce legislation during the past generation has been not toward more lax divorce laws, as is popularly supposed, but toward more restrictive legislation. There are some who would have us pass a Federal amendment unifying and standardizing our divergent State divorce laws. Yet the problem of divorce can not and will not be solved by legislation. The hope for its solution lies not in the prohibition of the break-up of families which have already broken up and just await social sanction for the collapse—the hope lies in preventing the causes of the original breakdown. Perhaps one reason why we lead the world in divorce rates is that as individuals we are more ready to admit that our marriage has been a failure and to experiment anew. But always it is a blind experimentation. Through our educational system, we provide little guidance for marriage and family life. We would think a man an idiot who went on an Arctic expedition without making the most thorough and painstaking preparation possible, by consulting all the charts, guides, helps, etc., that were available. Even so, we might brand as idiotic a society that allows its members to marry and establish families (a life expedition) without giving the slightest thought to preparation for the venture. The remarkable fact about this situation is not that many families break down in our present complex society—rather is it remarkable that so many succeed!

C. PRESENT POSSIBILITIES FOR THE AMERICAN FAMILY

The creation of a family and the setting up of a harmonious home in our generation is a more difficult task than has ever been faced before by the human species. So long as the primary motive for marriage and the family was economic interdependence, there was a

bond that could not be broken except at considerable sacrifice to all concerned. So long as the family was the center of child education and nurture, the only recourse in case of illness or old age, the center of recreational activities, the home was necessarily more permanent to start with. But, with many of these functions performed in other ways, what happens to the family? To me, just this happens to the family. For the first time in human history, and by that I mean the entire life of man on earth, we to-day have an opportunity to make of the family that which has never been possible in any previous culture. We can make of this institution a harmonious primary group, giving status to parents and children alike. If there is one fact that is self-evident to all students of human society, it is that man is by nature, or has become, a social being. Man can no more live without his fellows than he can without food and sustenance. "The Man Without a Country" is a pure figment of the imagination—for such a man is no longer a human being. Not only does the group mold the individual in every aspect of his personality so that, in a very real sense, man may be said to be a product of society; but man also depends upon his social groupings, he exalts his social bonds to the point where he is willing to sacrifice himself for the sake of the group. The family has been, and I venture to make the prediction that it will long continue to be, one of the most important, if not the most important, socializing and status-giving agencies that man in his development has been able to devise.

I fail to follow the arguments of those who say that some other group or institution can take the place of the family. Can the play group, the neighborhood group, the fraternal order or club, the State or the Nation, act in the capacity of pater to its members? Can they replace the intimate, face-to-face contacts that in the family take a nonmoral, biological, nonsocial creature and begin the tedious process of transforming it into a moral, social, and, if you permit me to use the word, spiritual being? Personally, I think not, and the whole weight of the experience of social workers, physicians, psychiatrists, and juvenile judges would seem to bear out the contention that a home, even though it be a foster one, is infinitely superior for the making of socially acceptable behavior to any institutional or larger group device that we have as yet tried out.

In the next place, I think we have an opportunity to make of the family an institution in which some of the finer qualities of life can be passed on to the children. I mean simply this, that now in our society, with mechanical slaves to do our work, it is theoretically possible for us to divert more and more of our energies to the cultivation of what older civilizations than ours tell us are the products of mature cultures, namely, the stimulation of interest in the artistic and æsthetic sides of life, the broadening and deepening of our intellects, the cultivation

of a genuinely spiritual outlook as opposed to a crassly materialistic. For this function the home seems admirably adapted. Here is the earliest and most important source of not merely the child's social values, for here the initial stamp is put upon his emerging personality. With the energies of parents increasingly freed for attention to their children, think of the possibilities of inculcating in the minds of the children an appreciation of some of these finer aspects of human life. What chance in a society where the main function of the family was an economic one, where the father and mother were engaged all day in slaving for self-maintenance, and where the children as soon as they were old enough joined the working procession—what chance in such an institution for the development of these higher qualities?

To be sure, such a conception of the family relationship requires an intelligent viewpoint concerning this institution. It requires a higher order of forethought and preparation than was demanded in any previous society. Individuals can not enter such a family without the requisite training. But where are they to get such training? Unfortunately, because we have either been blind to a changing society around us, or we believed that things would right themselves without any outside interference, and we simply held tenaciously to an institution because it was sanctioned by milleniums of tradition, we have not made the adaptations that are necessary to make possible such a family. We have not provided in our educational system or anywhere else for an adequate training for marriage and family life. But we are beginning to appreciate this lag and we are making some attempts to face the problem.

Social work agencies are making some efforts to meet this problem by combining their knowledge of family problems with the expert advice of psychologists, psychiatrists, and social workers to assist in the program of education for marriage and the family. Motivated as their work is by the best intentions, most of their contacts with the situations come just before or after the crises in family relations have been reached, so that as a preventive measure, it falls short. In some of our larger cities, clergymen, with the help of professional workers, are conducting premarital classes and giving invaluable help to those contemplating marriage in such problems as sex life, parent education, keeping a family budget, etc. Parent education has made considerable strides both in and outside academic circles. Home-economics departments in our colleges are facing the problem squarely and adjusting their curricula to the needs of young men and especially young women. Of course, mere theories will not do. What we need in this field is a competent body of knowledge to act as a guide. Just as every individual differs so every attempt at setting up a home and family has its own peculiar problems. However, if we can get a sufficiently large body of knowledge on the basis

of case studies and experiences, we shall be able to generalize effectively enough to reach conclusions that will be universally applicable.

Perhaps the Family Relations Institute of Los Angeles has pointed the way in the short year of its existence. In an organized attempt to provide guidance to marriage and family life, it has accumulated some very valuable data. On the basis of its work so far it has come to the tentative conclusion that the two greatest needs in education for marriage and the family are the sex and economic problems. This would seem to bear out the contention that has frequently been made by judges of domestic-relations courts and others that most marriages collapse on these two issues. To provide for education along these lines not only in our colleges but in our whole public-school system would then seem to be an imperative necessity if we are to rehabilitate the family and to refine its functions.

Several years ago a student of mine asked me if he might have the privilege of writing his major thesis for the department in the field of "sex and married life." Had I not known him so well, I might have suspected that he had some morbid interest in a topic of that kind, but appreciating the fact that he was contemplating marriage, I saw that here was a boy who had arrived at his senior year in college and nowhere in all his educational work had he received what he felt was going to prove absolutely necessary information if he were to embark intelligently on the marriage venture. I encouraged him in the project, and he wrote a very excellent and intelligent paper. I suppose that you would say that is the way all education should progress, through interest to investigation to conclusions. However, it would be idle to say that we have reached a point where we can expect that individuals contemplating the creation of a family will of their own free will make a thorough investigation in advance of the problems that will have to be met. We must provide avenues of guidance which will open up in a thoroughly objective fashion ways to the goal we have in mind.

No, the family is not sacrosanct; it is a very human institution. No, the family is not about to disappear as a social group. But no one who looks at the matter realistically will deny that many of the functions previously associated with the family are no longer performed by it. This simply makes it possible for us to utilize this very valuable institution for the promotion of still higher and more socially valuable ends. But such a conception of the family demands, if it is to succeed, a type of education for marriage and family life which we have not as yet generally provided. As I see the purpose and meaning of this conference, your meeting will be to no end unless you are willing to face squarely this ever-growing need for providing the necessary agencies for training and education leading to harmonious family life.

III. THE HISTORIAN

BERTRAM E. PACKARD,
Commissioner of Education, Maine

THE INFLUENCE OF THE NEW ENGLAND HOME

The typical New Englander has always been characterized by a firmness and vigor of opinion amounting at times to well-nigh sheer obstinacy. He has never been hesitant in advancing his ideas upon all occasions. Whatever his opinions may have been, they have been accurately reflected in his home life. The New England community was ever a religious community, the New England home a religious home.

We must recall that there were in those early days no magazines and newspapers and very few books. The minister and the school teacher were important personages in the community. Frequently they were one and the same person. The clergy were, as a rule, men of learning and of lofty character, and they were held in high social esteem on account of their character and scholarship as well as their clerical position. The long sermon, doctrinal in type and bristling with quotations from the Bible or from famous books of controversial theology, afforded in the long winter evenings the occasion for lively debate in every household. The Bible itself was read in the majority of homes, and prayers daily ascended to the Throne of Grace. Other subjects were thoroughly discussed, especially the political questions of the day. Theaters were unknown, strict observance of the Sabbath was enjoyed, public and private morals were regarded with jealous care, and dancing and card playing were not tolerated.

Every New England farm home was a veritable little world in itself, large families of children were the rule and every household was a beehive of industry. There was no place for selfishness and the children naturally learned the rough-and-ready lessons of give and take. Each home was largely sufficient unto itself. There was little need for money, as outside of the small expenditure for taxes and groceries—tea, coffee, and spices and the like—practically everything was produced on the farm. All the cereal grains, vegetables, beef, mutton, and pork were produced at home. From flax and wool all the clothing was carded, spun, knitted, and woven. The women and girls of the household baked, brewed, knitted, sewed, spun, and wove. Every farm home embraced a carpenter shop, blacksmith shop, cobbler shop, and much of the furniture was homemade. There was no thought of going abroad for any necessity that could be produced or made at home. *Because of these activities the boys and girls became independent, resourceful, and self-reliant. No better training for homemaking could be found than in these early New England homes.* Because

of the lack of such home training in modern days, we find the reason for the introduction into our school curriculum of practical courses in home economics and manual training.

Up to the close of the eighteenth century, the founders of New England thought their own thoughts and went their own ways in a very remarkable seclusion. During the nineteenth century, we find the New Englander and his family, first and foremost at every frontier in the making of America. We find them streaming over the Alleghany Mountains into the central plains. Like a resistless tide we find them swarming across the Rockies, and their westward march was only stayed by the broad expanse of the Pacific. Wherever they went they multiplied their numbers and created new communities patterned after those of their native New England. Always in their wake we find the village church and the village school. So to-day we may find innumerable communities throughout the broad reaches of the West, which are more typically New England even than anything we can find at home. Nearly every little New England hamlet has sent forth its sons to play honorably their part in the making of our Nation. I am taking the liberty to cite one rather interesting example: From a farm home in Maine, still in the possession of the family, where the father was a farmer and country storekeeper, and the mother had been a school teacher, five sons went forth and gained unusual distinction and honor. Simultaneously 1 was Governor of his native State, 2 were members of Congress, 1 from Illinois, and 1 from Wisconsin, and 2 represented the United States Government as ministers to foreign courts. At the same time, their own cousin, native of a little village only a few miles distant, was Vice President of the United States.

In its vital aspect New England and the homes of New England have changed during the years. Economic conditions have so brought it about that our families may no longer be characterized by their size. The admixture and amalgamation of other nationalities have had their leveling effect. More liberal and tolerant religious faiths have leavened the stern orthodoxy characteristic of an earlier day. The fundamental law has removed the teaching of religion from our public schools. Religious education, if it be accomplished at all, must be accomplished in the church and the home. In these days the impulse is under way, a tendency which is bound to grow stronger in the future, that character education must become a part of our public-school curriculum. Of this we may be sure, our children may attain their highest intellectual, moral, and religious development only by the sympathetic and constant cooperation of the home, the church, and the school. No one of these agencies alone can successfully accomplish the task, but through united effort no task can be impossible.

IV. THE HOME ECONOMIST

EMELINE S. WHITCOMB
Senior Specialist in Home Economics, United States Office of Education

Homemaking is in the school curriculum because it contributes to the community educational services dealing with the primal necessities of life, namely, food, clothing, shelter, and the social values of home and family life. *At present* no other school subject is as well prepared to administer these services to the child, the home, or to society in general, as is the homemaking program. This fact is not always clearly understood by all school patrons, or even by all the school officials, as is sometimes shown in such extraordinary times as these when retrenchment is universally considered. We are hearing that in some rural communities, and even in a number of fairly large cities, the home-economics program may be swept out of the school curriculum, or else be very much curtailed. Such action would probably not take place if the indispensable services homemaking education may contribute to the well-being of the home and the child were better understood.

Since the onset of this depression, the emergency services contributed by the home-economics departments throughout the Nation are of notable magnitude and worth.

A. EMERGENCY SERVICES

During the depression period, the hot lunches furnished the children of the unemployed; the instruction offered to children in the grades even as low as the sixth on low-cost dietaries planned for the entire family; and the clothing renovated and made fit by home-economics classes and contributed to children who otherwise would have been denied school attendance have gone far in maintaining family morale, and probably in preventing riots. In some school systems, the entire home-economics program is built around the food and clothing needs for families without breadwinners. In fact, the slogan of the home-economics departments throughout the land is "Let us make the most of what we have."

It is almost the rule that such relief contributed to the needy by the home-economics departments in our public education receives little, if any, publicity, and the value of such services is often minimized instead of extolled.

Everywhere communities are facing the problem: "What shall be the guiding nutritional principles in the present emergency?" In other words, "What best to do with an inadequate amount of money to realize the highest nutritional returns?" This problem challenges the most expert nutritionist and certainly should not be left to the untrained.

To provide, in the diet of the growing child, the nutritional essentials of which a shortage tends to permanent injury, even at the cost of other features in the dietary normally desirable, but not absolutely essential, is a responsibility which if neglected opens the way to infections and life-long injuries to health, happiness, and working efficiency. A child may not grow fat on bread and milk, some fresh fruit and vegetables, but these foods make for sound bone and muscle upon which to build in better times.

B. FOOD AND GOOD CITIZENSHIP

We were told by the White House Conference on Child Health and Protection that, in normal times, 6,000,000 of our children are malnourished. This condition, according to Dr. Ray Lyman Wilbur,[6] is due to ignorance rather than lack of food, to misfeeding, not knowing how, and doing the wrong thing. Doctor Wilbur pointed out that:

> The Nation carries enormous burdens in supporting the insane, the feeble-minded, the imbeciles, the sick, and the handicapped. The children's diet determines to a larger extent than is realized what side they will join—whether it will be the ranks of the fit, where they can care for themselves, or the unfit, where they will have to be taken care of.

He further stated:

> There is a close relationship between food and *good citizenship* and food and *bad citizenship*. Food has a good deal to do with the way we behave, and with the way we resist disease. . . . When the child is dependent upon conditions in which he finds himself, it is worth our while to look over these conditions. . . .
>
> If it is true that ignorance is the greatest difficulty in the United States, isn't it about time for all of us, with all of our schools, all of our experts, to get a distribution of this knowledge so that it will reach all of our children? . . . For, properly nourished children of to-day will not have the bad joints and become the handicapped people of the future. They will be better citizens as they grow. They will resist not only diseases of civilization but the instabilities of various types, the tendency to take drugs, alcohol, morphine, and the like. All may come if the nutrition is bad. In a sound properly fed child, the nervous system does not crave that sort of thing. If the child feels well and is strong and happy, that is the test. The thermometer of good nutrition in children is happiness, for healthy children are happy children, and the kind that are not happy should be studied from the standpoint of nutrition as well as from other standpoints. . . .
>
> Nutrition also has a large function to play in the security of the future government, therefore good nutrition is the most basic of all our human responsibilities.

This, from a scientific scholar of highest rank, who has given years of study to the subject, would indicate that the school's first responsibility is to offer instruction in adequate nutrition *to all* the children from the preschool period through the high school, a first step in realizing a comprehensive program in homemaking education.

---

[6] "Food and Good Citizens," article by Dr. Ray Lyman Wilbur, in June, 1932, number of Practical Home Economics. Abridged from paper given before Department of Supervisors and Teachers of Home Economics, N. E. A., February, 1932, in Washington, D. C.

It is fully appreciated that there are a number of school activities which can materially contribute to the health and the happiness of the school child. Conspicuous among these is the school lunch, the possibilities of which are sometimes meagerly recognized.

C. THE SOCIAL SIGNIFICANCE OF THE SCHOOL CAFETERIA

The school cafeteria might well become the integrating social laboratory for the entire school system, a place where school departments, other than homemaking, can make a worthy contribution. For example: English, art, economics, business, general science, civics, and physical education have much to offer.

The lunch hour for the Nation's school children should be not only a happy occasion but one of high social significance, and not a place where one "grabs a sandwich," "bolts his food," and "hurries out with an ice cream cone in one hand and a 'weenie' in the other."

The lunch room should express the best efforts of the art department in creating an environment appealing to children. It should be a place where civics is practiced, not preached; where children like to meet their associates for friendly exchanges in courtesies and hospitality; and where children enjoy the nutritious and appetizing food which may be had for the choosing at a nominal sum.

Such aspirations for what too often is a commonplace school activity make certain demands on cafeteria directors. Among these are: First, a thorough training in foods good for growing boys and girls; second, the ability to produce such foods in an attractive form; third, the genuis to sell adequate nutritional ideas to boys and girls; fourth, to help them establish sound nutritional habits; fifth, imagination, cooperative abilities, and interests in the happiness of boys and girls, as well as to keep lines moving in orderly procession, and accounts balanced.

The job of making available to all the school children the present known nutrition facts most naturally falls to the departments best prepared to render such services, and these at present on the whole are the departments of homemaking. They, in cooperation with all the other existing allied school agencies, should assume the leadership for seeing to it that all the children and not just those in home-economics classes receive nutrition instruction. This responsibility home economists are willing to assume if given an opportunity.

D. CLOTHING, THE SECOND PRIMAL NEED

The second primal need is clothing—which makes a notable contribution to the happiness and comfort of the individual. As yet, we have little definite knowledge as to the specific relationships of clothing to health. That is, we know very little about the physiological effects of clothing. But some psychological effects are fairly

evident. Aside from the comfort and economic aspects, clothing instruction furnishes useful and unique opportunities for artistic expression. Whether the child plays with paints, clay, marbles, wood, or cloth, really does not make so much difference just so he has an opportunity to express his creative abilities. In the case of clothing, the child's training may be utilized earlier than his training with the other materials by putting this instruction to useful purposes such as helping to keep his own body clothed as well as that of other members of the family, and later, in using his clothing experiences in earning a livelihood. For, aside from the appreciational, economic, social, and health values inherent in the food and clothing programs, the gainful opportunities have hardly been explored.

E. SHELTER

The third primal need is shelter. President Hoover, in opening his Conference on Home Building and Home Ownership, stated, "Next to food and clothing, the housing of a nation is the most vital social and economic problem. . . ." The wealth of material, based upon the experiences and knowledges of experts, resulting from this conference will offer anyone a liberal education on every phase of the housing problem.

Home economists have long offered courses on the house, including its location, plans, and sanitary aspects; on home furnishing; on interior decoration; and on home management. Many cottages, bungalows, houses, and apartments have been furnished, from the basement to the attic, by home-economics students. These projects have had the cooperation of other school interests, especially the boys' classes in industrial education. The boys in such classes have built outright or have remodeled dilapidated small buildings, changing them into attractive little homes. All of this is most laudable. The activities afford excellent examples for developing right attitudes of citizenship and thrift, as well as judgment in buying.

But, when one reads in the February, March, and April, 1932, numbers of Fortune, that America has the worst slums in the world, that we not only have the kind of slums they have elsewhere; but the spectacular improvements of our own, such as the unholy mixing of races, the overcrowding of the land, and the construction of tall tenements which shut off the air and sunlight; and as one learns from Mr. Barry Parker, English architect of the two most important model towns of England, that he has seen the slums of South America and of all the great European cities, but nowhere has he found conditions which were not preferable to tenement conditions in our big cities, one realizes that, fine as the courses now offered in the departments of home economics are, the most important problems concerning housing have not yet been touched.

According to Dr. Edith Elmer Woods' book, entitled, "Trends in American Housing," less than half the homes in America measure up to minimum standards of health and decency.

According to the President's Conference on Home Building and Home Ownership, good housing is dependent first of all on good surroundings. No matter how good the design, if it is in a slum or factory district, if it lacks privacy, quiet, or sunlight, running water or sewers, if through traffic endangers the lives of its children, if ugliness is all about it, if no parks or playgrounds are within walking distance it is not good housing. The foregoing faults are common to many American homes, and neighborhoods, and there can be no effective improvement of our housing standard until they are removed.

The study made by the committee on the delinquent child, of which the late Judge Cabot was chairman, gives us the facts concerning the forces at work in a slum district making for delinquency; and in the April, 1932, number of Harper's Magazine, appears an autobiography of a girl delinquent, age 16, written in a State penal institution. This story reveals the processes through which boys and girls in slum areas in our cities are educated in crime from an early age.

According to the Harvard School of City Planning, 26 per cent of our population can not aspire to own homes costing more than $2,400.

The Bureau of Labor Statistics in 1929 placed the cost of the single family dwelling in 85 large cities at $4,902 exclusive of land.

Is it possible to build profitably for the $2,000 and under income class? Even in times of prosperity, the incomes of 65 to 75 per cent of our Americans is less than $2,000 a year.

The housing problem is one that challenges all of us—the building industries, other industries, observers of contemporary science, and educators, including those offering homemaking—in helping to develop a social conscience that will not tolerate slums—the crime schools for many boys and girls.

High-school boys and girls should be taught the facts concerning home finance, taxation, slums, large-scale housing, decentralization, home ownership, income and types of dwelling, and house design, construction, and equipment. This information should not be gleaned from the highways and byways but should be an organized body of knowledge if boys and girls are to know how to cope with the disintegrating forces that seem all about us.

THE PROPOSALS

I. BY CURRICULUM MAKERS

A. GENERAL SUGGESTIONS

R. D. Russell

Director of Curriculum, State Department of Education, Boise, Idaho

The homemaking curriculum should provide education for prospective homemakers along three major home functions. These are education for: A. The social control of sex impulses; B. The perpetuation of the race; and C. Children and adults.

1. THE SOCIAL CONTROL OF SEX IMPULSES

Improved methods of transportation, communication, the crowded conditions of cities, apartment houses, opportunities for gainful occupations for women, and the rise of science, are some of the things which are affecting the stability of the family as a social institution. Along with this has come the abolition of the double moral standard and an increase in social diseases.

With these changes in our mode of living, it is impossible "to retire into the sanctified defenses of sex and family taboos of earlier generations." The obligation rests upon the school for that type of education which will help the family to perform more effectively this function, or will help society to formulate a substitute. The home as an institution can not furnish the power for its own regeneration. The school exists specifically for this purpose. The homemaking program in our schools which neglects thorough-going training in social conditions of family life, sex hygiene, and sex pathology is failing to help the home perform one of its most important functions.

The writer recently asked 120 boys in the senior class of an Idaho high school regarding the sources of their information concerning sex problems. One hundred and thirty-nine sources were mentioned, including repetitions. Mother was mentioned 29 times; father, 36; "here and there," 12; friends, 26; experience, 15; reading books, 26; teachers, 13; doctors, 5; R. O. T. C. course, 2; Y. M. C. A., 4. It is obvious that so far as boys are concerned, the school is not functioning very effectively. Biology courses which are offered in many schools are obviously not functioning as well as they might. Approximately 150 girls were asked the same question. Two hundred and nineteen sources were mentioned, including repetitions. Mother was mentioned 104 times; Dad, 15; "here and there," 7; friends, 27; boy

friends, 4; girl friends, 12; experience, 7; literature, 23; doctor, 2; Y. W. C. A., Camp Fire, Girl Scouts, 9; minister, 1; sisters, 2; brothers, 2; not answering, 9. In the case of girls the school was not mentioned at all as giving any instruction in sex hygiene. Most sources of information on this important topic are of a haphazard nature. The important problems that we all must face in life seem to be the ones most neglected by the home and the school.

Is it not possible for the home-economics course of study to incorporate in its curriculum instruction in social conditions of family life, sex hygiene, and sex pathology? It does seem that it should be a function of the home-economics department to use its influence with other related departments for meeting this need. It is almost inconceivable that courses of this type are not required in a home-economics course of study.

2. THE PERPETUATION OF THE RACE

At the present time the conditions which have been basic for the evolution of the race through natural selection are being removed. Improvements in the medical field, hospitals, clinics, and health resorts are tending to prohibit the elimination of the weak. Moreover, the largest families are found in those homes of lower intellectual and economic levels. Although this problem may be thought of as pertaining particularly to the field of sociology and biology, yet the perpetuation of the race is a family function, and when it is obvious that the home is functioning in such a way as to limit racial evolution it should be a matter of grave concern to those who are teaching in the field of home economics.

3. EDUCATION FOR CHILDREN AND ADULTS

Education in the tool subjects was once the sole responsibility of the home. The mother, father, or a tutor employed by the parents was the teacher. The consequence was, of course, that the great mass of people were practically illiterate. Ideals of democracy demanded a school which would raise the level of intelligence of the great mass of people. The result was the elementary school. It has reached such a stage of efficiency that teachers encourage parents to make no attempt at education on this level. In many schools children are not allowed to take their books home, thereby completely relieving the home of any responsibility which was once almost entirely its own. Among the important emphases which should be made in education are those concerned with:

Vocational education.—Mr. Ordway Tead, editor of business books for Harper & Bros., in a speech before the convention at Detroit, gave the following points in this connection:

(1) The important thing in vocational education is not learning the tricks of the trade, but learning the proper approach to problem solving.

and tea are overconsumed. Approximately a fourth of the food budget is for meat and the lower the income the greater the expenditure for this expensive item.

In the field of patent medicines the great mass of American people are victims of advertising. There are approximately 45,000 patent medicines, not more than 50 of which are really necessary in the treatment of disease.

These illustrations are adequate to show the need in homemaking curriculums of emphasis on buying based on values. The making of clothing and cooking can not be overlooked, but clothing must be bought before being made. It is questionable, moreover, whether or not, except for individuality of style, the making of clothing should be emphasized if it is at the expense of the effective performance of more fundamental functions. The home-economics course of study is not complete without a scientific study of foods, nutrition, purchasing, housing, rent, building materials, lumber, paint, leather, fuels, lighting, heat, clothing, fabrics, and clothing articles. These topics are of course as broad as life itself and unlimited time could be spent on them, but it is unthinkable that emphasis on the many routines of home life should limit the opportunity of studying these topics.

ORVILLE C. PRATT

Superintendent of Schools, Spokane, Wash.

What are some of the practical provisions for extending homemaking education to boys as well as to girls? What subject matter, points of view, and activities might both boys and girls engage in to their better conception of the importance of the home, its relation to the happiness of its occupants, and to their present worthy home membership?

WHAT A HOME SHOULD BE

The first objective might well be an appreciation of what a home should be, an emotional ideal of its possibilities. To this objective the information and activities should be supplementary. Closely related to this chief objective is the second: A conception of the give-and-take essential to successful living with other people. The breakdown of the home, when it occurs, is not due primarily to a lack of things but to a lack of ideals, particularly to the lack of the ideal of service. The central problem is that of harmony on the spiritual plane. What the school should strive to cultivate is the ability to get on with other people. There is no other one ability which contributes more to successful living outside the home as well as in it. The best preparation which the school can give is

(2) The school must teach about jobs and industry rather than perfection in routine skills.
(3) The tendency in industry is toward offering to employees life rather than a mere job.
(4) Jobs are not so minute as they once were. The new changes in industry are away from high specialization. Attitudes, ideals, ambitions, working qualities, and general outlook on life are the important things in selecting employees
(5) Guidance is therefore life-realization guidance rather than job guidance in our schools.

It is obvious from this tendency in industry that the kind of vocational training possible in the home is not adequate to meet the social complexities of industry at the present time. Outside of perfection in the routines of homemaking the school will have to bear the burden. Education for the broader and more fundamental aspects of all vocations will have to be provided by the school. In the case of the home it is the same. This institution can provide the routine but not the broader problems until parents are educated in the fundamentals of home life.

The use of leisure hours.—The responsibility of parents in planning for the leisure hours of their children is becoming greater if the home is to have the influence it should. In a questionnaire given to approximately 250 high-school seniors in Idaho, it was revealed that they are absent from the home approximately half the evenings. When away from home they are usually at a picture show, visiting friends, attending parties, or car riding. This is probably one of the strongest disintegrating forces of the institution.

Mental and physical hygiene.—In the field of mental and physical hygiene, the weakness in our home-economics curriculum is probably most pronounced. An examination of 14 State courses of study reveals that more than five times as much time is given to clothing selection and care as to health and home nursing and hygiene, and four times as much time is given to the construction of clothes. Almost ten times as much time is given to foods, cooking, and meal planning as to health and hygiene. The emphasis given to child development is approximately the same as that of health and nursing and hygiene. It is obvious that mental and physical hygiene receive very secondary emphasis, although health is considered to some extent in connection with clothing and cooking.

Wise management of income.—Buying of foods, clothing, furniture, fuel, and so forth, has not been sufficiently stressed in home-economics courses of study. The average homemaker is not able to judge values. A study of food budgets shows an ignorance of the ability to select foods in order to secure the largest returns in food value for the money. Cheap foods having high food value such as beans, peas, cheese, cocoa, oatmeal, are underconsumed. Expensive foods like pork, beef, coffee,

the actual practice in harmonious cooperation which extracurricular activities afford.

CONSUMERSHIP

A third suggestion is that homemaking in the school, if it is to be effective, must carry over the ideals children now have into present application in the homes. In citizenship we have come to the viewpoint that it is not something to be applied after the children are voters, but that children in every other respect except voting are citizens of some kind, good or bad, here and now, in the home, the neighborhood, and the school. Similarly, children are now members of homes toward which they already have attitudes of some kind, harmful or helpful. To as great a degree as is possible the knowledges, attitudes, and skills taught in homemaking should find immediate application in the child's present home.

In short, instruction in homemaking should shift from the objective of production as it was in the form of cooking and sewing to that of consumption as in selecting foods in relation to health, table manners, and standards of social conduct. Homemaking should be aimed at the improvement of life as it exists in the home of to-day.

Following are some school adjustments which would help in the attainment of homemaking as outlined above:

1. Homemaking clubs for boys should be among the recognized extracurricular activities. Such clubs, where organized, have functioned with much interest and benefit to boys.

2. Electives in home economics should be planned to meet the needs of students with a wide variety of interests. The work should not be limited to those taking the home-economics course. For instance, a class in "social relations" would be valuable for every student and one in "personal problems for commercial girls" would be worth while for every girl taking commercial work.

3. Single period classes should be scheduled for home economics wherever feasible. This would greatly extend the work in any given school without additional cost. The shift in emphasis in home economics makes this recommendation feasible.

4. The changed objectives of the homemaking work should be carefully explained to teachers, parents, pupils, and administrators. I mentioned teachers because, unless they have taken home-economics courses in recent years, they are quite as apt to have a mistaken idea of present objectives as are the others mentioned. The first essential is that teachers shall have the correct conception of homemaking work.

5. Carefully planned correlation with other departments will strengthen home-economics courses and at the same time will extend home-economics education through these courses. For example, the trained home-economics teacher may teach "budgeting" in the

commercial department; "clothing selection and interior decoration" in the art department; "food principles" in connection with general science; etc. Such cooperation will eliminate unnecessary duplication and will allow for careful checking of subject-matter taught.

Quite as important is the avoidance of duplication in home economics as presented in the elementary, junior, and senior high schools. The course of study should be carefully correlated throughout. There is nothing more deadening to interest or wasteful of time than to have duplication of subject-matter in the high school which has already been well covered in the grades. Such duplication is inexcusable because it is so easy to avoid. All that is required is a little cooperation and a reasonably detailed course of study.

6. The attention of parent-teacher associations might well be directed to the social, economic, and psychologic aspects of home life. If the home under modern conditions is to be something more than a parking place or a filling station, more thought must be given to its spiritual values.

7. Less emphasis on athletics and more on health would react to the advantage of homemaking. There is statistical evidence to the effect that poor health is the outstanding cause of dependency and that ignorance in regard to personal hygiene, nutrition, and sanitary home conditions are the chief causes of poor health.

FREDERICK G. BONSER [1]
Professor of Education, Teachers College, Columbia University

Persons responsible for homemaking education in our secondary schools should undertake to develop and refine present homemaking courses to meet the needs for better home life in America.

This responsibility, among others, demands:

1. Exploration of the immediate interests boys and girls have in home life and provisions for fostering those interests.

2. Clarification of the newer conceptions and purposes of homemaking education.

3. Enrichment of courses in terms of thought content and experience to such a degree that they will have adequate liberalizing validity and respectability to be rated as worthy of credit toward high-school graduation and college-entrance requirements to afford a basis for work in college more advanced than that required for beginners.

4. Production of textbooks and other forms of home-economics materials on the high-school and college levels to provide basic source content adequately without attempting to establish such limits or standardization as will inhibit continued readjustment to new dis-

[1] Deceased.

coveries, inventions, and wholesome modes of living in an ever-changing world.

5. Orientation of school administrative and supervisory officers such as superientendents, principals, and advisers of boys and girls in the needs, possibilities, and educational validity of home-economics work in high schools.

6. Education of parents and the public generally in the meaning, content, and values of the larger conceptions of home economics adaptable to the interests and needs of high-school boys and girls

7. Determination of the costs of equipment and supplies for present forms of appropriate work to enable school administrators to see that the necessary expenditures for home economics are reasonably low and neither excessive nor extravagant.

8. Elimination of the impression that home economics is a losing field in the high schools by making available the facts of growth and progress in the work.

It is essential that school officers, academic teachers, parents, and students generally understand the breadth, larger purposes, and values of the work of the home-economics field at its present best It should be made clear that the field includes consideration of the whole problem of the business of being a girl or a boy, and the business of being a woman or a man, each in its place, in a wholesome, well-rounded, efficient, and satisfying career, with a frank and discriminating study of the problems of work, leisure, responsibilities, and adjustments, and the compensations of personal and home life.

B. PROBLEMS RAISED

1. IN CITY SCHOOLS

AGNES HOUSTON CRAIG
Supervisor of Home Economics, Springfield, Mass.

Problem I.—One of the most difficult tasks is to acquaint educational authorities and the general public with the meaning and scope of home-economics education. Melvin Brodshaug, in his book "Home Economics in Secondary Schools," points out that "Many administrators and teachers have failed to follow the trend and still conceive of home economics in terms of manual training." Such persons still speak of our work as "sewing and cooking," "domestic science," "shop," etc., although from a professional standpoint, these trends have been obsolete for a number of years.

The term "home economics" is the accepted designation of our work It is not a course of study, or shop work, or a subject for girls only It is a field of interest for both boys and girls and men and women Home economics is an applied science and art belonging to the same class as "education," "medicine," "agriculture," or "engineering."

Like them, its practices tap many fields of knowledge at some time or at some point. Many of the principles of biology, sociology, economics, psychology, chemistry, bacteriology, physics, and art are in active daily use in any modern home.

In industry, the engineer has been called the "world's greatest civilizer," because he applies the discoveries of pure science to material problems. Quietly, but persistently, home economists have done precisely this to the economic and social problems of the home and the family. They are social engineers, so named for their successful application of scientific principles, based upon research, to the improvement of health by the proper use of food, nutrition, clothing, and housing

Further, the social engineers have developed the important studies of human relationships, of economics applied to consumption, of vocational guidance and training for women, thereby opening up a greater variety of professional opportunities for women whose trained talents in scientific, economic, and art phases pay salaries ranging from $1,000 to $15,000 and more a year.

Problem II.—It is important that home economics be recognized as an organic part of the elementary and secondary school program. Most children are fond of skilled handwork, and in their early years can not do abstract thinking, but may be led to solve problems in constructing some useful article for themselves or their homes. If the proper activities are selected, they give children better insight into the world's work than any amount of theory or reading can possibly afford.

Variety of handwork makes pupils versatile with their hands and may help them in learning various types of handwork when later the machine makes their trade obsolete. This is a vital point for workers to-day, as well as educators in planning the school program.

Our basic industries are concerned with the production of food, shelter, and clothing. Home economics appreciates the consumer's problems in utilizing these fundamentals in relation to the welfare of family members, especially children in the home. Therefore, our work can not be lightly designated as a frill in education as is done so frequently. For the masses, home economics is more fundamental than any other school subject, and therefore should be recognized as an organic part of any educational program in helping to solve the problems of the present machine age.

Problem III.—We need to adopt the point of view that family problems have a place in the training of boys as well as of girls. To illustrate: Every child has a right to be born with a sound body and mind, to have intelligent care and training until, as a responsible person, he can preserve and increase his own endowment. Dr. E. V. McCollum assures us that "Food is the one single most important

factor in health." Home-economics-trained people have more soun scientific knowledge and experience in the field of food and nutritio than any other known group of school people on the elementary an secondary levels. Many of the home-economics teachers have studie foods and nutrition in a scientific manner intensively from two t six years.

Every home must be financed. It is a cooperative problem fo men and women. Both need to know something about how to direc the income. In the United States, 45 per cent of the wealth is owne and controlled by women; and, as consumers, they spend from 75 t 90 per cent of the family income or more than 50 billion dollars a yea Few girls have any training in the economics of consumption. Bot boys and girls need practical work of this kind, yet almost the onl school training offered is to girls in home economics.

The behavior of individual members of the family makes the hom either the "abiding place of affections" or "the center of conflict." Homes are usually one or the other. If homemakers were equippe with the most elementary principles of psychology, mental hygiene and the primary techniques of child training, innumerable huma tragedies in divorce, warped lives, and broken homes would b avoided. Parent responsibility, and not responsibility of socia agencies is important in the home situation. In fact, when we con sider the youth of the United States, it is humiliating, to say the leas that we depend so much on public social agencies to solve our famil problems. In this respect, education has failed to do its duty. W ask, "Is such an important task a 'frill' in education?"

President Hoover has pointed out that "adequate housing goes t the very roots of the well-being of the family . . . it has the impor tant aspects of health and morals, and education and provision for fair chance for growing childhood"

How many men would be willing to write their letters by long han or visit schools by means of the horse and buggy? Yet, to-day th majority of women are obliged to use antiquated methods in th management of their homes. More attention needs to be given t the invention of household equipment from the viewpoint of wha women want and need than from the viewpoint of what manufacturer wish to sell.

Problem IV.—Home-economics laboratories should be moved fron dark basements and stuffy attics to clean, sanitary, and attractiv quarters. These laboratories should be examples of the best stand ards for practice in health, sanitation, and technical operations i keeping with the times and the average income of American families They should be examples of the application of art to the everyda common affairs of life.

The practice house is an accepted type of laboratory in the United States. Brodshaug says, "There is a sound philosophical basis back of the use of the home-economics cottage; because it simulates life situations more adequately than other plans." Where the practice house is impracticable, the homemaking apartment should be provided.

Problem V.—The home-economics department should not be regarded a dumping ground for all irregular and handicapped children. In planning the home-economics curriculum, provision should be made for the following: Courses of general importance to both boys and girls such as foods, nutrition, home engineering or home mechanics, human relationships, child care and training, and economics of the household; courses especially designed for girls such as clothing construction, art in everyday living, home planning and furnishing, and housekeeping; special courses for retarded children; and those leading to the vocations.

2. IN INSTITUTIONS OF HIGHER EDUCATION

MARY E. PARKER

Director of Household Administration, Western Reserve University, Cleveland, Ohio

It was an outstanding professional woman, Ida Tarbell, who, 20 years ago, wrote, "I doubt if there is a more disintegrating influence at work—one more fatal to sound social development—than that which belittles the home and the place of the woman in it." That influence, under many guises, has been diligently at work during these 20 years and society knows to its sorrow what it has wrought

Realization of the menace to the future and faith in the power of education to develop a counter influence have led to the calling of this and similar conferences. The elementary and secondary schools can obviously reach the larger number, but the greatest opportunities for leadership are on the college level. The need for some consideration of the practical phases of the problem was never so great as at the present time, but the general field must be thought of as homemaking with all its economic, social, and psychological bearings.

Colleges can not yet be said to have organized their offering with this in view. Most of the traditionally accepted liberal-arts colleges have concerned themselves almost exclusively with preparation for academic pursuits and for "careers." The inference which one naturally draws is that the responsibilities of home life are not deemed sufficiently important or the problems sufficiently challenging to warrant their consideration in a college program. The introduction of any courses looking toward home life has furthermore been regarded until recently as a form of disloyalty to the pioneers who worked to

details of their housekeeping, and lose their sense of relative values. One wonders, however, why colleges so confidently aim to prepare for academic pursuits in which a relatively small number of their graduates spend their lives, and leave to a combination of instinct and "the trained mind" the solution of the problems involved in the life of the family. Many graduates, especially of recent years, who have observed the comparative ease with which home-economics women have adapted themselves to difficult financial conditions, have expressed their regret that their own college program had given so little to help them to meet the practical problems of everyday life. Furthermore, the undergraduate student to-day, in spite of the weakening of the bonds which hold families together and also in spite of richer college offerings and vastly increased opportunities for economic independence, are frankly saying, many of them, that they believe their own greatest happiness is going to lie in home and family life. The attitude of by no means an inconsiderable number of undergraduate women was expressed recently by a liberal arts senior, a Phi Beta Kappa student, who wrote, "Colleges have not yet succeeded in taking the woman entirely out of her home. She wants her college career, perhaps a few years of earning money to feel that she is getting definite returns for what she has put in; and then she wants her home. The greater number of years and the most of her energies are spent in this home. She wants to make it successful for she has not only her own satisfaction to consider but she has a responsibility to her husband and her children—to keep them healthy and happy. If that is woman's big task, she should be prepared to undertake it. And why not receive that preparation while in college?" We await a satisfactory answer to that question.

A broad conception of education.—An unbiased evaluation of the contribution which home-economics departments make to the realization of a broad conception of education for homemaking would place that contribution upon a higher level than is now accorded it because it would judge it more fairly. It is doubtless true that in the early years of the teaching of the subject, the work was not always on the college level. Subject matter was lacking and there was not adequate reference material in any of the phases of this complex subject. Young women coming into the field to-day from graduate study marvel at the courage of the pioneers who were obliged to work not only in the face of difficulties, misconceptions, and prejudice but also with scant materials. Theirs was the day of small things but to them we owe the beginnings of a movement of great social significance, one which does not "belittle the home and the place of the woman in it."

An unprejudiced study of the history of this movement would reveal the fact that there has been an enormous change both in secondary

open the doors of colleges to women. And yet the graduates of these colleges have married and at present the proportion of those who do marry is larger than of those who do not. In the face of this fact, one wonders why intensive study of things remote from everyday life, and preparation for professions outside the home should to such a degree make up the program of the average student in the liberal-arts colleges and why these colleges exclude what President Eliot called "the arts and sciences that can be applied day by day in the conduct of the family."

On the other hand, the colleges and universities made possible by the Morrill Grant, and a few on private endowment, have seen as clearly as did the great president of Harvard University that "the object which should be kept before young women in their colleges" may well be "the acquisition of the powers which will enable a woman to discharge her main function in life not only with accuracy and justice but with enjoyment, bringing forth happiness for herself as well as for her family." These colleges have also been keen to discover new ways in which their work may function in schools, hospitals, and other fields in which special training enables a young woman to be economically independent. The development has been of enormous value to young women and through them in many ways to society, but adequate preparation such as is required involves a higher degree of specialization than is consistent with breadth of outlook.

A broad conception of homemaking education.—Education for any mode of living must obviously concern itself first and primarily with the individual; for what the man or woman brings to any undertaking in personality, mental resource, and potential character is manifestly more important than any specific guidance that can be given. The correlation between mental resource and family happiness may not be perfect but it is probably very high and we have all about us evidence that it is on the higher levels, fundamental in human companionship. The broader conception of homemaking for the college woman connotes the ability to participate, whether as mate or parent, in the thoughts and activities of a broadened environment and the ability to interpret current conditions and movements more truthfully and to find in the beauties of literature, nature, and art more inspiration. It connotes also the ability to contribute more effectively to human welfare outside the home than would have been possible without the advantages which the college offers. A broad, satisfying, and effective preparation for homemaking can not be realized without the incorporation of much which the traditionally accepted liberal-arts college offers. Lacking breadth of vision and a body of fundamental principles, too many women lose the stimulation which comes from an interest in the larger issues of life outside the home, magnify the

schools and in colleges in the direction of added emphasis upon scientific background and social outlook. A study of the teaching to-day would reveal weaknesses, to be sure, but it would also reveal the use of extended bibliographies, the requiring of a degree of reasoning as to cause and effect, the application of fundamental principles, and an amount of independent thinking which one does not in every case find in accepted academic courses in which a retentive verbal memory is a major asset. Courses which are directly applicable to the needs of daily life are based upon objective facts, fundamental principles, and a body of information built up through a sequence of prerequisite college courses. Courses in normal nutrition and in the feeding of infants and children, for instance, follow prescribed study of physiology and chemistry identical with that required as a basis for academic specialization. The same holds true for most of the work in this field.

All home-economics courses are often cavalierly dismissed on the ground that they consist only of the teaching of "skills, techniques, and devices"; are therefore outside the pale of education; and should be classified as training. That represents, of course, a misapprehension which can be explained usually by lack of acquaintance with facts; but at any rate, one is tempted to inquire why the manipulation of materials in chemistry, biology, and physics is thought so essential and the manipulation of food materials and textile fabrics should be altogether discredited. A good many pragmatically minded young women to-day are asking that very question and wondering why the ancient Greek scorn for productive work with the hands should persist in a country like ours and in times like these.

Constructive work with concrete materials has for years been regarded as a valuable therapeutic agent in the treatment of nervous disorders but its value for the normal mind has only recently been recognized. Work with her hands, especially in the service of her family, has confessedly helped many an adult woman to keep her balance mentally and emotionally in a world of conflicting ideas and emotional overstrain, and one might possibly question the wisdom of excluding it altogether from the education of the girl in her later adolescent years when she is trying to meet the exacting demands of her college work and at the same time to reconcile conflicting purposes in her own life. It would not seem that the human race has yet reached the stage of evolution in which people live at their best in a world of symbols and abstractions, even for a 4-year period.

In the light of the foregoing, it may not seem altogether dogmatic to state that the broadest conception of education for homemaking can not be realized without a recognition of the value of courses in home economics and the inclusion of some of their material which bears directly upon the problems and responsibilities of home life.

A forecast.—The next step in preparation for homemaking will probably be a study of human relations in the intimate circle of the family. The stress and strain of modern life have made adjustments in family life more and more difficult and failures too easily condoned. In the teaching field it has been found possible to develop appreciations and techniques which save a young woman from unnecessary mistakes and which bring her earlier to the realization of her powers, to greater usefulness, and to greater happiness; and it seems reasonable to expect that we may also in time find equally acceptable appreciations and techniques which will render a similar service in preparation for home life—an undertaking fraught with greater possibilities for success or failure—and more dependent upon a clearly conceived philosophy of life than teaching can possibly be.

Courses in "the family" are already offered by departments of sociology in many colleges and are exceedingly valuable, but as a rule they treat the family historically and as an institution rather than as an intimate group in which the interaction of personalities is probably the major consideration. These courses have done much to stimulate thinking and to bring to the student a realization of the important place which the home occupies in society, and it is only natural that young people of the present generation are asking that they may have as the next step some analysis of successful and happy married life and the philosophy upon which it depends. There is much to learn from failure, but there is a growing recognition in all of the social sciences that the time has come for both preventive and constructive work. There is also a growing appreciation of the need for preserving mental health, for better ways of making personality adjustments, and for the early recognition of desirable or undesirable tendencies.

Analysis of success in married life is undoubtedly more difficult than a similar analysis of its failures. A man's house is his castle and more inviolate than his house are the happy intimacies and loyalties of family life Furthermore, the families whose lives are the happiest are likely to be most reticent; but if we define our problem as the study of the interaction of personalities within the family group, we have reason to hope that highly trained men and women in sociology, psychology, ethics, and psychiatry, with the cooperation of men and women happily married, can discover a system of values valid for the guidance of young men and women in their intimate personal relations. There have been notable contributions in recent years which lend themselves to the making of courses of substance. Experimental courses are being offered in some of the home-economics departments in State universities and are conducted by broadly trained women. The cooperation of specialists in different fields has been secured and although the public hears nothing of this work, and it is still the light under the bushel, we are perhaps war-

ranted in predicting that this will be the next step in the realizatio of a broad conception of education for homemaking. It represent the beginnings of a highly significant movement, and the response o the students themselves argues for its timeliness and value.

The realization of a new viewpoint.—There are many other encouraging signs of the times. Many of the traditionally accepted liberal arts colleges, which until recently have been distinctly hostile, have taken a highly important step in the establishment of nursery schools and have put the seal of their approval upon the study of the child and his development. Vassar College has not only her nursery school and the integration of courses represented by euthenics, but also the flourishing summer Institute of Euthenics. Back to the college campus go young married women, practically all of them college graduates, who put their little children into the nursery school and themselves become students learning much that as homemakers they need to know, and that we hope will in time be available to the undergraduate student. In many ways, the development of euthenics at Vassar College represents the most significant step in college education for women in recent years. In the universities and colleges in which home economics is taught, the work has passed through the earlier stages of inadequacy, and has reached the level of the college standard, a fact that deserves wider recognition than it yet receives.

II. BY PARENTS

C. C. McCracken
President, Connecticut Agricultural College, Storrs

Education for parenthood involves many fields of learning.—Parenthood involves many intricacies which do not develop within a few months and education for parenthood is a long vital process. The secret of this process has been sought through all the ages and is still only partially known Occasionally scientists have given us glimpses of what seems to be the best procedure through well-established biological laws. The theologians and moralists have given us certain prescriptions and the lawmakers have laid down definite controls of social actions. Psychologists have studied the emotions and the mental processes involved and have offered much advice. The educators have assumed great responsibility in acting as parents and guardians to our children and in attempting to guide them to successful and happy parenthood.

Dr. L. P. Jacks, of Oxford, England, in speaking to a community group under the auspices of the National Recreation Association, commented on the practice of taking children to the movies and talkies, as follows: "How many of our places of amusement, how many of our pleasure resorts, how many of the movies and the talkies might well write up over their doors, 'Empty Barrels Filled Up Here.'"

This view seems very significant. The child, in a sense, is a barrel to be filled with reliable knowledge, proper purposes, correct ideals. Education for parenthood must begin as soon as the child begins to take cognizance of its surroundings—in other words, at birth.

The young parents and particularly the young mothers are at the mercy of physicians in attempting to decide upon a proper diet and daily regimen for the child. . . The medical profession has become so highly specialized that it is necessary for parents to visit from one to a dozen specialists in order to gain a fair knowledge of what should be done for the child. . . . The advancement in medical science has been wonderful, but there are times when the parents wish that a revised family doctor might return. As the child progresses through the years to adolescence, trial and error enter into the picture very largely, because the child is thought of analytically and not synthetically. With the changes occurring in the early adolescent period come troubles that need very sympathetic understanding and treatment. The physician may advise but he can not do certain things that a wise sympathetic mother can do for her daughter or a father for his son. . . .

Too late, oftentimes, the parents or the school attempt to instruct the child about the factors involved in parenthood or they neglect the matter altogether. The physical man or woman has developed to maturity without a knowledge of basic physiological and hygienic laws. He or she may have been kept well and healthful, which means a great deal, but without knowing the whys and wherefores. Parenthood suffers a severe handicap when the individual is ignorant of his physical self.

A. THE PLACE OF THE CHURCH IN THE CHILD'S EDUCATION

In the past, the church has exerted in many cases a very direct influence by surrounding the child with high ideals and uplifting environments. One of these ideals for which the church has stood valiantly is the sanctity of the marriage vow. Certainly, when a book has maintained its prominence for as many centuries as the Bible, there must be something vital in its teachings. . . . As soon as the child can listen to the simplest story, Bible instruction can be begun and continued as long as the child lives. When the church does this it will establish in the mind of the growing child principles and ideals that have been basic in all ages in education for parenthood.

B. THE RIGHTS OF THE STATE

Basic principles must be engrained in the fabric of everyday living. We first have the idea, and then trial; permission follows and if the majority approve, the provision becomes mandatory. Lawmaking is a process of writing into statutes what the people desire. . . . Our

laws and our ordinances are, in general, written to protect us from conditions which are contrary to satisfactory parenthood. For example, companionate marriage is very generally condemned. . . . Our laws for the protection of the child growing into maturity will certainly never be written to favor physical disability and wantonness, prostitution, or moral instability. Whether the laws are to be enforced is again to depend on our citizenry. While there are many discouraging conditions to-day, these certainly can and will be remedied. Law must, and undoubtedly will, be conducive to inculcation of the ideals for which this Nation has stood in the past. An understanding of and respect for the law should begin as soon as the child has companions, and should develop each year. . . .

The State says that the child must go to school, and the State thereby supersedes the parent. The child must be educated and moreover, educated as the State prescribes. The parent may supplement what the State prescribes, but must not omit any of the required subjects. In the last analysis, the law of the State is supreme and can control the fate of the individual for the welfare of the majority. My child *must* go to school, *must* study certain subjects *must* do this, and *must* do that.

That the State is willing to assume this responsibility is quite a relief to many parents. Where both father and mother must work to make a living, it is convenient to check the baby at the nursery school in the morning and claim it again in the evening. As the child grows, the checking process becomes unnecessary, but the principle remains, for the child is assigned to the school or the playground for the day and oftentimes part of the night. Parents and children grow up almost strangers to one another. There is little or no common bond. The school has taken over many of the functions of the home.

Possibly this is best, you say. The school physician will guard the physical development of the child. The psychologist will test his mentality, his emotions, and his aptitudes, and issue educational prescriptions accordingly. The biologist will teach the essential facts of sex. Certain departments inculcate proper social practices through organized plays and games and student government. The religious element must be omitted, lest someone's prejudices be trampled on. If it is introduced it must be done clandestinely or in the community. In short, the child is the creature of the State as the State prescribes. The State has become the parent and the teacher the instrument of the State. Society tends to become institutionalized.

C. THE TEACHER'S PLACE

The teacher in the American public school merits great respect and confidence. She must be all things to all people. The education

of this teacher deserves a place in the universities of to-day. A knowledge of biology, sociology, psychology, and other sciences and arts must be gained to cope with this complex problem. It is unfortunate that so large a percentage of these teachers come from homes where the family income is too low to permit a more general education than the time and finances allow. . . . The teacher must act the part of the parent, but oftentimes without the maturity that parenthood assumes to have. The teacher attempts to be father, mother, and intellectual adviser. The success which our teachers are meeting in this colossal attempt is little short of marvelous. Parenthood comes from the conglomerate, but not always in commendable form.

D. IDEAL EDUCATION FOR PARENTHOOD

With all due respect to all these agencies, it seems to me that in them does not lie the ideal in education for parenthood. . . . The best education which a boy or girl can secure for parenthood comes through a close companionship with good parents. . . .

If we, as fathers and mothers, are willing to make the effort and take the time to be good companions to our children we *can* do it. If the teachers are failing to accomplish the task, we as parents can supplement their work. If we as parents do not understand the biological processes, the school can help us in teaching these principles. If the child needs oversight in play, we as parents can learn to play without policing *if we will.* The Greeks were able to accomplish it. So can we, *if we will.*

Although cooperation of other agencies is vital, responsibility for education for parenthood devolves primarily upon the home. It is not an easy task to perform. But the most fundamental factor in the solution of the problem is a close, sympathetic understanding between the parent and the child from the birth of the child until he becomes a parent. On such a foundation, we can build all the other elements involved.

WILLIAM JOHN COOPER
United States Commissioner of Education

In Harper's Magazine for December, 1931, there is a very interesting article entitled "Parents as Children See Them." These parents are nearly all mothers. Rarely ever does a child of 7 to 11 years, which represents the age of the 61 children concerned, give much thought to father. The women are all what one would call "upper middle class." They are wives of well-to-do business and professional men. How do such people appear in the eyes of their own children? Each child was asked to write a composition on "grown-ups" and was told that the compositions would be regarded entirely as con-

fidential. In general, these children resented the "bossiness" of the parents. One child regarded the matter of growing up as an inevitable state. She wrote, "I should hate to be a grown-up, but I guess I will have to be one some day unless I die. I think I will stab myself or commit suicide when I am almost 20 years old."

The chief offense of which these children, if they are typical and I think they are, accuse us grown-ups is of unnecessary interference in children's affairs. Too much attention to their appearance, for instance, is condemned. Such comments as "Women always make me wear a million sweaters and coats when the wind is a little cold. I think that you could have much more fun if women grown-ups would stop thinking about what they look like and get some exercise outdoors. If they would go out and play baseball and those games, they would get some color that was much prettier than rouge." This matter of exercise is connected in the child's mind with appearance, for perhaps the next most commonly made charge against the grown-up is that she uses too much lipstick, powder, and rouge. The care with which this operation is performed also seems to arouse the comment of children who at this age despise it.

One does not need lectures like this, however, if he stops and thinks of his problem as a parent. There are everyday questions which require a large body of information to understand. Such questions as, "Where do I come from?" "Why am I here?" are problems which nearly every parent has to meet sooner or later. The day of evasion and lying to children is passing. We must be honest and frank and yet be so without the sheer openness which leaves its mark on the child.

In fact, one's education to-day has to consider the entire personality. We began with a little intellectual work, and eventually we added to that some physical-education work. We are now beginning to see that courses in mental hygiene are as important as courses in physical hygiene. When we get a complete education we will have a chance to answer such problems. Those of us who have been through the schools and college have really mostly an intellectual slant with a little physical work. We have practically no mental hygiene. Consequently it may be necessary in an adult school somewhere to begin to work on this problem. If we go to Russia we are told that the educational work of what would correspond to our schools from the eighth year of life to the twelfth is organized in "complexes"—that is, one gets his reading and writing and arithmetic incidentally to the work in connection with a "complex." The latter may involve one's calling in life or some aspect of one's occupation as a member of the family group. I am wondering if as our educational system approaches completeness and effectiveness it will not be given in the form of "complexes" or projects. Already some of our experimental schools

have gone a long distance in this direction. When this time comes a child will not be given an artificial training outside his home but the school will be the real supplement of his home and family life will be the normal condition of any young person.

To-day a child is fortunate if he has an unbroken home. With divorces rating approximately one in six, many children come from homes in which the family is disrupted, and it is remarkable that our child life is as good as it is. The family in which the child is growing up is anything but static. Changes in the environment must affect it. The period of unemployment through which we have been coming has been exceedingly hard on some families. Many of these have been undernourished and are not likely to recover from some of the evils due to it. If by chance a child does have both a father and a mother it is hardly to be expected under present conditions that they will be in agreement and if these disagreements are known to the youngsters they must work an evil. Consequently we can say that there are comparatively few homes in which children to-day are growing up with the training which they should receive. In fact, some 300 mothers who were college graduates were asked by Miss Ruth Lindquist what they felt they needed most. Seventy-seven per cent of them expressed the need for educational child training; one-half for child psychology, which probably was merely another way of expressing a feeling of need for child training; and 15 per cent felt the need of more educational work.

But assuming that a child is in the more fortunate position of having parents who are agreed upon how it shall be trained, upon what it should be as it develops, think of the environing factors other than the family which tend to counteract this influence. Under these conditions one can readily realize what the handicaps are. If, then, we have a course in college which regards the child as the object of study, where shall we begin? It seems to me that we must begin with babyhood and infancy. One of the first needs is security.

> For every child a dwelling place safe, sanitary, and wholesome, with reasonable provisions for privacy, free from conditions which tend to thwart his development; and a home environment harmonious and enriching.[8]

Another problem will be the young one's attitude toward money. Children have usually very badly twisted ideas about the sources and values of money and yet before they are in school they feel the need of it. There should be a course in the economic independence of the family in which all of its members should participate. Such a course has been well worked out under Miss Florence Barnard in the schools of Brookline, Mass., and a similar course is optional in the State of New York. It is now being proposed by Mr. Orrin C. Lester, vice-

[8] White House Conference on Child Health and Protection. The Children's Charter, No. VII.

president of the Bowery Savings Bank, as a national institution. To know how money is earned, what it is worth, and how it can be effectively saved is very valuable information for a child to have. Such a course, if it is to succeed to-day, need be taken first of all by the parents and then by their children.

As a child proceeds from very early childhood into adolescence there will be questions of sex. It is exceedingly difficult for the school to-day to do very much with the problem. There are now existing courses in natural science which give all of the sex information possible with regard to birds and animals. Probably there would be less trouble in this regard if parents were a little more frank than they have been It is also needed that children be given some advice in the selection of a mate and in the foundation of a home in order that there may be a time when some of these difficulties will come to an end. At the same time that instruction in founding a home is given, time will be allowed for the consideration of home beautification and other aspects of domestic art. For the home, which is around about the child from his early beginnings until he himself mates, is the interpreter of the ideals for which his parents stand.

If educational work is to be successful in this field, it must take a child from the beginning through until he is himself ready for parenthood, meeting all of his problems with the best educational advice, and at the same time that the course is being administered for children and for their parents it will be advisable to have further study going on in such research centers as the Universities of Iowa, Minnesota, California, Columbia, Yale, etc., and in such institutions, as the Merrill-Palmer School.

Letter of transmittal VII

I Introduction 1

The mastery of the technique of broadcasting is a prerequisite of successful teaching by radio.

There are a number of possible forms of presentation that should be considered by the prospective broadcaster.

II Possible Forms of Broadcasts 6

Radio talks, including lectures, addresses, and stories, *p. 6*.

Directed activities, including radio programs in which the listener is requested to perform some activity during the broadcast, *p. 9*.

Actuality broadcasts, including the broadcasting of important public events, eye-witness accounts, etc., either at the time of their occurrence or shortly afterwards, *p. 10*.

Radio conversation, including dialogs and discussions, *p. 14*.

Radio debates, including both formal and point-by-point debates, *p. 18*.

Broadcast music, *p. 20*.

Radio plays, including various forms of dramatic presentations, *p. 27*.

III ✶ Preparation of Broadcasts . . . 33

Importance of thorough preparation, *p. 34.*

Work in close cooperation with the program director of the radio station.

Visualize the audience while preparing the broadcast manuscript.

Organize the subject matter to conform to the requirement of the medium.

In broadcast series, plan the radio presentations to profit from accumulative interests.

In writing the broadcast, *p. 39.*

Plan to catch the interest of the listener at the very beginning of the radio broadcast.

Use strong, common words with rich, meaningful associations.

Write in a speaking style, using a pleasing style of phraseology.

Make the radio broadcast compact and concise so that the line of thought will be easy to follow.

Make only a few points and illustrate them amply.

Strive for an effective close.

Prepare the broadcast manuscript to conform to the best practices as to mechanical form.

Rehearsal, *p. 48.*

Perfect delivery by practice.

Make the broadcast exactly fit the time limit.

Hints for greater effectiveness, *p. 51.*

Listen to other broadcasts as a means of securing suggestions for improving your own.

Plan to make a definite appeal to the mental-emotional activity of the listeners.

Use all available means to create interest and to assist listeners in making use of the broadcast.

CONTENTS

IV ✦ Enlisting and Assisting Listeners . . 54

Effective use of the broadcasts may be secured in a large number of possible ways, *p. 55*.

The promoters of an educational broadcasting series must really sell the series, *p. 56*.

Special aids-to-study should be used in connection with broadcasts to schools, *p. 58*.

The formation of discussion groups will materially improve the value of broadcasts to adult listeners, *p. 61*.

V ✦ Presentation of Broadcasts 65

Attitudes, *p. 66*.

Cooperate closely with the station management.

Assume a friendly, respectful attitude toward the listeners.

Think the thoughts and live the part while broadcasting.

Microphone technique, *p. 70*.

Avoid extraneous noises.

er the microphone.

the rate of delivery according to your own style
d the thought being expressed.

ion, *p. 76*.

ounce correctly.

ulate distinctly.

pleasing and natural tone of voice.

hasize important points.

to appreciate the general cultural effect of good
tion.

Hints for greater effectiveness, *p. 80.*

Make the introductory statements concise and appropriate to stimulate interest in the broadcast.

Use smooth yet animated style of delivery, with a pleasing variety of pitch and intonation appropriate to an accurate portrayal of the ideas being presented.

Avoid dullness

Make use of the radio manuscript after it has been broadcast.

With the exception of microphone technique, the rules given for effective broadcasting do not necessarily apply to the broadcasting of addresses, etc., at important public occasions.

Radio personality is more important than rules in determining the success of a broadcaster.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR
OFFICE OF EDUCATION,
WASHINGTON, D.C., JUNE 1933.

SIR: Radio is a new factor in education. Whether it will play a large part in the school either by supplementing work now done only in class or by replacing some of the formal instruction, only time and experience will tell us. The Office of Education, however, is endeavoring to keep track of what is going on. It is studying broadcasting especially as it affects subjects which are or might be in the school. In this connection improvements in techniques are very important. Especially is it important to enlist and hold the adult. For adult education cannot be carried on well in the average school, but it could be done in the adult's home if we could find a method that is so appealing that he cannot get away from it.

This manuscript analyzes some of the forms which broadcasting has taken and gives some attention to the preparation and delivery of these forms and contains a suggestive bibliography. It is suggestive enough to warrant its publication as a bulletin of the Office of Education.

Respectfully submitted.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR.

* I *

INTRODUCTION

---

for opinion in good men
is but knowledge in the making.

JOHN MILTON

RADIO is a new force which science has placed in the hands of civilization. Its potential uses are so numerous and varied that it has captivated the imagination of the entire civilized world. As a means of diffusing entertainment and information over wide areas, broadcasting has no peer. Steadily it is breaking down the barriers of isolation, broadening the horizons, and enriching the lives of countless millions of people. Within a dozen years radio broadcasting has become an important social factor in nearly every country in the world. Even the civilization of the future may depend upon the control and direction of this power.

The Purpose of the Study

Considered as an educational force, radio is not a separate entity. It is simply a conveyor of sound. It is just as frail and human as the men and women who direct it. It is just as powerful and ingenious as the men and women who master it. Properly used, the radio may become an invaluable aid in education. If so, educational broadcasters must learn how to broadcast. They must master the art of teaching by radio.

The mastery of the technique of broadcasting is a prerequisite in skillful teaching by radio. It is different from the technique of the stage or the screen. It is different from the platform or the classroom. It is the anxious task of the present generation to determine what these differences are. For if the radio is to be harnessed and put to work to help bear the ever-increasing burdens of education, there must be a skillful instructional performance before the microphone.

The principal purpose of this bulletin is to make available to the educational profession what appear to be the best practices in teaching by radio. The study should also be of service to professional broadcasters and occasional speakers. It is hoped that the prospective broadcaster will find a number of practical suggestions to assist him in the preparation and presentation of broadcasts. If it does nothing more than to create a widespread interest in the problems involved in teaching by radio, the result will justify the effort involved in making this study.

Limitations of the Study

Since the material for the study consists principally of the consensus of well-informed opinion on the technique of effective teaching by radio, it has the limitations and advantages of such a study. Years of research and experimentation would be needed to solve the numerous educational and broadcasting problems involved in effective teaching by radio. The scope of the study is limited to a consideration of the problems of the educational broadcaster. No attempt has been made to treat the problems of the listener except to point out the aid the broadcaster is expected to give.

The rules for effective broadcasting contained in the bulletin are intended to be used simply as suggestions. After all, the speaker must make the most of his own personality. Ruth Bryan Owen points out that:

> The speaker's own sincere conviction on a matter vital to him, expressed in his own words, colored by his own individuality, will be more telling to his hearers than his repetition of others' words, however eloquent they may be. [*68*].*

*Figures in brackets refer to source references in the bibliography at the end of the bulletin.

After the speaker has mastered the essentials in broadcasting, he should be able practically to forget them as he focuses his thought upon the message he is giving.

Orrin E. Dunlap, Jr., radio editor of the New York Times, says that radio personality is an inborn quality capable of holding an invisible audience. He adds that in order to get across on the air there must be a dynamic concentration - an intense absorption in what one is broadcasting. And at the same time there must be a calm control that overrides the inevitable disturbances in a radio studio (*31, p. 138*).

Study and training may be very effective in enabling broadcasters to organize their subject matter, master microphone technique, and develop self-assurance; but no amount of training can take the place of natural ability which enables the broadcaster to project his personality over the air. It is an intangible, innate essential.

The value of the present study is based upon the important influence of the broadcasting movement, its potential educational applications, and the need for a mastery of the technique of teaching by radio, which, after all, is the basic problem involved in utilizing radio in education. It is intended to serve broadcasters who want advice and guidance in improving their teaching efficiency over the air.

Sources and Procedure

The data included in this study consist of facts and opinions on the technique of broadcasting and were secured from the following sources:

Published accounts found in magazine articles, books, conference and committee reports, and special booklets dealing with the subject.

Typed and mimeographed instructions and suggestions to broadcasters issued by various broadcasting stations and broadcasting ventures.

Experience in preparing, editing, and evaluating educational radio manuscripts.

Interviews with various educational broadcasting leaders.

Data gathered from a questionnaire sent to 604 radio broadcasting stations by the Federal Office of Education. This was the principal source of material.

A card system for assembling the data was used, and the cards were sorted and resorted until a tentative outline was developed. The tentative outline was submitted to a committee of broadcasting experts and a group of educational specialists for their additions and criticisms. The outline used in the study resulted.

In documenting the bulletins, the references used are annotated and arranged alphabetically as a bibliography at the end of the bulletin. Each reference is assigned a number representing its position in the list. In the text, references to the sources of authority are indicated by referring to these numbers. Since reference number *86*, which represents the data gathered from a questionnaire sent to all broadcasting stations, would occur so often throughout the text, citations to this source have been omitted. The reader should assume that material not documented came from this principal reference, or possibly from the experience of the writer.

It is evident that all the data thus assembled could not be used in the study. Some points contradicted others. The items were not of equal value. Therefore, it became necessary to set up a basis for evaluating the different items. This was done as follows:

The Federal Office of Education invited the Association of College and University Stations and the National Association of Broadcasters to assist with the study. Several members of the former organization prepared splendid suggestions. A special committee of the latter organization rendered invaluable service throughout the study.

Items not in harmony with the consensus of opinion were eliminated.

The committee of broadcasting experts next were asked to evaluate the items in terms of best broadcasting practices.

Following this, a tentative form of the report was prepared and submitted to several specialists in the Office of Education

and experienced educational broadcasters outside for their criticism.

The Plan of the Study

The final report which consists principally of the consensus of opinion of broadcasters and educators, as interpreted by the writer, is divided into five chapters. Chapter I briefly considers the purpose, procedure, and plan of the study. The second chapter treats the various forms of radio programs and the special consideration in each. The third chapter deals with certain points that should be considered in the preparation of all educational broadcasts. Publicity and supplementary aids for listeners are included in the fourth chapter, and some points that should be considered in the presentation of all educational broadcasts are treated in the fifth chapter.

✶ II ✶

POSSIBLE FORMS OF BROADCASTS

You shall hear their lightest tone
Stealing through your walls of stone
Till your loneliest valleys hear
The far cathedral's whispered prayer.

ALFRED NOYES

THE nature of the advance preparation needed by the broadcaster will depend somewhat upon the form in which the broadcast will be presented. Will it be a lecture, a radio debate, or a discussion? Will it be a radio dramatization or a musical broadcast? The form of presentation will depend upon three factors, namely: The nature of the subject, the broadcast talent, and the listeners for whom it is intended.

Radio broadcasts may be roughly classified under seven general headings: [*i*] talks, [*ii*] directed activities, [*iii*] actuality broadcasts, [*iv*] radio conversation, [*v*] debates, [*vi*] broadcast music, and [*vii*] radio plays. This chapter will be given to a discussion of these various types of radio broadcasts.

Radio Talks

As used here, the expression *radio talks* is intended to include features broadcast in the form of lectures, addresses, and stories; but it is not intended to include forms of radio

presentation commonly known as *directed activities* and *eye-witness accounts*, which are sometimes classified under the more inclusive term of *reportage* or *actuality broadcasts*. These last-mentioned forms will be discussed later.

Beginning with the traditional forms, radio talks are gradually evolving methods of their own [*55, p. 192*]. Even yet, so much is unknown, there is such a close interlocking of the subject matter, the personality of the speaker, and the manner of delivery that it is impossible to set up any one best method of organizing and standardizing radio talks. The crucial test which is used at the present time is the amount of interest the talk will arouse and sustain. Listeners may manifest intense interest in a news broadcast or an ordinary discussion of some major public issue simply because the broadcast is timely.

While there is no common agreement among broadcasting authorities as to the general characteristics of a successful radio talk, it appears that the broadcaster should have a magnetic personality, his attitude should be friendly and courteous, the style of the manuscript should be suited to the subject being presented, and, finally, only a few points should be made in one talk.

The attitude of the speaker should be that of a guest in the home, and he should conduct himself accordingly. He should be liberal and open-minded, minimizing generalizations, preachment, and self-aggrandizement. While the listener must be made to understand that the speaker is an authority on his subject, the tone of the manuscript should be friendly and ingratiating. Without attempting to be condescending or dictatorial, the speaker should win the appreciation of the listener by his skillful presentation of the subject and by his friendly manner. The use of the words *we*, *you*, and *friends* frequently tends to make his message direct and personal.

The narrative or story is especially fitted to the younger pupils. This is true whether the story tells about fictitious or real events, or whether it recounts anecdotes from the lives of celebrated men [*59*]. Stories for primary pupils should be short, seldom more than 10 minutes in length.

They should present situations that will stimulate interest and sustain the attention while the young listener tries to imagine what the outcome will be. Side references to situations within the experiences of the children are very effective. Stories from life are suitable also to illustrate serious talks for adults. Dean Gleason Archer's law lectures, for example, are shot through and through with human-interest illustrations.

There is considerable variation of opinion as to the relation of effective radio speaking to effective public speaking. A British lecturer says that if the speaker is a live lecturer and knows his public he needs to learn very little from the microphone [*54, p. 909*]. Borden states that more of the principles of effective platform speaking carry over as principles of effective radio speaking [*51*]. Lawton points out that the platform speaker who has depended a great deal on bombast will not be very effective over the air [*51, p. 264–265*]. As quoted by Lawton, Professor Morecraft considers radio oratory as being much different from platform oratory for—

> Ill-built sentences, expressing weak ideas, cannot succeed without the aid of forensic gesticulation. Flowery nonsense and rhetorical excursions of the soapbox orator are probably a thing of the past if a microphone is being used. The radio listener, curled comfortably in his favorite chair, is likely to criticize the vituperations of the vote pleader very seriously. Woe be to the candidate who depends for public favor on the wild rantings and tearing of the hair. [51, *p. 265*].

Radio audiences will not tolerate floundering, stuttering, groping for words, long pauses, or the use of "er–er–er," or "a–a–ah."

As a rule, radio talks should not be more than 15 minutes in length. Therefore, the speaker should get to the main point quickly and not be overambitious to cover the subject. He is usually expected to have a thorough knowledge of the subject he is to discuss. This frequently requires extensive experience and research. The talk should be a straightforward expression of the speaker's sincere convictions on a subject. Even silver-tongued oratory by a speaker who lacks conviction will seldom carry as much weight in convincing listeners.

Broadcasters point out that the scholar, with a vast amount of information, may be an absolute failure as a

broadcaster because of the lack of showmanship. Lambert is of the opinion that the university classroom lecturer may be too graceless and pedantic; the university extension lecturer with his platform manner may sound "stagey"; the tutorial class tutor may lack the power to react to a sufficiently varied range of intellectual needs. He thinks that there is not a single one of these styles of lecturing which is wholly suitable to broadcasting. Every one of these types requires, under normal circumstances, considerable guidance and rehearsal in the production of effective popular broadcasts [*57, p. 800*].

Directed Activities

The expression *directed activities* as used here names the form of radio presentation in which the listener is instructed to perform a definite activity during the broadcast. The most common types of directed activities taught over the air are setting-up exercises, story plays and rhythmics. The writing down of an address or recipe, or the making of a memorandum at the request of the broadcaster is a directed activity. Thus it will be seen that this form of radio presentation is frequently combined with other forms such as talks, discussions, and even singing when the listeners are expected to sing with the broadcaster.

Directed activities are considered as a separate form of radio presentation because they need rather specialized preparation, and because they are used extensively in teaching by radio. Some educators have questioned the possibility of teaching by radio. They say there is no learning without activity on the part of the learner and in teaching by radio the pupils are not active. Any person who has visited a class being taught by a skillful radio instructor knows the pupils are far from passive. With the aid of lesson material, and the assistance of their class teacher, the pupils carry out as wide a variety of activities for the teacher of the air as they do for their regular teacher.

The broadcaster who has developed the ability to stimulate and direct the emotional, mental, and physical activities of the listeners has gone a long way toward mastering the highly specialized art of teaching by radio.

In the preparation of the broadcast the radio instructor must be able to visualize the listeners and not expect them to use equipment that they do not have or do anything that they cannot do at that moment. He must be able to arouse the interest of the listeners at the outset of the projected activity and sustain it throughout the broadcast. Careful preparation and thorough rehearsing will be absolutely necessary.

As far as possible, the material should be developed around the listeners rather than forcing the listeners to adapt themselves to the material. If possible, the manuscript should be prepared far enough in advance so that teachers and other group leaders can secure copies of it before it is put on the air. The broadcast should be limited to explicit activities that can easily be described over the air.

The main directions should be carefully thought out and expressed in the fewest words possible to get the desired results. The more difficult directions should be repeated slowly. Interesting or humorous side remarks interspersed with the directions relieve the effort of listening and give the listeners time to think over the directions.

The speed of movements and exact timing of activities must be worked out in advance to insure smoothness in presentation and avoid confusion of the listeners. It is usually necessary for the broadcaster to have a group typical of the listeners carry out the activities under his personal direction in order to perfect his instructions and time exactly the speed of the movements. If an exact counterpart is produced before the microphone, with the liberal use of music and subdued sound effects, the proper atmospheric effect can be created. An occasional interruption of the broadcaster with a pertinent question will enable him to emphasize important directions that might be misunderstood.

Actuality Broadcasts

The expression *actuality programs* is borrowed from the British to describe the broadcasting of important public events, either at the time of their occurrence or soon afterwards, and the running commentaries along with natural sound effects of interesting settings. Beginning with eye-

witness accounts of sports events, parades, and other public occasions, the development of improved microphones, remote-control equipment, and sound-recording systems has caused this form of radio presentation to be expanded until now the wide variety of adaptations related to eye-witness accounts makes it desirable to secure a more inclusive term than any in general use, thus the expression *actuality broadcasts*. The Germans refer to actuality broadcasts as reportages. Among the adaptions are descriptions of scenes from airplanes, visits to factories, stories of personal experiences, and, through characterizations or sound recording, the reproductions of important national occasions, and other actualities.

The following is an example of an actuality broadcast over the Columbia Broadcasting System, February 5, 1932:

ANNOUNCER

Tonight the editors of Time raise the curtain again on a new way of reporting the news—the reenactment of memorable scenes from the news of the week—from the March of Time.

Thirteen years ago the League of Nations Covenant solemnly promised a reduction of armament in the name of peace—a promise made to the 8,000,000 young men slaughtered in the World War. This week at Geneva, to the accompaniment of ringing church bells, in New York, London, Paris, the long-awaited world disarmament conference begins. At this moment the 232 men and women representing 60 nations of innumerable traditions, cultures, and creeds face the Presidential Tribunal. Chairman Arthur Henderson of Great Britain opens the conference:

MR. HENDERSON

This is an historic occasion. Assembled here are the spokesmen of one billion seven hundred million people. We must have no illusions as to the problems which confront us. We must be determined to overcome them in our common hope for the attainment of universal disarmament. We must insure the continuity of the world. Modern history incontestably disproves the belief that the safety of nations lies in the strength of their armaments. A sense of insecurity merely leads to an increase of armaments, increase in armaments only aggravates the sense of insecurity. And unless this vicious circle can be broken, the process goes inevitably forward. The burdened nations find no release from their mutual distress except in open conflict.

Need I remind the conference of the financial burden of armaments? During the last five years 41 countries have spent the immense sum of four billion dollars a year for military purposes. The world wants disarmament. The world needs disarmament. And the future of our developing civilization depends upon our success today.

[Bells up—Music]

The educational possibilities of actuality broadcasts are almost unlimited. Stimulated by carefully worded pictures, graphic descriptions, actual sounds, the ear-witness' imagination enables him really to experience the situation. Thus the cultural values of guided travel, the instructive benefits of history-making news of the day, the stimulating guidance of great personalities become available even to the underprivileged peoples of remote regions.

The advance preparation for running commentary broadcasts includes the selection of the speakers, the setting up of proper transmitting equipment, and the advance preparation of subject matter that may be useful in the broadcast. The principal broadcaster or narrator should be very carefully selected, because the success of the broadcast depends almost entirely upon his ability.

One writer says the narrator should be a clear, concise thinker with a well-developed news sense and a ready command of vivid descriptive language. Another says he should be able to observe keenly and to narrate interestingly and accurately what he observes. A third writer points out that the narrator should possess a thorough knowledge of the situation, a virile personality, and the ability to transport the listener to the scene by means of a vivid understandable word picture.

Broadcasts originating outside the studios make it necessary to install proper physical equipment in suitable positions. In running commentaries, the microphones should be placed in positions where the broadcasters can easily see the situations being described. Transmitters on trucks are sometimes used to make running commentaries. Sometimes several microphones should be used to put the event on the air. If so, they should be connected with each other in an inner communication line. The positions selected should be such

that the proper background sound effects can be heard without being too loud. Of course, the microphones should be protected from storms or damage by spectators.

Not only running commentaries but also practically all forms of actuality broadcasts require considerable advance preparation of subject matter. The principal broadcaster should anticipate the scene and write out narrative descriptions to facilitate the advance description of details needed to create the proper atmospheric effect and aid in the running commentaries. Interesting sidelights on the location or participants will be welcomed by the radio audience to fill the lulls in action that almost invariably occur during the broadcast. As a rule not more than five seconds should be permitted to lapse without a sound going on the air.

Beginning with a brief word picture of the location and principal characters as they would be seen if the listener were present, the broadcaster should proceed naturally, giving a running-fire description of the activity as it takes place. The tempo and the pitch of the voice should be suited to the event. The listener relies on the man at the microphone to be on the lookout for human interest happenings and to translate them so that he can visualize and feel the situation whether it be the thrill of the touchdown, the dignity of the parade, or the solemnity of the dedication. The dramatic possibilities of each incident should be stressed.

In describing exciting events the rate of delivery should be faster, the voice pitched higher, and the style more vigorous than usual. Short crisp sentences and appropriate interruptions help. Enthusiasm should be projected, but the speaker should neither become so much excited that it interferes with clear coherent delivery nor try to keep the listeners at a feverish pitch of excitement throughout the broadcast.

Experienced broadcasters point out that the program should not become so involved that it tends to confuse the listener. In order to avoid this difficulty, the main points of action and interest should be brought out clearly and be well supported by live detail. In describing a football game, for instance, when an unusual play has been made,

state briefly the outline of the play and keep the course of the ball in the minds of the listeners. Then when the play is over and the enthusiasm starts to subside, go back and give pertinent details of the play, telling exactly what happened and the parts played by the various participants. Scores, participants, and the occasion of the broadcast should be repeated at appropriate intervals.

The reports indicate that the broadcaster should tell the truth but avoid expressing personal prejudices and wisecracks, and stressing situations containing a great deal of horror. While it is usually appropriate to use the first person in speaking, it should be done without any appearance of ego, or otherwise putting the broadcaster between the event and the listener. If more than one narrator is used, one of them should be designated as chief. The chief should take the microphone any time he sees fit. Various voices should be used and the interludes filled with music or variety.

In instances where events are to be broadcast as actualities soon after they transpire, sound-recording systems become valuable aids in making the events real to the listeners. Characterizations also add to the reality of the event. The Blattnerphone used extensively in Germany and Great Britain to record outside events to be broadcast later is an example of the sound-recording system. "The March of Time" reproductions of the news of the week over the Columbia Broadcasting System illustrate the use of characterization. In case a person not accustomed to broadcasting is called upon to tell of some unusual experience that has attracted public attention, the interview method is usually most satisfactory. Generally this puts the individual at ease and enables him to picture the situation.

Radio Conversation

A wide variety of subjects lend themselves to this form of radio presentation. Current topics of genuine public interest and typical life problems and experiences can be treated in such a way as to stimulate analytical and creative thinking and be of real service to the listeners. Through

judicious use of comedy, pathos, or tragedy, the feature may have high entertainment value and still carry a subtle lesson as a by-product of the experiences reproduced in the dialog or discussion. Inferences drawn by the listener as a result of his own reflection may carry more weight in his life decisions than the careful analytical study of human conduct would carry.

There are several forms of radio conversation. In the one-man discussion, the speaker either impersonates two or more characters, changing his voice to suit the different roles, or representing his audience by asking himself indirect questions. To illustrate the latter form, the speaker may say, "Perhaps you would like to know . . . ," and so forth. "Very well, I will tell you . . . ," and so forth. In the dialog method one speaker may represent the teacher and another the pupil, or both speakers may discuss the subject as of about equal ability [*38*]. The interview is a popular form of the dialog. In the three-way discussion two speakers of about equal ability discuss a subject and a third person, representing the pupils, interrupts with questions. This method is meeting with considerable favor abroad, especially in Germany, where it has been carefully developed and extensively used in giving instruction over the air [*47*, *58*]. In a recent variation of the three-way discussion two speakers of about equal ability discuss a subject and occasionally appeal to a third person who, as an eminent authority, settles points of difference.

A fourth form of the radio discussion is the teacher-class form in which the teacher has a class actually present in the studio and teaches it before the microphone. Sir Walford Davies attracted a great deal of attention by using this form in 1924. Although at first glance this method might appear to be ideal, it has not been very satisfactory. In the first place, it is difficult to arrange to have a class present in the studio. Next, if rehearsals are held, the performance becomes unnatural. If not, too much time is lost. Besides these difficulties, the limitations of radio necessitate the use of different procedure in teaching an invisible class with the assistance of their regular teacher than the broadcasting instructor would use in teaching the class before him.

In the one-man discussion the speaker should cause the listener to feel as if the speaker were in the listener's home and talking things over with him. In most other forms of discussion the listener should be made to feel that he is eavesdropping on an informal and rather confidential conversation in which the speakers are not aware of a listening audience. In order to accomplish this effect, the broadcast must appear to be natural and spontaneous with unfinished statements, typical interruptions, and varied speed just as would be expected in a normal impromptu conversation.

The interview form of the dialog is simple and usually effective if the skilled interviewer is questioning a prominent person, or a person who has attracted widespread public attention for some act of heroism or other unusual accomplishment. The interview dialog in which the questions or the delivery seem stilted, as well as straw-man questions to be torn down by the person being interviewed, will be ridiculous and ineffective. Any suggestion that the dialog has been written out in advance or is being read is bad. Utmost naturalness should be the aim even though it requires rare art to achieve it.

In practically every instance it appears that the material should be written out and rehearsed. The extemporaneous type is seldom successful. There is considerable division of opinion on the question of whether or not the characters should be permitted to take liberties with the text during the broadcast. While the appearance of absolute freedom of discussion is highly desirable, the best practice seems to be to build these apparent liberties into the text. Alertness of the characters during rehearsal will usually bring out the "patter" that should be built into the script.

The general characteristics of radio discussions vary in accordance with the subject matter being discussed and the purposes of the broadcasts. While most writers say the style should be informal and chatty, there are occasions and subjects when a very formal presentation may be more appropriate. Notwithstanding these variations, there are some common points that should usually be observed in the preparation of radio discussions.

The lines for the different characters should be written in different styles. All of the contractions that are common in the spoken language should be employed without perpetuating the common errors. Charm, originality, and clear crystallization of ideas stimulate attentive listening. The discussion should be arranged so as to consider basic fundamental points to the exclusion of minor details. Each point discussed should be made clear and complete before passing on to the next one. The trend of thought should unfold naturally.

The consensus of opinion indicates that the manuscript should include words to identify properly each character so that the listener visualizes him at once when he speaks. As the various characters address one another, the different pitch of their voices and the frequent repetition of their names prevent confusion in the minds of the unseen audience. Comments of the characters, appropriate musical settings, and sound effects are used to indicate the setting, movements, and lapse of time.

As a rule the discussion should not be monopolized by one character but should be rather evenly balanced. If it is necessary to have long speeches by one person, break them up with short questions or remarks, such as, "Did you say 7,659?" "Yes; go on," or "I didn't know that."

There is a very definite tendency in the evolution of educational talks for broadcasting purposes to get away from the formal lecture method of presentation and to substitute discussions, directed activities, eye-witness accounts, and debates [*8, 47*]. There seem to be three reasons for this shift in method. First, since the listener must concentrate on sound and sound alone, the conversational style and different voices tend to relieve the strain of continual listening to the voice of a single broadcaster [*12*]. Second, classroom teaching conditions can be more nearly duplicated in the conversational presentation of material, as this method not only assists the pupils in following the line of thought but also assists the teacher at the microphone in making his points clear. Third, a more personal animated form of expression will usually result when speakers talk to each other before the microphone [*28, 38, 47, 58*].

Radio Debates

Very satisfactory progress is being made in the use of the discussion method in broadcasting, but comparatively little advance has been made in the use of debates [*28, p. 219*]. Intercollege debates over the air have attracted considerable interest at the time they were presented, but the movement has not grown very rapidly. Some broadcasters are of the opinion that radio debates will never be effective. An examination of the characteristics of debates will bring out some of the reasons why they have never become more popular over the air.

In the first place great care must be exercised in selecting the subject and conducting the debate over the air so as not to offend any group of listeners. The subject must be of general interest to the audience, whether national or local. It must be controversial. The audience, being more critical at home than in the lecture hall, is likely to take offense at broadcast statements that are contrary to their convictions. Even though the station management exercises the greatest care to maintain its neutrality, the listener may think the station is taking sides.

In the second place debates afford the speakers the opportunity to bring out strong emotions, which are hard to handle by radio. Heated arguments, rabid controversial statements, and dogmatic utterances such as "I am now going to prove to you," sound out of place when broadcast. Outrageous attacks, sarcastic thrusts, and vehement ridicule are decidedly inappropriate in the quiet atmosphere of the home. The microphone has not been invented to pick up shouting and table thumping so much used in ordinary debating.

In the third place the length of time needed to prove the points and the lapse of time after a point is made before it is answered make it difficult for the listener to retain and evaluate the various ideas. Long, involved statements logically organized and delivered in a convincing oratorical style may be pleasing and effective in the assembly hall but not over the air [*64, 69*].

Best practice at the present time indicates that if a debate is broadcast the station must maintain its neutrality. The

subject should be carefully selected, clearly stated, and fully covered by competent speakers. The question should be thoroughly analyzed and irrelevant matter excluded by common agreement. The debate should be completed in one program.

The chairman, or master of ceremonies, has the responsibility of giving the listeners a glimpse of the situation, stating the premises clearly, introducing the speakers, making necessary explanations, and summarizing the points. The voices of the speakers should be sufficiently different to be easily distinguishable. The length of time given each speaker should be short—seldom more than 10 minutes—with about 4 minutes for rebuttals. The rebuttals may be impromptu, but should be accurately timed. The audience may be invited to judge the debate by mailing in their votes.

In the preparation of the debate great care is necessary to insure clear, concise, coherent reasoning. The points should be easily grasped and supported with authentic proof and ample illustrations woven into logical arguments and kept free from racial, religious, or political prejudice. The style of presentation should be diversified and colorful.

The same adverse criticism that applies to the lecture method of broadcasting also applies to the debate, and probably will continue to do so until the debate is broken up into an argument in which there is a point-by-point presentation and less formality. In a point-by-point debate the negative speaker immediately answers a point when it is made by the affirmative. Thus the debate really becomes a controversial discussion. As such it will probably motivate the hearers to further learning activity on the subject which, after all, would be a worthy objective in any debate.

During the winter of 1931–32 the League of Women Voters presented a series of informal debates in dealing with public questions of a controversial nature. The chairman would ask the question, which would be answered immediately by a person representing the affirmative. A person taking the negative viewpoint would then answer the question. The final decision would be left to the radio audience. The British Broadcasting Corporation used a slightly different

procedure in its unfinished debates for school audiences. The affirmative speaker presents his complete argument. The negative speaker then answers him. The final decision is left to the listeners [*59*]. Thus it will be seen that many variations of the debate may be used in broadcasting controversial subjects.

Broadcast Music

The most extensively used and the most popular form of radio broadcasting is music. Howard Millholland, of the National Broadcasting Co., is of the opinion that the popularity of music is due to its appeal to the sensory faculties of hearing and motor or rhythmic activity; the memory and imagination through ballads, songs, operas, etc.; and the emotions, engaging the feelings between all extremes from the trivial to the sublime, from grief to joy. Music, since it depends so much on auditory impressions, suffers less than any other form of expression when it is broadcast. Music is the universal language which is understood by everyone. Radio is playing an important part in its dissemination. John Erskine says that the radio is doing more to raise the American public's appreciation of music than all other agencies combined [*47*].

There are many musical tastes to appeal to and all are worthy of attention. The latest song hits and popular tunes attract a large audience. They should be scrutinized carefully, however, for suggestiveness before they are broadcast. Many of them are soon worn out. One radio program director says, "Avoid riding new popular tunes to death. They are short-winded brutes." Another program director states that "It is an appalling fact that despite the vast amount of musical entertainment over the air and the great number of possible selections comparatively few compositions by a limited number of composers are ever played or sung."

While a station may feature male quartets, Hawaiian selections, western songs, or any other form of musical expression, at different hours different types of musical programs should be built to appeal to different audiences and different moods. For example, for a quiet or pensive mood, preference

should be given to the string and wind instruments over the brass instruments and the saxophones. Care should be given to the harmonious choice of selections and their sequence of arrangement to insure both variety and continuity. Orchestral selections should be broken up with vocal numbers.

The musical programs of too many stations are based upon the belief that everyone wants the same sort of music. Variety is essential. In order to have variety the station program can be broken up into 15-minute blocks and different types of music presented in different blocks. Monotony results from too much repetition of the same or similar numbers. That must be avoided.

The following example of a well-planned broadcast music lesson was the first concert of Series A, presented by Walter Damrosch in the Music Appreciation Hour over stations WEAF and WJZ, New York, of the National Broadcasting Co., on Friday, October 9, 1931, at 11 a.m.

ANNOUNCER

Good morning, young people. This is the first concert in Series A of the NBC Music Appreciation Hour. These programs have been specially arranged for you by Walter Damrosch, who conducts the National Orchestra. It gives me great pleasure to introduce Mr. George H. Gartlan, director of music in the public schools of greater New York, and a leader in public-school music affairs in our country. Mr. Gartlan.

MR. GARTLAN

To the children of my own New York—to all others listening in all over the whole country—this inaugural statement today starts you on a great adventure with Walter Damrosch. He is going to introduce you to the members of his musical family, and you are going to take part with him in many concerts of beautiful music, presented only as Walter Damrosch and his orchestra can present it. In your name I thank him and the National Broadcasting Co., who makes this series possible. I assure them that the music teachers of the country and you their pupils are looking forward to each Friday morning with great anticipation and eagerness. Dr. Damrosch, we are all ears, ready to listen.

MR. DAMROSCH

Good morning, my dear children. Here we are again together. I can't see you, and you can't see me—but you can hear me, as you can

hear the orchestra that's going to play music for you this morning. Thanks to this wonderful invention of the radio there will be many, many millions of boys and girls like yourselves, all over this country, in every State of the Union, listening to the music that we are going to give you.

I call my orchestra my musical family, because here they are, seated around me, holding their instruments in their hands, waiting for me to give them the signal to begin. They are seated around me just as you sit around the table in your own home, eating your breakfast. There is father, mother, and your little brothers and sisters, and perhaps an aunt, and as you eat your breakfast, some of you may begin talking about something and your little brother joins in. And he says, "No, that isn't so, I saw that robin on the tree behind the barn." "No, I saw it on the tree outside of the house." And you get talking so wildly with each other that your father looks up from his paper and says, "Children, stop talking. You disturb my reading when you all talk at once like that." Now, my family—my musical family—can all talk together at the same time and not create a disturbance. On the contrary, the more they play together, if they play nice music together, the more pleasant it is. And while you have father and mother, and brothers and sisters in your family, I've got in my family here violins and violas, and violoncellos, and double basses, and flutes, and oboes, and clarinets, and trumpets, and trombones, and all kinds of instruments that are called percussion instruments, where you produce noises or sounds with a stick on a skin stretched over what looks like a copper kettle—oh, the strangest looking instruments, and yet they all make music together. And they can all talk at the same time. When I say they can talk, what language can they talk? Can they talk English? No. Can they talk German? No. Can they talk Italian? No. But they can talk music; and what is music? It's a language. But a language of what? A language of our feelings. For music can express when we feel happy. It can express when we feel sad. It can express our love for our country—patriotism. It can express sorrow, if we have lost someone dear to us. So you see what an important part music—good music—can play in our lives. Because whenever it expresses that which is in us, it expresses it beautifully—in beautiful tunes, in lovely harmonies; and gradually, little by little, you will understand more and more of this language of music; so that when people ask you what language can you speak, you will say, "Well, I can speak English, and my father and mother used to speak German, or Italian, and I can speak a little of that, and I can speak the language of music."

The orchestra is now going to play with me a march—a military march, written by the great German composer, Franz Schubert. And as you listen to this march you will hear it coming from far off, very faintly, as if a regiment of soldiers were coming on parade, nearer and nearer, and finally you see them with their rifles on their shoulders,

and their flags flying. Then comes the general on horseback, with his horse curvetting around, and behind him his colonels and his adjutants and all the other officers, and so the march will go on from glory to glory. We will now play you this military march of Schubert's.

[*Military March in D*, by SCHUBERT, is played]

ANNOUNCER

This is the NBC Music Appreciation Hour. WJZ, New York. Mr. Damrosch continues.

MR. DAMROSCH

I am gradually going to introduce to you the various members of my musical family just as you would say, Mr. Damrosch, this is my father. Mr. Damrosch, this my aunt, or this is my younger brother Jim, and this is Sarah. So I am going to tell you all about the various members of the musical family, what instruments they play, and let you listen to them so that you can tell a violin from a double bass and so forth and so on.

Our next number is going to be a spinning song. Now, you know, your great-grandmother used to spin with a spinning wheel, which she made to move with her feet while she spun the flax. Today all that is done in great big factories by machinery, and we have sewing machines at home; but in those days they had a spinning wheel which made a nice little whir-r-r, as your great-grandmother used to spin the flax. Instead of the whir-r-r, this rumbling sound is played in the accompaniment by the first violins and the melody is played by the second violins, pizzicato. Now we will play for you the jolly little Spinning Song written by Mendelssohn.

[*Spinning Song* by MENDELSSOHN is played]

* * * * *

ANNOUNCER

You have just heard the first concert in Series A of the NBC Music Appreciation Hour, conducted by Walter Damrosch. The next concert in this particular series will be broadcast 2 weeks from today, on Friday morning, October 23, at 11 o'clock eastern standard time.

As illustrated by the NBC Music Appreciation Hour, suitable continuity and carefully worded explanations and interpretations have an important part to play in broadcast musical instruction. If explanatory comment is used, it should be prepared by someone familiar with the music and its composer, or by one who knows where to find authentic information about them. Such comments should not be

improvised by announcers or prepared by continuity writers who know very little about music. The tone of the manuscript should conform to the standard of the music being studied. Different types of music require different types of continuity. Besides the bare announcement of the author, title, and setting, little historical sketches concerning the author, incidents surrounding the composition of the selection, etc., are appropriate. When used for instructional purposes, it will not be amiss to point out some of the characteristics of the composition and direct the students to what to listen for. The continuity should be brief.

The following example of a Standard symphony hour will serve to illustrate the place of continuity in a musical broadcast.

[Trumpet Fanfare No. 1]

ANNOUNCER

The two hundred and twenty-seventh Standard Symphony Hour.

[Extract from the *Prelude to Act III* of Lohengrin is played]

ANNOUNCER

We have pleasure in presenting the Los Angeles Philharmonic Orchestra and its conductor, Dr. Artur Rodzinski. This orchestra and the San Francisco Symphony Orchestra have been engaged exclusively for broadcasting alternately, week by week, under the sponsorship of the Standard Oil Co. of California.

We begin with the vivid Carnival Romaine, or Roman Carnival, by Hector Berlioz, a picturesque number which is based on a vigorous Italian dance, the Saltarello:

[*Carnival Romaine* by BERLIOZ is played]

ANNOUNCER

There is an ancient tradition in many European countries that on All Halloween the dead return from their graves to dance till cockcrow. On a poem of this nature, Saint-Saëns based his Danse Macabre, or Dance of the Dead, with which we follow the Carnival Romaine by Berlioz. The opening notes tell how "Death the Fiddler" hammers the gravestones to summon the dead and tunes his instrument, which has a flat E string.

[*Danse Macabre* by SAINT-SAËNS is played]

POSSIBLE FORMS OF BROADCASTS

ANNOUNCER

The Carnival Romaine by Berlioz and the Danse Macabre by Saint-Saëns, the two works just played by the Los Angeles Philharmonic Orchestra under the direction of Dr. Artur Rodzinski, were discussed this morning during the elementary and advanced lessons of the Standard School Broadcast. Both the Standard School Broadcast and the Standard Symphony Hour, linking home and school in the companionship of music, are presentations of the Standard Oil Co. of California.

The Standard Symphony Hour continues with the theme and variations from Suite No. 3 by Tchaikowsky, a number which concludes with a polacca, a brilliant Polish dance, based on the theme or melody which forms the basis of the work

Suite No. 3 : Theme and variations by TCHAIKOWSKY is played]

ANNOUNCER

The theme and variations from Tchaikowsky's Third Suite has just been played by the Los Angeles Philharmonic Orchestra during the two hundred and thirty-eighth Standard Symphony Hour under the direction of Dr. Artur Rodzinski, a program sponsored by the Standard Oil Co. of California.

The concluding number on this program will be the introduction to Act III of Wagner's opera, Die Meistersinger, leading at the close to the Dance of the Apprentices. . . .

The Standard School Broadcast will be given on Thursday morning, the elementary lesson from 11 to 11:20 and advanced from 11:25 to 11:45, as a preparation for the evening Standard Symphony Hour. Both programs are presentations of the Standard Oil Company of California.

[Trumpet Fanfare No. 2. Sign off and chimes]

It is a good practice to end the introductory announcement with the title and then repeat the title at the close of the number. There are always listeners who tune in during a number and like to know what it is that they have heard. Titles of songs to be sung in a foreign language should be announced in that language and usually repeated in English.

The program director should be very careful in the selection of musical talent, for whatever is done should be extremely well done. The artist should not be too ambitious. It is better that a simple song be played well than a difficult one violated. In the words of Vice President John Elwood, of the

National Broadcasting Co., "A first-class harmonica player is better than a second-rate symphony."

Music instruction over the air may be vocal or instrumental. Assuming that the primary object of teaching music is that children may listen to music for pleasure, that they may desire to express themselves through it for their own pleasure and for that of others, and that they may become critical of it so as to enrich their own expression and to demand higher standards, broadcasting can be a very valuable aid in music instruction [*47*].

The nature of the preparation needed for music instruction over the air will depend upon the purpose of the instruction and the form of the musical expression. The singer will need rehearsals to master broadcasting technique and develop self-confidence. A well-known British soloist, Vivienne Chatterton, makes some splendid suggestions for radio singing. She says:

> *First*, take warning. When you first sing in a draped studio your voice will seem about half its usual volume, and you will be tempted to force the tone. DON'T. To mitigate this, practice singing with a finger in each ear—a trick which will enable you to hear your voice much as it would sound in the studio
>
> *Secondly*, see that your breath is perfectly silent, for anything like a gasp for breath will transmit as a veritable hurricane.
>
> *Thirdly*, diction is tremendously important. Every consonant must be crisp and clear, especially at the end of a word; but this must not be exaggerated, or an uneasy sense of jerkiness will result.
>
> *Fourthly*, slow songs can be taken a little faster and quick songs a little more slowly, providing the rhythm is very strictly maintained.
>
> *Lastly*, do not merely "vocalize", but concentrate on the message of your song [*17, p. 165–166*].

Naturally, no two voices are the same, but as a rule singers with higher-pitched voices should stand farther from the microphone than those with lower-pitched voices. Considerable experimentation is sometimes necessary to determine the right position for a singer to take with reference to the microphone. Radio has developed a new type of singing voice. The singing whisperer and the crooner have been interesting innovations. The soloist stands about 6 inches from the microphone and sings in an intimate voice only a little above a whisper, so soft and with so little volume that

it could scarcely be heard from another position in the studio. This delivery is suited to quiet songs in which there is a limited range of tone color [*75, p. 120*]. Besides preparation for delivery, the radio music instructor must consider careful preparation of the instructional content of the music lessons, since he is expected to interpret and explain the songs so that the broadcast instruction may be easily synchronized with the regular music courses in the schools [*47, p. 330–347, 64*].

Various solo instruments, string quartets, and orchestras are used to teach instrumental music over the air. String quartets transmit well because they are composed of instruments of the same tone quality, while larger orchestras and military bands, being made up of instruments of different qualities, are more difficult to transmit [*21, p. 167*]. Practice is needed to determine the relative positions that the instruments should be placed from the microphone to balance their strength. As a rule, high-pitched instruments should be placed farther away from the microphone than low-pitched instruments [*21, 79*].

Radio Plays

From the foregoing consideration it will be evident that no clear line of distinction can be drawn between the radio discussion and the radio play, or radio dramatization, as one merges into the other. In the radio play, however, the manuscript is usually prepared by one person and presented by others who are selected because they possess dramatic talent.

The radio play is a type of broadcast that is rapidly growing in popularity as the producers learn more about radio dramatic art. Clever dramatic broadcasts win much favor and stimulate the producer to renewed efforts for better radio plays. In the dramatization it is, above all, necessary to make the scene live for the listener and even make it possible for the pupils to imagine that they are living the scenes themselves [*59*].

Drama on the air is subject to a different technique from that of the drama of platform or stage. The visual has no

part in it and the psychological effect of the crowded theater and the holiday mood are absent. The scene exists solely in the mind of the listener, and since it is the creation of each individual it should be perfect for him.

It is very difficult to write radio plays. The radio dramatist must know the technique of play construction, prepare the play so that it can be broadcast effectively, and understand the listener mind and methods of appealing to and holding attention and interest. Without gorgeous scenic effects the author's lines and the actors' skill must produce the desired mental reactions. Therefore, an even greater knowledge of psychology is needed by the radio playwright than is needed by the stage playwright. With a few well-chosen lines giving only the bare essentials, the radio playwright must rely upon the ever-revolving stage of the imagination of the audience to create the scenic effects and set the invisible stage.

In the absence of visual aids, the playwright must ingeniously substitute lines in the script, music, and sound effects necessary to understand the setting and the progress of the plot to produce the desired mood and to stimulate the imagination. Radio plays fall flat if they fail to create illusions and to affect human emotions. If successful, they draw tears and laughter. Scripts that bring temperaments and characteristics into severe contrast seem to be most successful.

The play must be constructed so that only a few characters speak at a given point; otherwise, the audience will not be able to identify immediately an actor when he speaks. For elementary school pupils it seems best never to use more than three characters at a point in the play. Even then there should be a marked contrast in voices, and special lines used to introduce them. For example, the previous speaker may say, "Here comes John Smith. Hello there, John!" or "What do you think, Kingfish?" Above all, the play must be educationally desirable as well as dramatically effective [*9, 13, 30, 64, 91*].

A British author states that the most successful broadcast plays have been transferred from the stage to the microphone [*61, p. 1108*], but both he and Mrs. Bushman are

of the opinion that radio dramatists must write most of their own material [*13, p. 354; 61, p. 1108*]. One writer says that the reason so many of the better broadcast plays have been transferred from the stage is that a microphone classic has not been written as yet [*61, p. 1108*]. Baddeley points out the similarity of wireless drama and stage drama and voices the opinion that it will be unnecessary to write plays especially for broadcasting purposes when dramatists learn to adapt stage productions properly to the microphone [*2, p. 1033–1034*]. To support this position he points out that honesty and sincerity in writing, clear characterization, action, and sense and taste in evolving the theatrical shape of the play are the essentials of drama wherever found [*2, p. 1033*].

Bushman describes the limitations of radio drama by stating that the radio actor plays to what might be called a blind audience, and for every piece of business on the stage of the theater, he must devise some sound effect [*13, p. 354*]. Lambert does not consider this such a handicap. He thinks that the broadcast play is not a substitute for the ordinary theater, but a new form of artistic expression appealing to the imagination through the sense of hearing alone. According to Mr. Lambert, the radio play has some advantages over the stage production since it can be presented to the human intelligence undistracted by the complications inseparable from the visible stage [*30, p. 50; 61, p. 1108*].

Radio dramas are pictures of life. They present untold opportunities when considered as an educational medium. When radio plays are well written and suitably presented by a capable cast, listeners can profit immeasurably from life situations and the experiences of others. Radio is peculiarly adapted to that form of teaching in which the lesson to be learned is the by-product of a life experience. Through this scientific marvel the dead past may be made to live again and the cultural wealth of the ages brought to all men everywhere.

Educational subject matter can be woven into skits, interviews, and plays. It can be arranged in serials, but each broadcast should be a complete unit within itself. The dramatizations should be of genuine literary merit and embody true-to-life experiences arranged so that listeners of

In casting, voice, perhaps, is the most important consideration. A British writer said, "Voices are the pigments wherewith the producer of wireless plays sets out to paint his mental picture" [*8, p. 200, 1931*]. Voice, divorced of grease paint and cloak, must carry the principal weight of the play. Is it any wonder then that radio actors should be selected with the utmost care? The dramatic coach must thoroughly master the script in order to determine the type of characterization that is demanded. Next, voices must be selected. "There are, of course, the main differences between bass, baritone, tenor, and their feminine counterparts," says the British Broadcasting Corporation in a recent yearbook, "but, also, be it remembered there are a thousand and one other differentiations; there are plaintive voices, happy voices, hard compelling voices, soft beguiling voices, voices that are old and worn with grief, voices that are as young as laughter itself, voices that suggest fat old men, and voices that suggest thin young ones" [*8, p. 200, 1931*]. Out of the multitude the right voices must be picked.

Low-pitched voices should predominate and there should be proper balance between the contrasting voices. In lieu of skill, heavy dialect parts and exaggerated characterizations are sometimes "daubed on" by amateurs. High-pitched or harsh, rasping voices are seldomed welcomed on the air. Characters must be very carefully drawn in order to create an illusion of reality.

The lack of visual aids makes it necessary that plays have as much help with music and sound effects as possible. There are instances in the broadcast play when sound effects themselves can be more eloquent and more dramatically useful than speech, and it is conceivably right to drown speech with abstract noise on certain occasions. In fact, the successful production of a play for broadcasting must be conceived in symphonic form where speech is merely one thread in the woven fabric of the sound, [*8, p. 201, 1931*].

At this time there are many unexplored possibilities of using music as an aid to effective radio drama. Millholland suggests that music may be used in radio dramatizations to [*i*] present character, [*ii*] establish a mood, [*iii*] denote the

different abilities will be stimulated mentally and be able to put the parts together, arriving by their own reasoning at the lesson to be taught.

Dramatizations should be of short duration and as timely as is the medium. Simplicity of effects is to be greatly desired. In order to accomplish these results, only a few simple situations should be presented and the minimum number of characters used. One-act plays are usually adaptable because they progress quickly to a climax.

Beginning with a short prologue to set the stage, the plot of the play should progress clearly and quickly to a climax. Each character must have easily recognizable identity, and the fewest possible words should be used to convey the meaning forcefully. Every word and sound that goes on the air should contribute its share in building the word picture. The sequence of action should be unbroken. As a rule, each character's part should be brief and the sentences short. Appropriate music and sound effects are generally used to indicate the shifting of scenes and permit a moment of relaxation. The quickly revolving stage of the listener's imagination makes it possible for the playwright to include several scenes in a short play.

Insofar as possible, the scenes and action should be cleverly embodied in the character's lines. Some sounds produced by the action of the characters in carrying out their parts may be misunderstood by the listeners unless suitable explanation is included in the lines. The words and sounds should imply the action which is so essential in radio drama. Ear testing of the script during rehearsals will enable the producer to make changes needed to eliminate the obvious and to clarify confusing situations.

The work of casting is very important in the production of radio plays. Although there may be an occasional clever actor who can successfully impersonate a wide variety of types, most actors should have natural voice characteristics that ring true of the characters being portrayed. Casting is difficult because the microphone exposes insincerity, sham, and idiosyncrasies. Tracy F. Tyler points out that a telephone conversation is a good preliminary voice test.

✶ III ✶

THE PREPARATION OF BROADCASTS

A good actor studies his part
until it becomes a part of him.

JOHN L. CLARK

PERHAPS historians will refer to the period between 1920 and 1933 as the exploratory period in broadcasting. During that period broadcasting spread until it practically covered the entire civilized world. Phenomenal engineering achievements will be recorded as having accompanied and made possible the remarkable extension of the influence of radio. The account of the evolution of the control and administration of radio broadcasting will appeal to many. Without doubt the evolution of the art of broadcasting will stand out as one of the most fascinating stories in connection with the remarkable rise of the broadcasting movement.

Starting with traditional methods of presenting material, radio is gradually evolving broadcasting methods of its own. No longer is platform oratory nor the magazine style acceptable in the best broadcasting studios. During this adventurous period when broadcasters and would-be broadcasters were trying to conquer this new medium of communication, many amusing and heart-rending experiences might be recorded. In the great onrush to master the microphone,

passage of time, and [*iv*] suggest a scene. It might be added that appropriate musical interludes also afford pleasing relaxation from the strain of continual listening. The music selected, however, should be appropriate and should not be too strongly endowed with associations remote from the play.

Sound effects is an expression used to cover everything that comes out of the loud speaker except what is usually classed as speech or music. Judiciously used, this creature of broadcasting is not an extra appendage but is one of the three essential ingredients out of which broadcast drama is built. While hundreds of sound effects have been used in radio plays, thousands remain to be discovered, the discovery and utilization of which will relegate our present radio dramas to the age of antiquity.

While the history dramalogue is one of the most popular forms of radio dramatizations for educational purposes, there are numerous other possible forms which are suitable. The possibilities of radio drama in education are as wide as human experience itself. The principal problem is not scarcity of material but the selection, adaptation, and presentation of material in such a way as will contribute most effectively to the realization of the objectives of education. While rapid progress has been made during the past few years, we are still just at the dawn of day in educational broadcasting. The future teems with possibilities.

and thereby win fame and fortune, many promising amateurs have fallen by the wayside.

The advance has been rapid, but there still remain vast unconquered areas in the art of broadcasting. "Today's methods are obsolete tomorrow. Yesterday's methods are already as dead as the dodo," says Tyrone Guthrie, the well-known British dramatic playwright. Out of the confusion that has accompanied the very rapid growth of the movement, a few rather clearly defined rules for the preparation and presentation of successful broadcasts are gradually emerging. It is the purpose of this chapter to point out some of these rules that should be observed in the preparation of all broadcasts, regardless of the form in which they are to be presented.

Importance of Thorough Preparation

After the broadcaster has decided upon the purpose of the broadcast and the form to be used, he will next turn his attention to the actual preparation of the broadcast. It would be difficult to overemphasize the importance of thorough preparation. Preparation involves the selection of valuable and timely material on a subject in which the broadcaster is well informed and genuinely interested, the organization of the material for effective presentation, and the rehearsal until a good standard of delivery is developed.

While there may be an occasional genius who has a burning message and a spontaneous flow of beautiful language that will enable him to do effective impromptu speaking over the air, the average broadcaster must thoroughly prepare his script. Broadcast writers point out that the manuscript should be written and rewritten several times; it should be condensed and deadwood cut out; and care should be exercised to keep the original spontaneity so that it can be presented with an ease and freedom which do not suggest to the audience that intense preparation has been made [*12, p. 933*]. William Hard suggests that the extemporaneous broadcast is suited especially to dramatic instances.

Work in close cooperation with the program director of the broadcasting station ★ The station management is very much

interested in the success of every program that is broadcast from its studios. The program director is in position to observe the errors that are most frequently made in broadcasts and to offer constructive suggestions to avoid them. Therefore, the prospective broadcaster should consult the program director at the very first opportunity after the broadcast is scheduled. If the station has a list of rules to be observed, or suggestions to assist in the preparation of a manuscript, the program director can supply them. He can also inform the prospective broadcaster of various ways in which the station can assist him in the preparation and rehearsal of the proposed broadcast. An open-minded attitude and willingness to accept the opinion of the program director or studio operator who is handling the technical pick-up will facilitate the preparation of a broadcast. Not only the occasional broadcaster but also those who broadcast regular series can profit by working in close cooperation with the program director. It is the business of the program director to know how to build broadcast programs.

Visualize the audience while preparing the broadcast manuscript ★ In visualizing the audience, the broadcast speaker should consider the relationship between himself and his listeners. On this point Morse Salisbury, Chief of the Radio Service, United States Department of Agriculture, says:

> It seems to me that the person who sets out to prepare and deliver a radio talk must consider first of all the relationship between himself and the listener. He is going to be a guest in the home of his listeners. As a guest by radio he is under the same obligations that rest upon guests present in the flesh. Common courtesy and common sense dictate that he be cheerful and interesting and sympathetic. A family has to tolerate the presence of a caller even though he be an utter bore. But the radio listener doesn't need to be one tenth so patient and long-suffering to the bore invited in by way of the radio receiving set. The moment that his radio guest becomes tedious or repetitious or in any way dull, the listener may excuse him and does excuse him by a flip of the dial. Hence the radio speaker is at pains to be courteous, to be interesting, to be clear and logical in his statements [77].

If the broadcast is intended for classroom reception the script writer should visualize on classroom to which he directs his broadcast material. If the broadcast is intended for home reception, the person preparing the manuscript should

make a mental picture of one individual who will be listening in front of his loud speaker. The content material should be selected because of its value and importance to the listener and because it will link up closely with what he does and thinks about from day to day.

The broadcaster should consider what the mental attitude of the listener will be at the time the broadcast is put on the air. It is obvious that the appeal should be different if the program is scheduled for 11:30 p.m. than if it is scheduled for 8 a.m. An early evening broadcast may reach a tired audience. Different audiences listen at different hours. The broadcaster can not make his subject matter link up closely with what the listener does and thinks about from day to day unless he visualizes the listener.

The principal factor that tends to make a broadcast timely is that the broadcaster appreciates and ties in with interests that are uppermost in the minds of the listeners at the time the broadcast is put on the air. For this reason the speaker may use the press, the platform, and the radio to build interest in the subject of the broadcast; or the speaker may capitalize on the interest that the listener already has. Regardless of how it is achieved, the thoughts and attitudes of the listener at the time of the broadcast do much to determine the effectiveness of the radio presentation. The timeliness of a single broadcast may determine the results of an election.

Since the audience is composed of every race and color, every age and creed, the manuscript should stay within the bounds of good taste both as to form and content. Good taste decrees that the broadcaster avoid the use of vituperative remarks, questionable humor, personalities, racial or religious slurs, recondite references, and even puns and foreign phrases. Material of an advertising or propaganda nature should not be included. While the broadcast may be addressed to a specific class or group, it should not include material that might antagonize any considerable minority of the listeners.

The broadcast should be accurate and truthful always, and presented in a dignified way that will appeal to the intelligence of the listeners. Unless the broadcast is in the nature

of a debate, the speaker should avoid dogmatism and adhere to a strict policy of impartiality. No attempt should be made to give a misleading impression. Controversial subjects can be handled best as debates in which fair play is exercised. Even then extremely controversial statements should be avoided.

Organize the subject matter to conform to the requirements of the medium ★ The broadcast is to be delivered to a virtually blind audience which cannot be seen by the broadcaster; neither can the audience talk back to him. The dependence upon hearing alone requires more concentration of attention and stimulates more freedom of the imagination. The fact that nothing can be seen is not a loss in some ways, but rather a gain. For given a cue, a directing impulse, the mind's inner eye will visualize scenes beyond the physical powers of designers to build or the camera to photograph [*26*]. An imaginative writer can build up a scene by subtle and ingenious word-sound picture which will create illusions of the imaginative listener infinitely more romantic than the tawdry grottoes of the stage [*30*].

In the absence of visual presence, the ear appeal should be given uppermost consideration during the preparation of the broadcast. Action should be explained in words and sounds. Space gestures, and even facial expressions which play such important places in public speaking and stage productions, are absent. A disarming smile may soften a cynical remark, but the smile does not go out over the air. The words used, the voice contrasts, the manner of delivery (even the pauses), and the sound effect must be carefully synchronized to convey the desired impression.

In the absence of discussion, the manuscript should be prepared to anticipate and answer listeners' questions and stimulate their interest and imagination. Since the broadcaster cannot profit from the reactions of the listeners during the broadcast, considerable practice and experimentation are usually desirable in order to perfect the manuscript and delivery.

In broadcast series, plan the radio presentations to profit from accumulative interest ★ Regularity of presentation and

unity within a series are important factors in building an interest and extending the use of a broadcast series. In this way the broadcast is able to profit from the criticism of the listeners, and the listeners learn to adjust themselves to the broadcaster's voice and manner of presentation. The habit of regularity in the use of the broadcasts and the feeling of familiarity with the radio personality combine to enhance the value of the series. The Amos and Andy series may be cited as an example. Interest awakened in one broadcast and activities growing out of it can be tied into the following program in the series. Prof. J. C. Jensen, of Nebraska Wesleyan University, says:

> We have found it desirable in broadcasting series of lectures of an educational nature to be very careful of the lesson assignment for the next period. The plan that has worked out to best advantage is to spend about one fourth of the time at the beginning of the period in reviewing the preceding lesson and answering questions which may have come in, and spending an equal amount of time at the close of the period outlining the next lesson in the textbook or other outlines which are being followed.

Thus, it will be seen that the cumulative value of a regular unified series may increase manyfold its worth over irregular offerings of unrelated material.

Other things being equal, it is much better to use the same broadcasters throughout an educational series than to change speakers each program. The nature of some series precludes the possibility of using the same speakers. The presentation of famous writers on successive programs in a Literature by Living Writers series may be used as an example. The continuity can be at least partially preserved by adopting the interview method and using the same interviewer and similar set-ups throughout the series.

Some writers recommend terminating each performance in a series at an interesting point so as to keep up the expectancy. Others recommend that each broadcast should carry a complete thought, lesson, or story, as the case may be. An examination of successful broadcast series indicates that there is no conflict in the two viewpoints expressed. Each performance of a successful broadcast series usually carries to completion certain parts of the plot, story, or lesson; the

same performance introduces a new unit or plot to motivate interest in the next broadcast.

There should be no long lapses between successive broadcasts in a series. Many of the popular series are broadcast daily. Experience indicates that not more than a week should elapse between broadcasts in a series. A brief résumé of the preceding broadcast in a series will serve as a good connecting link.

In Writing the Broadcast

Beginning with the traditional methods of the news reporter and the playwright, broadcast writing is gradually evolving methods of its own. A good radio manuscript has certain points in common with both the news story and the stage manuscript. It also has certain characteristics that are peculiar to broadcasting.

The style of the manuscript and the words used are very important, but they are only means to an end. The sound of the words and phrases becomes an important consideration. The material must be vitalized with interest-holding qualities. Atmosphere is insinuated, and voice and sound effects give the setting, convey the meaning, and express the emotion in broadcasting [*44, 81*].

Plan to catch the interest of the listener at the very beginning of the radio broadcast ✶ While a clever introduction by the announcer may create an atmosphere of expectancy, the broadcaster's lead must awaken the listener's interest and fix his attention on the subject being presented. He gives a greeting to his posts. This greeting may be either formal or informal. He may introduce his subject with a squib or an anecdote. He may start with something that is certain to be in the foreground of the thinking of most of his listeners [*77*].

The consensus indicates that long prefatory statements should be omitted, and the broadcaster should plunge right into his subject by giving a vivid illustration of one of the most important points in his broadcast [*69, p. 305*]. In case the speaker presents a regular series of broadcasts this point is not quite so important as it is with the occasional broadcaster. He may make an introductory statement con-

necting the subject he is going to discuss with the previous one. In this way the interest of the regular listeners in the previous broadcast will tend to carry over until the speaker can get a good beginning on the new lesson. If the interest of the listener is not caught immediately, he may tune out the station. If he continues to listen, an unfavorable mental attitude is created that is hard to overcome later [*12, p. 933–934; 51, 64, 69*].

Use strong common words with rich meaningful associations ★ Since words are the names we attach to experiences, it is highly important that the vocabulary level of the radio broadcast be determined very largely by the experiences of the listeners. Words are simply conveyors of ideas. If the words used by a radio speaker are unfamiliar to the hearers, they will fail to convey the ideas that the speaker had in mind. Suitable vocabulary is more important in broadcast speaking than it is in direct speaking, since the vocabulary is expected to carry exact meanings to the listeners. The vocabulary that people understand from listening is considerably different from the vocabulary they understand from reading. A speaking vocabulary is needed in broadcasts. Therefore, the sound of words becomes an important consideration. Homonyms are confusing. Sibilants do not broadcast well. When practicable to do so, other words with similar meanings should be used for words containing sibilants. For example, "crime" may be substituted for "lawlessness", and "gratitude" for "thanks" [*51, 78, 87*]. Certain combinations of words are difficult to say. "Enlisting and assisting listeners," the title of CHAPTER IV, will serve to illustrate this point.

Gosden and Correll, the popular Amos and Andy radio stars, give the following advice in regard to simplicity of expression:

> We recently had a call from a very prominent physician who was scheduled to speak on the radio during Child Week. This doctor had prepared a 15-minute talk which appeared to have great educational value. He read us the script and asked that we suggest any changes which would benefit the script from a radio standpoint. Our suggestion to him was to simplify the entire talk. In other words, if he were addressing a medical group his script would have been perfectly under-

stood, but inasmuch as the radio audience demands simplicity we suggested that he change the script in this respect, which he did. We heard his radio address and could not help but believe that it was not only very interesting but thoroughly understood by his listeners [*Letter dated May 17, 1932*].

The liberal use of strong, common, Anglo-Saxon words will improve the radio vocabulary. It has been said that three-fourths of the words used in the ordinary writer's vocabulary are of Greek and Latin origin, while three-fourths of the words used in the ordinary speaking vocabulary are of Anglo-Saxon origin. More nouns and less qualifying words are used. First and second person, active voice, indicative or imperative mode, give the broadcast certain dynamic qualities.

The style of the manuscript should be well suited to the subject matter of the address and the personality of the broadcaster. An original individual style may be pleasing. Some repetition for emphasis and clarity is allowable. Short paragraphs facilitate the delivery. Above all, the manuscript should follow a natural speaking style. Best practice indicates that the manuscript should carefully build a word picture designed to impress upon the listener the central idea of the broadcast. In doing this all extraneous material should be eliminated and minor points sacrificed when necessary. A liberal use of illustrations and human interest sidelights will be found helpful in building the picture. Short, concise statements and a direct style combine to make the line of thought easy to follow. Descriptive phrases frequently replace complete sentences. Seymour and Martin point out that the radio writer "must unlearn many of the prose writers' rules of sentence structure; must forget many of his best tricks for obtaining variation in sentences; must disregard such forms as dependent clauses and balanced sentences; and he must even unlearn the first law of writing he ever learned— that every sentence must have a subject and a verb" [*81, p. 61*].

Morse Salisbury, Chief of the Radio Division of the United States Department of Agriculture, points out that the traditional academic style is to walk backward into sentences. "For example," says Mr. Salisbury, "the person who is preoccupied with academic interests will say, 'It was done by

me,' instead of saying, 'I did it.'" [77]. Scholarly groups shy at the perpendicular personal pronoun.

Many broadcasters find a speaking style can best be attained by dictating the address from carefully prepared notes. The manuscript prepared in this way may lack smoothness when read, but it will retain the vitality and naturalness of the spoken word in the broadcaster's own style. In this way long, involved sentences, difficult words, a passive voice, and an impersonal style can be replaced by short, direct sentences, active voice, indicative mood, and the liberal use of personal pronouns in the first and second person.

An original manner of expression may be pleasing; but it must be easily understood when it is heard once. Dialect broadcasts frequently are difficult to understand. Radio writers must learn to hear their own writing rather than visualize it on the printed page. Hence the broadcast should be written in a speaking style suitable to the personality of the broadcaster [*81*].

In broadcasting to various grade levels in schools, broadcasters must be exceedingly careful to select words which will be understood by the pupils. Dale found that the vocabulary level of the most popular broadcast instructor of the Ohio School of the Air was much more suitable for the listening pupils than the vocabularies used by less popular broadcast instructors [*22*].

When it becomes necessary to use new and unusual words, the meanings should be made clear. Dale is of the opinion that at least 90 percent of the words in a radio lesson should be known by the listening pupils. If the broadcaster will use Thorndike's Teacher's Word Book or Dale's list of evaluated words, when he prepares his broadcast, it will aid him materially in selecting a suitable vocabulary [*22*].

Write in a speaking style, using a pleasing variety of phraseology ★ The phraseology and sentence structure should be easily spoken and appeal to the sense of hearing. A chatty style embodying some of the incoherencies of ordinary speech and illustrations taken from the everyday lives of the listeners makes the broadcast sound natural and spontaneous.

Although an informal style similar to that used in conversation should be followed, the broadcaster should use extreme care not to appear either condescending, dictatorial, or too familiar.

It is very difficult for one person to write in another's speaking style. There are some people who are quite proficient in radio writing, but they are poor broadcasters. There are also some broadcasters who are very clever in broadcasting material written in various styles. Too often, however, there appears to be a lack of sincerity on the part of the sweet-voiced speaker. Therefore, it is usually a good rule to have the person who writes the broadcast present it over the air. Of course, dramatic productions are the outstanding exception. Even then the casting must be very carefully done, and the producer usually takes some liberties in interpreting the manuscript.

In broadcasting to schools, persons with pedagogical background who have experiences and can pass them on in a dramatic and lively way are more to be desired than radio or stage stars. The radio should bring true, genuine life into the classes by presentations which come, on the one side, from the direct experience of the speaker, and, on the other side, afford the listeners an opportunity to share his experience [*56*].

Keep the radio broadcast compact and concise, making the line of thought easy to follow ★ This does not mean that the broadcast should be encyclopedic in nature. It does mean, however, that the manuscript should deal directly with the subject under consideration and not wander far afield to introduce distantly related material. Time over the air is very valuable—every moment should count.

The reports indicate that the organization of the broadcast and the choice of language should be such as to permit a skillful instructional performance before the microphone. The various points should be presented and ingeniously fitted together with language that is easily understood and the material organized in a clear, orderly, teachable form [*69, p. 305*]. Short, choppy statements, as well as long, involved, confusing ones, should be avoided. After the

subject matter has been decided upon, the radio manuscript should be written in the most concise and lucid phrasing consistent with the transmission of the message therein.

Kadderly points out that some words are hard to understand when broadcast even though those same words are perfectly clear when the speaker is present. He also states that printed words may be understood because of the context. If they are not readily understood, the reader can pause to study them or look them up in a dictionary. But in the good radio manuscript the meaning of the word cannot be cloudy—it must register easily on the ear and brain [*44, p. 3*].

Slovenly thoughts and vague ideas have no place on the air. Ideas still in solution should never be broadcast. Poorly focused mental pictures cause hesitations in speech and confusion of the listeners. Emma Thursby stresses this point when she says, "To sing beautifully one must think beautifully; for, after all, the voice is but a reflection of the inner self" [*64*]. After all, the speaker must think clearly if he is to give clear expression to his ideas [*6, p. 100; and 47*].

The use of similes and metaphors, particularly those related to the experience of the listeners, will be found effective. Abstruse ideas finding utterance in hazy, involved expressions will fail to hold the audience. The radio speaker's style must be clear and his illustrations simple and easy to follow. Even after the script has been submitted for the broadcast, it can be tested for diction as well as for emphasis, repetition, etc. The script can be rewritten until it becomes an effective expression of the ideas involved. The ability to rewrite radio manuscripts is not a common one, for the vitality and worth-while parts of the original must be preserved at any cost [*12, 15, 51, 69, 87*].

Make only a few points and illustrate them amply ★ The broadcast should be written usually around one dominant idea determined by the major purpose of the broadcast. The salient facts needed to fulfill the purpose should be selected and grouped under a few points and arranged in proper sequence to insure the retention of the interest and the expectancy of the listener as the line of thought progresses rapidly to the climax. Since it is impossible for the average

listener to retain more than a few points at a time, only a few points should be made in a single broadcast.

Experienced broadcasters point out that one point should be discussed at a time and care be taken to complete every thought that is injected. The examples and comparisons used should register in the minds of the listeners. Brevity, combined with showmanship, is the formula for successful radio manuscripts.

Strive for an effective close ★ If the broadcast is presented as a dramatization, the culmination of the plot will mark the close of the broadcast. The climax is not so easily recognized in other forms of radio presentation. Nevertheless, the material should be organized and presented in such a way as to lead to a climax in interest which becomes the logical place to close.

It has been pointed out previously that the line of thought or development of the situation should be easy to follow. It was also pointed out that only a few points clustering around a single idea should usually be presented in one broadcast. It follows that if these points are skillfully summarized confusion will be minimized. Considerable repetition of the major idea is permissible if it can be done without the appearance of being tedious or repetitious to the listener.

Proposed projects or suggestions for further investigation growing out of a broadcast to schools have proved to be effective ways of closing broadcasts to schools. The raising of a question at the beginning of a broadcast to be answered at the close is frequently used in educational features. A number of other suggestions for an effective close might be made. After all, no general rule can be laid down, since the variable factors of subject matter, purpose, personality, etc., must be considered in determining the most suitable way of bringing a broadcast to an effective close. In this, as well as in many other respects, effective broadcasting depends upon innate ability reenforced by experience and not upon precept or example.

Broadcasters point out that when it is necessary to use technical terms they should be explained [*38, p. 252*]. Unless the broadcaster is very skillful in his delivery, qualifi-

cations of any statement should be used after it and not inserted as a clause in the statement itself. (The sentence just used is a good example of a poor radio sentence.) The broadcast should have an attractive beginning, the body of the talk should carry the interest throughout, and the finish should have a good snappy climax. In brief, the broadcasting teacher must have something to say, stick to his subject and say what he has to say as simply and directly as possible. In this respect broadcasting is more exacting than classroom teaching. Many errors of enunciation and of rhetorical form which are overlooked in classroom teaching stand out in bold relief when broadcast [*15, 28, 51, 52, 69*].

Prepare the broadcast manuscript to conform to the best practices as to mechanical form ★ Some writers are of the opinion that all radio manuscripts should be prepared to follow a standard mechanical form. They point out that a standardized form could be developed that not only would greatly simplify the work of the station operator but would also facilitate the actual broadcasting by the radio talent. While it is highly improbable that all broadcasters could agree on the details of any set mechanical form for their manuscripts, some general suggestions will probably be helpful to most broadcasters, especially to amateurs on the air.

It is desirable to have the manuscript clearly typed on paper that will not rattle when handled before the microphone. The new cotton sheet, rustle-proof paper is best. But if it is not available each sheet can be mounted on light cardboard. The pages should be numbered, preferably on the lower right corner, but the sheets should not be fastened together nor folded.

The number of copies that are needed by the station personnel should be ascertained in advance. If the broadcast is to be a talk without musical setting or sound effects, there should be three copies of the manuscript—one for the speaker, one for the staff, and one for the control operator. If some other form of presentation is used, additional copies should be prepared for each person participating in the broadcast. Additions or deletions are not countenanced after the manuscript has been prepared and placed in the hands of the station staff.

The following copy of the first page of a broadcast manuscript is reproduced here to illustrate a desirable mechanical form:

THE ART OF BROADCASTING

RADIO SCRIPTS

[Orchestra—*In a Little Red Schoolhouse*—1 minute—dimming through]

ANNOUNCER

Good evening, Prof. H. E. Blank of Osceola (Os–ce–o–lă) University will now present the second broadcast in his series entitled "The Art of Broadcasting." These programs are intended primarily for the 376 teachers enrolled in the extension department of Osceola University. Without doubt, a number of home listeners who have always been curious to know just how broadcasting is done will be interested eavesdroppers as this eminent authority speaks. I now take pleasure in introducing to you Professor Blank.

PROFESSOR BLANK

Fellow teachers and friends, your local leader has already told you that this subject would be on the mechanical form of radio manuscripts. You were also given the first page of a radio manuscript to illustrate desirable mechanical form. Now, I have a pleasant surprise for you. We have with us a nationally known radio writer in person. I now present Mr R. Emerson Hawthorne, author of the popular radio mystery series, Black Patches. Mr. Hawthorne!

MR. HAWTHORNE

(7:12:30)

Hello, folks! Perhaps I am giving away a professional secret when I tell you that most radio artists use manuscripts when they broadcast. If you teachers will examine the first page of this radio manuscript, you will see the *station*, the *date*, and the *hour* in the upper left corner, etc.

As illustrated above, the mechanical set-up of the manuscript is intended to make clear the parts to be spoken in contrast to the directions to the producer. Some writers have the spoken parts typed in black and the supplementary instructions in red. Wide spacing and short paragraphs

properly used facilitate broadcasting. Careful punctuation aids correct phrasing.

The manuscript should be complete. All announcements, directions, musical settings, and sound effects should be properly placed in the manuscript, in set forms that will make them easily distinguishable. All words and figures in the context should be spelled out, and words that are difficult to pronounce should be written a second time phonetically. Dashes and capital letters are used to illustrate pauses and stress.

The broadcast should be accurately timed during rehearsal and time check points marked in the left margin. In this connection it is also desirable to have certain paragraphs or sections that can be omitted if the actual delivery is running short of time. Liberal margins should be left at the bottoms of the pages, and a sentence should not be carried over from one page to another.

It is evident from the foregoing discussion that the mechanical form of the radio manuscript is an important factor in the success of most broadcasts. Although it may never become feasible to have all radio manuscripts follow a standardized mechanical form, some suggestions tending toward uniformity in certain particulars will be welcomed both by broadcasters and station staffs.

Rehearsal

The broadcasts production should be given in as finished a manner as possible. This will usually necessitate considerable practice before the actual broadcast. The nature of the rehearsal will depend upon the talent and the form of presentation. The rehearsal for a radio address should be quite different from that for a radio play. An infinite amount of care is necessary in either case.

Perfect delivery by practice ★ If a radio address is memorized and recited, it sounds artificial. If it is read, the reading interferes with the elasticity in delivery and the address becomes dull and lifeless. A new technique is required—that of talking from a manuscript and fitting exactly the time limit [*68, p. 177*].

After a play has been written or adapted, the dramatic coach must select the cast and conduct several rehearsals before the play will be ready for the unseen audience [*13, p. 353*]. Radio properties needed to create atmosphere by producing various sound effects need to be secured and tested [*30, p. 50*]. The members of the cast should thoroughly familiarize themselves with their lines, so that they can really live the part as they present it before the microphone. Actors should really act, as it tends to project their radio personalities and impress the audience. The coach usually listens from the control room and directs the cast through the microphone. This form of coaching is known as the "talk-back." Besides studying the effects of the presentation, the coach must make an exact timing of the script and be on the alert to correct disturbing sound effects and awkward pauses [*13, p. 351–352; 30, p. 50; 47, 72, p. 115–117*].

Dramatizations must always sound authentic and human. This necessitates complete familiarity with the dramatization on the part of the participants. Musical settings and sound effects must be carefully rehearsed and tested along with the lines to insure proper blending and smooth moving of the play. It is vital that extreme pains be taken in the rehearsal of radio plays; otherwise, the interpretation will be dull and muddy.

Exaggerations in the interpretation of characters make the entire production tawdry and cheap. Dialects must be understandable, and all of the characters must learn to assume the proper positions in front of the microphone to insure the presentation in as finished a manner as possible.

Mr. Ernest LaPrade, of the National Broadcasting Co., makes the following comment on the rehearsal of radio music:

> Provide for ample rehearsal. The microphone has not been invented that will eliminate "wrong notes".
>
> During rehearsal have a competent musician who is accustomed to listening to radio reproduction stationed in the control room or monitoring booth to check the balance of instruments and of voices as heard through the loudspeaker. I know of no other way to determine the proper placement of performers with reference to the microphone, as acoustical conditions differ in different studios, and even in the same studio under different atmospheric conditions.

Time each composition during rehearsal. Do not assume that, because a given piece was performed in 5 minutes last year by Brown, Smith will do it in 5 minutes today In order to obtain accurate timing during rehearsal, when there are frequent interruptions and repetitions, it is almost essential that the timer be provided with a score, or at least a part, of the work performed, and that he be able to follow it.

In solos with orchestral accompaniment do not allow the soloist to "hog the mike" so that the orchestra becomes nearly or quite inaudible. The accompaniment is a part of the music [*50*].

In the preparation of educational broadcasts, speakers frequently rehearse their manuscripts before pupils in a classroom if the presentation is intended for school reception. If the broadcast is planned for home reception, a rehearsal with a family group in a home is a common practice. The manuscript should always be read aloud in advance to test its ear quality and to determine whether or not the words and sentences can be easily spoken. Of course, the better the speaking style used in the manuscript the easier the delivery will be. As was previously pointed out, many broadcasters dictate radio addresses to attain a speaking style.

The use of phonographic records and Blattnerphone recordings is rapidly gaining favor as a means of improving broadcasts. By means of the recordings the broadcaster is able to study his own voice and delivery as they sound to others. If the entire broadcast is recorded, the broadcaster can observe the effect that his presentation is having on the listeners while the broadcast is actually on the air. Some of the British broadcasting teachers who present radio lessons for schools report that they have been able to make marked improvements in their radio lessons after observing their effects on pupils in a classroom while the lesson was being broadcast from Blattnerphone recordings.

Make the broadcast exactly fit the time limit ★ Broadcasting stations operate on exact schedules. Therefore it is desirable that the broadcaster begin immediately when his program has been introduced. It is even more important that the broadcast stop exactly when the time is up. The adaptation of the broadcast to the time limit is usually accomplished by timing the delivery during rehearsal [*69*]. Judith Waller suggests

that a clock in plain view of the broadcaster during the broadcast will assist him in fitting the time limit.

There are occasional instances when a broadcaster will speak much more rapidly when he is actually on the air than he did in practice. There are many more instances, however, when the broadcaster speaks at a slower rate than during rehearsal. This makes it necessary for parts of the manuscript to be omitted. Some program directors measure the speaker's normal rate of delivery and then advise him as to the number of words his broadcast should contain. Rather than be cut off when the time is up or speed up to finish on time, it is better to have a few paragraphs before the summarization that may be omitted if the time is nearly up. If the broadcaster has marked the time of his normal rate of delivery at various points in the margin, it will assist him in regulating his delivery while on the air [*47*, *64*].

If the broadcaster does not begin immediately when the signal is given to start, an awkward pause ensues which tends to disturb the listeners and place the speaker at a disadvantage when he does begin. After several rehearsals and a few broadcasts it is not unusual for a broadcaster to be able to start punctually and time his manuscript so accurately that he will not vary more than 10 seconds from the allotted time when on the air. This accurate timing sense is a new technique which is worth mastering [*69*].

Hints for Greater Effectiveness

Listen to other broadcasts as a means of securing suggestions for improving your own ★ Each individual has his own particular style of delivery. It is seldom desirable for one broadcaster to attempt to copy the style of another. On the other hand, the amateur can gain many helpful suggestions by listening to successful broadcasters.

Many questions, such as the timeliness of the topic selected, the amount and organization of the subject matter, the manner of delivery, etc. may be studied by listening to broadcasts. The amateur will find it very profitable to study the essential characteristics of successful broadcasts.

Plan to make a definite appeal to the mental-emotional activity of the listener ★ It has been said that we never remember what we hear; nobody ever did. We never remember what we see, and we never remember what we read. We remember what we think. Therefore, if the listener is expected to remember anything from the broadcast, it must be presented in a way that will cause him to think. Even a program of light entertainment is planned to make an emotional appeal to the hearers.

The first prerequisite of mental response to a broadcast is that the listener's attention be sustained throughout the broadcast. Since several suggestions have already been made on creating and sustaining interest, only a few additional suggestions will be made here.

By stating problems, introducing questions, giving references, and making requests, listener can be stimulated. The use of human-interest material, the clever presentation of unusual facts, the use of appropriate short anecdotes, and rapid-moving and varied action are all conducive to listener activity.

In broadcasting to schools especially, the importance of mental activity by the pupils should not be ignored. Dr. W. R. McConnell points out that he thinks there can be mental activity while the child is sitting dead still in the seat. "So," says Dr. McConnell, "I am not so much concerned with having children go to the board, walk around, or fill in blanks during a broadcast. I am not always sure there is mental activity accompanying the physical activity" [*80*].

The invisible teacher is usually unacquainted with the different students to whom he sends his message, and is, therefore, expected to stimulate activity of pupils who have widely different knowledge, interests, and abilities while addressing himself to a type student. In his effort to accomplish this difficult teaching feat he is further handicapped by being unable either to see his pupils or to be seen by them. This also makes it impossible for him to study the effect of his presentation upon the pupils or to direct the class discussions [*3, 12, 51*].

The broadcasting teacher should prepare his material so that it will suffer the minimum loss when received through the sense of hearing alone [*12, p. 33*]. The manuscript should get away from purely didactic matter and introduce a good deal of human interest material.

Use all available means to create interest and assist listeners in making the fullest use of the radio broadcast ★ It is highly desirable that the administrator of a broadcast series provide adequate publicity and supplementary aids to assist the listeners in profiting most from the broadcasts. The more advance preparation needed by the listeners the more merchandising and supplementary aid will be needed. Listener activity is so important in educational broadcasting that the following chapter is given to a discussion of the subject.

✶ IV ✶

ENLISTING AND ASSISTING LISTENERS

Full many a flower is born to blush unseen,
And waste its sweetness on the desert air.

GRAY

RADIO broadcasting disseminates information in such a way that it becomes instantly available to great masses of people. Although the wise choice of sponsorship and broadcasting personnel will do much to establish confidence and create interest in a forthcoming broadcast series, extensive publicity and special aids for listeners will still be necessary if the active participation of a large number of listeners is secured. Commercial broadcasters realize the importance of listener activity if radio advertising is to become effective. It is even more important that listener activity be secured if the broadcast is intended for instructional purposes. This chapter will be devoted to a discussion of provisions for enlisting and assisting listeners in making effective use of the broadcasts.

The promoters of an educational broadcast series must really merchandise the series. Inertia and mistrust must be overcome. The fear of elimination of the local teacher, too much centralization of authority, fear of propaganda and commercialism must be carefully considered and diplomatically handled. The broadcast must compete with various other broadcasts at the same period, as well as numerous other possible ways of using the time. The principal task in merchandising is to cause the prospective listener to feel that

the broadcast is important to him and cause him to want to listen to it.

Effective Use of the Broadcasts

The following list will serve to suggest various ways being employed to secure effective use of the broadcasts:

Newspapers and magazines:

Feature articles; short press notices following a daily sequence; programs; special news items; pictures of the broadcasting talent; pictures of listening groups; letters from listeners; box announcements; small display advertisements; interesting points in the broadcasts reproduced as news stories; syndicated columns.

Broadcast publicity:

Regular announcements; "teaser" campaigns; previews; reviews; stimulating questions.

Other forms of publicity:

Window displays; billboard advertisements; bulletin-board announcements; printed or mimeographed publicity mailed to listeners or heads of listening groups; car cards; personal calls; direct announcements to cooperating groups; telephone calls; prizes and awards; electric signs; theater appearances; theater announcements; theater lobby displays.

Aids-to-study:

Printed or mimeographed copies of the broadcasts; outlines of subjects and syllabi; guide questions; references for reading; examples of listener use of the broadcasts; suggestions how to use; diagrams, illustrations, and various mechanical aids; possible projects; special aids for leaders or teachers of the participating groups.

Skillful broadcast teaching:

Recognition of listeners; local references and applications; suggestions motivating activity; stimulating questions; references to available aids; clear, invigorating style; psychological organization.

Regularity and continuity of a series:

Same voices; continuation of the line of thought; similarity in style and form of presentation; same broadcast personalities; reviews and previews.

Local leader and listener cooperation:

Conferences to stimulate and facilitate use; evaluations and reports; local needs made known to broadcasters; proper listening conditions

and aids; readiness to assist the broadcaster; local leaders write letters and newspaper articles in regard to the broadcasts [*46*].

Merchandising Broadcasts

Commercial broadcasters have used the various means that were available to them to merchandise their broadcasts. For example, a milk company placed cardboard collars on each bottle of milk; a railroad company announced a broadcast on a dining car menu; a publisher advertised on a paper-book cover a series of broadcasts prepared from the book; and a telephone company clipped announcements to its telephone bills [*46*].

Plans for creating interest and securing effective use of the broadcast series should be carefully worked out. Both the press and the radio are fine publicity animals and when they are hitched together their pulling power is more than doubled. It is usually desirable to use a variety of means of creating interest and facilitating the utilization of the broadcasts. The publicity material should be systematically prepared and released at the most opportune times.

It would be difficult to overestimate the importance of good publicity. Practically every known form of publicity commonly used to create interest in commercially sponsored broadcasts may be used advantageously to interest listeners in educational broadcasts. In addition, several avenues seldom available to commercial broadcasters may be used to advantage.

Consensus of opinion indicates that press notices and advertisements should be used in newspapers and magazines in general circulation among the groups to be served. If broadcasts are intended for school use, school papers and educational magazines should be used in addition to the daily press. The following is a good news story of a forthcoming educational broadcast.

Boston, Feb. 21.—Faneuil Hall, "Cradle of Liberty", tomorrow will be the scene of an historic Nation-wide broadcast, when Gov. Joseph B. Ely, of Massachusetts, pays tribute to the memory of George Washington at a patriotic gathering of the Ancient and Honorable Artillery Company.

Originating in the armory, a room on the third floor where General Washington once supped, the birthday program at 1:30 to 2 will be distributed by WBZ-WBZA to an NBC-WJZ network of stations from coast to coast.

As the Nation listens, the program will bring to life the famous old lithograph, "The Spirit of '76", with its blaring fifes and drums. It will unfold bits of colorful description of Revolutionary flags, muskets, powder horns, and sabers, all with their lustrous traditions, and prized possessions of the Ancient an Honorables' armory.

The dust-covered bell high up in the ancient belfry will ring again and a cannon salute to the "Father of His Country" will be invoked from a drum that once beat at Bunker Hill or Lexington.

Governor Ely, who tomorrow observes both his own and Washington's birthday, will address the Nation's audience on "Washington-From an Ancient and Honorable Setting." It will be the Governor's first appearance on a coast-to-coast network.

Musical features of the patriotic program will be introduced by Oscar Elgart and his Continentals, an orchestral unit of 18 pieces, and the Minute Men, a double octet under the direction of Edward C. MacArthur. J. Warren Hull, of the WBZ-WBZA staff, will announce the program.

Arrangements for the broadcast were made by a committee including Capt. Joseph G. Maier, of the Ancient and Honorables; George A. Harder, representing Governor Ely; Walter E. Myers, of the National Broadcasting Co.; and Oliver Morton and John L. Clark, of station WBZ-WBZA.

Broadcast announcements over the station or stations that are going to present the program may be used to supply needed information and stimulate interest of the prospective listeners. The following are direct announcements of the types that have proved their worth in advertising educational features:

Ladies and gentlemen, we pause briefly in our schedule to announce that leading radio features over this station tomorrow (or this week) include Mr. ———— ———, whose experience in ———— ———— includes ———— ————, will present ———— ———— over this station at — o'clock tomorrow. Don't miss it.

Women's legal rights form the theme of the skit, A Day in a Lawyer's Office, to be presented on WMBD's Homemakers' Corner at 2:05 p.m., Friday, June 5. Members of the Peoria League of Women Voters will take the parts, with Miss Estelle Harmel, Peoria attorney, taking the role of the lawyer.

In addition to the regular broadcast announcement, "teaser" campaigns may frequently be used advantageously

to stimulate interest in broadcasts. Begin with an announcement a week before the broadcast and add an additional announcement each day until seven are given on the day of the broadcast. Give a dramatized preview, or tell just enough to stimulate interest and curiosity, leaving the listener eager to know more about the program. The following is an example of a "teaser" announcement:

Have you arrived at, or passed, your twenty-first birthday? . . . (Pause) If you are 21 years of age or over, you won't want to miss . . . or should not want to miss, the first of a new series of programs over this station at 6:45 tomorrow evening.

School Listeners

Almost from the very beginning of educational broadcasting, listeners' aids-to-study have been used. These aids may be prepared for use by the teachers or they may be intended for use of the pupils. The principal purpose of these aids-to-study is to make it easy for the listeners to make profitable use of the broadcasts. The advance material usually contained in the aids-to-study, or study guides, as they are sometimes called, includes:

The date and the exact time of the broadcast; by whom and the form of presentation; the exact topic and purpose of the lesson; an outline or preview of the lesson; suggested problems, projects, guide questions, and review tests; pictures and review tests, illustrations, and charts; suggested references, maps, charts, drawings, pictures, blackboard outlines, specimen, equipment, and other aids to be supplied by the listeners; suggestions for integrating the broadcast instruction and the class instruction.

In broadcasting to schools the active participation of the local classroom teachers is so important that perhaps it is wrong to refer to the speakers at the microphone as broadcasting teachers. It might be better to call them radio assistants to the classroom teachers. There are a few enthusiasts who seem to think that the whole job of teaching may be done over the air, but most educators regard the classroom teacher's active, intelligent participation as essential to the success of practically every radio lesson that is intended for school use [*23, p. 9; 65, p. 2*].

SUGGESTED QUESTIONS

What kind of work do you think this boy does?
How old do you think he is?
Where is the strongest light?
What makes it seem even more luminous?
Why do you think the boy is happy?
Can you whistle?
Does one whistle when he isn't happy?

In addition to the teachers' manuals, pupils' textbooks have been prepared to be used in connection with the Cleveland broadcasts in arithmetic, NBC Music Appreciation Hour, certain courses of the American School of the Air, and the WMAQ Summer School of the Air. This forward step should extend and facilitate listeners' use of the broadcast lessons, and thereby materially increase the value of the broadcast service.

In broadcasting to schools the administrator of the school of the air must assume the responsibility of disseminating information designed to assist classroom teachers in making proper use of the broadcasts. The classroom teacher has the responsibility of deciding [*i*] what broadcasts she will have her pupils listen to; [*ii*] how the radio lessons are to be fitted into the regular school work; [*iii*] what mechanical aids she will need and how they are to be used; [*iv*] how to create the proper mental attitudes of the pupils toward the broadcasts; [*v*] what subject-matter preparation the pupils should make; [*vi*] what listening conditions should prevail; [*vii*] what assistance her pupils will need; and [*viii*] how to merge the program with the curriculum of her school. Through press releases, broadcast announcements, aids-to-study, and conferences the wireless teacher can be of assist-

The broadcasting teacher is expected to prepare outlines of the forthcoming lessons, guide questions, review questions, references for collateral reading, suggestions as to materials and equipment needed in connection with each lesson, suggested projects intended to synchronize the radio lessons with the regular instruction, a profusion of illustrations, and a clear-cut statement of the objectives of the lesson.

Without these aids in the school some time in advance of the broadcast, teachers and pupils could hardly be expected to be prepared to cooperate in making the radio instruction effective [*23*, *65*].

The following aid-to-study material to be used by teachers and pupils in connection with the art appreciation lesson of December 2, 1931, has been taken from the American School of the Air Teachers' Manual and Classroom Guide:

THE WHISTLING BOY

Cincinnati Museum of Art : Frank Duveneck

(1848–1919)

The Whistling Boy is painted in Duveneck's simple direct style. This work, although it is a happy, active all-boy portrait, possesses dignity and calm. We see here the artist's immensely vital construction of the head, on which he has concentrated. The entire figure is drawn with direct brush handling, giving a vitality to his technique by expression in large planes. Although this and other of his works seem to have been "dashed off" (so vividly and simply did he paint), this Whistling Boy is full of character and, at the same time, has an astonishing luminous quality.

Frank Duveneck was born in 1848 in Covington, Ky. During his 3 years' work at the Royal Academy, Munich, he was awarded many prizes. In 1878 Duveneck opened a school of his own in Munich and strongly influenced the American students who were studying there. For many years following the loss of his wife he was unknown to the public, quietly teaching in Cincinnati. However, at the San Francisco Panama-Pacific Exposition in 1915 he was given an entire room for the exhibition of his works. This honor was given him because of the inspiring aid he had given American art students.

ance to the local teacher in meeting nearly all of her responsibilities in connection with the radio lesson.

Adult Listeners

The vast majority of adult listeners receive the broadcasts in their homes under conditions which frequently are not conducive to serious mental endeavor. This fact must be considered in planning educational broadcasts for adult listeners. It is also well to remember the importance of discussion in a teaching-learning situation. Review is essential in all good teaching. This maxim applies with special force to teaching by radio, where transient auditory impressions are the chief element. It will be necessary to revive and clarify these impressions if the broadcast stimulates thinking and the carrying out of projects. Home listening is suitable for indirect learning where no great amount of preparation or mental effort is involved. But discussion group listening has been recognized as more desirable for purposeful learning involving considerable mental effort and various related activities.

There are a number of difficulties and limitations in teaching by radio which make it highly desirable that the broadcasting teacher and the local group leader work closely together in overcoming the difficulties and supplying the deficiencies in the radio instruction. This involves the necessity for freedom in the exchange of ideas between the broadcasters and local cooperators. Regular reports from listeners, group conferences, visits to discussion groups, visits to studios, and research are important means of overcoming these limitations.

It is the responsibility of the broadcast administrator to encourage and assist local listeners to organize themselves into discussion groups. These groups usually meet in some convenient place, usually at a library or a school. They listen to the broadcast and discuss it afterwards. The discussion must be of sufficient interest to induce the individual to come to group meetings.

The suitability of the group leader is the determining factor in the success or failure of the discussion group.

Realizing the importance of the group leader in educational broadcasts for adults, the British Broadcasting Corporation has been employing field representatives for several years to assist local leaders in organizing and conducting group discussions. During the past two or three summers, summer schools for group leaders have been conducted by the British Broadcasting Corporation. The British plan of organizing discussion groups has spread to several other countries, including the United States.

The League of Women Voters has been eminently successful in organizing listening groups to receive the broadcast on political education by that organization. These groups not only listen in but also offer their criticisms on the program for check-up purposes.

During the winter of 1931–32 Rutgers University broadcast a Mother and Son series over radio station WOR. The New Jersey Congress of Parents and Teachers organized a number of discussion groups in various parts of the State to listen to and discuss the broadcasts and practical questions arising in connection with this series. Reports indicate that this plan worked out very well.

Profs. V. R. Sill and P. B. Zumbro, of the Agricultural Extension Service of the Ohio State University, conducted an interesting experiment in group listening during the spring of 1932. In cooperation with various county agricultural agents listening groups were organized and film strips were supplied to be used to illustrate the subject being broadcast. The broadcast instructor used a film projector in the studio as he broadcast over radio station WEAO to the listening groups, who observed similar pictures as they were projected on the screens in the various group meetings. Reports of this plan of combining visual and auditory impressions at group meetings were very favorable.

Voluntary discussion groups were organized in various parts of the country during the winters of 1931–33 to listen to and discuss the broadcasts of the National Advisory Council on Radio in Education. Public libraries and the various national organizations cooperating with the National Council were very helpful in giving publicity, preparing aids-to-study, and encouraging group listening.

Dr. Levering Tyson, director of the National Advisory Council on Radio in Education, states that the council was aware from the start that merely putting educators "on the air" is not necessarily education. Dr. Tyson continues: "Admitting that special teaching techniques must be used in front of the microphone, the determination and development of which are huge problems, there still remains the very necessary tasks of [*i*] assembling listeners who can enjoy the benefit from the programs; [*ii*] providing them with basic minimum material for making reasonable use of what they hear in the programs; and [*iii*] suggesting ways in which, and material by means of which, the broadcasts can be made of permanent and lasting educational value. Every dignified publicity means is employed to make known the availability of the authentic material which the council produces in its programs, subject only to the limitations of the council's financial resources."

He continues:

> The press is informed through the publicity departments of the broadcasting companies. Magazines and periodicals, particularly popular reviews, the professional educational papers, are notified through the council office direct. In addition, printed announcements in the form of bulletin-board posters and leaflets are sent out by the council to all educational, civic, and professional organizations which are likely to be interested at all in the subject matter of the material to be broadcast. By use of these mechanisms an audience is built up which is limited only by the extent of this preliminary activity.

The council committee prepares a listener's handbook or notebook containing subject-matter outlines, information about speakers, dates, references, and other educational aids. The council enlisted the active cooperation of the American Library Association, which not only assists in compiling book lists and suggesting collateral reading but also keeps its constituent member libraries informed of the progress of programs and suggestions as to how programs can be followed up educationally. "The council," says Dr. Tyson, "has also made an affiliation with the University of Chicago Press whereby programs are put into permanent printed form and supplied to listeners at absolute cost. At the conclusion of the series the programs are printed in volume

form and made available as textbooks. Plans are under way for electrically recording all programs."

Dr. Tyson in discussing other means of enlisting and assisting listeners, says:

> Group listening is encouraged wherever possible, although the council has not as yet been able to undertake any comprehensive campaign to develop it. For example, the series, "American Labor and the Nation", broadcast over approximately 60 stations of the Columbia Broadcasting System, was designed definitely for the use of labor unions, of which there are approximately 30,000 throughout the country. There is evidence to indicate that a large number of these labor organizations listened regularly to the programs in this series. For group listening the libraries have frequently made space available, and in a large number of cases have supplied leaders and individuals who can and do provoke and incite discussion of the subject matter of the program.
>
> In the furtherance of this group work the assistance of educational, civic, and professional organizations has been of particular value. In most cases these associations or societies have means for assembling their memberships. When the subject matter of the broadcast is of public concern it is relatively easy to engage their interest and assistance.

In conclusion, many different means have been used to enlist and assist listeners. Educational broadcasts involve the need of both preparation and follow-up activities on the part of listeners. Although favorable publicity, skillful broadcasting, and timely subject matter will do much to insure the success of educational broadcasts, nevertheless special aids-to-study and local cooperators remain a necessity in systematic instruction by radio. The vast expanse of unknown areas in this new and fascinating field challenges the ingenuity of educators and broadcasters of educational material to determine how the broadcasts can be made of permanent and lasting educational value.

✶ V ✶

PRESENTATION OF THE BROADCAST

The manner of speaking
is as important as the matter.

CHESTERFIELD

ALMOST everything included in this chapter on the actual presentation of the broadcast might very appropriately have been included in the second chapter on the preparation of the broadcast. The matter of delivery should be so well in hand before the broadcast that it can be relegated to the fringe of consciousness as the broadcaster focuses his attention on the thought he is presenting. Ideas, not merely words, must be communicated to the audience. The preparation should be sufficiently thorough that the performer need not be disturbed about diction, position, or anything else but the part he is playing. The program should be rehearsed to such an extent that there is no hesitation or lack of confidence on the part of those participating. This chapter is intended to set up some rules to be observed during the broadcast.

It is difficult to suggest specific directions for broadcasting, since so much depends upon the personality of the speaker and his individual style. Just as some teachers make an educational subject interesting and others do not, some broadcasters are naturally interesting and others are not. Some experienced speakers can keep to the original timing and have more spontaneity by using carefully prepared notes.

Other equally effective broadcasters follow their manuscripts verbatim even though they have rehearsed them until they have practically memorized them.

Even though delivery should not be the focal point of attention of either the broadcaster or the listeners, it is of paramount importance, since the voice, and the voice alone, is expected to give the message effectiveness. Therefore, it is not out of place to analyze delivery, as it is of even greater importance in broadcasting than in classroom lecturing or public speaking. Although not mutually exclusive, delivery may be considered under the headings of [*i*] attitudes, [*ii*] microphone technique, and [*iii*] diction. They will be considered in order.

Attitudes

Back of the delivery itself are certain mental attitudes that the speaker needs in order to interpret the broadcast properly. He must be able to visualize his audience, banish affectation, and think anew the thoughts of the broadcast as he delivers it in an unassuming, intimate, natural, delightful manner [*12, p. 934; 63*]. Let him think of the microphone as a sensitive-eared person, fairly close to the speaker, whose ear the speaker does not want to offend [*12, p. 934; 63*].

Cooperate closely with the station management ★ It will prove to be mutually advantageous for the broadcaster to work in close harmony with the station management during the broadcast as well as during the preparation for the broadcast.

Program directors point out that the broadcaster should be on hand and have everything ready for the broadcast 15 or 20 minutes in advance of actually going on the air. Punctuality is of extreme importance. The announcer in charge of the program should be notified immediately when the broadcaster arrives.

The announcer and operator should do everything they can to make the speaker or artist comfortable and at ease. The studio should be properly heated, ventilated, and available to the broadcaster at least 15 minutes before he is to go on the air. If the broadcaster wants to stand, let him stand.

If he wants to sit, let him sit. If he desires to work in his shirt sleeves, by all means permit him to do so. Sometimes a speaker will want some one to sit in the studio across from him as he broadcasts. Most stations will permit visitors to be in the studios under these circumstances, provided the visitor observes good studio decorum—which requires that the visitor remain quiet and not move around or leave the studio during the program.

The microphone should be placed in such a position that the speaker can see the announcer or the control operator during the broadcast. Periodical confirmation of the quality of the broadcast by the control operator, the announcer, or the production man is desirable. Code signals need to be understood, and only one person should communicate with or direct the artist or speaker during the broadcast.

Assume a friendly, respectful attitude toward the listeners ★ Mental contact leading to confidence on the part of the individual listeners must be established. "Confidence," says B. A. Fenner, "is the secret of broadcasting, whether for sustaining or commercial programs." A friendly, respectful attitude tends to build confidence. Sir Walford Davies says that minds held in common must be mobilized on both sides of the microphone, and that, above all, the broadcaster must hold fast to the faith that the common mind everywhere is ready to take delight in simple beauty in music, or in simple truth in a talk, or in any high exercise of the heavenly faculty of imagination, with which every ordinary man, woman, or child on God's earth seems to be endowed [*25, p. 129*].

A dogmatic, domineering attitude on the part of the broadcaster is not likely to gain confidence. Political broadcasts frequently defeat their own purpose by trying to force conclusions upon the listener. The broadcaster can submit the evidence and appeal to the listener to judge for himself what the conclusions should be. He should make a definite mental appeal to the listeners, but leave the conclusions to the listener's own intelligence.

The broadcaster should remember that each listener is in his own home and will listen closely if he is talked to as an individual rather than as a member of a tremendous audience.

If the radio speaker will imagine himself holding a conference with someone across the office desk—someone whose opinion he respects and wants to impress—this attitude will lend an attractive ease and a spontaneous, intimate, and personal story.

According to Prof. J. C. Jensen, a genuine interest in the unseen audience and a lot of enthusiasm were the characteristics of Nebraska Wesleyan University's most successful radio instructor [*47*].

The consensus of opinion indicates that a normal conversational tone with a sparkle of informality is more conducive to building confidence than a platform or academic style of delivery. Preachment, advice, and generalization should be minimized. The message should be humanized and personal applications made frequently. In actuality broadcasts the listener should be made to feel that he is with the speaker and seeing what the speaker sees.

When the occasion warrants, the broadcaster should speak in a straightforward manner with conviction. Since he wants to persuade rather than command, however, he should not be dogmatic or too positive in his viewpoint.

He should correct immediately any mistake he makes just as he would if the listeners were present. Other pitfalls to be avoided are a superior attitude, overacting, and a patronizing, affected manner.

Think the thoughts and live the part while broadcasting ★ "The most deadly faults in broadcasting are to let listeners get the impression that you are simply reading a manuscript," says Dr. Frank F. Nalder, of the State College of Washington. The subject should be presented in an impressionistic fashion which strikes the imagination of the listener and provokes his creative activity. The broadcaster should be able to communicate his enthusiasm to the listeners by projecting his personality over the air. The audience can detect the subtle difference in phraseology between the written and the spoken word. Besides the actual difference in pronunciation, the written word lacks vitality and authority [*68, p. 178*]. Mechanical reading will not create the impression of naturalness and sincerity which are valuable

attributes on the air [*59*] B. H. Darrow says, "Do not iron out flat. Leave in the pauses, changes of speed and pitch that make conversation more attractive than reading."

Natural ability is the first requirement in broadcasting. No set of rules can produce it. If the broadcaster is blessed with a natural poise and clear-cut speech, he should be natural. Otherwise, he should try to overcome the difficulties that interfere with his broadcasting effectiveness or stay off the air.

Gosden and Correll point out that the broadcast should be natural, human, and simple. They say:

> In radio we as Amos and Andy first of all try to be natural. We never use any phrasing or words the meaning of which we think some few might not clearly understand. Even in the continuity we write for the announcer giving the synopsis of the episode or a brief of what has gone before, we make it as plain as possible, bearing in mind that we are catering to the masses.
>
> There is nothing further we could tell you about radio broadcasting other than when the speaker is before the microphone he should be natural and human. Occasionally when some physician or public speaker gets before the microphone after he is introduced he will clear his throat in the face of the radio audience before starting his talk. His next remark is "Good evening, ladies and gentlemen," and then he tightens up, overemphasizing throughout his speech.
>
> Our personal idea of a good educational program is one with many interesting facts and true incidents of interest injected into the talk, with the speaker giving us the impression that he is leaning back in a big overstuffed chair, with his feet on the ottoman, talking to us in our own library.

Radio must present ideas in a living fashion. A realistic and colorful delivery adds to the attractiveness of the broadcast provided it seems natural. Every speaker has a style of his own. If the speaker's delivery naturally varies in regard to speed, stress, intonation, etc., he should be encouraged to utilize these variations. If not, any attempt to force a varied style is almost certain to create an affected delivery. Affectation, as well as dullness, drives listeners away.

A sense of the dramatic which enables the individual to make the most of his personality as he lives the part he is presenting may be called showmanship. If so, showmanship is essential in broadcasting. The real showman can conform

to the best practices in delivery without permitting the thoughts of microphone technique, diction, etc., to become a complex that will destroy his naturalness. After all, the thought of the radio speaker must be on the ideas he is presenting during the broadcast and not on the method of presenting the ideas.

Microphone Technique

Microphone technique is an expression that has grown up in broadcasting circles to describe the proper use of the microphone as to position, volume, pitch, avoidance of extraneous noises, etc. In a leaflet entitled "Getting Acquainted with the Microphone," the Columbia Broadcasting System points out the microphone which picks up the voice of the speaker as a very sensitive instrument. Its improvement from year to year only tends to make it more sensitive. The slightest sound, even one that is almost inaudible to the speaker himself, is picked up by the microphone and amplified in transmission so that the sounds intended for the listeners may be clearly reproduced in the homes of those who make up the radio audience [*36*].

The limitations which the microphone imposes upon the broadcaster tend to make him "mike conscious". The mastery of the art of broadcasting implies that the speaker has learned to perform in front of the open microphone in such a manner as to produce the desired effects upon the audience. This section will be devoted to a discussion of some of the rules to be observed in mastering the microphone.

Avoid extraneous noises ★ The microphone magnifies some qualities of the voice and amplifies certain extraneous noises [*51, p. 267*]. Many interesting instances might be given of the effects of studio noises on listeners. Lawton relates an instance that occurred during the early days of broadcasting. Radio station KFI at Los Angeles received an appeal by mail from Cuba, "For heaven's sake, turn off that faucet; I hear that dripping of water every time you put on a program and I tune in." An examination of the studio revealed a leaky water tap [*51, p. 267*]. Eliminate all interference possible. Carpenter gives an instance of an

orchestra leader who believed himself unfortunate in that his orchestra was forced to play classical music only in the hotel dining room where they were working. This type of music was not conducive to applause, but he felt that applause was needed to impress his invisible audience. He solved the difficulty by having several members of his orchestra gather closely around the microphone and click their teeth as loudly as possible. This sounded very much like hand clapping to the radio audience [*15, p. 25*].

Sudden loud noises such as coughing or sneezing blast the microphone. Heavy breathing, walking, the rustling of a manuscript, keeping time with the feet, the clearing of the throat, lip noises, tapping on the microphone or a table, even the clicking of the finger nails or the rubbing of a careless finger over a half day's growth of beard may completely confuse the audience. One program director recommends a pinch of salt to loosen the throat just before entering the studio [*47; 51, p. 262–264*].

Often, for a brief period before the speaker begins his address and after he has finished, the microphone is open and alert. During the time the microphone is open, the instrument itself, the standard on which it rests, and the cables running to it should not be touched in any way. Absolute silence should be maintained. A red light or some other signal is used in nearly all studios to indicate when the studio is on the air [*86*].

Master the microphone ★ The statement "master the microphone" is used to denote skill in adjusting one's position in reference to the microphone to facilitate the hearers' getting the correct understanding of the broadcast. For example, J. E. Bryan, general manager of radio station KTAT, gives the following suggestions:

To arouse excitement, stand back 5 or 6 feet from the microphone and raise the pitch of the voice and increase the rate.

To command attention, raise the head slightly and speak with gravity and authority.

To elicit sympathy, stand close and practically murmur—but distinctly.

To develop loyalty, speak in a kindly, quiet voice near the microphone [*86*].

The proper position of the speaker before the microphone depends upon the acoustical characteristics of the studio, type of microphone used, and the character of the voice. The acoustical characteristics of a studio are materially affected by atmospheric conditions. Sometimes it is necessary to arrange the various instruments in the orchestra after the final rehearsal because of atmospheric changes. Station managers are learning to appreciate more and more the importance of suitable atmospheric conditions in the broadcasting studio. Proper temperature, ventilation, humidity, etc., not only contribute to the comfort of the broadcaster but also improve the transmission [*36*].

Engineering improvements are being made constantly in microphones which increase the fidelity of tone reproduction and affect microphone technique. Microphones have been developed recently that will pick up the speaker's voice satisfactorily 6 or 8 feet away. This gives the speaker more freedom and thereby facilitates naturalness. The lapel microphone which proved to be a technical success at the Democratic National Convention brings several innovations, especially for actuality broadcasts and dramatic productions. By means of the small microphone attached to the speaker, or to a page who moves from speaker to speaker, more freedom of movement is insured, eliminating the ever-present "mike consciousness," and raises the possibility of better outdoor broadcasts with natural sounds [*36*]. Recent experiments with the nondirectional microphone indicate that engineering developments may greatly increase the freedom of the broadcaster with reference to the position of the microphone.

Actual experimentation with the cooperation of the radio-station staff is necessary to determine suitable distance and angle of the speaker from the microphone. The type and nature of the speaker's voice is an important factor in determining proper placement of the speaker. The broadcaster should learn to perform with freedom and ease within the prescribed limitations of the microphone as determined in rehearsal. Fortunately the technical operator has considerable control over the transmission. This should relieve the

broadcaster of much concern while on the air. If the performer is comfortably placed, with the microphone at the proper height and distance from him, the transmission can be left very largely to the operator as the broadcaster gives his full attention to the thought of the broadcast.

Sutton points out that a speaker with a good broadcasting voice—clear, reasonant without a nasal or metallic twang—may stand close to the microphone and talk intimately into it; and that a speaker with a voice of less pure quality gets a better effect by standing at right angles to the disk and speaking across it [*87, p. 323*]. The volume of voice that the speaker may use varies with the distance from the microphone. As the volume of the voice is varied, the speaker moves back and forth from the microphone. Unlike stage delivery, where the speaker steps forward and increases the volume to emphasize a point, broadcasting requires that the speaker either step back from the microphone and raise his voice, or speak very close to the microphone in warm, intimate tones when he wants to stress a point. Sudden changes of the direction in which the broadcaster is speaking affect the volume. Crowding or overloading the microphone, as well as getting beyond its range, should be avoided. Weaving about and turning of the head away influence the pick-up.

Precisely how the voice comes over depends also upon the way in which the operator controls transmission. Too much current destroys the overtones; too little gives only the fundamental vibrations. The galvanometer in the control room is calibrated from 1 to 60 points, and the speaker should control his voice so that the needle fluctuates between 10 and 20. The rasp of the metallic voice and the twang of the nasal are always magnified. When the current of transmission is too great, they come over with ear-splitting harshness [*13, p. 350–351; 87, p. 323–324*].

Annette Bushman, who has had extensive experience in directing dramatic productions, gives an interesting account of some of the technical problems to be considered when a radio drama is being properly produced. She says:

> An actor unfamiliar with radio finds it difficult to acclimate himself to this somewhat strange medium. On the stage he must project his voice so that he can be heard in the last row of the second balcony. On

prevent distinct enunciation. Regarding the rate of delivery, Borden considers an average rate of about 165 words per minute as being most effective [*51*]. While a brisk rate of delivery, provided the enunciation is good, is more likely to hold the attention of a radio listener than a more deliberate rate, other writers are of the opinion that 165 words a minute is a little too fast, especially for instructional purposes. Clark recommends 140 to 160 words [*47*], and Lawton says that the only blanket rule that can justifiably be made with regard to the rate of delivery is that the speaker should talk as briskly as is consistent with good enunciation and proper employment of the *variety stimuli*. He thinks it should lie somewhere near 135 or 140 words per minute [*51, p. 270*]. This is considerably slower than Lowell Thomas or Edwin C. Hill speaks.

According to Dr. Hillis Lumley, of the Bureau of Educational Research of the Ohio State University, news broadcasts are broadcast at the rate of almost 200 words per minute; educational talks for adults about 160 words per minute. The rate for a small sampling of school broadcasts was 170 words per minute. Of course, the rate varies with the material and the audience being addressed. The rate should be somewhat slower for children than for adults. The same instructor who would speak at the rate of 140 words per minute, when he was telling some interesting story, might drop to 90 words per minute in giving directions for the listeners to follow. The broadcaster should be deliberate in order to be at ease, but not slow enough to appear lazy. Of course, if slowness is overdone, the delivery will sound stilted. For instructional purposes the thought must be attuned to the powers of perception of the listeners. The tempo and pitch of the voice should be suited to the idea being presented and the personality of the speaker [*6, p. 100*].

The foregoing opinions are in accord with better practice in broadcasting, but the writer believes that Dr. Burt is right when he says that microphone technique must be made the subject of a scientific investigation rather than be left to the empirical maxims of practitioners themselves [*12, p. 933.*]

the radio the last row in the balcony becomes the first row in the orchestra. If he attempts to project farther than the first row, he "blasts"; that is, he uses so much volume that his voice is just a raucous noise. . . The actor must "trick" his voice to register correctly on the galvanometer and still maintain the emotion and feeling of the character which he is playing. He must stand only 8 or 12 inches from the microphone; if he is farther away than this, we still may be able to hear him distinctly, but, in the terms of the theater, he is not center stage. Sometimes this is desirable, but we must keep in mind the effect to be produced. If the action of the play demands that an actor speak from a door or a window, he will back away from the microphone, using a slightly higher pitch in voice, and deliver his line to the person at the "mike." If the listeners are to "see" the actor make the movement, he must move while speaking, and raise his voice in slight crescendo. Entrances are made 6 or 7 feet from the "mike"; the actor starting with his voice pitched higher than usual will gradually walk into the microphone, lowering his voice in a gradual diminuendo until he arrives at the "mike" If the listener is to see the actor move, the actor must always keep talking as he moves, for if he makes a pause in his lines while he walks it may sound like two different voices.

In a mob scene in the theater the actors top the noise in the background by projecting their voices above the noise. Quite the opposite is true on the radio. Two actors, speaking in ordinary tones, 6 inches away from the microphone, will be heard above any noise made by the mob in the background. Unfortunately, the natural instinct of the actor at the microphone is to raise his voice above the mob, but his scene must be rehearsed over and over again until this defect is remedied [*13, p. 350–351*].

If more than one person is in the broadcast, or if musical setting or sound effects are used, particular attention should be paid to the microphone set-up. In radio conversation between two speakers the broadcasters can stand or sit close together on opposite sides of the microphone and then forget it. In case more than one person is using a microphone no one should appropriate it to himself. The balance of voices should be considered when different participants have fixed positions in reference to the microphone. One program director reports an instance when four persons were speaking at a long table. A very bad effect was created by having two gruff, heavy-voiced men in the center near the microphone and two feeble-voiced women at the extreme ends.

Vary the rate of delivery according to your own style and the thought being expressed ★ It should never be so rapid as to

Diction

Diction, as used by the American Academy of Arts and Letters, includes [*i*] pronunciation, [*ii*] articulation, [*iii*] quality of tone, [*iv*] accent, and [*v*] general cultural effect [*47, p. 1*]. The term is used here in the same sense. Good diction includes those qualities of voice and delivery that enable the speaker to project his personality through the microphone in such a way that the listeners will be able to understand and suffer the minimum handicap from the lack of the visual presence of the speaker. They should be stimulated to think and act on the subject under discussion. Good diction—an effective vocal exposition—is of paramount importance to the broadcasting teacher, since it must do such heavy duty in instruction by radio. Lambert remarks that speakers with charm of manner and voice may succeed at broadcasting even though they do not have much to say [*57, p. 800*]. Diction should be pleasing but not overelaborate or stilted. Since it is simply the conveyor of the ideas, it should not detract the attention of the listener from the content of the message.

Too much stress cannot be placed on proper diction. In radio the word and a few supporting sound effects alone must be relied upon. No visual aid or motion is possible. The speaker's diction should be precise without suggesting specific effort. Most good radio speakers talk softly and distinctly.

Pronounce correctly ★ The speaker should pronounce correctly the words he uses in the broadcast and avoid the use of words he is likely to mispronounce. Wrong pronunciation is worse than no pronunciation. Carpenter roughly classifies mistakes in pronunciation under the following types: [*i*] words easily mispronounced through carelessness; [*ii*] tongue twisters; [*iii*] foreign words; [*iv*] foreign names; and [*v*] those words which all of us see repeatedly in print, but which we have never spoken aloud and probably have never heard pronounced [*15, p. 41*]. Cosmopolitan English, using pronunciation which conforms to the standards of best usage, involves knowledge of the phonetics of English, the ability to use the phonetic pronouncing dictionary. Inten-

sive study should precede the presentation involving the extensive use of foreign names [*87, p. 315*].

Perhaps the worst fault in pronunciation and enunciation comes from speaking too rapidly and dropping the voice near the end of sentences. Final consonants, especially *s*, *d*, and *t*, should be watched. The hissing of sibilants executed with a slight whistle is disagreeable over the air. By keeping the tongue as far as possible from the roof of the mouth, the sibilant may be uttered softly. The harshness of the letter *r* may be avoided by giving it a slight roll and almost dropping it at the end of a word [*64*].

If formulas or important figures are to be quoted, give the listener warning if it is especially desired that he get them. Speak slowly and distinctly in giving the information, assuming that some of the listeners are writing it down. Finally, repeat for good measure. Proper names should be emphasized if important and spelled out if there is a likelihood of their being misunderstood.

Articulate distinctly ★ Clear, clean-cut, crisp enunciation and finely articulated sounds are important in the effective use of the voice over the air [*12, p. 933; 47*]. Borden says that the importance of speaking distinctly over the radio cannot be overemphasized, but that the speaker should not enunciate pedantically [*51*]. Fleck states that emphasis should be given to clear, clean-cut enunciation, but not to the extent that the delivery becomes stilted or unnatural [*47*]. Sutton points out that clear enunciation demands the control of the tongue from the front, the shaping of the syllable in speech, without mouthing or jawing or using the back of the tongue [*87, p. 315*].

In speaking clearly it is necessary to open the mouth well. Tone vowels should be held and final consonants cracked off crisply and clearly. Lazy lip motion creates an at-ease attitude, but leads to poor articulation of certain sounds. For example, the letter w becomes dub-u instead of double-you.

Writers point out that the broadcaster should be capable of shading the voice to meet the requirements of the manuscript. Important points should be emphasized and climaxes approached with a rising inflection of the voice. The speaker

should not become so enthusiastic, however, that he slurs his words and runs his sentences together; neither should he let his voice trail off at the end of sentences. Special modes of enunciation, such as dialects and other speech variations, should never be permitted to interfere with the clearness, forcefulness, and the pleasingness of the message.

Use a pleasing and natural tone of voice ★ The National Voice Technique Committee recommends that the speaker strive for an average pitch of low middle range [*51*]. Van Campen considers that Graham McNamee has thousands of admirers because his wonderful voice, full of melody, friendliness, enthusiasm, and sincerity, is a flexible instrument that conveys every light and shade of feeling and thought [*6, p. 19*]. The words: Good, pleasing, clear, are frequently used by local teachers and principals in describing desirable radio voices. Other descriptive terms used include: Strong, buoyant, soft, low-pitched, well-modulated, well-directed, heavy, audible, convincing, attractive, full, expressive, earnest, magnetic, flexible, deep, natural, live, friendly, low-toned, warm, sincere [*64*]. The words: Rough, harsh, raucous, squeaky, shrill, high, sharp, tense, throaty, clacky, flat, explosive, jerky, rasping, are used to describe undesirable radio voices [*64*]. Shouting, shrill intonations, and superior tones are objectionable.

There is considerable variation of opinion regarding the improvement of poor radio voices. Campbell says that if a prospect's voice line is erratic there is little that can be done about it [*6*]. Clark [*47*], Bushman [*13*], and Van Campen believe in voice training for broadcasting. Good health and vitality are of great importance, as fatigue and nervousness show quickly in the voice [*87, p. 316*].

The tone of the ideal radio talk is not the tone of the public address. The radio talk has a friendly, intimate tone. It makes the listener feel he is being visited with rather than lectured at.

Emphasize important points ★ Accent or emphasis is an important factor in instruction by radio. Through meaningful variations in pitch and rate of delivery, changing inflections, volume, etc., the invisible speaker interprets his thoughts to

the listeners. If his emphasis is properly placed, his broadcast will be meaningful and effective. If his emphasis is not properly placed, confusion and dissatisfaction will result. Some pitfalls to be avoided include the affectation of so-called English or Oxford accents, colloquialisms and sectional speech [*47*].

Learn to appreciate the general cultural effect of good diction ★ Good radio diction will eventually teach us how to produce the proper kinds of voice, whether it be for the theater, the concert hall, or the school. With the increased use of the radio in the classroom will come the increased demand for improved speech, and this in turn will improve the speech of the whole Nation, for the radio is in the nature of an acid test. It is to the ear what the microscope is to the eye. It is devoid of all make-up and accentuates the qualities of the voice [*13, p. 353*].

The radio drama may be used to illustrate the importance of good diction. From the voice over the air the listener must receive detailed interpretations of characters and situations. Since the flashing eye, wrathful mien, and the like are hidden, the tonal colors must paint the yellows of jealousy, the vermillions of violence, the somber grays of sadness, and the joyous riot of bright splashes of gaiety. The voice colors must create the atmosphere in order that the listener may create the necessary mental pictures which provide the boundaries of the action of the play [*71, p. 178*]. Besides the importance of good diction as the vehicle for carrying effectively, its tremendous general cultural effects are almost inestimable.

From the foregoing consideration it will be seen that prospective broadcasters may need considerable practice to master the techniques in successful broadcasting. The feeling of closeness in the studio, the strangeness of the medium, and the feeling of the importance of the occasion frequently cause the novice to suffer from "mike fright." In the early days of broadcasting many amusing instances of "mike fright" occurred. This malady affected experienced public speakers just as often as it did others [*15, p. 29*]. Kennedy says that mother wit is the only thing that can

save a speaker if he is struck by "mike fright". Any person who has not practiced until he feels perfectly at ease before the microphone may be struck dumb at any moment [*47*].

To offset the danger of "mike fright" and to improve the broadcasts, more and more time is being given to preparation. Lambert says that there should be a gradual raising of the tests which would-be speakers may be expected to pass [*57, p. 800*]. The National Advisory Committee on Education by Radio states that a whole department may be required for preparing manuscripts and conducting rehearsals to develop proper voice and manner before the microphone [*1, p. 75*]. Neels recommends that broadcasting teachers should be selected with infinite care and should receive most careful training for their important work [*60, p. 233*].

Hints for Greater Effectiveness

Make the introductory announcements concise and appropriate to stimulate interest in the broadcast ★ It is the announcer's responsibility to introduce the speaker or artist and the subject. In his discussion of the mission of the announcer, John L. Clark, program director of radio station WBZ, says:

> You are the prelude, the interlude, and the postlude; you are the scene painter, the vocal framework. You might liken your speech to the mortar that binds together the masonry of entertainment, making of it a solid whole. This simile carried further gives an indication of the proportion of announcing to feature. The strongest masonry is that which is bound together by thin layers of mortar.
>
> No matter how modern, how perfect the equipment and performance of the station, the excellence of its features, a poor announcer can spoil everything [*18*].

Since the introduction is intended to stimulate interest in the program in a very short time, it should be exceedingly well done. The broadcaster should supply information to be included in the introduction and check the announcement before it is made. In this way he can make a good beginning, which contributes in a significant manner to the success of the broadcast.

Use a smooth, yet intimate and animated, style of delivery with a pleasing variety of pitch and intonation appropriate to an accurate portrayal of the ideas being presented ★ Smoothness in delivery should not be interpreted as even-flowing, monotonous presentation with well-rounded sentences. Not at all. It does imply, however, that an abrupt, explosive style with extreme frequencies in pitch and clumsy pauses should be avoided. Stammering and hesitation, except for desired dramatic effect in characterizations, annoy the listener. The listener wants to know every minute what is happening. Therefore, cues should be followed quickly and smoothly.

Various program directors warn against awkward pauses or "dead air" during a broadcast. They point out that a few seconds of silence over the air may seem like minutes to the listener. There are times, however, when silence may be very effective. Pauses and changes of emphasis can be used advantageously to overcome the disturbing effect of abrupt transitions from one idea to another. Dramatic pauses and an atmosphere of mystery are important aids in creating suspense and firing the imagination in certain dramatic situations. As a rule, however, pauses over the air should be shorter than pauses on the stage. A good pause, properly timed, is much more effective in a radio address than any amount of shouting. The mental reactions of the listener must be studied in order to understand the function of the dramatic pause. Sound is a stimulus which stirs the imagination. The imagination makes use of all five of the special senses. Frequently an appeal to the auditory sense alone makes a stronger appeal to the imagination than if a direct appeal is made to several senses at one time. On this point, Vernon Radcliffe, of the National Broadcasting Co., says: "If you hear a footfall in your darkened room after midnight, you receive a much more violent shock and stimulus than if you see a face, for the reason that the imagination is widely and instantly stirred. It is a fact, therefore, that radio audiences react much more violently and quickly—provided they react at all."

Avoid dullness ★ Broadcasters are frequently urged to be natural and at ease when they are on the air. Naturalness that tends to disturb or annoy the listeners should be sacrificed for effectiveness. Natural dullness may be used as an example. Dullness has no place on the air.

A number of writers are of the opinion that the speaker should vary his voice and exercise some freedom as to his position before the microphone. Burt says that in delivering a talk, monotony is the one unpardonable sin. The delivery must be as varied as possible; pitch, speed, stress, and intonation must be continually changing [*12, p. 933*]. Busse says that a monotonic delivery is a perfectly deadly thing and one not calculated to inspire the radio listeners to continue hearing the lecture. Lawton states that animated delivery can be aided by meaningful variations in pitch, volume, and rate; but that extreme care should be taken that these variations should not become manneristic or uninterpretative [*51, p. 268*].

Make use of radio manuscript after it has been broadcast ★ There are a number of ways in which the radio manuscript may be used after it has been broadcast. The uses that may be made of it will be determined by the purpose it is intended to serve. For example, a broadcast by Edwin Markham reading his own poems can be placed on recordings or sound films so that the living voice of the poet will be preserved for future generations. The British Broadcasting Corporation finds it desirable to repeat certain important broadcasts at different hours in order to accommodate the different audiences. The discussion of an important public question in a broadcast may be rewritten and used as a magazine article. Press associations appreciate the news value of certain broadcasts and use them as front-page articles. Copies of broadcasts are sometimes printed or mimeographed and distributed among the listeners. The broadcast series of the National Advisory Council on Radio in Education and those of the Foreign Policy Association may be referred to as examples.

This demand for copies of important broadcasts after they have been put on the air has prompted various individuals and groups to consider the desirability of launching a listeners' magazine to include the best of the past week's broadcast

and announcements of forthcoming programs It is probable that definite steps will be taken in this direction when economic conditions improve

At the present time a great number of unknown factors make it impossible to find satisfactory solutions to many of the problems involved in teaching by radio. It is the anxious task of the present age to initiate a new service, to preface the way for genius to solve the problems involved. This may be done by courageously facing the task, by going ahead and making mistakes and profiting from them [*25, p. 131*]. In broadcasting to schools the classroom teachers will have an important part to play in the ultimate solution of these problems. They are in the strategic positions to direct the reception and evaluate the radio lessons [*24*].

Includes hints for playwrights.

BROADCAST SERVICE

In addition to the large number of carefully prepared broadcasts that may be listened to, there are some broadcast series especially intended to assist listeners in improving their diction. For example, Miss Vida R. Sutton for some time past has been broadcasting a series of programs entitled "The Magic of Speech" over the National Broadcasting Company network. This series is excellent on voice training and radio diction. Further information regarding these programs and other broadcasts designed to serve similar purposes may be secured by addressing the stations from which broadcasts are available.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D.C., June 1933.

SIR: The National Survey of Secondary Education shows almost unbelievable results in secondary education for Negroes. This would seem to imply similar results for elementary schools. Our specialist in the education of Negroes, Dr. Ambrose Caliver, here takes the opportunity of investigating those schools which have been under the Jeanes supervisors. The Jeanes Fund has been a most worth while philanthropy extending its benign influence over these underprivileged people in the Southern States.

This study represents 611 schools with a teaching staff of approximately 1,000 teachers and enrolling 44,785 pupils. The schools are located in 76 counties in the 12 Southern States. Some of the schools were almost inaccessible. It was found that more than a third of the children were in the kindergarten and first grade. Only 2.29 percent were in the eighth grade—such is school mortality in these rural schools. Only about 11 percent of the teachers in these schools held college degrees. The teachers and principals had more experience however than white teachers. Meetings attended and reading show great professional interest on their part.

It was found that the Rosenwald Fund had given great impetus to better housing. The report closes with 14 problems listed for further study.

I recommend that this manuscript be published as a bulletin of this office.

Respectfully submitted.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR.

RURAL ELEMENTARY EDUCATION AMONG NEGROES UNDER JEANES SUPERVISING TEACHERS

CHAPTER I : INTRODUCTION

THE NEGRO A RURAL DWELLER

Despite the fact that the past two decades have witnessed the greatest exodus of Negroes from rural sections in the history of the race, the majority still live in the country. According to the 1930 census, more than two thirds of the race reside in farming and nonfarming rural areas. In 15 Southern States it was found [1] that of the 9,420,747 Negro population 67.4 percent were rural dwellers. In 3 of the States the percentages were as high as 79, 81, and 83.

EDUCATION OF RURAL NEGROES

These facts have a real bearing on the education of the Negro, and show that, according to the number of persons involved, the education of colored persons in rural centers is a problem of great importance. That the millions of citizens and potential citizens living in rural sections should receive the fundamentals of education is recognized by practically everyone conversant with the situation. That this ideal is not realized by the majority of Americans so situated, and more particularly for the Negro,[2] is equally well known.

Although the disparities between the education of Negroes and whites in rural communities are still great, reaching enormous proportions in some places,[3] considerable progress has been made in improving conditions during the past 10 or 15 years.

THE JEANES WORK

Among the agencies most influential in advancing education of Negroes are the Jeanes supervising teachers. Beginning activities nearly 20 years ago with 1 supervisor, the Jeanes work has grown until at present there are 339 supervising teachers. They have promoted many diverse enterprises, but their most important contribution has been in stimulating and encouraging the colored people to become interested in better schools, and in soliciting and maintaining the cooperation of the local white people in a program of educational development for Negroes.

The Negro Rural School Fund, Anna T. Jeanes Foundation,[4] which initiated and has sponsored the work of the Jeanes supervisors, was incorporated on November 20, 1907. The fund is the result of a million-dollar gift by the late Miss Anna T. Jeanes, of Philadelphia. Speaking to a visitor in regard to making a contribution toward the education of colored children in the South, Miss Jeanes remarked, "Others have given to the large schools; if I could, I should like to help the little country schools." Not long after the expression of this desire Miss Jeanes conferred with Dr. Hollis B. Frissell, principal of Hampton Institute, Dr. Booker T. Washington, founder and principal of Tuskegee Institute, and Mr. George F. Peabody, concerning the contemplated donation. The first regular meeting of the full governing board, which was formed as a result of these conferences, was held on February 29, 1908.[5]

In 1931–32 the Jeanes Fund cooperated with the public-school authorities in employing Jeanes supervising teachers in 339 counties of 15 States as shown by table 1. These supervisors are appointed by the county superintendent, work under his direction, and are considered members of his regular corps of teachers.[6]

Their work includes a wide range of activities, comprising teaching and supervising elementary industrial work; supervision of regular academic instruction; promotion of school and community clubs; and improvement of health and sanitary conditions in schools and homes. Perhaps the largest

[4] It is generally known simply as the Jeanes Fund.

[6] Jeanes fund. Report of the president, annual meeting, 1914, Washington, D.C.

proportion of supervisors' time is consumed in raising money for new schoolhouses, school equipment, and extension of the school term. From 1913–14 to 1927–28 these supervisors raised an aggregate sum of approximately $5,000,000.[7]

The purpose of the Jeanes Fund from the beginning has been to stimulate and assist local rural communities to assume their obligation in the education of colored children. One measure of success appears in figure 1 which shows the pro-

FIGURE 1.— PERCENTAGE OF SALARIES OF JEANES TEACHERS PAID BY THE JEANES FUND AND FROM PUBLIC FUNDS IN 1913–14 AND 1931–32

portion of the salaries of Jeanes supervisors paid by the Jeanes Fund and from public funds in 1913–14 and 1931–32. It will be noted that in 1913–14 only 16 percent of the salaries was paid from public funds, while in 1931–32, 66 percent came from this source.

State and county officials and citizens in all walks of life, both colored and white, bear testimony to the fine service

[7] Statement issued from the office of the Jeanes Fund by J. H. Dillard, Charlottesville, Va., and

rendered by the Jeanes teachers. Their influence has been effective and far reaching according to persons most familiar with their work.

Contrary to the general opinion, Jeanes teachers are not employed in all the counties of the Southern States where the number of colored schools would warrant their services. This fact is shown by table 1 which lists the number of counties in the various Southern States and the number having Jeanes teachers. It also reveals the number of counties in each State without Jeanes teachers according to the number of Negro teachers employed in the counties. In observing the table it is seen that those counties having 10 Negro teachers or more are suggested as potential fields for the extension of Jeanes work. There is a total of 478 of these counties.

PURPOSE OF THE STUDY

Limited studies have been made of certain factors relating to the education of Negroes in rural communities, but few investigations have been made of sufficient scope to warrant valid conclusions. It is the purpose of this study, therefore, to present rather detailed facts regarding some of the more important phases of elementary education for Negroes in rural communities in a representative number of counties in the Southern States, where Jeanes supervising teachers are employed. Some of the more important phases considered are: (1) Accessibility of schools and transportation of pupils; (2) enrollment; (3) pupil mortality; (4) acceleration and retardation; (5) the staff; (6) administrative and supervisory practices; (7) housing and equipment; and (8) extended services and community relationships.

THE DATA AND THEIR SOURCES

Some of the data for this study were secured from printed reports of the Jeanes Fund; part through personal visits to elementary rural schools under the supervision of Jeanes teachers; some from material obtained in the office of the Jeanes Fund in Washington; and still others by reference to a study of the Jeanes supervising teachers made by Hardy Liston.[8] The major part of the data, however, was gathered by means of a questionnaire distributed to the schools through the Jeanes teachers.

In the initial stages of the study advice and cooperation were secured from Dr. J. H. Dillard, then president of the Anna T. Jeanes Fund. Letters were sent to the State directors of Negro education and to the county superintendents of the Southern States, apprizing them of the study and soliciting their cooperation. Also, a preliminary letter was sent to all Jeanes teachers in the winter of 1931 explaining the nature of the investigation and requesting their assistance in selecting the schools to be included and in distributing the questionnaires. The following directions read in part:

> It will be impracticable to attempt to study all the elementary schools under the supervision of the Jeanes teachers; therefore, we are requesting each supervisor to select 50 percent of the schools under her supervision. You are kindly asked to select approximately one third

[8] Liston, Hardy. Op. cit.

of this number from those schools which are doing very effective work; one third which are not doing effective work; and another third which you consider to be doing average work.

Blanks were forwarded to the Jeanes teachers for distribution to the principals or head teachers of the schools under their supervision. They were requested to distribute the blanks; to instruct the teachers how to fill them in; to collect them and verify the accuracy of the replies; and to return them to the United States Office of Education.

SCOPE OF THE STUDY

A limited number of characteristic features of a representative sampling of elementary schools for Negroes under the supervision of Jeanes teachers will be the extent of the concern of this report. The investigation comprises a study of 611 schools with a teaching staff of approximately 1,000, and enrolling 44,785 pupils. These schools are located in 76 counties of 12 Southern States. Seventy-six Jeanes teachers cooperated with the Office of Education in securing the data. Table 2 presents the detailed facts concerning the data and their sources.

Assuming that the Jeanes teachers selected the schools in the manner suggested to them, it may safely be concluded that the picture here shown is a fair representation of the school situation encountered by Jeanes teachers. In the degree to which they failed to select an approximately equal number of schools according to the three suggested levels, namely, poor, good, and average, to that extent the findings fall short of revealing a representative picture.

TABLE 2.—*Number of supervisors participating and number of schools and pupils included in the study, by States*

State	Number of supervisors returning check list	Number of schools	Number of pupils
1	2	3	4
Alabama	5	63	3,896

Texas	5	23	1,390
Virginia	17	105	5,558
Total	76	611	44,785

CHAPTER II : ACCESSIBILITY OF ELEMENTARY SCHOOLS

Among the many factors influencing the accessibility of schools the following may be mentioned as of primary importance: (1) Number of children of school age per school; (2) proximity of schools to the homes of the children; (3) facilities provided for transportation of pupils to and from school; and (4) condition of the roads. Only two of these factors will be discussed in this section, namely, proximity of schools to children of school age and transportation facilities provided by public funds.

DISTANCE CHILDREN LIVE FROM SCHOOL

Because of the variability of the factors involved it has been difficult to establish standards of accessibility of schools. How far children should be expected to walk to school without physical injury to themselves and without deleterious effects on their educational progress is a question that has not been answered conclusively. However, in several studies of accessibility which have been made, a distance of 1½ miles has been suggested as a reasonable maximum.[1] Table 3 shows the distance children live from the school they attend according to the size of the school, and the number of children who are transported in relation to the distance they live. According to the suggested criterion it is clear from this table that the majority of the children comprising the present study are too far removed from the schools they attend.

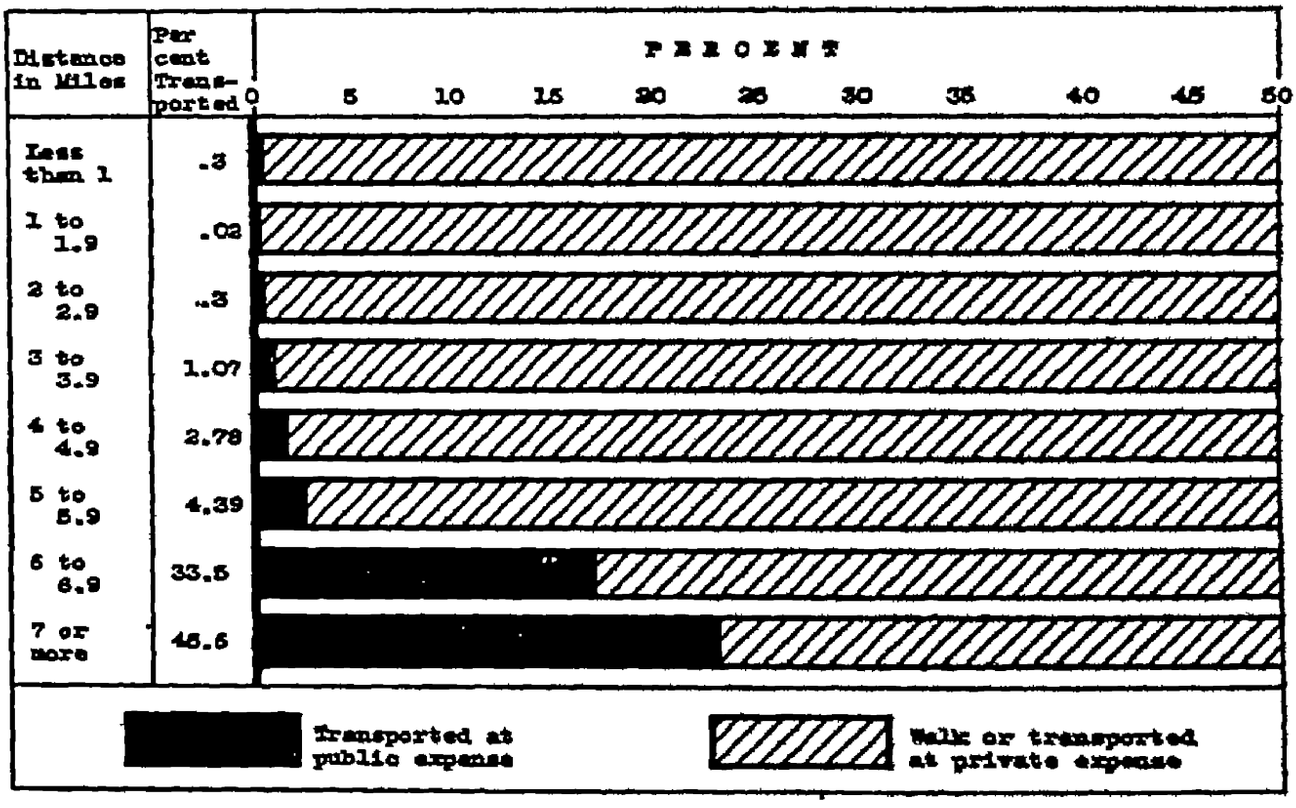
Percent	2.78	1.5	4.39	0.6	33.5	0.7	45.6	----	1.06



There are several significant features that should be noted about the table. Of the 44,187 pupils concerning whom information was given, 7,669, or 17.1 percent, live 3 miles or more away from the schools they attend. In the 22 counties of the five States studied by Gaumnitz,[2] comprising 41,200 pupils, only 4.3 percent lived 3 miles or more away from the schools they attended. Of the Negro children represented in this study, 39.2 percent live a distance of 2 miles or more from their schools, which means, according to the criterion of 1½ miles, that less than 60 percent are within reasonable walking distance.

[2] Gaumnitz, W. H. Availability of Public-School Education in Rural Communities. Washington, Government Printing Office, 1930. (U.S. Office of Education. Bulletin 1930, no. 34.)

CHILDREN TRANSPORTED AT PUBLIC EXPENSE

The distance children live from schools they attend would not be a matter of such great concern were adequate means provided to transport them to and from school. In many States and communities the transportation facilities are wholly inadequate even for white children, but the disparities which exist between the whites and Negroes in regard to transportation reach enormous proportions. The following figures, taken from one State superintendent's report, illus-

FIGURE 2.— PERCENTAGE OF NEGRO PUPILS LIVING VARYING DISTANCES FROM SCHOOL WHO ARE TRANSPORTED AT PUBLIC EXPENSE

trate the differences that may be found in many places in providing transportation facilities. According to this 1929–30 report, there was spent for the transportation of white pupils the sum of $1,053,649; for the transportation of colored pupils there was spent the sum of $200.

Table 3 shows facts on transportation of pupils in this study. Of the 44,187 pupils, only 471, or 1.06 percent, were transported at public expense. Gaumnitz found 18.8 percent of the pupils in his study to be transported at public expense.

Of the 17,286 pupils in the present study who live 2 miles or more from the schools they attend, only 414, or 2.4 percent, are transported at public expense. Those who live a distance of 5 miles number 1,310, or 2.9 percent of the total. Of this number only 282, or 21.5 percent, are transported at public expense. How the 97.6 percent of those pupils who live a distance of 2 miles or more, who are not transported at public expense, travel to and from school is a matter of conjecture. It may safely be said, however, that the majority of them walk.

Figure 2 shows the percentages of pupils living varying distances from school who are transported at public expense. The seriousness of the problem may be appreciated when it is considered that the lined portion of the bar represents the percentage of pupils who either walk to school or who travel in conveyances provided by themselves or the patrons of the community.

The percentages of the pupils attending the various sizes of schools who are transported at public expense are as follows: 1-teacher, 0.12; 2-teacher, 0.56; 3-teacher, 0.28; 4-or-more teacher, 2.65.

It is probable that inaccessibility of schools is one of the most important factors causing the nonattendance of the more than 1,000,000 Negro children in the United States who are not in school. The Florida Educational Survey Commission claims that one of the reasons that more than 50,000 of the 133,000 Negro children of school age in Florida are not in school is inaccessibility of schools.[3]

In visiting the rural schools of one county the writer was taken to a school which was about as inaccessible as could be imagined. After leaving the highway we drove about a mile over a fairly good gravel road, then about half a mile over an ungraded dirt road which ran alongside a hill and slanted to such an extent that it seemed that the car would turn over any minute. We turned off this road abruptly onto a narrow, steep passageway running between fallen-down fences, which seemed more like a series of gullies and washouts than a road for automobile traffic. At the top of the hill

[3] Educational Survey Commission and Survey Staff Report, State of Florida, April 1929. p. 367.

where the road ended was a clearing in the woods where we left the car, and proceeded on foot several yards down the side of the hill where we found the shack which housed the school.

This school, which was formerly fairly close to the homes of the pupils, was now removed 2 miles from the nearest home, and as far as 3 miles from many, with no transportation facilities. The patrons had moved from the vicinity, but the school had failed to follow them. It was tied to the acre and a half of land which had been donated to the school trustees a generation ago. Although land had been offered for a school site more accessible to the pupils, the trustees argued that it was "cheaper" to maintain this 1-room school on the side of the hill.

CHAPTER III : NEGRO PUPILS IN RURAL ELEMENTARY SCHOOLS

In order to help determine the efficiency of the work done in the schools comprising this investigation, studies of pupil mortality and age-grade distribution were made and are reported in this chapter.

Although certain age-grade studies have heretofore been made of Negro pupils of a local and State-wide nature, few, if any, have appeared which covered the South as a whole or any considerable portion of it. The present study, therefore, was made for the purpose of presenting a picture of the age-grade distribution of Negro pupils in rural elementary schools which are under the supervision of Jeanes teachers. A representative sampling of pupils is taken from 12 Southern States. The total group comprises 39,930 pupils from 501 schools. Table 4 shows the pupil enrollment and the number of schools for each size group represented in this phase of the study.

TABLE 4.—*Number of schools and enrollment, by size of school*

Size of school	Number of schools	Enrollment
1-teacher	290	8,482
2-teacher	164	12,945
3-teacher	30	5,102
4-or-more teacher	47	13,451
Total	501	39,980

PUPIL MORTALITY

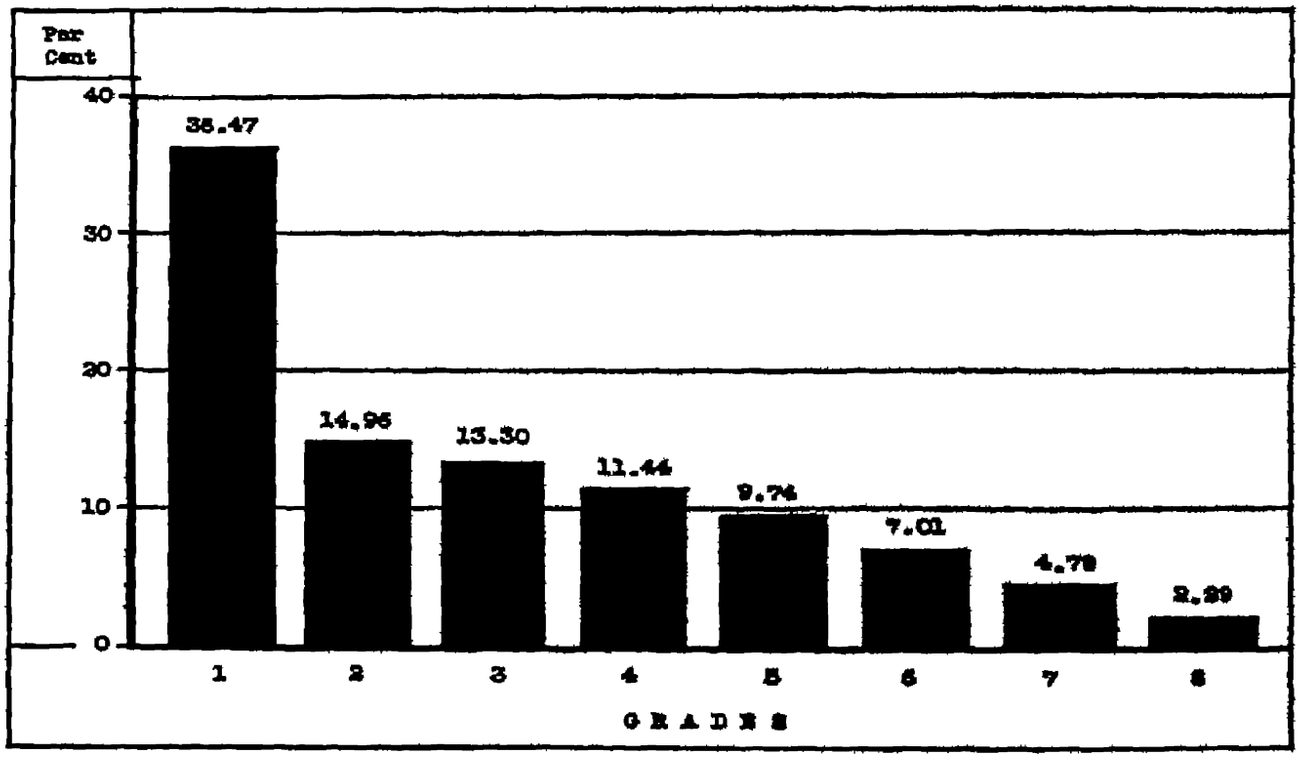


Figure 3 shows the grade distribution of 39,930 Negro pupils in rural elementary schools under Jeanes teachers. Insofar as enrollment for the year under consideration, 1930–31, is representative of a normal situation, to that extent does it show general tendencies.

The accurate way to determine pupil mortality [illegible] ages is to take the number of years covering the [illegible] period under consideration, and, beginning with [illegible] grade of the first year, calculate the [illegible]

ment bears to the next highest grade in the succeeding year; then calculate the percentage the enrollment of the second year bears to that of the third, and so on until the entire span is covered. Losses due to emigration will usually be offset by gains resulting from immigration.

Due to our inability to obtain a sufficient quantity of accurate data over a long enough period, it was not possible to determine pupil mortality as described above. However,

FIGURE 3.— PERCENTAGE OF NEGRO PUPILS ENROLLED IN EACH GRADE OF RURAL ELEMENTARY SCHOOLS UNDER JEANES TEACHERS

from the data at hand student mortality trends may be estimated.

As will be noted from the figure, more than a third of the pupils are enrolled in the first grade. The abrupt drop in enrollment from the first to the second grade may be partially accounted for by the large number of older pupils who enter the first grade, then drop out apparently never to return to school. The decline in the third, fourth, and fifth grades is fairly regular, but becomes sharp again in the sixth grade, and continues through the eighth grade. The percentages of pupils in each grade as shown here are not greatly

different from those shown in Blose's study [1] of 1,398,452 pupils in 1928. A comparison of the two studies with the percentage of grade distribution of 25,179,996 pupils for the country at large is shown in table 5.

TABLE 5.—*Percentage distribution of Negro pupils for the first eight grades, in rural elementary schools under Jeanes teachers, compared with the percentage distribution of Negro pupils in public elementary schools in 12 Southern States, and with all pupils in public elementary schools for the country at large*

Grade	Negro children under Jeanes teachers, 1930	Negro children in 12 Southern States, 1928 [1]	All children, 1928 [2]
1	2	3	4
Kindergarten or first grade	36.47	35.69	22.88
2	14.96	15.78	13.24
3	13.30	13.80	12.51

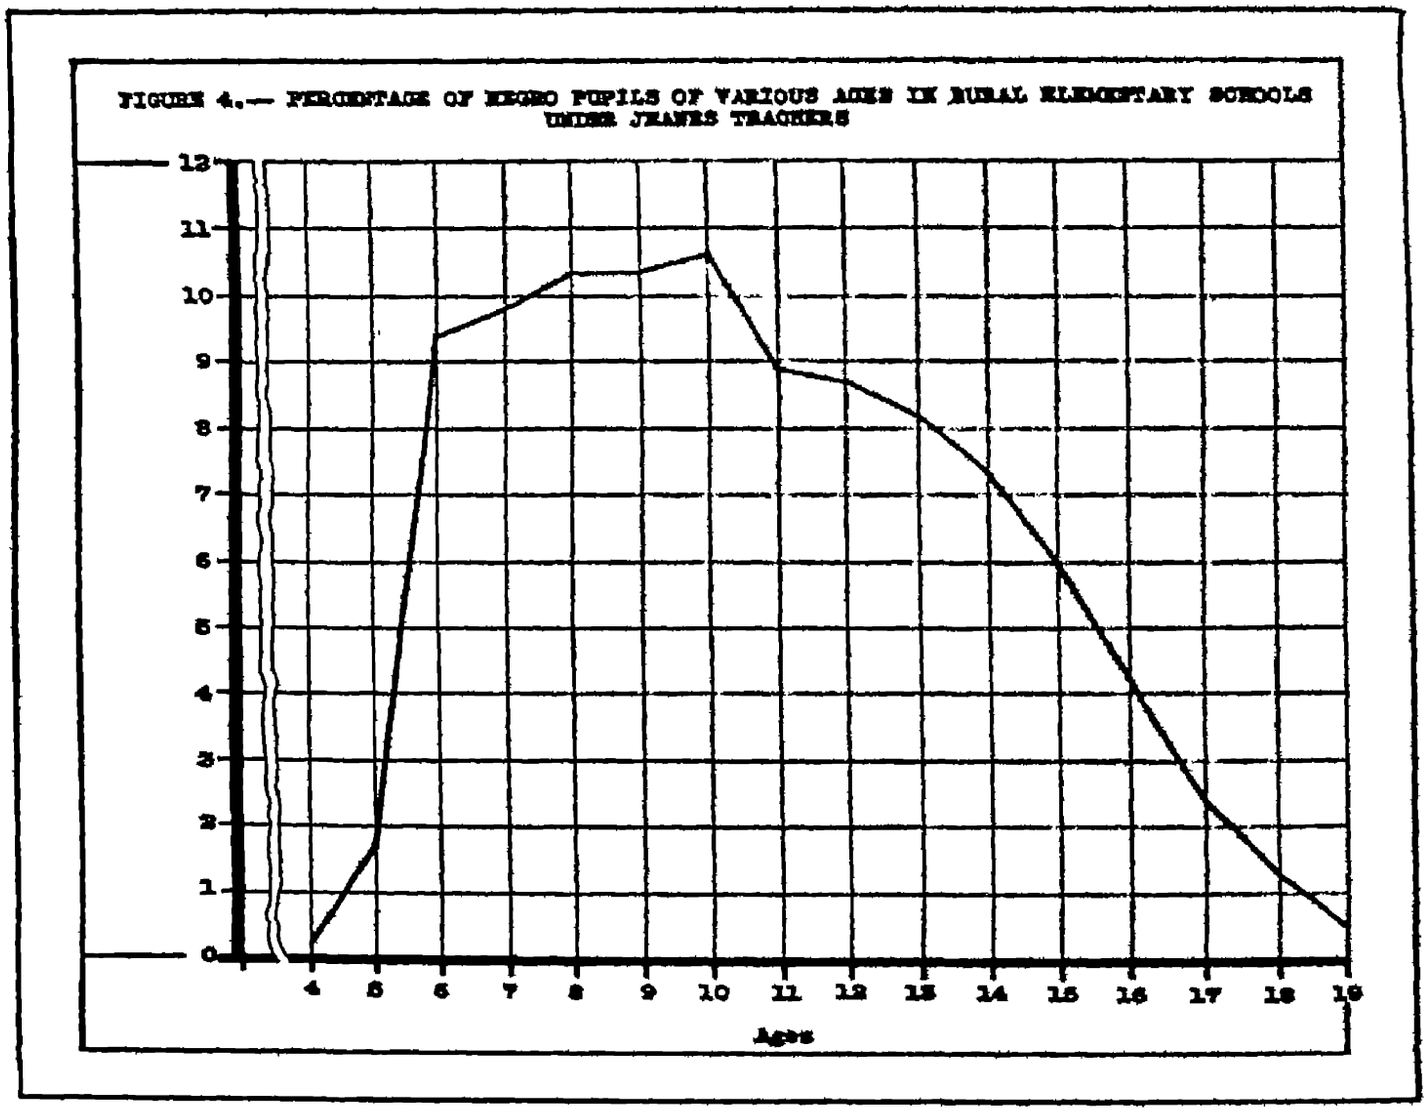
5	9.74	9.56	11.45
6	7.01	6.92	10.54
7	4.79	4.54	9.50
8	2.29	1.49	7.47

[1] Blose, David T. Statistics of the Negro Race, 1927–28. Washington, Government Printing Office, 1930. (U. S. Office of Education Pamphlet No. 14.)
[2] Phillips, Frank M. Statistics of State School Systems, 1927–28. Washington, Government Printing Office, 1930. (U. S. Office of Education Bulletin, 1930, No 5).

There is a tremendous waste of time, energy, and money resulting from pupil mortality. Maladjustments of individuals who leave school prematurely present problems of serious proportions.



Failure of pupils to remain in school is due to many causes, some of which are inaccessibility of schools, poverty of parents, poor health, unattractiveness of the school, indifference of parents, lack of interest on the part of pupils, and lack of appeal of the program of studies. Whatever the cause may be, pupil mortality is an important consideration in the cost of education and the success of a school in realizing its objectives. Moreover, retention of pupils in school is absolutely essential to the raising of the general educational level of society. This latter point is of vital significance to the Negro. Attention has been called again and again to the enormous Negro pupil mortality and the great disproportion of numbers found in the lower grades.

ACCELERATION AND RETARDATION

To what extent do Negro children fall below the normal rate in their progress through school? How do their ages vary? What percent are retarded and accelerated?

These are some of the questions which this section of the study will attempt to answer in terms of the chronological ages of the pupils. Chronological age is recognized to be a

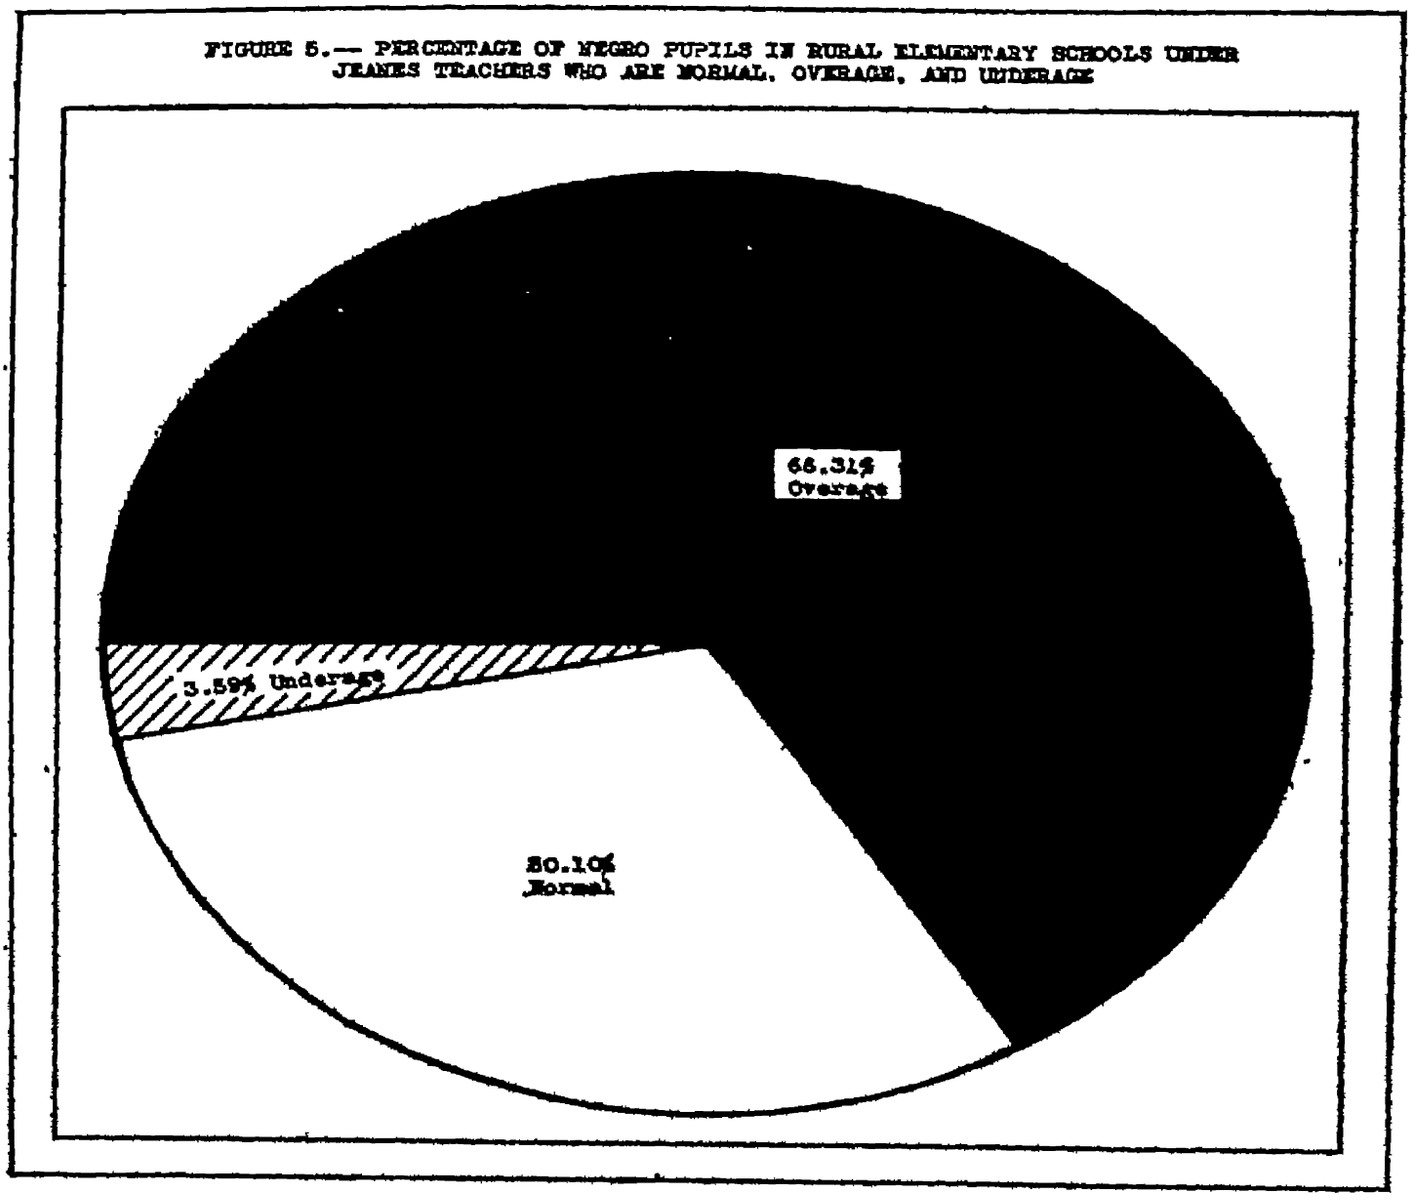
coarse measure of progress, but the scope of the present study did not permit the use of the finer measurements of mental age, educational age, social age, and the special-subject ages.

Data concerning the age-grade distribution of Negro pupils in rural elementary schools under the supervision of Jeanes teachers are presented in table 6 and in figures 4, 5, and 6. Figure 4 shows the percentage of pupils of a given age. The median for the entire group is 9.78 years. One-fifth, or 21.8

percent, of the 39,930 pupils enrolled in the 611 elementary schools are 14 years of age or above. The median age in years of pupils enrolled in each grade is shown below:

Median ages in eight grades

Grades	1	2	3	4	5	6	7	8
Median ages	6. 9	9. 02	10. 39	11. 69	12. 87	13. 83	14. 55	15. 33



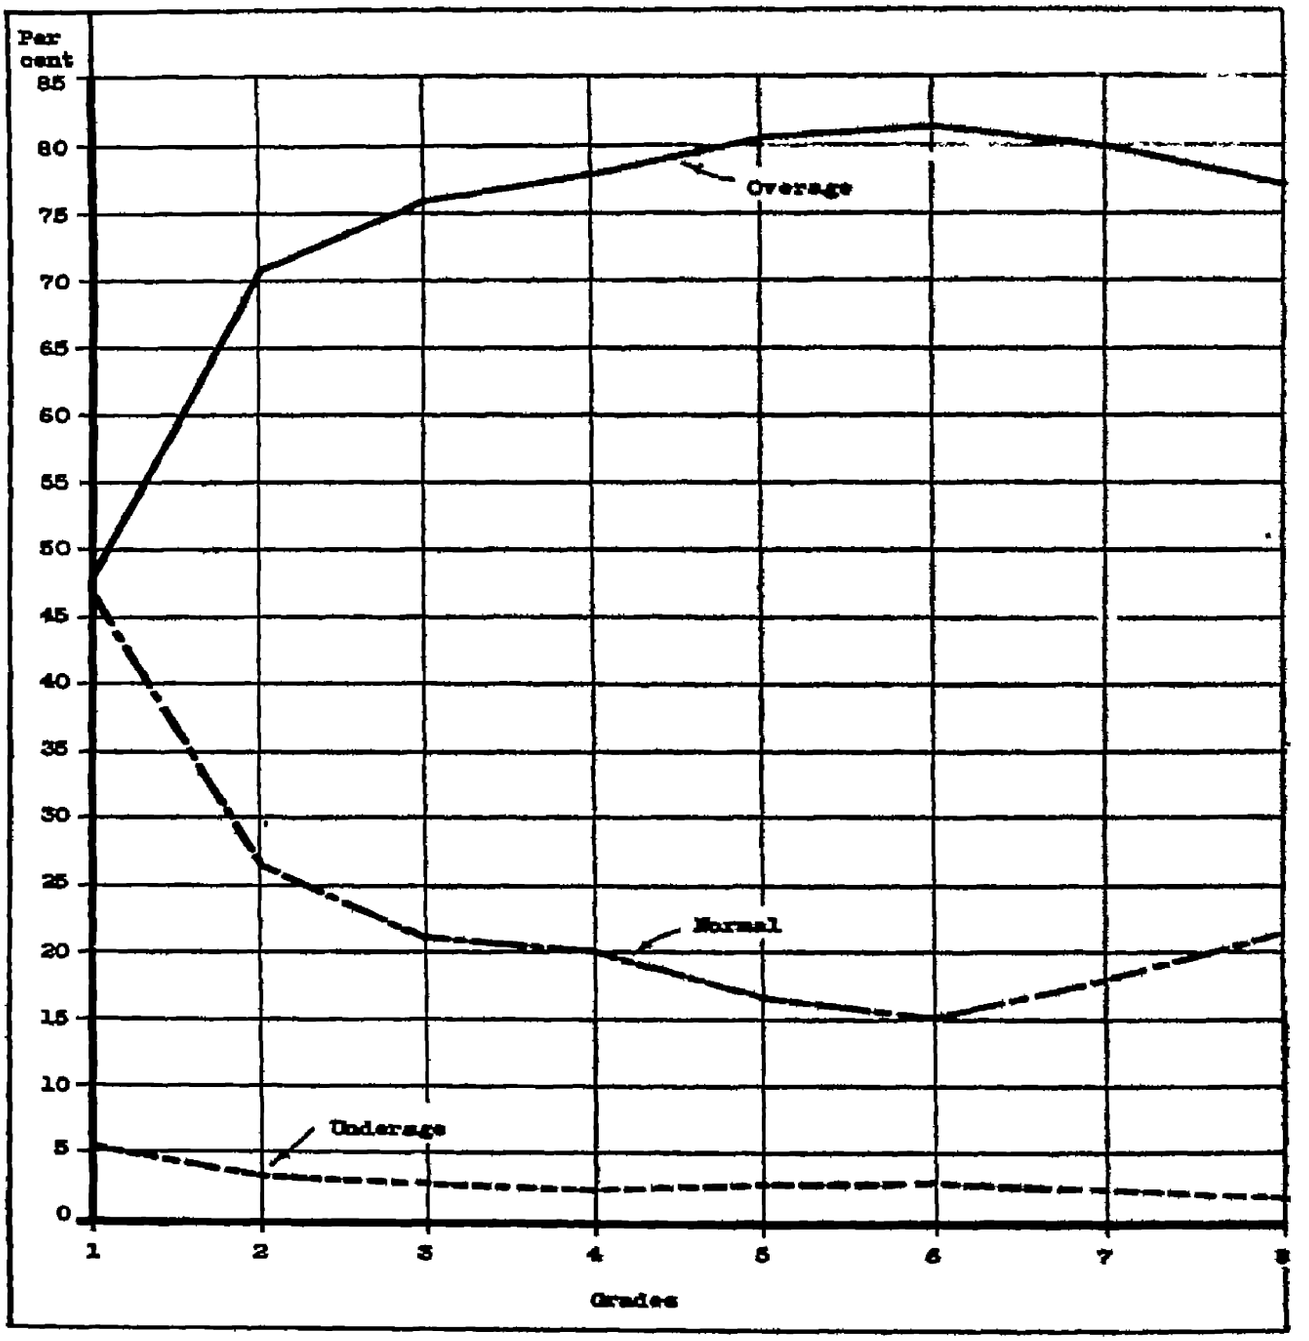


FIGURE 5.— PERCENTAGE OF NEGRO PUPILS IN RURAL ELEMENTARY SCHOOLS UNDER JEANES TEACHERS WHO ARE NORMAL, OVERAGE, AND UNDERAGE

In table 6 are set forth the ages of pupils in each grade of the elementary school. It will be noted that the proportion of pupils who are of normal age, the ages within the heavy lines, is rather small. There is a sudden drop in the percent who are of normal age in the second grade, and it continues to decrease until the seventh grade is reached, when it begins an upward movement.

Figure 5 shows the percentage of the total group who are normal, over age, and under age. That 66.31 percent are over age presents a problem of serious proportions. Only 30.10 percent are of normal age, while 3.59 percent are underage.

FIGURE 6.— PERCENTAGE OF NEGRO PUPILS IN RURAL ELEMENTARY SCHOOLS UNDER JEANES TEACHERS WHO ARE NORMAL, OVERAGE, AND UNDERAGE IN EACH GRADE

As the proportion of pupils of normal age increases, the proportion of pupils who are over age decreases. These trends are shown in figure 6, as are the percents of pupils in each grade who are under age.

17118°—33

In an effort to compare the acceleration and retardation of Negro pupils with that of white pupils, comparisons were made with the white pupils in a wide sampling of schools in Mississippi, Texas, and Tennessee. The results of this study are shown in table 7.

Considering the table as a whole it is seen that the differences in the percentages of Negro pupils under Jeanes teachers and those in the three States who are normal, overage, and underage are very slight. Similarly, the differences between the corresponding percentages for white pupils of the three States are also slight. But marked differences are found between the whites and Negroes in the percentage of pupils who are normal, overage, and underage.

The differences between Negro pupils in the present study and white pupils of the three States under consideration are: For pupils of normal age, from 21.3 to 22.6 percent; for overage pupils, from 25.01 to 44 percent; and for pupils who are accelerated, from 3.51 to 22.01 percent, the whites, of course, having the advantage to the extent shown by the percents mentioned above.

Observation again of table 6 will indicate that the ages of pupils in each grade vary markedly. Columns 4 and 7 show that every age from 4 to 19 years and above is represented in the first two grades. Not a great many teachers have so wide a distribution of ages, but for the few who have even a range of 4 to 12 years in the first and second grades, serious problems are presented; problems which would tax the ingenuity of the best-trained teachers.

TABLE 7.—*Percentage of Negro pupils of normal age, underage, and overage in rural elementary schools under Jeanes teachers compared with Negro and white pupils in Mississippi, Texas, and Tennessee*

Pupils	Negro pupils under Jeanes teachers	Pupils [1] of Mississippi		Pupils of common-school districts of Texas [2]		Pupils of rural schools of Tennessee [3]

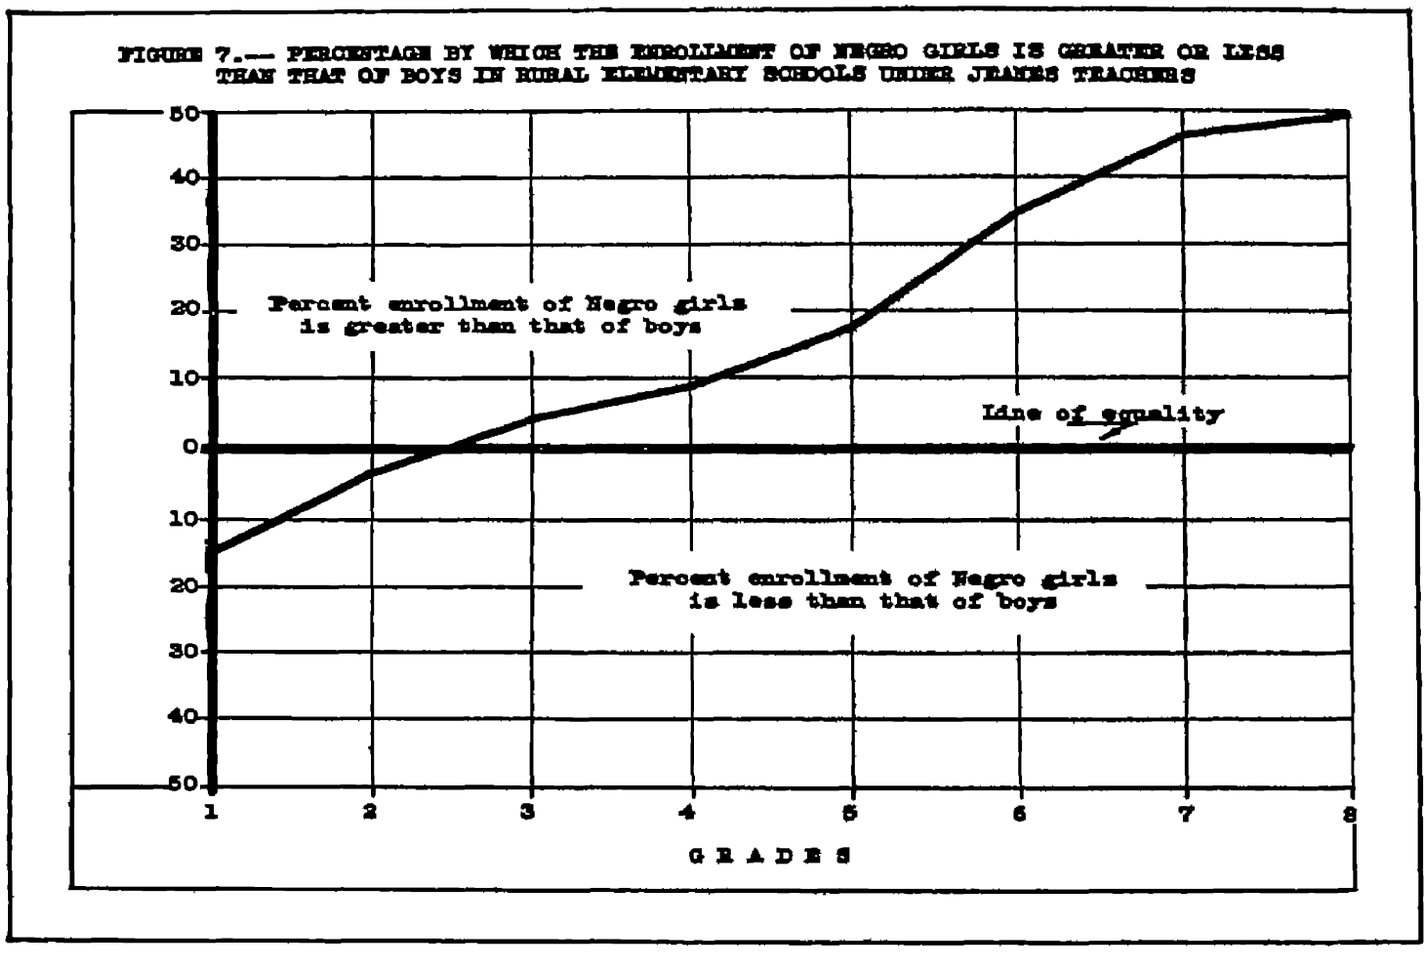
[3] Tennessee. State Department of Education. Annual report for the scholastic year ending June 30, 1930. Nashville, 1930. pp. 76–77.

Every age from 12 to 19 and above is represented in each grade of some schools. Of the 14,562 pupils enrolled in the first grade, 6,980, or 47 93 percent, are retarded. Two thousand six hundred, or 17.7 percent, are retarded 1 year; 1,748, or 12 percent, are retarded 2 years; 1,162, or 8 percent, are retarded as much as 3 years. Only 766, or 5.26 percent of the pupils in the first grade are accelerated.

Further details for each of the grades and for boys and girls separately may be observed by reference to the table.



One State school official maintains that much of the retardation of pupils is due to the erroneous idea of some teachers that children should spend 2 years in the first grade. He is urging teachers not to hold pupils back, but rather to pass them on to the next grade. That the official had the support of pupils, at least, was evident in a rural school visited by the writer, who in an address, attempted to develop the idea that subjects, teachers, and materials were merely agencies in the educational process, and that there must be responsiveness and self-activity on the part of pupils. By way of reiteration he asked the question: "What are teachers for?" Quick as a flash, one little, bright-eyed, fourth-grade boy, with a broad grin, replied, "To pass you!"

There are many factors which influence the progress of children through the grades, among the most significant of which are: (1) Intelligence of pupils, (2) length of term, and recitation period, (3) attendance, (4) health, (5) adaptation of the curriculum to pupils' needs and capacities, (6) methods of teaching, (7) preparation of teachers, (8) teaching load of teachers, (9) educational facilities and equipment, and (10) the general scholastic tone of the school. Six of these factors have special pertinence to the education of colored children in the Southern States, namely, length of term and recitations, health of pupils and members of their families, preparation of teachers, teaching load of teachers, equipment and facilities, and attendance. In each of these criteria Negroes fall below the accepted norms.

As in the case of pupil mortality, the problem of retardation of Negro children is one which should be given serious attention and should be considered in light of the various factors involved.

RATIO BETWEEN ENROLLMENT OF BOYS AND GIRLS

Figure 7 shows the percent the enrollment of Negro girls is greater or less than that of boys in rural elementary schools under the Jeanes teachers. Data for the graph were obtained from the age-grade table shown in the previous section, and include 39,930 pupils. It will be noted that the enrollment of boys exceeds that of girls in the first and second grades, but beginning with the third grade the enrollment of girls exceeds

that of boys. This excess continues to grow steadily through the eighth grade.

The problem presented by this disproportion, which does not stop with the elementary school, but continues on into high school [2] and college,[3] is one of the most serious with which persons interested in Negro education must deal.

Since the number of boys and girls of school age is about equally proportioned under normal conditions, one would expect an equal proportion in enrollment. That this is not

[2] Caliver, Ambrose. Secondary education for Negroes Op. cit.

[3] ———. A Personnel Study of Negro College Students. New York, 1931, 146 pp. Teachers College, Columbia University (Contributions to education, no. 484.)

the case, however, may be due to several causes, some of which are lack of appeal of school work to boys, necessity for boys to assist on the farm and in the general support of the family, belief that schooling should lead to an academic career, and the attitude of many Negro parents that girls should be educated in preference to boys. Some of these circumstances are within the power of the individual boy to correct; others must be attacked by the parents; while still others must be remedied by employers and leaders of the community. Certainly the disproportion between enrollments of Negro boys and girls is a deficiency which is vitally affecting the social and economic future of the Negro.

CHAPTER IV : STATUS OF TEACHERS OF RURAL SCHOOLS FOR NEGROES

This chapter presents certain facts regarding the teachers of rural schools under the Jeanes supervisors. In all items except salary the data relate to teachers in 1-teacher schools and head teachers in 2-, 3-, and 4-or-more teacher schools. Although in a few instances the head teachers may not be representative of all the teachers in the schools having more than one teacher, in general their status will be about the same. This is particularly true with reference to two of the most important factors—training and experience. A study [1] of 5,000 Negro elementary teachers in the open country and villages revealed a median in years of teaching experience of 6.70 as compared with a median of 8.78 years for 511 teachers in the present study.

In the matter of training the difference between the head teachers of schools larger than 1-teacher schools and the other teachers is very slight. Liston found 4,046 teachers working under Jeanes supervisors to have a median of 4.56 years of training beyond the elementary school, while 588 teachers in the present study, 322 of whom are head teachers in 2-, 3-, and 4-or-more teacher schools, have a median of 5.14 years of training beyond elementary school. It may safely be said, therefore, that the data presented here are fairly representative of all the teachers working under Jeanes supervisors.

The topics to be discussed in this chapter are age, sex and marital status, training, experience, tenure, professional advancement, and salary.

AGE

Table 8 indicates that the teachers of schools comprising this study are relatively mature. The median age for the entire group is 31.66 years. The lower limit of the ranges increases gradually with the increase in size of school, as will be noted from the table. The median ages also increase,

[1] Calliver, Ambrose. Secondary education for Negroes. Op. cit.

but the differences are not particularly significant. According to the data at hand Negro teachers in 1-teacher rural schools appear to be older than white teachers of the same class. Of the 228 Negro teachers replying only 9, or 3.9 percent, are 20 years of age or less; Gaumnitz [2] found that 23.5 per cent of the white teachers in the 1-teacher schools in his study were less than 20 years of age.

SEX AND MARITAL STATUS

Three fourths of the teachers included in the present study are women. Half the women are married. Of the men who replied more than two thirds are married. Table 9 shows that the percentage of married teachers of both sexes increases with the size of school; similarly the proportion of men in schools under observation increases as the size of school increases.[3]

TABLE 8.—*Age of teachers by size of school*

Size of school	Median	Range	Number replying
1	2	3	4
1-teacher schools	29.61	17–65	228
2-teacher schools	31.83	19–60	153
3-teacher schools	32.11	22–62	46
4- or more teacher schools	35.60	24–69	67
Total	31.66	17–69	494

Percent	31.8	68.2	25.6	50.1	49.9	74.3

[2] Gaumnitz, W. H. Op. cit.

[3] Because many of the teachers reported here are head teachers or principals the ratio between men and women for the 3- and 4-or-more teacher schools will probably not be maintained for the teachers in general.

TRAINING OF TEACHERS

Of the 611 teachers replying to the question on degrees earned, 67, or 10 9 percent, had college degrees, the percent holding such degrees increasing with the size of school. Nineteen and 41 percent, respectively, of the teachers of the 3- and 4-or-more teacher schools hold degrees, as compared with 6 and 3 percent, respectively, of teachers of 1- and 2-teacher schools. One teacher holds a master's degree and two hold degrees other than bachelor's or master's.

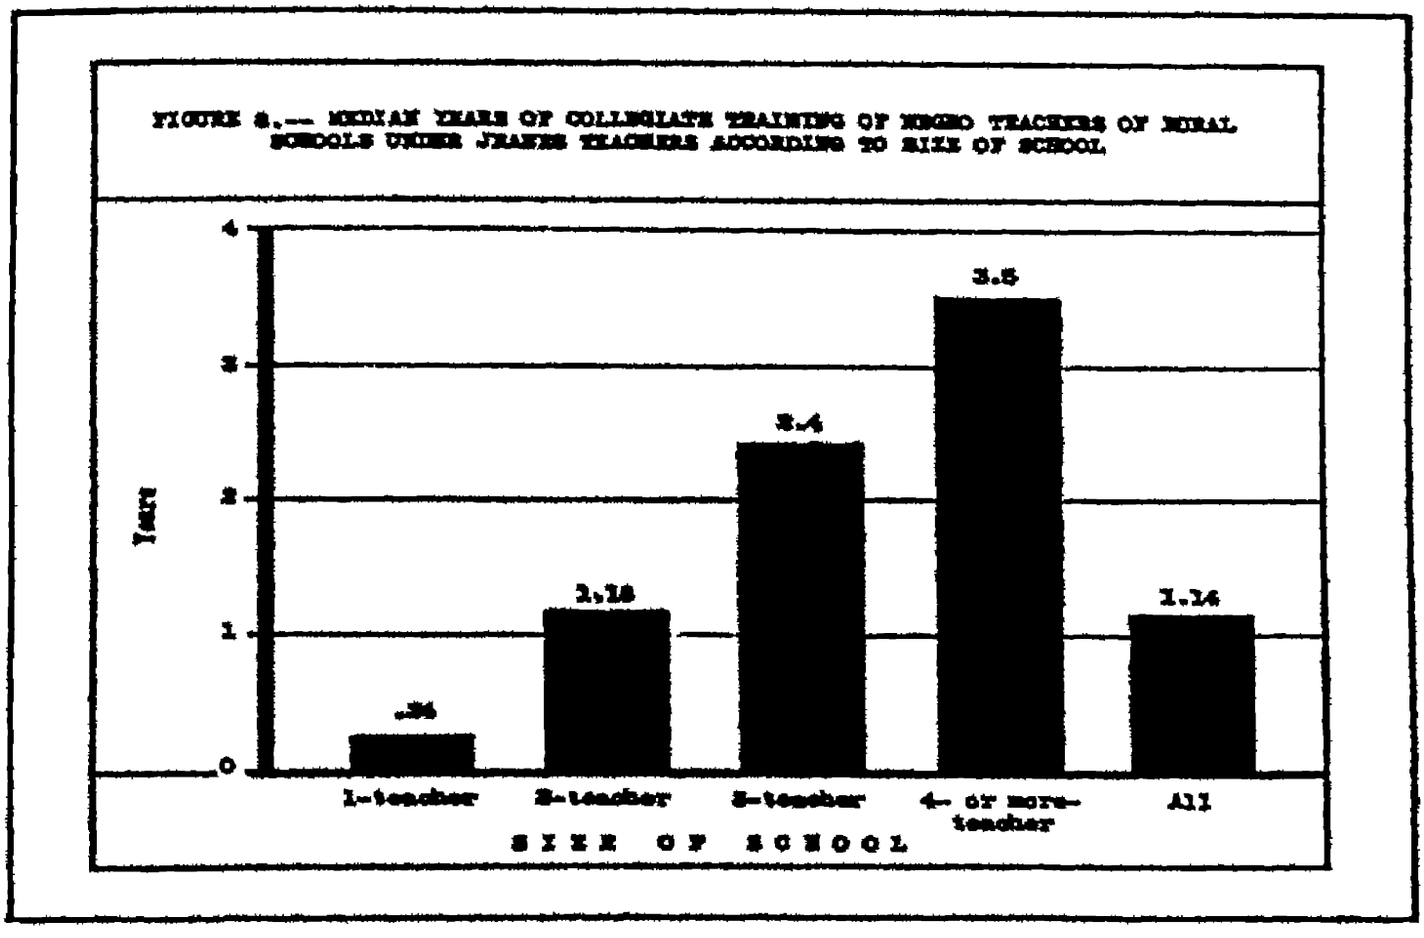

Table 10 shows the percent of teachers in schools under Jeanes supervisors having a given amount of training in terms of years of school attendance. Of the 588 teachers replying 29.41 percent had 4 years or less of high-school training, which means that more than two thirds had some college experience. For the white teachers of the 1-teacher schools Gaumnitz found 44.2 percent having 4 years or less of high-school training. He found a corresponding percent for colored teachers to be 75.3 In the present study the percent of teachers in 1-teacher schools with 4 years or less of high-school training more nearly approximates that of the white teachers of the 1-teacher schools in Gaumnitz's study, their respective percentages being: White, 44.2; Negro, 42.1; and their medians in years of training beyond elementary school being 4 years and 2 months for both white and colored. This close correspondence of the training of white and colored teachers in 1-teacher schools is probably an indication that the colored teachers constitute a selected group; or that the small number of teachers involved in the present study may be a factor tending to make the median unreliable.

TABLE 10.—*Highest level of training of teachers*

Level of training	Number	Percent
Less than 4 years of high school	62	10. 54
4 years of high school only	111	18. 87
6–12 weeks of college	84	14. 28

2 years of college	105	17. 85
3 years of college	27	4. 59
4 years of college	62	10. 54
1 year of graduate work	9	1. 53
2 years of graduate work	3	.51
3 years or more of graduate work	5	.85
Total	588	
Median	1 14 years of college	

The median years of college training of Negro teachers who are working under the Jeanes teachers included in this study according to size of school is shown in figure 8.

Detailed analysis of the data shows that in the 1-teacher schools, 2 out of 5 of the teachers have 4 years or less of training of high-school grade. The corresponding ratio for 2-teacher schools is 1 out of 4. Of the teachers in the 3-teacher and 4-or-more teacher schools approximately only 1 out of 10 has 4 years or less of high-school training. Seven-

teen of the 588 teachers responding have some training on the graduate level.

The problem of upgrading and certification of Negro teachers commands attention. Aside from the mere amount of formal training which a teacher has had, there looms the problem of the actual mastery of the subject matter to be taught. The seriousness of this problem is illustrated by a case which came under the observation of the writer: The teacher, a woman about 50 years of age, had an attendance of approximately 60 pupils distributed over grades 1 to 7. Upon the occasion of our visit she was teaching sixth-grade

arithmetic. A boy was explaining a problem in decimals which he had worked on the blackboard. He was about to straighten out an error which he had made when the teacher interfered, took up the explanation, and went farther astray than had the boy, and became inextricably entangled.

Pupils of this teacher and of others like her will eventually become teachers with very little more training than can be obtained in their local schools. This vicious circle is being perpetuated by the poor preparation and often lax certification of Negro teachers in rural communities.

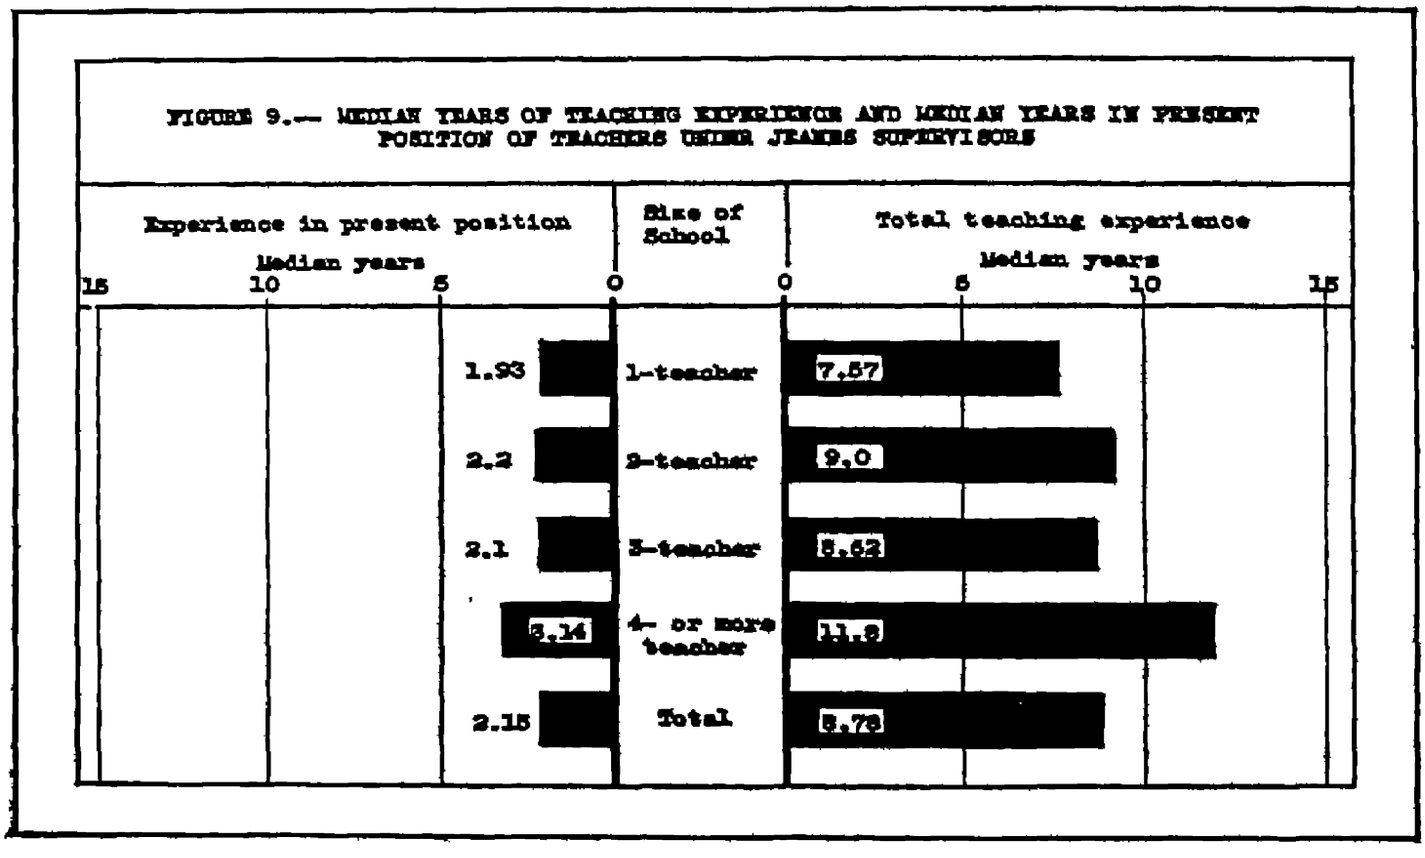

FIGURE 9.— MEDIAN YEARS OF TEACHING EXPERIENCE AND MEDIAN YEARS IN PRESENT POSITION OF TEACHERS UNDER JEANES SUPERVISORS

The principal of a county training school remarked to the writer that one of his greatest difficulties is that of securing teachers with a rural point of view and *a thorough grounding in the fundamentals.*

EXPERIENCE

Facts relating to the median years of experience of teachers according to size of school are shown in figure 9.

Both the present study and the findings of a previous investigation [4] show that Negro teachers and principals have

[4] Caliver, Ambrose. Secondary education for Negroes. Op cit.

a greater amount of educational experience than do white teachers and principals. While experience is an important asset, in considering the apparent favorable position held by Negroes in this regard, it should not be allowed to assume disproportionate weight, for educational growth does not always follow educational experience. One important element which should be considered in this connection is the limited field open to Negroes in the pursuit of a career. This fact tends to keep in the teaching profession many Negroes who, if vocational opportunities were less restricted, might change their occupation.

TENURE

The constant and high turnover of the teaching personnel found in many school systems is a matter which gives the officials much concern. Figure 9 (which also gives data concerning tenure) reveals a situation which may counteract the possible good that accrues from experience. It shows the median number of years teachers have been in their present positions by size of school.

While a few teachers have retained their present positions for a number of years, the majority can claim a tenure not exceeding 3 years. Two head teachers have been in their present positions between 31 and 35 years, while one remained more than 35 years. On the other hand, 258 or 47.7 percent of the 540 replying had been in their present positions 2 years or less. If the facts for the year 1930–31 can be assumed to indicate tendencies it may be said that slightly more than half of the Negro teachers of rural schools under the Jeanes teachers change their positions every 2 years.

PROFESSIONAL INTERESTS

In an effort to secure information concerning the professional interest of teachers they were asked to indicate the number and kind of meetings they had attended during the past three years, and the number and kind of journals they read regularly. Tables 11, 12, and 13 show the results of this inquiry.

TABLE 11.—*Number and percent of meetings attended by teachers*

NUMBER OF MEETINGS ATTENDED

Table 11 shows the number and percent of teachers attending a given number of meetings. Detailed analysis of the facts from which this table is drawn shows that the largest percent (54.4) of teachers who attended only *one* meeting were from 1-teacher schools; the smallest percent (18.7) were from 4-or-more teacher schools. The converse is true with reference to the percent of teachers attending two meetings. For the 1-teacher group it is 20.6; and 40.6 for the 4-or-more

teacher group. According to the analysis here presented it is clear that if the number of meetings attended may be taken as a criterion, the teachers of the 4-or-more teacher schools exhibit a more professional attitude than teachers of the smaller schools.

KINDS OF MEETINGS ATTENDED

Frequently the kinds of meetings of educational organizations which one attends are more valuable than the mere number attended. It would be of interest to analyze the nature and character of the meetings reported on by teachers in this study. Since, however, data were not gathered on these points we shall present here only the kinds of meetings in terms of the geographical boundaries which they represent.

As shown in table 12, five kinds of organizations are listed, namely, national, State, district, county, and other. This inquiry was answered by 326 teachers, the largest number of whom attended meetings of State-wide organizations, the next in order of popularity being meetings of county organizations.

Similar to results found in the section just preceding, the teachers of 4-or-more teacher schools surpass those of the other size groups in the percent who attend meetings of the various kinds. This advantage is particularly pronounced in the matter of national meetings.

NUMBER AND KIND OF MAGAZINES READ

Our data show that for the group as a whole, 1 out of every 4 teachers reads only 1 journal; nearly a third read 2; and 1 out of every 4 reads as many as 3. Only 35 percent of the teachers of 1-teacher schools read 3 or more magazines as compared with 60 per cent of those of the 4-or-more teacher schools.

Again, as in the case of the meetings, it may be said that the kind of magazines read is of infinitely greater importance than the number. Table 13 lists the journals read by teachers into five catagories. First, those having to do with methods and plans in primary and elementary education, including such journals as The Instructor, Grade Teacher, and Primary Education; second, journals and organs of educational associations; third, School Life, the official organ of the United States Office of Education; fourth, magazines of a general

nature having some educational bearing, such as Correct English, Good Housekeeping, The Progressive Farmer, and the Pathfinder; and finally a miscellaneous group.

As is to be expected, the journals bearing directly on the technical work of the school are read by the largest number. Ninety-eight percent of the teachers read some journal belonging to group 1. Further details may be observed by reference to the table.

Among the many factors entering into the professional advancement of school teachers and administrators none is of greater importance than the out-of-school interests as revealed by the number and kinds of educational meetings attended and the number and kinds of journals read. No educator can hope to grow professionally and find a continuing appreciation for his vocation year by year unless he enriches his own thinking through contact with others interested in common problems and informs himself on the newer ideas and trends in his work through the literature of the field.

In general, it may be concluded from the evidence here presented that Negro teachers under Jeanes supervisors, when their circumstances are considered, are endeavoring to advance themselves professionally.

SALARY OF TEACHERS

Table 14 and figure 9 present facts on salaries of 1,157 Negro teachers of rural schools under Jeanes supervisors.

There are several important features about the table worthy of note: The extremely low minimum and maximum salary range; the large percent of teachers who receive salaries in the lower ranges; and the small percent who receive salaries in the higher ranges. One out of every four teachers receives an annual salary of $300 or less. Another fourth, approximately, receives between $300 and $400 a year. More than 70 percent are paid a salary of $500 or less; only 7 percent receive as much as $700.

Differences between salaries of teachers of schools of various sizes are not especially great. However, some increase may be noted by reference to table 14, in proceeding from the smaller to the larger schools.

Of the 304 teachers receiving annual salaries of $300 or less, 31 percent belong to the 1-teacher schools and 34 percent belong to the 2-teacher schools. Of those receiving salaries in the higher ranges of $700 and above, all except 9 (89 percent) belong to the 3- and 4-or-more teacher schools.

The Negro teachers of the 1- and 2-teacher schools in the present study receive higher salaries than the Negro teachers in the 1- and 2-teacher schools of the Gaumnitz [5] study, the medians for his 1- and 2-teacher schools, respectively, are $314 and $352 as compared with $346 and $360 for those in the present study.

FIGURE 10.— PERCENTAGE OF NEGRO TEACHERS UNDER JEANES SUPERVISORS WHO RECEIVE SALARIES WITHIN GIVEN CLASS LIMITS (527 CASES)

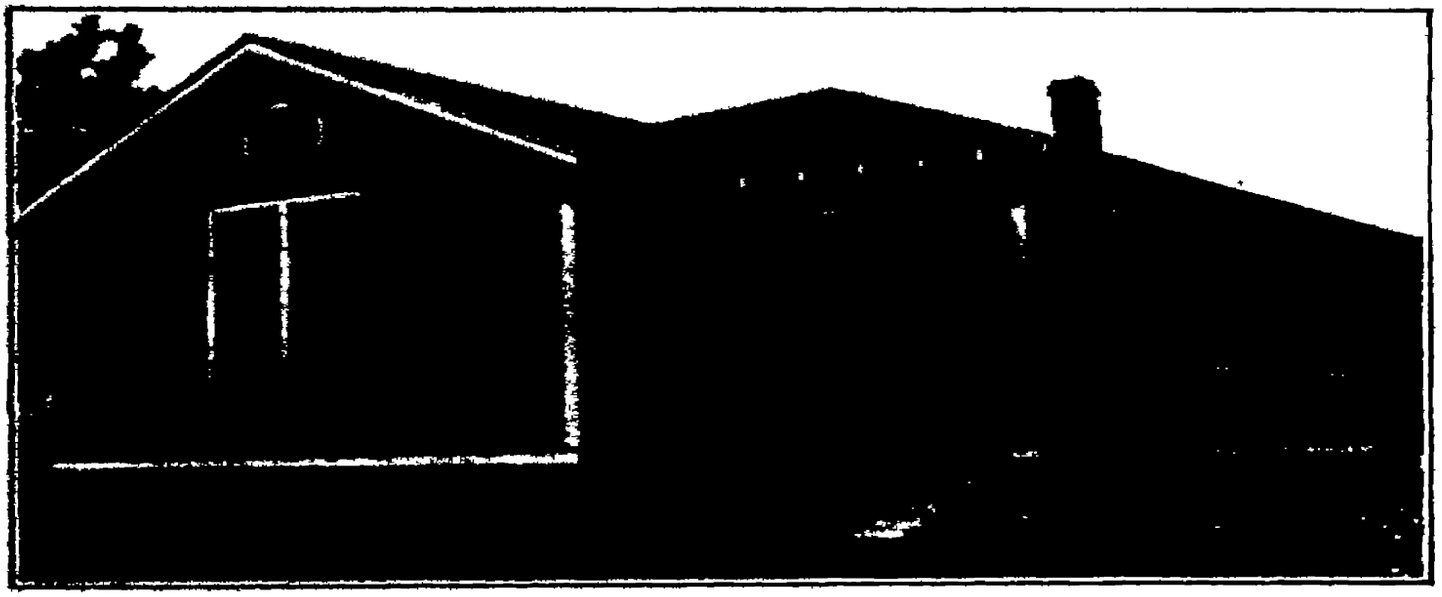
Median	$346	$360	$429	$478	$400	

[5] Gaumnitz, W. H. Op. cit.

Although, according to our evidence, the Negro teacher under Jeanes supervisors are slightly favored in the matte of salaries when compared with Negro rural teachers for th country as a whole, their salaries are still far below those o the white rural teachers. Gaumnitz found a median salary of $883 and $881, respectively, for white teachers of the 1-teacher and 2-teacher schools. This is more than twice the salary received by Negro rural teachers of the same size of schools. The median salaries for white teachers of the 3-or-more teacher schools in the open country and in villages or towns, respectively, are $1,022 and $1,174 (1929–30).



The average Negro rural teacher, after paying her room and board, has a very small balance out of which she must buy her clothes, shoes, books and magazines, and other incidentals, pay her railroad fare, and provide for the 6 or 7 months in which she is not teaching.

CHAPTER V

ADMINISTRATIVE AND SUPERVISORY PRACTICES IN RURAL ELEMENTARY SCHOOLS FOR NEGROES

This section will treat the following topics: Permanent records, promotion, use of psychological and standardized tests, provision for individual differences, supervisory visits, and the library.

PERMANENT RECORDS

Unfortunately data were not available in this study to permit a report on more than the form in which records are kept. The fact that only 287 teachers replied to this inquiry indicates that probably the majority of the remaining 324 teachers kept no permanent records at all. While in no wise condoning this deficiency, in all fairness it should be said that the following factors in the rural educational situation among Negroes make it difficult to improve record keeping: (1) Lack of continuity of tenure of teachers; (2) lack of equipment and facilities for keeping records; and (3) lack of time on the part of teachers due to overcrowded schedules.

TABLE 15.—*Methods used for keeping permanent records*

Method used	Teachers using	
	Number	Percent
Card system	39	13.5
Bound volume	184	64.1
Loose leaf	19	6.8
Other	48	16.7
Total	[1] 287	

[1] 53 percent did not reply.

Table 15 shows the facts regarding this phase of the study. The bound volume seems to be preferred by those keeping permanent records. The differences between schools of the various size groups are not sufficient to mention here in detail.

TABLE 17.—*How pupils make up failures*

Method	Number	Percent
Examination	56	17.2
Summer school	35	10 8
Reviews and tests	6	1.8
Night school	4	1 2
Individual instruction	23	7 0
Repeating subject	95	29 3
Extra work outside of school hours	102	31 4
Special classes	13	4 0
Other	28	8.6
Number replying	324	

The only method in which there is a significant difference between the percentage of schools in the various groups using it is in the case of "individual instruction." This method is used by 15.3 percent of the 4-or-more teacher schools as compared with 11.1 for the 3-teacher, 1.8 for the 2-teacher, and 7.2 for the 1-teacher schools.

Perhaps the greatest single waste in our entire school system is due to pupil failures. It has been estimated that for the country as a whole approximately a fourth of the pupils fail each year. While the money and time lost due to these failures, and to the consequent repetition of work are considerable, amounting to millions of dollars, and an aggregate of many years, these are by no means the most disastrous results. The most serious consequences have to do with the less tangible factors, such as "failure complex" on the part of the pupils and its concomitant general maladjustments which diffuse themselves through the whole life of the pupil and frequently result in repercussions in later life.

It is heartening to note the extent to which new techniques and procedures of student personnel research and administration are gaining recognition among school people. It is in this innovation that educators hope to find a remedy for evils entailed in pupil failures.

OBJECTIVE TESTING

Psychological examinations.—A total of 88 teachers reported some use of psychological examinations. Purposes for which results of these examinations are used are shown in table 18. The greatest number used them for grade

The writer found one school in a small village which he visited that had a personnel record of its pupils from the first grade through the high school. Plans were being made to install the personnel record card devised by the American Council on Education.

PROMOTION

In addition to scholastic grades there are a number of factors which determine whether or not a pupil passes from one grade or subject to the next higher. The number and influence of these factors vary with different teachers and schools. Among those commonly considered, the following were listed by 379 teachers as conditioning the promotion of their pupils: Age; general ability or average in all subjects; time spent in grade; reviews, tests, and monthly examinations; daily recitations; conduct; daily attendance; effort; and a few miscellaneous factors.

The percentage of teachers reporting each of the factors named may be seen by reference to table 16. Only totals are shown here as the differences between the percent of schools of the various sizes making use of the several factors are very slight.

In order to ascertain the measures provided to assist pupils in making up the work in which they had failed teachers were requested to list such means as they use for the purpose. Table 17 shows the answers to this question. The means most frequently mentioned by the 324 teachers replying was "extra work outside of school hours," which was indicated by 102, or 31.4 percent. The means receiving the next highest frequency of mention was "repeating subject" (29.3 percent).

TABLE 16.—*Factors conditioning passing*

Factor	Number	Percent
Age	34	8.9
General average or ability in all subjects	82	21.6
Time spent in grade	27	7.1
Reviews, tests, monthly examinations	64	16.8
Daily recitation	90	23.7

Daily attendance	124	32.7
Miscellaneous	55	14.5
Effort	36	9.4
Number replying	379	

assignment, the percent being 34; while 25 percent used them to ascertain the mental ability of pupils. The greatest difference between the schools of the various size groups in the use made of the results of psychological examinations is in the matter of grade assignment; the two larger sized groups of schools surpass the two smaller groups in this regard. Their respective percentages are for the 1- and 2-teacher schools, 25; for the 3-or-more teacher schools, 47.

Standardized tests.—The use of standardized tests was reported by 119 teachers. Uses made of the results of these tests together with the percent of teachers reporting them are shown in table 19. Detailed study of the data from which this table is made shows that only 15 percent of the 1- and 2-teacher schools use the results of standardized tests for remedial work, while this use is employed by 40 percent of the 3-or-more teacher schools.

TABLE 18.—*Use made of results of psychological tests*

Test general ability or knowledge	16	13.4
Other	20	16.8
Number replying	119	

Individual differences.—Objective tests have been most helpful in discovering individual differences among pupils.

One hundred and fifty-five teachers responded to the inquiry concerning individual differences and listed the provisions they made for them. The extent to which the schools included in the present study have made provision for these differences is shown in table 20.

Although the use of quantitative data resulting from objective testing has increased at a very rapid rate during the past decade there is still room for improvement. The lack of knowledge possessed by a few teachers concerning some of the newer educational devices is illustrated by the following reply: In answer to the question on the inquiry form, "Do you have any provisions to take care of individual differences of pupils in your school?" one teacher replied, "Yes; among the trustees, patrons, and pupils we settle all differences." It is encouraging, however, to observe the entrance, even on a small scale, of these modern procedures into the list of administrative practices in use by Negro rural school teachers as shown by our data. It is of particular significance to note the extent to which the larger sized schools surpass the smaller ones in the employment and use of these devices.

TABLE 20.— *Teachers making provisions for individual differences*

Other	15	9.6
Number replying	155	

SUPERVISION

As has frequently been said, the most acute problem in the education of children in rural areas is that of supervision. This problem is accentuated in the case of Negroes. Practically the only supervision received by them comes from the Jeanes supervising teachers. The Florida Educational Survey Commission, in commenting on Negro education, said:

Outstanding among the conclusions at which one must arrive regarding Negro education in Florida is the fact that conditions are what can

be best termed "spotty." In other words, in one county conditions approaching a somewhat satisfactory state may be found, while in the next county the most backward and deplorable condition will exist. Furthermore, even in the same county two neighboring schools may be almost as different as ratings of good and bad would indicate. One is forced to the conclusion that these "spotty" conditions are in a large measure due to lack of effective supervision, State and local.[1]

In table 21 are contained data for 76 Jeanes teachers who cooperated in this study with regard to the number of visits made to the 611 schools. Information is also included on county superintendents. This table reveals that 326 schools during the school year 1929–30 received a total of 524 visits from Jeanes teachers. It can be easily understood how difficult it would be for Jeanes teachers to visit their schools more frequently when it is remembered that each Jeanes teacher has under her supervision an average of 33 schools, 49 teachers, and 1,737 pupils.[2] Some of them have under their supervision as many as 75 to 90 schools, enrolling more than 10,000 pupils.

TABLE 21.—*Number of visits per month made by Jeanes supervisors and county superintendents*

Schools		Jeanes supervisor			County superintendent		
Size	Number	Schools visited	Percent of total	Number of visits	Schools visited	Percent of total	Number of visits
1	2	3	4	5	6	7	8
1-teacher	278	146	56.11	196	32	11.50	38
2-teacher	193	97	50.25	167	21	10.86	23
3-teacher	59	36	61.01	64	11	18.64	11
4- or more teacher	81	47	58.02	95	16	19 75	20
Total	611	326	53.35	524	80	13.09	92

The average number of visits paid to schools by Jeanes teachers rises as the size of school increases. The most significant feature about table 21 is the fact that only 80 teachers reported any visits from the county or district superintendent. One teacher claimed that the county superintendent had not visited her school in 9 years, while some in other counties reported 2 or 3 visits a year from the superintendent.

[1] Florida. Educational Survey Commission. Official Report. Apr. 2, 1929. Tallahassee. p. 372.

[2] Liston, Hardy. Op. cit.

In a recent study of the supervision of high schools for Negroes [3] it was found that schools in rural areas received fewer visits from supervisory officers than did schools in urban centers. Thus, those schools which need the most supervision, because of the inadequate preparation of their teachers and other disadvantages, received the least.

LIBRARY

On account of recent changes in educational theory and practice, schools are becoming increasingly dependent upon libraries. Table 22 shows that the library facilities for Negro children in rural areas are very meager. However, better prepared teachers, more modern teaching methods, and stimulation and aid from State and other agencies are beginning to have an influence in improving the school library situation for colored children.

TABLE 22.—*Library books*

Size of school	Average volumes per school	Schools replying
1-teacher	69	43
2-teacher	48	59
3-teacher	55	22
4-or-more teacher	117	46
Total	74	170

Table 22 shows the average number of books per school for each size group. The advantage held by the 4-or-more teacher schools over the smaller schools in most of the other school factors considered is maintained in the matter of average number of library books per school.

Two observations should be made with reference to this table. First, these schools, being under Jeanes teachers, probably represent better practices than would be found in the general run of Negro rural schools. Consequently, the showing made here, small though it is, is probably not representative of the general situation. Second, the value of a library lies not so much in the number of books as in the kind and accessibility. A detailed study of these factors, which is beyond the scope of the present study, would yield valuable information. One ingenious principal, unable to

[3] Calliver, Ambrose. Secondary education for Negroes. Op. cit.

secure a library room for his school, solved his problem. In order to make the books the school possessed accessible to the pupils, he converted part of the balcony of his auditorium into a library. This temporary arrangement, with its mezzanine effect, presented a very good appearance.

In this connection it is encouraging to note the aid to the library movement which the Rosenwald Fund has furnished. In the Annual Report of the Foundation for 1929,[4] the president outlined the activities of the fund in furnishing library facilities for rural schools and suggested the type of cooperation which would be given.

[4] Embree, Edwin R., Julius Rosenwald Fund. Report for the year 1929. Chicago, Julius Rosenwald Fund.

CHAPTER VI : BUILDINGS AND EQUIPMENT

Few phases of education of Negroes in rural communities have made greater progress than schoolhouse planning and erection. Receiving impetus from the Rosenwald Fund, the movement has grown until the amount of money spent for the erection of school buildings, while relatively small in comparison with the need, has reached large proportions. Much space could be devoted to the subject of lack of schoolrooms and inadequate buildings and equipment for colored children in rural communities. While quantitative data of a national scope bearing on this situation for the present year are not available, it is generally known that schoolhouses for Negro children in most of the rural areas of the South are in a bad state of repair, to say the least. The extent of aid by the Rosenwald Fund in providing more and better school buildings for Negroes in rural communities can be seen from table 23.

TABLE 23.—*School buildings aided by Rosenwald Fund, 1913–1930, together with pupil capacity and cost* [1]

State	Buildings aided by fund	Pupil capacity	Cost
Alabama	398	38,070	$1,177,636
Arkansas	365	43,650	1,809,953
Florida	116	20,835	1,320,833
Georgia	231	31,635	1,112,404
Kentucky	145	14,760	866,790
Louisiana	427	50,355	1,665,172

Total	5,075	612,495	25,342,272

[1] Embree, Edwin R. Julius Rosenwald Fund. Review for the year. Chicago, 1930.

BUILDINGS

Jeanes teachers have been especially active in the building of these Rosenwald schools to which attention has been called. Table 24 shows that of the 587 schools concerning which teachers reported, 230, or 39.1 percent, are Rosenwald schools.

Materials of construction.—Practically all of the teachers reporting on the type of construction indicated that their schools are frame buildings. Out of a total of 589 schools reported, 567, or 96 percent, are of frame construction; 15 are brick; 4, stucco; and 3 are constructed of some other material.

State of repair of buildings.—In an attempt to ascertain the general condition of the buildings which house elementary rural schools for colored children, teachers were asked to express their opinions regarding the state of repair of the building. The items about which information was sought were: Outside paint, inside paint, windows, woodwork, steps, and masonry.

It is acknowledged that these data lack objectivity, inasmuch as no score card was used in an attempt to standardize the judgments of teachers. However, it is believed that the teachers answering have a sufficiently clear idea of what is good, fair, and poor in the matter of the state of repair of their buildings to give some validity to their opinions.

TABLE 24.—*Number and percent of Rosenwald schools by size of school*

Size of schools	Number replying	Number of Rosenwald schools	Percent
1	2	3	4
1-teacher	265	53	20.00
2-teacher	187	90	48.12
3-teacher	58	36	62.06
4-or-more teacher	77	51	66.23
Total	587	230	39.1

Table 25 shows the results of this inquiry.

The teachers of the 4-or-more teacher schools are the only ones who report the condition of any portion of their buildings to be in good repair in as many as 50 percent of the cases. Considering all the schools together, there is no part of the

buildings which is indicated to be in good repair by as many as 50 percent of the teachers; in most cases it approximated more nearly a third. About one fourth of the teachers claimed that the various parts of the buildings listed were in fair condition.

EQUIPMENT

Seating facilities.—Table 26 shows facts relating to student desks in the school buildings under consideration. Of the 532 schools concerning which data on these items were obtained, 19, or 3.57 percent, had no desks at all. Single desks were possessed by 186 schools (34.96 percent); 308 (57.8 percent) had double desks.

TABLE 25.—*Number and percent of schools whose buildings are in the State of repair indicated*

Item	State of repair					
	Good		Fair		Poor	
	Number	Percent	Number	Percent	Number	Percent

In view of the progress which has been made in seating provision for children,[1] it is unfortunate to find schools still using ancient seating facilities in the form of benches, but they may still be found in many rural schools, and to a considerable extent in the rural schools for colored children. Table 26 indicates that 208 schools (39.09 percent) use benches with backs, but no desks in front, similar to church pews, while 7.51 percent had seats with no backs. Seventy-six (14.28 percent) teachers said that all their seats were the same height. This fact is significant considering the wide variation in the ages of the pupils, as shown in chapter IV. The advantage of the larger-sized schools over the smaller ones is again to be noted in their seating facilities.

Blackboards.—Another essential for the successful prosecution of school work is adequate blackboard facilities. How well are rural schools for Negroes under Jeanes teachers thus provided? Table 27 answers this question. It will be observed that 11 (2.42 percent) of the 454 teachers responding said their schools had no blackboards. Black oilcloth was used in 46 schools (10.13 percent). Beaverboard was used by 69.16 percent. Only 83 (18.28 percent) had slate boards.

TABLE 27.—*Blackboard facilities by size of school*

Kind of blackboards provided	1-teacher		2-teacher		3-teacher		4-or more teacher		Total

Total replying	190	-------	148	-------	49	-------	67	-------	454	------

Other facilities.—The use of a variety of teaching aids in addition to the conventional textbook is rapidly coming into wide use by forward-looking teachers and administrators. They are among the first things for which one looks in attempting to evaluate the ability of a school to do effective work.

[1] In order to provide for the more modern teaching methods many schools are beginning to use chairs and tables of varying heights.

The manner in which the rural schools under consideration here measure up in this regard is shown in table 28. From the picture shown in this table it may be said that there is a paucity of teaching aids and facilities in the rural elementary schools for Negroes under consideration. And insofar as this picture is representative, it reveals a situation having wide educational implications.

SERVICE FACILITIES

Table 29 reveals facts which have important relationship to the health of the rural Negro population. Data are given on heating and fire protection facilities; provision for drinking water, and washing and bathing; lighting and toilet facilities.

TABLE 29.—*Number and percent of schools having given type of service facilities*

Type of service facilities	Number	Percent
Heating system:		
Stoves (wood or coal)	581	95 09

Outdoor flush	11	1. 80
Indoor chemical	3	.49
Indoor flush	13	2. 12
Protected	442	72. 30
Not protected	85	13. 91

Heating and fire protection.—Practically all the schools are heated by stoves. In the 611 schools included in the study, 581 (95 percent) stoves were used. This is important when considered in connection with the fact that 67 percent of the schools have no fire protection facilities, as shown in the table.

Drinking water.—The percentage of schools providing drinking water from deep and shallow wells is 37. From data in hand it may be safely assumed that the water from many of these wells does not get regular inspection and chemical analysis.

Washing facilities.—In view of the importance of clean hands to health it is encouraging to find that 62 percent of the schools possessed washbasins and that 38 percent had individual towels. Doubtless this is a reflection of the influence of Jeanes teachers. While no information is available concerning the use of these facilities, from general observation it is probably correct to say that they are fairly well used.

Lighting facilities.—Of the 611 schools in the study, 131 (21.44 percent) had no artificial lighting facilities; 383 (54.5 percent) had lamps; while electricity was used by 10.5 percent.

Attempt was made to gather information concerning the natural lighting of the schools, but usable data were unobtainable.

Toilet facilities.—Five hundred and fifteen (84.28 percent) of the schools had ordinary outdoor toilets; 11 schools had outdoor flush toilets and 13 had indoor flush toilets.

Two features about this table are worthy of note: First, there are 11 schools that had no toilet facilities at all; and second, 85 (13.91 percent) teachers said their toilets were not well protected nor had sufficient privacy.

In many instances there are only slight differences between schools of various sizes in the percent of their number possessing the facilities discussed above, but wherever the differences are significant in practically every case they are in favor of the larger-sized schools.

SCHOOL GARDEN

Only 61 (10 percent) schools have school gardens, according to the data in hand. The 4-or-more teacher schools greatly surpass the others in this regard, the percentage of schools of this group having school gardens being 27.16 as compared with 5.75 percent of the 1-teacher schools, 9.84 percent of the 2-teacher schools, and 6.7 percent of the 3-teacher schools.

If the small number of schools having gardens reflects the tendency of a shift in emphasis from school gardens to home gardens under the supervision of the school, the small number is not to be deplored. But it is not known to what extent this is true. However, it is generally conceded that the school has an obligation in promoting a greater appreciation for the finer values of rural life by every possible means, whether by school gardens, home gardens, or some other agency.

CHAPTER VII : EXTENDED SCHOOL SERVICES

As has been repeatedly observed, the bringing of the school and community into closer relationship is one of the primary aims of the Jeanes teachers. Considerable activity in this regard, therefore, should be found among the schools under their supervision.

One of the most interesting examples of extended school service observed by the writer was the case of a school building project in one of the black-belt counties. For more than 17 years the Jeanes supervisor had labored in the county in an effort to stimulate interest and encourage cooperation in building more and better schools. This most recent project was to be her crowning achievement. Negro citizens of the community donated more than 60,000 feet of lumber from their farms. They also donated their labor and other services to build the schoolhouse. Men in the community who were not skilled mechanics would go out and work on the farms of men who were skilled, thus releasing the skilled persons for work on the school building. One old gentleman who hauled the first logs from which lumber was obtained for the first Rosenwald school in the county and who had helped on many others was particularly proud of the small assistance which he gave on what he considered his last school project. Although the school board did not contribute a dollar to the erection of this improved 4-room school, all the citizens, colored and white, rejoiced at its completion and dedication, and the supervisor was happiest of all, not merely because her son was made principal, but because of what she considered to be the triumph of an idea—school and community cooperation.

Another example of extended school services is the case of a young agricultural teacher who made a simple social and economic survey of the Negroes in his county and used the information obtained in extension classes for the farmers.

In an effort to ascertain objective data concerning this matter, teachers were asked to describe briefly provisions

made by them to promote good relationship between school and community. A variety of replies was received to this inquiry. The activities named were classified into eight categories as shown in table 30. The teachers responding numbered 482.

There are slight differences between the sizes of schools in the average number of activities sponsored. For the 1-teacher schools the average is 1.6; 2-teacher schools, 1.8; 3-teacher schools, 2; and 4-or-more teacher schools, 1.9.

In the percentage of schools promoting the various kinds of activities listed there are only two activities in which the differences are particularly marked, namely, parent-teacher associations and visitation of homes. In both cases a greater percentage of larger schools promoted them. The percentages of schools of various sizes which sponsor parent-teacher associations are: 1-teacher schools, 50.4; 2-teacher schools, 72.7; 3-teacher schools, 70; and 4-or-more teacher schools, 88.6.

In the matter of home visitation the following percentages prevail: 1-teacher schools, 12.01; 2-teacher schools, 12.33; 3-teacher schools, 16; 4-or-more teacher schools, 21.42.

TABLE 30.—*Number and percent of teachers who named various activities sponsored by their schools, by size of school*

Activity	1-teacher		2-teacher		3-teacher		4-or-more teacher		Total	Percent
	Number	Percent	Number	Percent	Number	Percent	Number	Percent		
1	2	3	4	5	6	7	8	9	10	11
Parent-teacher association	105	50.40	112	72.72	35	70	62	88.57	314	65.14
Community league	16	7 69	8	5 19	5	10	------	-------	29	6.01
Special programs	65	31 25	29	18.83	12	24	13	18.57	119	24.67
Opportunity school	11	5 28	3	1.94	4	8	5	7 14	23	4.77
Visiting homes	25	12.01	19	12.33	8	16	15	21.42	67	13.90
Cooperation with church	7	3.36	7	4.54	4	8	5	7.14	23	4.77
School visiting days	70	33.65	50	32.46	19	38	21	30 00	160	33 19
Mother's club	7	3.36	4	2.59	2	4	2	2.85	15	3 11
Other	43	20.67	53	34.40	20	40	16	22.85	132	27.39

For the group as a whole the percentages of schools fostering the activities listed are: Parent-teacher associations, 65.14; school visiting days, 33.19; special programs, 24.67; visiting homes, 13.90; community league, 6.01; cooperation

with church, 4.77; opportunity school, 4.77; mothers' clubs, 3.11; and other, 27.39.

These extension activities indicate that the supervisors attempted to attain the goals set for them by Dr. J. H. Dillard when he laid down the following four rules for their guidance (the only specific rules given them): (1) Keep in touch with the county superintendent; (2) keep in touch with the ministers and churches; (3) get some particular work done that will hitch the school to the life of the community; and (4) you are only a helping visitor; it is not your school, so do not be bossy.

The following excerpts from letters and reports from Jeanes teachers illustrate the type and scope of extension work done by them and the nature of the community relationships which are promoted:

1. . . . Through the courtesy of the Home Makers Department, it has been possible to demonstrate lessons in domestic science as well as to acquaint the children with many useful household products. Talks have been made on care of the books, cleanliness, health, and sanitation. All schools are preparing for the Interscholastic League which convenes at Rocky Mound School in this month.

Negro History Week was well conducted and much interest manifested.

Money raised for school purposes, $48.17.

2. . . . Four P.T.A. and one teachers' meeting were held. Quite a few schools observed Negro History Week.

A live-at-home program was discussed and stressed in each adult meeting.

$25.25 reported.

3. . . . A very keen interest is being shown in all school activities—improving and beautifying grounds. Fences are being repaired and new ones built, trees and flowers are planted. Several school gardens deserve special mention. Sugarland has reported $6.50 as the result of the sale of garden plants and vegetables.

The Interscholastic League and County Meet will be held March 25–26, at Sugarland. All hands are busy making preparations for this splendid occasion. Activities of club women and girls will be displayed and its development and possibilities for the future pointed out. The display of the work in sewing, handicraft, home improvement, and canning will demonstrate what has been done.

Rosenwald Day will be observed in —— County generally, but especially in Rosenwald school buildings. What an opportunity to honor the name of one whose liberality has so benefited the Negro.

Visited many homes and in many cases endeavored to relieve the sick.

Money reported raised for school improvement, $122.36.

4. . . . Negro History Week was observed in several of the schools. I feel that the time devoted to the study of the Negro during Negro History Week has done some good toward creating a desire among the students to read what Negro literature they are able to get.

A large number of programs were rendered, also a large number of trees and shrubs were planted, which featured a part of the school programs on February 22.

5. . . . The month of May has surely proved to be all too short a month with so many ideas to be worked out.

The following weeks and special days have been observed by the schools and communities: National Child Health Day, May 1; Mother's Day, May 8; World Good-Will Day, May 18; Music Week, May 1.

The May Queen was crowned in New Town and Central High School. Park School had a pageant representing eight nations of the world in costumes, songs, and dances. Hillside's school closing represented daily activities. There were 361 graduated from the seventh grades and 94 graduated from the high schools in the county.

The work of the clubs and communities is progressing nicely. They have reported 5,000 chickens, 850 turkeys, 500 goslings, 250 pigs; canned 1,000 quarts of berries, 600 pints of jellies and jams, and 975 quarts of vegetables.

The teachers have had an executive committee meeting outlining plans for the summer. I am urging all of them to attend the Bishop-Wiley Summer School to get the information offered by the course in rural school supervision, which is endorsed by our county superintendent. We are proud to have this course taught in our county.

6. . . . The Jeanes work in this county closed May 16, with a very successful year's work. I hope that the work will continue to grow and the literary and industrial work will keep the same keen interest in the future as it has in the past.

During the school year, I have made 169 visits to schools, visited 40 homes, organized 14 clubs, raised $365, and traveled approximately 1,500 miles.

7. . . . At last we are winding up a large brick Rosenwald school built entirely by colored, on colored land, by free colored labor, etc. We purpose dedicating it July 26–28.

We had problems during the depression, but we are through, with only about $2,500 indebtedness on a $20,000 building. This school is 8 miles from three towns and 12 miles from the Training School. Built in a community of 100 square miles of land owned by Negro farmers whose labor has built the brick school 149 by 66 feet.

These letters and reports are typical of the hundreds which have been written by the Jeanes teachers since the beginning of the work, and indicate the importance which has been attached to the matter of extending the services of the schools into the life of the community.

CHAPTER VIII : SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

The following are some of the more significant findings and conclusions resulting from the present study:

1. Rural schools for colored children are, in general, far removed from the pupils they serve. Of the 44,187 pupils under investigation, 17 percent live 3 miles or more from the school they attend and 39 percent live a distance of 2 miles or more.
2. Despite the inaccessibility of schools, most Negro pupils in rural areas must either walk to school or provide their own conveyances. Of 44,187 pupils it was reported that only 471, or 1.06 percent, are transported to and from school at public expense.
3. Pupil mortality in Negro rural schools is extremely high. According to data in the present study, out of 100 Negro pupils who start in the first grade only 9 reach the fifth grade, 7 the sixth grade, 4 the seventh grade, and 2 the eighth grade. More than 76 percent of the pupils are enrolled in the first four grades. In other words, more than one third of the Negro pupils never go beyond the first grade and nearly three fourths never advance beyond the fourth grade. This is in close agreement with the situation found among Negroes for the Southern States in general, but is a great deal worse than the situation found among all the children of the country.
4. This study shows that Negro pupils are greatly retarded, the proportion of the pupils who are over age being approximately two thirds. The amount of retardation seems to be related to the size of school. Fewer of the pupils of 4-or-more teacher schools are over age than is true of the smaller schools. It is believed that much of the excessive retardation among Negro pupils is due

to shortness of the school term, poorly prepared and overloaded teachers, lack of equipment, poor health, and inaccessibility of schools.

5. The typical teacher of the 1-, 2-, and 3-teacher Negro elementary rural school under Jeanes teachers is a woman and is approximately 30 years of age; the typical head teacher of the 4- or more-teacher rural school for Negroes is a married man of about 35 years of age. The training of the Negro teachers of rural elementary schools under Jeanes teachers increases markedly with the size of school. The average for the entire group is about one year of college training. The averages for the various sizes of school are: 1-teacher, 0.24; 2-teacher, 1.16; 3-teacher, 2.4; and 4-or-more teacher, 3.5. The typical Negro rural teacher has had nearly 9 years of educational experience, but has been in his present position only 2 years. He attends 2 educational meetings a year, within his State or county, and reads an average of 2 magazines having to do with plans and methods in primary and elementary education. The typical Negro teacher of rural elementary schools receives a salary of $400. One out of every four receives less than $300 a year, while more than 70 percent are paid a salary of $500 or less.
6. Median salaries of teachers by size of schools are: 1-teacher schools, $346; 2-teacher schools, $360; 3-teacher schools, $429; and 4-or-more teacher schools, $478. The corresponding median salaries of white teachers in rural schools are: 1-teacher schools, $883; 2-teacher schools, $881; 3-or-more teacher schools, $1,022; and all classes of schools, $945. Only 1.4 percent of the Negro teachers in the present study receive salaries of $880 or more compared with 72.4 percent for white rural teachers.
7. Aside from the availability of educational facilities, the training and salary of teachers are the two most important problems in the whole rural educational situation of Negroes. They are insep-

arable and form a sort of vicious circle. Nearly a third of the teachers have only four years of high-school training or less, while approximately two thirds are below what is considered to be the accepted standard, two years of college training. It is generally conceded that there must be an improvement of the training of Negro rural teachers, but how a teacher who receives only $500 a year (seven tenths of the Negro rural teachers receive $500 or less) can save enough to advance herself professionally presents a problem of serious proportions.

8. Negro rural teachers are beginning to make use of some of the newer devices in the promotion of the education of their pupils. Psychological examinations and standardized objective tests were used, respectively, by 13 and 19 percent of the schools. Twenty-four percent of the teachers made some provision for individual differences.
9. Although considerable impetus has been given by the Rosenwald Fund to the movement for the improvement of housing conditions of Negro schools, there is still much to be desired. Nearly 40 percent of the schools included in this study are Rosenwald schools. Doubtless the majority of the remaining 60 percent constitute the schools mentioned by teachers as not being in a good state of repair.
10. The equipment of Negro rural schools is, in the main, meager, and inadequate for educational use. Nearly 40 percent of the schools still use benches with no desks. A few schools have no blackboards at all.
11. A large number of the teachers indicated that they had handwashing facilities in the school, the percent being 62.19. Ordinary stoves are used to heat 67.1 percent of the schools, most of which have no fire protection facilities. Only 10.47 percent have electric lights. Most of the schools still use the ordinary outdoor toilets, several of

which were not well protected or sufficiently private. Eleven schools had no toilets at all. Only 10 percent of these rural schools have school gardens.

12. Most of the supervision received by the rural elementary schools under investigation comes from the Jeanes teacher, who, in general, is overloaded and underpaid. Some of them are responsible for as many as 90 schools, enrolling approximately 10,000 pupils, scattered over an entire county. The typical Jeanes teacher has under her supervision 33 schools, 49 teachers, and 1,737 pupils. She has attended school approximately 5 years beyond the elementary grades. She has had 10 years of educational experience, and is employed 8.7 months of the year. In view of the variety of activities in which she engages, including the teaching and supervision of industrial subjects; organization and promotion of school and community clubs and activities; and raising money for teachers' salaries, erection and repair of school buildings, equipment and other sundry purposes, it can hardly be expected that she can devote much time to the actual supervision of regular classroom work.
13. In practically every criterion administered, the 3- and 4-or-more teacher schools have the advantage of the 1- or 2-teacher schools.

RECOMMENDATIONS FOR FURTHER STUDY

During the prosecution of this study several questions continually arose which for their answer would require further investigation. Some of them are:

1. How do the educational results achieved in counties which have Jeanes teachers compare with those that do not have Jeanes teachers?
2. In view of the new conditions and the present development of Jeanes work, what changes, if any, should be made in the objectives, scope, and methods of the work of Jeanes teachers?

3. What steps should be taken to extend supervision of Negro schools into counties which do not have supervisors?
4. What is the relation between availability of schools and the attendance of Negro pupils?
5. What relation is there between the ages of Negro pupils, their school attendance, and pupil mortality?
6. Does the condition of the roads affect the attendance of Negro pupils?
7. Is there any relation between the socio-economic status, the school attendance, and pupil mortality of Negro children?
8. Is pupil mortality, as reported by districts, counties, and States related to the availability of schools to Negroes?
9. What is the relation between the availability and popularization of secondary education among Negroes?
10. Is retardation of Negro pupils influenced by length of school term, preparation of teachers, school equipment, and load which a teacher carries?
11. What is the intelligence of Negro elementary rural pupils as compared with white elementary rural pupils, similarly situated?
12. How do Negro teachers in rural elementary schools supplement the meager salaries which they receive for teaching?
13. To what extent are appointments of Negro rural teachers based on training and certification?
14. What happens to Negro elementary rural pupils who drop out of school?

Because of the importance of many of these questions to the further development of Negro education it is recommended that graduate students, research organizations, and professional associations give them serious consideration in their effort to find problems for investigation and research projects.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D.C., June 1933.

SIR: This is the sixth bibliography of research studies in education. The last study was quite large (more than 450 pages). Consequently we sought ways of reducing this one. The result has been that we have issued several mimeographed studies containing some researches formerly published by title in this volume. That has left for inclusion in this volume only the masters' and doctors' theses and faculty research studies. The studies marked with an asterisk are those which may be had by interlibrary loans from the Office of Education. In August 1931 we began the collection of doctors' dissertations and outstanding masters' theses. We now have more than 700 of these coming from 139 cooperating colleges. Circulation of these studies will help research in education and prevent duplication of effort.

I think that the volume is decidedly worth while and respectfully recommend that it be published as a bulletin of this office.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR.

INTRODUCTORY NOTE

SCOPE OF BIBLIOGRAPHY

As we present the sixth [1] annual compilation of research studies in education, we inaugurate a new policy for issuing our bibliographies. The Bibliography of Research Studies in Education, starting with this number, will be devoted entirely to masters' and doctors' theses and faculty research studies completed during the period covered. This compilation is for the school year September 1, 1931, through August 31, 1932. In addition to the printed bibliography, we expect to issue, annually, mimeographed lists of research studies completed by State departments of education and State educational associations; city school systems; and educational associations, independent agencies and individuals. These three mimeographed bibliographies will cover the same types of material that were formerly included in the printed bibliography.

In answer to a letter sent out on October 1, 1932, a total of 3,121 theses and faculty research studies were reported by 124 colleges and universities, including a number of institutions that had never reported to us before. We hope eventually that all institutions granting graduate degrees in education, or whose faculty members carry on research in education, will report to us, so that their studies may be included in the bibliography for the use of students and institutions interested.

A number of faculty research studies were reported as having been accepted by various educational periodicals. As the articles have not yet been published, we are unable to give their volume and page references. A few articles were published in magazines later than August 1932, but were included as the studies were completed during the period covered by the bibliography.

The table shows the number of research studies in various fields of education which were completed in 1931–32. The most popular fields were those of (1) special subjects of the curriculum; (2) vocational training including such related subjects as agricultural education and home economics; (3) school administration; (4) teacher training; (5) school management; (6) school health and physical education; (7) secondary education and junior colleges; (8) higher education; (9) testing and research.

[1] Earlier bulletins in the series are: 1926–27, Bulletin, 1928, No. 22; 1927–28, Bulletin, 1929, No. 36; 1928–29, Bulletin 1930, No. 23; 1929–30, Bulletin, 1931, No. 13; and 1930–31, Bulletin, 1932, No. 16.

Number of research studies in various fields of education, 1931–32

Subject	Doctors'	Masters'	Faculty research	Total	Percent
1	2	3	4	5	6
1 Educational history and biography	20	59	8	87	2.78
2 Current educational conditions—United States	4	39	10	53	1 68
3. Current educational conditions—Foreign and international	16	32	2	50	1. 60
4 Educational theory, special methods	10	51	10	71	2. 27
5 Educational psychology, child study	8	31	14	53	1. 68
6 Testing and research	17	70	56	143	4 57
7 Special subjects of curriculum	59	673	68	800	25 53
8. Elementary education, including preschool	9	45	7	61	2. 26
9 Secondary education and junior colleges	17	123	17	157	5. 03
10 Teacher training and status	45	113	25	183	5. 85
11. Higher education	23	71	55	149	4. 75
12 School administration	25	183	22	230	7. 36
13 School management	8	153	23	184	5 89
14 School buildings	5	27	7	39	1 21
15 School health and physical education	20	131	15	166	5. 31
16 Play, social aspects, and child welfare	17	50	4	80	2. 56
17 Moral and religious education	6	65	11	82	2. 62
18 Vocational training, including agricultural education, home economics, etc	13	241	14	268	8 57
19. Guidance	2	38	5	45	1. 44
20. Education of racial groups	9	40	1	50	1. 60
21 Exceptional children	14	55	5	74	2. 36
22. Education extension	4	14	----------	18	57
23 Education of women	4	8	2	14	.45
24. Libraries	2	54	8	64	2. 05
Total	357	2,375	380	3,121	100

Of the special subjects of the curriculum, those receiving the most attention were English grammar and composition, with a total of 82 entries; music, 77; psychology, 47; art, 46; modern languages, 44; social studies, 44; history, 41; and English literature, 38.

As a large number of the theses bear upon more than one subject, all theses in a field cannot be listed together, but may be found through the cross references at the end of the subject, or through the subject index.

The entries were classified and indexed by Ruth A. Gray, assisted by Julia L. Power and Delia V. Cafferty. In order to save as much space as possible, the annotations, most of which were furnished by the persons reporting, have been made as brief as possible.

Many of the studies listed are available for consultation in various public and institutional libraries. Printed material here mentioned may ordinarily be obtained from the publishers. The Office of Education cannot supply the publications listed, other than those expressly designated as its own. Unpublished theses are indicated by the abbreviation ms. after the number of pages, signifying that the study is in typewritten or mimeographed form. An asterisk (*) indicates those theses which are on file in the library of the Office of Education. They may be borrowed through the interlibrary loan system for a limited time. Theses not on file in this office may possibly be secured through an interlibrary loan from the institution under whose supervision the study was made.

In August 1931, the library of the Office of Education started collecting doctors' dissertations and outstanding masters' theses in the field of education. Since that time the Office has received 768 theses from 139 colleges and universities. These studies are available for interlibrary loan. The Office of Education appreciates the cooperation of the graduate schools of education in sending us as many of their doctors' and masters' theses as possible, in order that the studies may be available to students and institutions interested in particular fields of educational research. The use of the loan collection is growing rapidly.

ABBREVIATIONS

We are continuing the use of abbreviations which was started in the 1930–31 bibliography. The list of abbreviations, with the name and address of the institution to which each refers, is given below.

ABBREVIATIONS	INSTITUTIONS
Ala. Poly. Inst.	Alabama polytechnic institute, Auburn, Ala.
American Univ.	American university, Washington, D.C.
Arkansas	University of Arkansas, Fayetteville, Ark.
Ark. St. T. C.	Arkansas State teachers college, Conway, Ark.
Birmingham-Southern	Birmingham-Southern college, Birmingham, Ala.
Boston Coll.	Boston college, Boston, Mass.
Boston Univ.	Boston university, Boston, Mass.
Brigham Young	Brigham Young university, Provo, Utah.
Brown	Brown university, Providence, R.I.
Buffalo	University of Buffalo, Buffalo, N.Y.
Butler	Butler university, Indianapolis, Ind.
California	University of California, Berkeley, Calif.
Catholic Univ.	Catholic university of America, Washington, D.C.
Chicago	University of Chicago, Chicago, Ill.
Cincinnati	University of Cincinnati, Cincinnati, Ohio.
Claremont	Claremont colleges, Claremont, Calif.
Coll. of the City of N.Y.	College of the City of New York, New York, N.Y.
Coll. of the Pacific	College of the Pacific, Stockton, Calif.
Colorado	University of Colorado, Boulder, Colo
Colo. Agr. Coll.	Colorado agricultural college, Fort Collins, Colo.
Colo. St. T. C.	Colorado State teachers college, Greeley, Colo.
Columbia	Columbia university, New York, N.Y.
Cornell	Cornell university, Ithaca, N.Y.
Denver	University of Denver, Denver, Colo.
DePauw	DePauw university, Greencastle, Ind.
Duke	Duke university, Durham, N.C.
East Cent. St. T. C.	East Central State teachers college, Ada, Okla.

ABBREVIATIONS	INSTITUTIONS
East. St. Nor. Sch	Eastern State normal school, Madison, S.Dak
Emory	Emory university, Emory, Ga.
Florida	University of Florida, Gainesville, Fla.
Fla. St Coll. for Women	Florida State college for women, Tallahassee, Fla.
Fordham	Fordham university, New York, N.Y.
George Washington	George Washington university, Washington, D.C.
Georgia	University of Georgia, Athens, Ga.
Goshen	Goshen college, Goshen, Ind.
Hampton	Hampton institute, Hampton, Va.
Harvard	Harvard university, Cambridge, Mass
Illinois	University of Illinois, Urbana, Ill.
Indiana	Indiana university, Bloomington, Ind.
Ind. St. T. C	Indiana State Teachers college, Terre Haute, Ind.
Int. Y.M.C.A. Coll	International young men's Christian association college, Springfield, Mass.
Iowa	University of Iowa, Iowa City, Iowa.
Iowa St. Coll	Iowa State college, Ames, Iowa.
John Carroll	John Carroll university, Cleveland, Ohio.
Johns Hopkins	Johns Hopkins university, Baltimore, Md.
Kansas	University of Kansas, Lawrence, Kans.
Kans. St. Coll	Kansas State college of agriculture and applied science, Manhattan, Kans.
Kans St. T. C., Emporia	Kansas State teachers college, Emporia, Kans.
Kans. St. T. C., Hays	Kansas State teachers college, Hays, Kans.
Kans St. T. C., Pittsburg	Kansas State teachers college, Pittsburg, Kans.
Kentucky	University of Kentucky, Louisville, Ky.
Louisiana	Louisiana State university, Baton Rouge, La.
Loyola	Loyola university, Chicago, Ill.
Maine	University of Maine, Orono, Me.
Marquette	Marquette university, Milwaukee, Wis.
Maryland	University of Maryland, College Park, Md.
Mercer	Mercer university, Macon, Ga.
Miami	Miami university, Oxford, Ohio.
Michigan	University of Michigan, Ann Arbor, Mich.
Mich. St. Coll	Michigan State college, East Lansing, Mich.
Mills	Mills college, Mills College, Calif.
Minnesota	University of Minnesota, Minneapolis, Minn.
Miss. St. C. for W	Mississippi State college for women, Columbus, Miss.
Missouri	University of Missouri, Columbia, Mo.
Nebraska	University of Nebraska, Lincoln, Nebr.
Nebr. St. T. C	Nebraska State teachers college, Peru, Nebr.

ABBREVIATIONS	INSTITUTIONS
New Hampshire	University of New Hampshire, Durham, N H.
N.J. St T C	New Jersey State teachers college, Trenton, N.J.
New Mexico	University of New Mexico, Albuquerque, N Mex
N.Mex. St. Nor. Univ	New Mexico State normal university, Las Vegas, N Mex.
N Mex St. T. C	New Mexico State teachers college, Silver City, N Mex.
New York	New York university, New York, N Y
North Carolina	University of North Carolina, Chapel Hill, N C.
North Dakota	University of North Dakota, University, N Dak
N.Dak. Agr. Coll	North Dakota agricultural college, State College, N.Dak.
Northeastern St. T. C	Northeastern State teachers college, Tallequah, Okla
Northwestern	Northwestern university, Evanston, Ill.
Notre Dame	University of Notre Dame, Notre Dame, Ind.
Ohio	Ohio State university, Columbus, Ohio.
Oklahoma	University of Oklahoma, Norman, Okla.
Okla. A. and M. Coll	Oklahoma agricultural and mechanical college, Stillwater, Okla
Oreg. Agr. Coll	Oregon agricultural college, Corvallis, Oreg.
Peabody	George Peabody college for teachers, Nashville, Tenn.
Pennsylvania	University of Pennsylvania, Philadelphia, Pa.
Penn. State	Pennsylvania State college, State College, Pa.
Philippines	University of the Philippines, Manila, P.I.
Pittsburgh	University of Pittsburgh, Pittsburgh, Pa.
Platteville St. T. C	State teachers college, Platteville, Wis.
Princeton	Princeton university, Princeton, N.J.
Providence	Providence college, Providence, R.I.
Puerto Rico	University of Puerto Rico, Rio Piedras, P.R.
Puget Sound	College of Puget Sound, Tacoma, Wash.
Purdue	Purdue university, La Fayette, Ind.
Rutgers	Rutgers university, New Brunswick, N.J.
St. Louis	St. Louis university, St. Louis, Mo.
Smith	Smith college, Northampton, Mass.
South Dakota	University of South Dakota, Vermilion, S.Dak.
Southern California	University of Southern California, Los Angeles, Calif.
South. Methodist	Southern Methodist university, Dallas, Tex.

ABBREVIATIONS	INSTITUTIONS
Southwestern	Southwestern university, Georgetown, Tex
Stanford	Stanford university, Stanford University, Calif
St. Coll. for T	State college for teachers, Albany, N.Y.
Stetson	Stetson university, De Land, Fla.
Syracuse	University of Syracuse, Syracuse, N Y
T C, Col Univ	Teachers college, Columbia university, New York, N Y
Temple	Temple university, Philadelphia, Pa.
Tennessee	University of Tennessee, Knoxville, Tenn.
Texas	University of Texas, Austin, Tex.
Texas Tech. Coll	Texas technological college, Lubbock, Tex
Utah	University of Utah, Salt Lake City, Utah.
Vermont	University of Vermont, Burlington, Vt.
Virginia	University of Virginia, Charlottesville, Va.
Va. Poly. Inst	Virginia polytechnic institute, Blacksburg, Va.
Va. St. Coll	Virginia State college, Ettrick, Va
Washington	University of Washington, Seattle, Wash.
Wash St. Nor. Sch	Washington State normal school, Bellingham, Wash
Washington Univ	Washington university, St. Louis, Mo.
Wesleyan	Wesleyan university, Middletown, Conn.
West Virginia	West Virginia university, Morgantown, W.Va.
West Carolina T. C.	Western Carolina teachers college, Cullowhee, N.C.
Western Reserve	Western Reserve university, Cleveland, Ohio.
West. St. Coll	Western State college, Gunnison, Colo.
West. St. T. C	Western State teachers college, Kalamazoo, Mich
Whittier	Whittier college, Whittier, Calif
Wichita	University of Wichita, Wichita, Kans.
William and Mary	College of William and Mary, Williamsburg, Va.
Wisconsin	University of Wisconsin, Madison, Wis.
Wyoming	University of Wyoming, Laramie, Wyo.
Yale	Yale university, New Haven, Conn.

BIBLIOGRAPHY OF RESEARCH STUDIES IN EDUCATION, 1931–1932

(Entries for masters' and doctors' theses are abbreviated "Master's, 1932, T. C., Col. Univ.," signifies a master's thesis completed in 1932 at Teachers College, Columbia University, New York, N.Y. A complete list of abbreviations used for institutions may be found on pp xi–xiv.)

* Indicates theses on file in the United States Office of Education library.

EDUCATIONAL HISTORY

1. **Alzona, Encarnacion.** History of education in the Philippines 1565–1930. Manila, University of the Philippines press, 1932. 390 p.

The study discusses the civilization of the Filipinos in the sixteenth century; education during the Spanish period, 1565–1898; and education during the American period, 1899–1930.

2. **Anderson, George Capers.** History of development of education in McCurtain county, Okla. Master's, 1932. Oklahoma A and M. Coll..

3. **Anderson, William Ray, *jr.*** The history of state and federal aid to education in South Carolina. Master's, 1932. Emory.

Particular attention is paid to the early period in the history of the state during which the educational policies and aims were being formulated

4. **Bailey, Edgar W.** History of education in Magoffin county. Master's, 1932. Kentucky.

5. **Baldree, William Hickman.** History of education in Ballard county. Master's, 1932. Kentucky.

6. **Bennett, Clemmon Ardell.** History of education in Garden county, Ga. Master's, 1932. Kentucky.

7. **Berkowitz, Nathan.** The history of secondary education for boys in New York City from 1784 to the Civil War. Master's, 1932. Coll. of the City of N.Y. 122 p. ms.

The New York free academy paved the way for the development of the public high school system of New York City; most of the schools were run by private individuals with little state or municipal supervision, to prepare boys for college and business; the teachers were as well prepared in subject matter as those in the modern schools

8. **Biggs, Byron Coleman.** The aims and functions of private secondary schools in the United States since 1870. Master's, 1932. Ohio. 166 p. ms.

Modern private secondary schools are different in character from the old academies. Their main aims are college preparation and formation of ethical character. Such schools are effective in promoting democratic spirit among their students.

9. **Blunt, Forrest P.** The development of the public (white) high school in the counties of Maryland from 1865 to 1930. Master's, 1932. Maryland. 107 p. ms.

Attempts were made by the legislature to define, standardize, and adequately support the high schools of the state with little permanent effect. The year 1916 marks the beginning of a strongly centralized State system which can easily be expanded to provide for the present and future needs of the children of the state.

10. **Bordenkircher, Mary Alice.** A historical study of the mission schools in early territory now comprising Kansas. Master's 1931. Kans. St. T. C, Emporia. 62 p. ms.

Describes early attempts to educate Indian children, and covers the period from the earliest settlement of Kansas until Kansas was admitted as a state

11. **Bruner, Claude A.** Origin and development of high-school standards in Massachusetts, 1821–1910. Master's, 1932. Ohio. 170 p. ms.

* 12. **Campbell, Anna Montgomery.** The black death and men of learning. Doctor's, 1931. T. C., Col Univ. New York City, Teachers college, Columbia university, 1932 210 p. (History of science society, New series 1.)

This study describes the effects of the Plague on medicine, surgery, and hygiene, and includes all other cultural activities

13. **Collins, Varnym Lansing.** Princeton, past and present. Princeton, N. J., Princeton university press, 1931. 200 p.

* 14. **Comstock, Lula Mae.** A comparison of educational systems of New England and of the lower South, 1840–1860. Master's, 1932. American Univ. 164 p. ms.

Surveys public schools, academies, and colleges and universities in five states in New England and in five states in the South. The South had three-fourths as many public schools as the North, enrolled more than one-half as many pupils, and raised $1.33 more per pupil enrolled; the South had 18 students enrolled in academies to 17 enrolled in the North and raised $9.11 more per student than the North for these schools. In 1860 in the South there were five times the number of universities, three times the number of professors and instructors, and more than three times the number of students enrolled in the North. Requirements for admission were almost identical in both sections, and the teaching force of both consisted of equally efficient and learned men

15 **Cusack, Hannah.** The historical consideration of the concept of cultural education. Master's, 1932. Southern California.

16 **Dasgupta, Debendra Chandra.** The place of vocational education in modern educational theory from the sixteenth to the twentieth century. Doctor's, 1932. California. 224 p ms.

Studies the writings of Rabelais, Vives, Montaigne, Mulcaster, Comenius, Milton, Locke, Rousseau, Pestalozzi, Fichte, Herbart, Froebel, Spencer, and Dewey, and shows that each of the authors considered vocational education to be an essential part of the general education of both the aristocratic and laboring classes.

17. **Diener, Harry C.** Decline of academy system in New York State, and disposition of the property. Doctor's, 1932. Cornell. 180 p. ms.

The decline was caused by the desire of the people for complete free secondary schools The academies did not oppose the mergers, and were more freely supported by public funds than was generally supposed.

18 **Dobbins, Eben Lloyd.** The development of education in Caddo county from the earliest date to 1931. Master's, 1932. Oklahoma A. and M. Coll.

19. **Dodgen, Mary Soleta.** The slave plantation as an educational institution. Master's, 1932. Texas.

20 **Doebler, Rotha G.** Historical study of learned societies in America founded between 1700 and 1865. Master's, 1931. Stanford.

21. **Douglas, Helen Holly.** A survey of some steps in the historical development of the Vancouver, Wash., schools. Master's, 1932. Washington. 74 p. ms.

22. **Doyle, *Sister* Margaret Marie.** The education of Catholic women in the United States. Doctor's, 1932 Notre Dame. 200 p ms.

Studies the Catholic philosophy of education in relation to the education of Catholic women; scope of women education in the United States; a curriculum of Catholic education for women.

23. **Garner, Charles Johnston.** Trends in the curriculum, content and methods of teaching second year algebra in high school during the period 1899–1929. Master's 1932. Southern California.

24. **Gooch, Richard Este.** The evolution of public education in the State of Kentucky as revealed through legislative enactments and Supreme Court decisions. Master's, 1932. Duke. 313 p. ms.

*25. **Greenhill, Noble Franklin.** Development of state school administration in Alabama. Doctor's, 1932. New York. 209 p. ms.

Traces briefly the beginning of educational effort in 1702 to the organization of the state system in 1854; stresses the constitutional and legal provisions for the administration of schools from 1854 to 1932; examines the appropriations provided by the Legislature in 1927 in the act known as the Unified educational program; considers unification versus centralization in the development of state school administration; and suggests a plan for the future development of state school administration

26. **Hollingsworth, Robertson Riley.** Influence of reconstruction on education in Georgia. Doctor's, 1931. North Carolina.

27. **Hyatt, Oscar W.** The development of secondary education in Alabama prior to 1920. Doctor's, 1932. Peabody.

28. **Jackson, Ward B.** The history of education of Boyd county. Master's, 1932. Kentucky.

29. **Kimbrough, Edith.** The legal development of public education in Georgia as revealed through the statutes and the Supreme Court decisions, with a comparative study of similar development in South Carolina and Alabama. Master's, 1931. Duke. 190 p. ms.

30. **Loeb, Julius.** The history of the New York City elementary vacation school (1898-1930). Master's, 1932. Coll. of the City of N. Y. 83 p. ms.

Special emphasis was placed on the objectives, curriculum, pupil body, teaching staff, and administration of the vacation schools. The schools no longer exist mainly to keep the children off the streets.

31. **Lokensgard, Hjalmar.** The aristocratic element in Jefferson's educational plan. Master's, 1932. Iowa.

32. **Long, Evan Edgar.** Development of the State department of education in Mississippi. Master's, 1932. Peabody. 126 p. ms.

Discusses the history of the state from 1817–1868 when the office of state superintendent of education was provided for in the constitution, the development of the department in various periods until 1931.

33. **Longstreet, Rupert James.** The development of State control and support of public schools in Florida. Master's, 1932. Duke. 131 p. ms.

*34. **Loomis, Burt Weed.** The educational influence of Richard Edwards. Doctor's, 1932. Peabody. Nashville, Tenn., George Peabody college for education, 1932. 213 p. (Contribution to education, no. 106.)

Discusses the contribution of Richard Edwards to the early development of normal schools in the United States.

35. **McGibbon, Leona M.** The development of academies in a group of Wisconsin counties. Master's, 1932. Iowa 280 p. ms.

36. **McNutt, Franklin Holbrook.** The social and psychological background of the progressive school movement. Doctor's, 1932. Ohio. 143 p. ms.

Evidences are presented to show that the American frontier (1607–1893) developed in the people an inter-related group of traits essentially indigenous and peculiar to this country, also that a democratic social aspiration evolved from the trait-group The traits valued and the ends sought by the progressive school movement are examined and it is concluded, that these can be identified with the indigenous American trait-group and its attendant democratic social aspiration

37. **Mann, Laurence.** Evolution of ideas and practices with respect to corporal punishment. Master's, 1932. Ohio. 70 p ms.

The study traces development of changes with respect to corporal punishment from ancient Greece to 1930. Findings Punishment has become less severe due to changing conceptions of psychology, to the rise of educational reformers such as Pestalozzi, Rousseau, Charles Dickens, and to the laws and rules passed by states and school districts, and to judgments handed down

38. **Marsh, Daniel L.** The founders of Boston university, being the Boston university founders' day address, March 14, 1932 1932. 30 p (Reprinted from Bostonia, the Boston university alumni magazine, March 1932.)

This is a brief study of the lives of Lee Claflin, Isaac Rich, and Jacob Sleeper, and their work in founding Boston university.

*39. **Miller, Charles S.** Development of state school administration in Pennsylvania. Doctor's, 1931. New York. 224 p. ms.

Discusses only those phases of the historical development of education in Pennsylvania which are significant from the standpoint of school administration.

40 **Mobley, James W.** Academy movement in Louisiana. Master's, 1931. Louisiana.

41. **Morgan, Julia Gertrude.** A study of the extension of the functions of the public schools of Long Beach into the field of social welfare since 1900. Master's, 1932. Southern California.

42 **Napier, John Hawkins, *jr.*** Origin and development of the public high school in California. Doctor's, 1932. Stanford.

A history of the public high school in California showing the influence of the University of California upon its development; its expansion in the 'seventies; its set-back in 1879 when state aid was limited to primary and grammar schools, its restoration to the state school system in 1891, and the extension of state aid in 1903.

43. **Nixon, O. Floyd.** A critical study of curriculum legislation with special reference to Ohio from 1803 to 1931. Doctor's, 1932. Ohio. 375 p. ms.

Intensive study of curriculum legislation in Ohio, augmented by a comparative study throughout the nation. A critical study of curriculum legislation makes the issue clear—if we are to have a sound educational program which meets adequately and fully the needs of the youth of the state and nation—either legislators must stop interfering with teaching and curriculum making or they must have constructive educational guidance from the best thought within the profession

44. **Nolen, Emmalu.** History of the Atlanta public schools to 1907. Master's, 1932. Emory.

Special attention is given to the early period in the development of the schools of the city.

45 **Norton, Egbert Fish.** History of education in Rockcastle county, Ky. Master's, 1932. Kentucky.

46. **Orr, Dorothy.** Rise of the common schools in Georgia. Master's, 1932. Emory.

* 47. **Panchaud, Frances Lee.** Hugo Gaudig, his contribution to modern German education. Master's, 1932. New York. 48 p. ms.

Gaudig believed in developing personality through self-activity for the greater glory of Germany.

Gives the history of the Chautaqua movement from the religious Sunday school assemblies beginning in 1874 to its development at the present time into a social institution.

69. **Umbreit, Allen George.** Education in the southern colonies. Doctor's, 1932. Iowa (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38 New series, no. 248. 1 p.)

Shows the difficulties involved in the establishment of public schools in the south in colonial times. The tutorial system was inaugurated because of the scattered population and a scarcity of schools; those living on large plantations and who desired higher education for their children sent them abroad to college, particularly was this true in law and medicine. Parochial schools were to be found in the back country where schools and churches were associated together and the pastor was often the teacher.

70. **Walker, Edward Everett.** The educational theories of Lester F. Ward. Doctor's, 1932. Stanford.

This study is concerned with the social trends of the second half of the nineteenth century; gives an account of the writings of Lester F. Ward, analyzing his educational and sociological theories which emphasized the importance of universal public education as a remedy for all social ills; and which would extend to all children the kind of training for which they are best fitted.

71. **Walty, Stella K.** Cleveland high school at the time of the Civil War Master's, 1931. Western Reserve.

Describes the development of secondary education in the East; the beginning of secondary education in Ohio; the early history of the Cleveland high school; and high-school education in Cleveland as compared with other cities in the East and in Europe.

108. **Wadia, Bomanji K.** Communication as education. Doctor's, 1932. T. C., Col. Univ.

This study is concerned with the field of communication in America today; its failure to function effectively, and the criteria which are indispensable. Data were supplied by material on journalism, newspapers, and discussions with faculty members of the Pulitzer school of journalism at Columbia university. Conclusion: The newspaper has been seriously deficient as an educative agency because there is lack of understanding of its true relationship towards the public and society.

*109. **Waller, J. Flint.** Outside demands and pressures on the public schools. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1932. 151 p. (Contributions to education, no. 542.)

Data were secured through interviews with some 150 school officials in 32 states. Demands on the schools show a wide range of intensity, insistence, and importance. The causes of demands were the desire of promoters of demands to continue their own regime; self interest of the proponent of the demand; desire for different service for the children; interest in persons versus interest in public welfare; spite, enmity, prejudice, and intolerance; clash of opinion and desire among outside groups; school official's manner, action, or attitude; and lack of information on the part of the proponent.

110. **West, Andrew Fleming.** American general education. A short study of its present condition and needs. Princeton, N.J., Princeton university press 1932. 76 p.

This is a brief discussion of education in general, the plan of studies, and teaching with suggestions for improving American education.

123. Henry, William T. A comparative study of the achievement of the schools of Scott county, Ky. Master's, 1932. Kentucky.

124. Holy, Thomas C. *and* Arnold, W. E. Survey of the schools of Aurora, Ohio. Columbus, Ohio State university, 1932. 46 p. ms.

The study gives a history of the character and growth of the community, school organization and enrollment, status, and utilization of the present school plant, administration of the schools, teaching staff, achievement of the pupils, financial condition of the school district, and the curriculum.

125. Luce, Paul Harold. A survey of the Struthers, Ohio, public-school system. Master's, 1931. Ohio.

*126. Morning, Gregory H. The status of the curriculum in the public-school survey. Master's, 1932. Penn. State. 77 p. ms.

Five state, 3 county, and 40 city school surveys were studied. Data indicate that surveys on an average allot about 29 percent of the space to a study of the curriculum; they tend to neglect the social factors underlying the curriculum; there seems to be no tendency on the part of the surveys to examine more deeply the ultimate bases of the curriculum; there is a tendency to decrease the percentage of space devoted to the curriculum inventory.

127. Nanninga, S. P. Report of the survey of the Estancia public schools with suggestions mutually pertinent to other small school systems in New Mexico. Albuquerque, N.Mex., University of New Mexico, 1931. 61 p. (Bulletin, no. 202.)

132. **Strayer, George D.,** *director.* Report of the survey of the schools of Chicago, Ill. New York City, Teachers college, Columbia university, 1932. 5 vols. Vol. 1, 350 p.; 2, 323 p ; 3, 227 p.; 4, 315 p.; 5, 137 p.

Vol. 1, deals with administration, business administration, finance, personnel, and social services; vol. 2, Fitting school to pupil, secondary education, and higher education; vol. 3, Elementary schools, health and physical education, and vocational education; vol. 4, Housing the schools, and operation of the school plant; vol. 5, contains the summary of findings and recommendations.

133. **Switzer, Alexander I.** Preliminary survey of the Spokane county school system. Master's, 1931. Stanford.

134. **Thrasher, James Arvin.** An educational survey of Unicoi county, Tenn. Master's, 1932. Tennessee. 99 p. ms.

135. **Wallace, Simon Charles.** Inequalities in educational opportunity in Jones county, Miss. Master's, 1932. Peabody. 156 p.

A study of the different types of schools in the county to determine just what inequalities in educational opportunity existed; this covered a period of three years. Findings: Inequalities were found to exist in the type of school; length of school term; average daily attendance; holding power of school; amount of wealth back of each census pupil in the different school districts; amount of money spent per educable pupil in the school districts; transportation.

136. **Wilbur, Milton J.,** *and* **Vance, Arthur M.** Critique of the Washington county survey. Boulder, University of Colorado, 1932. 28 p. ms.

Survey of attainment of pupils of the schools of Washington county, Colo., based upon Stanford achievement test results. Findings: General level of attainment slightly below normal.

137. **Williams, Charles M.** Care and maintenance practices in certain accredited Florida schools. Master's, 1932. Florida. 84 p. ms.

138. **Winters, James E.** A comparative study of the divided and undivided termed schools of Cleveland county, Okla. Master's, 1932. Oklahoma. 99 p. ms.

139. **Woodard, Hubert Lee.** A study of achievement of 8- and 9-months' rural and town schools of Indiana. Master's, 1932. Indiana. 94 p. ms.

140. **Young, Fred Wilson.** Comparative study of the white schools of Bolivar county, Miss. Master's, 1932. Peabody. 116 p. ms.

The white schools of Bolivar county were compared, measuring efficiency and determining status of these schools. It was found that they have a record of achievement which may be considered average in spite of many deficiencies. They rank much higher

on financial items than on purely educational items. A more unified, more strongly centralized school system would promote progress in education in the county.

153. **Huber** *Sister* **Mary Cecilia.** Post-war changes in education in Switzerland. Master's, 1931. Loyola. 125 p. ms.

154. **Jamali, Mohammed F.** The problem of Bedouin education in Iraq. Doctor's, 1932. T. C., Col. Univ.

*155. **Kasuya, Yoshi.** A comparative study of the secondary education of girls in England, Germany, and the United States; with a consideration of the secondary education of girls in Japan. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1933. 211 p.

The American high school is designed for all adolescents; English and German secondary schools are selective; problems in secondary education receive different emphases in different countries.

156. **Kearney,** *Sister* **Mary Winifred.** The growth of democracy in education in France and Germany since the World War. Master's, 1931. Loyola. 82 p. ms.

*157. **Kim, Helen Kiteuk.** Rural education for the regeneration of Korea. Doctor's, 1931. Columbia. New York City, 1931. 124 p.

Deals with the life situations of rural Korea and the way the present educational system meets the needs of the people; discusses what other agencies are contributing towards the education of rural people, what other countries are doing under similar circumstances, and gives some objectives and means of rural education in Korea.

158. **Kim, Hyun Chul.** History of education in Korea. Doctor's, 1931. American Univ. 291 p. ms.

159. **Kini, Kulal N.** Proposals for a program of vocational education for Mysore (India) based upon experiences in Mysore and the United States of America. Doctor's, 1932. T. C., Col. Univ.

Suggests that artisan type schools should be increased in number; short unit courses of definite subjects of importance to the adult artisans should be arranged in all day industrial schools; home industries classes should be established throughout the state; government weaving school should be converted into a full-fledged textile school to train efficient workers, foremen, and supervisors for the industry; industrial engineering should be introduced in the school of engineering at Bangalore and the latter be converted into a technological school; the project method and the cooperative method should be introduced into vocational schools if possible; and industrial arts instruction should be introduced in all primary, middle, and high schools for liberal education purposes.

*160. **Klineberg, Otto.** A study of psychological differences between racial and national groups in Europe. Doctor's, 1931. Columbia. New York City, Columbia university, 1931. 58 p. (Archives of psychology, no. 132)

Two Nordic, three Alpine, and two Mediterranean groups were studied. In each of the seven racial groups, 100 boys were tested. Pintner-Paterson tests were given to 100 boys each in Paris, Hamburg, and Rome. Clear and consistent differences were found between city and country children. The differences between the racial groups were small and unreliable.

161. **Knott, Wallace W. D.** Junior college in British Columbia. Master's, 1932. Stanford.

*162. **Kraemer, Delphine.** Guidance in European countries. Master's, 1932. Rutgers. 66 p. ms.

163. **Kwoh, Yu-Yu.** The monitorial system in relation to popular education in China. Master's, 1932. Kentucky.

164 **Lal, Prem Chand.** Rural reconstruction and rural elementary education in Bengal in the light of the program carried on at Sriniketan, the Institute of rural reconstruction founded by Rabindranath Tagore Doctor's, 1932. T. C, Col. Univ London, Eng, George Allen and Unwin, 1932. 262 p

The origin and history of Viswa-Bharati and of the educational institutions of Santiniketan and Sriniketan were described to show how the Institute of rural reconstruction was founded, and formed an important part of Tagore's educational program The aims and objectives of Sriniketan were described with a brief and general survey of the social, economic, health, and sanitary conditions of the locality The activities of the Institute were analyzed, and the need for their inclusion in the program was shown.

165. **Lister, Fraser.** First steps in curriculum revision in British Columbia. Master's, 1932. Washington. 98 p. ms.

166 **Liu, Chi Hung.** A study of modern education in Kiangsu Province, China. Master's, 1932. Washington. 130 p. ms.

The development and present status of modern education in Kiangsu Province. Findings: Based on the present status of modern education in the Province, some suggestions for improvement are given

167 **McLellan, Frederick Andrew.** The organization of a visual instruction department in the Kitsilana high school, Vancouver, B.C. Master's, 1932. Washington. 135 p. ms.

The actual organization of a visual instruction department in a large secondary school of 2,000 pupils in the province of British Columbia, Canada, is described.

168. **Marks, Theresa.** English men of letters in their relation to the Workingmen's college. Master's, 1932. Columbia.

INTERNATIONAL ASPECTS OF EDUCATION

188. **Britt, Esther Lee.** French influences on educational practices in the United States. Master's, 1932. Emory.

189 **Kolstad, Arthur.** A study of opinions on some international problems as related to certain experience and background factors. Doctor's, 1932. T. C., Col. Univ.

A study was made of 500 cases, selected at random, who had filled out Harper's questionnaire "A study of opinions concerning some international problems." These cases were compared with the opinion scores of a second group of 500 Teachers college students Students with high general examination scores tended to indicate a more favorable viewpoint than those with low scores, sex differences were small; students majoring in history and administration were more internationally minded, and those majoring in household arts and nursing were less internationally minded than the rest of the students; favorableness towards internationalism parallels the amount of college training as represented by having a Master's degree, a Bachelor's degree, and not having a degree.

190. **Lyon, Sarah S.** The connection of the foreign division of the Young women's Christian association with governments. Master's, 1932. Columbia.

EDUCATIONAL THEORY AND PRACTICE

191. **Castle, Anna R.** The development of techniques of study. Master's, 1932. Colorado.

192. **Drescher, William S.** Educational theories of the phrenologists. Master's, 1932. T. C. Col. univ. 21 p. ms.

A close relationship exists between modern educational theory, psychology, and phrenology.

193. **Driskill, Ruth.** Progressive educational ideals; lecture and demonstration by Marcus Fabius Quintilianus. Master's, 1932. Peabody. 58 p ms.

This study refers to Quintilian's principles and practices of education as revealed in his Institutio Oratoria. It is found that he discussed the purpose of education, varying abilities, preschool influences, environment, and public versus private education. He shows how an elementary school, a grammar school and a school of rhetoric should be conducted He stresses the need for perfect harmony between teacher and pupil.

SPECIAL METHODS OF INSTRUCTION AND ORGANIZATION

ABILITY GROUPING

207. **Dale, George Allan.** Differences in language and literature achievement under the traditional program and when using differentiated curricula and homogeneous grouping. Master's, 1932. Iowa.

208. **Godwin, Wendell R.** Efficacy of homogeneous grouping in Central junior high school. Master's, 1932. Chicago. 96 p. ms.

A study was made of the achievement of 135 children at 6A level in three courses during one semester. Findings: Grouping in itself seems to be neither an advantage nor a disadvantage.

209 **Gray, William S., Woody, Clifford, *and others.*** Special methods in the elementary school. Review of educational research, 1: p 245–323, October 1931.

This issue of the periodical deals primarily with studies in method

Contents: Reading, by W. S. Gray, p. 247–260; Arithmetic, language, fine arts, physical and health education, and industrial arts, by Clifford Woody, p. 261–275, Spelling, handwriting, social studies, character education, geography, and natural science, by F. S Breed, p. 276–293; Music, nursery-school and kindergarten methods, and integration of subject matter, p. 294–303; Bibliography, p. 304–323.

*210. **Marsden, Carl A.** A critical and experimental empirical study of homogeneous grouping in a public junior high school Doctor's, 1932 New York. 261 p. ms.

Describes an experiment in homogeneous grouping carried out in the A1–Mar, N J, junior high school.

211 **Rothman, Harriet Lillian.** A study of the homogeneity of ability groups in the Grover Cleveland high school. Master's, 1932. St. Louis. 78 p. ms.

212. **Sanderson, Chester Ballard.** An experimental study of the value of homogeneous grouping in the B7 grade. Master's, 1932. Southern California.

213. **Storm, Howard Charles.** Ability grouping with differentiated courses of study. Doctor's, 1932. California. 227 p. ms.

Attempts to determine which of two procedures produces the greater accomplishment in reading and arithmetic. (1) to have children grouped into three ability groups in each grade and to have them follow differentiated courses of study, or (2) to have them in the traditional grade classification following single courses of study. Findings: If carefully differentiated courses of study in reading and arithmetic are developed to fit the capacities of pupils of different ability levels, pupils accomplish more in these studies when grouped into ability groups.

214. **Tinsley, Gladney Jack.** A study of bases of ability grouping. Doctor's, 1932. Stanford.

An investigation was made of importance of various factors in the prediction of high-school success to secure a sound basis for ability grouping. The bases of grouping and grading studied were intelligence, achievement, previous scholarship, and chronological age; the three criteria used were first-year high-school success, four years' high-school success, and the score on the Thurston psychological test at high-school graduation. Data were supplied for 639 cases for the first criteria, and were available for 154 of this group for the second and third criteria. Statistical evidence is given of the relative importance of certain factors for the establishment of a true basis for grouping.

INDIVIDUAL INSTRUCTION

* 231. **Allen, Chauncey Newell.** Individual differences in delayed reaction of infants. A study of sex differences in early retentiveness. Doctor's [1931], Columbia. New York City, Columbia university, 1931. 40 p. (Archives of psychology, no. 127.)

In an attempt to test the traditional finding that the female sex is generally superior to the male in forms of behavior grouped under the title "memory" or "retentiveness", 100 one-year-old infants, about equally divided as to sex, were chosen at random from

an average group comparable as to age, educational opportunities, and lack of development of the language organizations Data show that individual differences are great, even in the same individual at different times; that sex differences exist, but are small and inconsistent.

232. **Chang, Suk Yung.** Principle and technique of effective treatment of individual problems. Master's, 1932. Columbia.

233. **Embry, H. W.** An experimental study of individual and traditional classroom procedure. Master's, 1931. South. Methodist.

234. **Kester, Eura M.** Experimental data on individual differences for beginning students of education. Master's, 1931. California.

235. **Steese, *Sister* Catherine.** An experiment with the group study and the individual technique plans in the sixth grade. Master's, 1932. Colo. St. T. C.

236. **Zeller, Glenn W.** A study of individual instruction. Master's, 1932. Ohio. 180 p. ms.

Compares individual instruction with the regular classroom procedure in two schools of Erie county Findings: No significant difference so far as arithmetic knowledge acquired is concerned Individual instruction has other preferred advantages.

VISUAL INSTRUCTION

244. **Atwood, Alice G.** Comparison of responses to printed word and to picture stimuli. Master's, 1932. Stanford.

245. **Beck, M. L.** The use of visual aids in teaching. Auburn, Alabama polytechnic institute, 1932.

246. **Bell, Carl S.** A summary and critical analysis of the experiments concerned with the use of visual aids in instruction. Doctor's, 1932. Washington. 331 p. ms.

The motion picture has proven to be an effective instructional aid in some subjects, while the slide and stereograph have proven more satisfactory in others

247. **Brown, H. Emmett,** *and* **Bird, Joy.** Motion pictures and lantern slides for elementary visual education. New York City, Teachers college, Columbia university, 1931. 105 p.

An annotated list of teaching aids together with suggestions for their use and tentative criteria for judging the worth of visual materials.

248. **Carnegie, John Lloyd.** Visual instruction in commercial subjects. Master's, 1932. Boston Coll.

* 249. **Clark, Clarence C.** Sound motion pictures as an aid in classroom teaching: A comparative study of their effectiveness at the junior college level of instruction. Doctor's, 1932. New York. 135 p. ms.

Investigates the value of educational sound motion pictures in classroom teaching as a medium for conveying accurate, concrete knowledge; for the development of ability to think more accurately and to reason more soundly; and for stimulating and sustaining interest in the topics studied with special reference to science. The experiment was carried out in the Outlines of science course at New York University A total of 13 films was used in the investigation. Three of the films had sound and silent editions, 5 were sound films, and the other 5 were silent. Data indicate a marked similarity in the effectiveness of the sound motion pictures, the silent motion pictures, and the lecture demonstrations as teaching aids.

250. **Hinckley, Leon Carl.** Visual aids for demonstrating subject matter in high-school biology. Master's, 1932. Colo. St. T. C.

251. **Iowa. University.** Visual aids for classroom use. Iowa City, University of Iowa, 1932. 90 p. (University of Iowa Extension bulletin, bulletin no. 294. June 15, 1932.)

This is a descriptive list of lantern slides and motion picture films available for classroom or assembly use in the schools.

* 252. **Koelle, Sylvester P.** A study of adjectives and pictures found in motion-picture advertising and of criticisms of motion pictures. Master's, 1932. Penn. State. 56 p. ms.

A study was made of the adjectives used in motion-picture advertisements, and of the pictures found in the advertisements, as they apply to the social value of motion pictures. Criticisms published in the newspapers and current magazines were also studied. Daily and Sunday newspapers, motion picture magazines, and producer's and director's annuals were analyzed, and the adjectives used to describe the pictures were tabulated and treated statistically. It was found that there are motion pictures for all types of persons, and that the criticisms seem to favor the motion-picture industry.

253. **Mehlman, Solomon.** A study of visual aids in elementary school history textbooks with standards for the evaluation of the aids. Master's, 1932. Coll. of the City of N.Y. 64 p. ms.

The visual aids studied were pictures (drawings, photographs, and reproduced paintings), cartoons, graphs, diagrams, maps, charts, tables, and the guides for the use of these aids. A set of criteria and standards was constructed.

254. **Morgan, Grace Myrtle.** The efficacy of the use of the lantern slides in teaching English composition as compared with the laboratory method. Master's, 1932. Denver. 52 p. ms.

An experiment conducted in two sections of the 9B English classes in Cole junior high school of Denver suggests that the use of lantern slides opens up a new approach to the problem of evaluating and grading original compositions, and enlists the interest of the group cooperatively.

255 **Mount, James Nathaniel.** The learning value of motion pictures in high-school physics as compared to the use of supplemental textbooks. Master's, 1931. Washington. 74 p. ms.

Studies two classes of high-school physics (24 in each class). Findings: 69 chances in 100 that motion pictures are superior as a teaching device to the use of supplemental texts

256 **Rogers, Ralph Winfred.** Visual aids as a means of making the subject of woodwork, in the secondary schools, more intelligent. Master's, 1932. Oklahoma A. and M. Coll.

257. **Rulon, Phillip J.** An experimental study of the value of talking films as an instrument of instruction Harvard university, Cambridge, Mass. [1932.]

258. **Sarvay, Laura Ann.** The available materials for picture study in the elementary grades. Master's, 1932. Peabody. 188 p. ms.

The pictures listed were chosen from the 18 sets of drawing books, manuals on picture study, and picture study courses now in use in the United States.

259. **Semsch, *Sister* M. A.** Analysis of visual aids found in modern history textbooks. Master's, 1932. Iowa. 147 p. ms.

* 260. **Terry, Laura Grace.** Types of children's responses to the Yale chronicles of America photoplays Master's, 1932. New York. 147 p. ms.

Junior high school children of the seventh and eighth grades are more interested in people as they are featured upon the screen than in any other type of response.

261. **Young, William H.** An analysis of the visual aids found in sixth grade European background texts. Master's, 1932. Iowa. 66 p. ms.

EDUCATIONAL PSYCHOLOGY

262. **Bayroff, Abram Gustavus.** Effect of varying and stable environments on behavior in the direction test box. Doctor's, 1931. North Carolina.

263. **Bedell, Ralph C.** The relationship between ability to recall and the ability to infer in specific learning situations. Doctor's, 1932. Missouri.

264. **Bell Anita I.** Experimental study of the relation between variability and learning. Master's, 1932. Columbia.

265. **Carpenter, Edwin Kenneth,** An experimental study of interrupted response in animal learning. Master's, 1931. Brown.

266. **Cattell Psyche.** Do the Stanford-Binet IQ's of superior boys and girls tend to decrease or increase with age? Harvard university, Cambridge, Mass. [1932.]

267. **Dunlap, Knight.** Habits, their making and unmaking. New York City, Liveright, inc., 1932. 326 p.

The study of the interrelation of the processes of learning and unlearning, of habit making and habit breaking is based on individual cases treated at Johns Hopkins uni-

versity It discusses the problems of habit and learning, fundamental principles of learning; voluntary and involuntary action, physiological theories of learning; the process of learning, conditions of efficient learning; retaining, recalling, and relearning; remembering and forgetting; personal and social adjustment; the breaking of specific bad habits; habits of emotional response; and learning ability and intelligence.

268 **Eurich, Alvin C.** A comprehensive examination in educational psychology. Minneapolis, University of Minnesota, 1932. 77 p. ms.

The report describes the manner in which two forms were prepared, the evaluation of the individual items, and the process of constructing shorter forms that are highly reliable. The need now is to standardize the shorter forms on larger groups of graduate students.

* 269. **Kemp, Edward L.** The content of educational psychology as evaluated and determined by city superintendents and supervisors in the United States on the basis of the observed professional needs of their teachers. Doctor's, 1932. New York. 110 p. ms.

Content check lists were sent to the 610 cities with a population of 15,000 or more in the United States The study is based on the 120 usable returns of the check list, and on 120 check lists filled out by teachers who were taking courses at New York University. The evaluations of the supervisors were generally more reliable than those of the teachers; the supervisors and teachers were more in agreement as to the relative importance of the content items than in disagreement; the items rated as of major importance are those which bear a relationship to the skill and insight of the teacher in his work and in his grasp of the subject; results dispute the importance of a number of items conventionally dealt with at length, and attach high value to a number of items commonly referred to in passing.

270. **Kuhn, Earl R.** Relationship between family size and achievement in learning. Master's, 1932. Stanford.

271. **Lehman, Adin Floyd.** A study of the effect of length, practice, and degree of learning upon the reliability of nonsense syllable scores. Master's, 1932. Kans. St. T. C., Emporia. 37 p. ms.

272. **Maul, Ruth Berg.** An investigation of the relation between age and the ability to memorize and retain meaningful and nonsense material. Master's, 1932. Kans. St. T. C., Emporia. 45 p. ms.

* 273. **Roberts, Earl F.** Survey of practices in the administration of the first course in educational psychology in teacher-training institutions in the United States. Doctor's, 1931. New York. 114 p. ms.

Data were secured from replies to a questionnaire received from 226 normal schools, teachers colleges, and schools or departments of education in colleges and universities. The first course is taught in the department of education more often than in all of the other departments combined in teachers colleges and schools of education; it tends to be offered later in the longer curricula than in the shorter curricula; introduction to education is the favored prerequisite in normal schools, and general psychology is the most commonly required prerequisite in teachers colleges and schools of education; the first course is handled mainly by class discussion, lecture, and question and answer methods.

274. **Schwarzbek, William C.** The effect of four types of progressive changes in inter-cylic rest periods on pursuitmeter learning. Master's, 1931. Ohio 56 p. ms.

Attempts to clarify the effect of distribution of practice on the acquisition of a skill (motor skill). In this study the length of the rest periods is either lengthened or shortened progressively. Findings: The best conditions for pursuitmeter learning are those in which the intercyclic rest periods are progressively decreased in length from 9 minutes at the beginning to 1 minute at the end, i.e., after about 35 practice periods each of 4 minutes duration. Those conditions were poorest in which the inter-cyclic rest was progressively increased from no rest to 9 minutes rest.

CHILD STUDY

275. **Allan, Nan Mitchell.** An analysis of behavior problems encountered in a traveling child guidance clinic. Master's, 1932. Southern California.

276 **Berry, Maggie.** A nutrition study of children of preschool age in Shelby county, Tenn. Master's, 1932. Peabody. 44 p. ms.

A study was made of the food and health habits, nutrition needs, and general well-being of rural white children from 1 to 6 years of age in Shelby county, Tenn.

277. **Chase, Lucile.** Motivation of young children. An experimental study of the influence of certain types of external incentives upon the performance of a task. Iowa City, University of Iowa, 1932. 119 p. (University of Iowa studies. First series no. 223 Studies in child welfare, vol. 5, no. 3, March 15, 1932.)

This study is an inquiry into the nature of certain incentives or types of motivation with reference to young children. Experimental work in this problem is handicapped by the number of variables to be brought under control and by a lack of suitable apparatus for securing quantitative data This study presents a sampling of 259 children ranging in age from 2 to 8 years.

278. **Fisher, Mary S.** Language patterns of preschool children. Doctor's, 1932. T. C., Col. Univ.

Aims to develop an objective technique for analysis of language records of preschool children showing social implications and personality differences which will reveal developmental patterns for gaining linguistic control. Data were secured from stenographic records of 9 hours of spontaneous speech of 72 preschool children, 37 girls and 35 boys, from 22 to 62 months, in the nursery school of the Child development institute of Columbia university, from September 1928 to June 1930. Patterns of speech reveal psychological data of significance; the use of structurally complete sentences increases with age up to the fourth year; there is a positive relation between the complexity of the sentence and the intelligence of the child; girls show a superiority over boys in all items.

279. **Fitz-Simons. Marian J.** Parent-child relationships as shown in clinical case studies. Doctor's, 1932. T. C. Col. Univ.

Describes the development of a technique by which about 100 cases of the emotional attitudes of the parent toward his child were classified.

283. **Hangliter, Ethel L.** A comparison of expressive behavior responses to stories and verse in children 2 to 6 years old. Pasadena, Calif., Whittier college, 1932. 47 p.

Studies nursery school and kindergarten children at Broadoaks. Findings: Both prose and poetry are happily received by children of nursery school age.

284. **Haven, Mary Estelle.** The personality traits of children, one of whose parents has been diagnosed as general paretic. Master's, 1932. Catholic Univ.

285. **Hayes, Marion Perrin.** The personality traits of children, one of whose parents has been diagnosed as maniac depressive. Master's, 1932. Catholic Univ.

286. **Henderson, Louise.** Effects of competition on the acquisition of a motor skill by young children. Master's, 1931. American Univ. 58 p. ms.

287. **Hicks, R. W.** A study of the behavior of children in learning to open a problem box. Master's, 1932. Illinois. 125 p. ms.

288. **Hildreth, Gertrude.** The success of young children in number and letter construction. Child development, 3: 1–14, March 1932. (Reprinted.)

A learning study of young children over a 3-year period indicating progress in ability to make numbers and letters.

289. **Hoke, Hazel.** A study of child life and out-of-school education in Kansas. Master's, 1932. Kans St. Coll.

290. **Jenkins, Felisa.** A critical study of the diets of preschool children in their homes; Group I—meals at family table. Group II—meals alone or at separate table. Master's, 1932. Mills. 62 p. ms.

291. **Jersild, A. T.,** *and* **Bienstock, S. F.** The influence of training on the vocal ability of 3-year-old children. Child development, 2: 272–91, December 1931.

Tests were administered to 53 3-year-old children to find their ability to sing tones and intervals. Intensive training over a period of 7 months was given to 18 children. Records were kept of the content and quantity of the children's spontaneous singing The results deal with the influence of training, individual differences, correlation between the vocal ranges of parents and children, tones and intervals most readily sung by children, and the educational implications of the findings.

292. ——— *and* **Markey, F. M.** Children's wishes, fears, dreams, daydreams, ambitions, pleasant and unpleasant memories, likes and dislikes: a study by the interview method of 400 children aged 5 to 12. New York City, Teachers college, Columbia university, 1932. 185 p.

293. ——— *and others.* A study of the constancy of certain behavior patterns in young children. American journal of psychology, 45: 125–29, January 1933.

The study deals with the predictive value of measurements of personality and social behavior in young children. The subjects were 12 kindergarten children who, during the two previous years, had been studied while attending a nursery school.

294. ——— ——— Training and growth in the development of children: A study of the relative influence of learning and maturation. New York City, Teachers college, Columbia university, 1932. 84 p. (Child development monographs, no. 10.)

More than 200 children, ranging in age from 2 to 11 years, were studied by the equivalent group method, to find the degree to which a child's capacity can be influenced by special training as compared with the influence of normal growth. Two mental, two musical, and four motor performances were used. A study was made of the influence of practice on individual differences, the relation between intelligence and the effect of practice, the improvability of motor as compared with mental capacities.

308. **Yates, Ida M.** Concepts and attitudes of children concerning slander and freedom of speech. Doctor's, 1932. Iowa. 549 p. ms. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

Upon investigation of the degree to which ethical ideas of pupils of various grades have developed in regard to slander and freedom of speech, results show that serious misconceptions exist as to malice and tale-bearing and the desirability of control of slanderous speech by law. The data indicate that children are more in agreement with court decisions than are prospective teachers; and that many children are not now developing concepts towards slander and free speech approved by society, and that specific education in this field is needed.

TESTS AND TESTING

PSYCHOLOGICAL TESTS

315. Atkins, Ruth Ellen. The measurement of the intelligence of young children by an object-fitting test. Minneapolis, University of Minnesota press, 1931. 89 p. (Institute of child welfare monograph series no. 5.)

Part 1 describes the development and standardization of the test; part 2 consists of a manual for the administration of the test.

* 316. Beck, Samuel J. The Rorschach test as applied to a feeble-minded group. Doctor's [1931] Columbia. New York City, Columbia university, 1932. 84 p. (Archives of psychology, no. 136.)

The Rorschach "Psychodiagnostik" test, consisting of 10 symmetrical ink-blots, was given to 87 feeble-minded children in Randall's Island, New York City. The findings in response patterns of 80 are reported in the study.

317. Bryan, Willard C. A study of the correspondence of pupils' ability to achieve as measured by group intelligence tests, and success as measured by teachers' marks. Master's, 1932. Ohio. 58 p. ms.

An investigation was made of the correlations between teachers' marks and intelligence quotients in four high schools in the city of Cleveland. Two academic, one commercial, and one technical high school were studied. Lower coefficients of correlation were found in practically all subjects in the technical school than in the other three.

318. Cattell, Psyche. Constant changes in the Stanford-Binet IQ. Journal of educational psychology, 22: 544–50, October 1931.

A study of the changes in IQ that take place after different periods of time and at different IQ levels. A tendency for the high to gain and the low to lose was noted.

319. ——— Why Otis' IQ cannot be equivalent to the Stanford-Binet IQ. Journal of educational psychology, 22: 599–603, November 1931.

The curves of distribution of Stanford-Binet IQ's of unselected and gifted children are contrasted with the greatest possible range of Otis IQ's. The conclusion drawn is that the Otis IQ of the gifted and backward child cannot be equivalent to the Stanford-Binet IQ.

320. Conrad, Loyal Richard. The evaluating of four techniques used to select a vocabulary as a test of mental age. Doctor's, 1931. Michigan. 85 p. (Abstracts of dissertations and theses in education, 1917–1931, p. 66–67.)

Studies 1,200 cases ranging in mental age from 6 to 14 who had IQ's between 90 and 110 on the Stanford-Binet test. Curve fitting, weighted words, P. E. difficulty and representative sampling were used. Data indicate that the weighted word method is best for selecting a vocabulary to be used as a test of mental age, other things being equal.

321. **Cramlet, Ross C.** A comparison of junior and senior high school students based on results of intelligence tests, mechanical aptitude tests, fundamental tests in woodwork and mechanical drawing. Master's [1932], Iowa St Coll. 175 p. ms.

322. **DeAngelis, Louis.** A study of the Bernreuter test with psychiatric cases. Master's, 1932. Columbia.

*323 **DuBois, Philip Hunter.** A speed factor in mental tests. Doctor's, 1932. Columbia. New York City, Columbia university, 1932. 39 p. (Archives of psychology, no 141.)

Attempts to discover a common factor of mental speed on a single level, and that a low level, of difficulty. Records of 139 male subjects in arithmetic reasoning test; a vocabulary test, two batteries of five tests designed to reflect differences in speed; Minnesota paper form board tests, and test 3 of the Haggerty reading examination, Sigma 3, form A were used.

324. **Durbin, Virginia O.** The uses of mental testing at the University of Kentucky. Master's, [1931.] Kentucky.

*325. **Egan, Eula Pearl.** The effect of fore-exercises on test reliability. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1932. 37 p (Contribution to education, no. 98.)

Attempts to discover whether fore-exercises increase or lower the reliability coefficients of the National intelligence tests, the Schorling-Sanford achievement test in plane geometry, and a ninth grade mathematics test. Scale A, forms 1 and 2, and Scale B, forms 1 and 2 of the National intelligence tests were given to two groups of children in the fifth, sixth, and seventh grades of the Florence, Ala., school system. Data indicate that fore-exercises do not have a significant effect on test reliability coefficients

326. **Fee, Mary.** Comparative discrimination and validity of five group mental tests Master's, 1932. Kansas.

327. **Ferneau, Lelah.** Alternate tests for Stanford-Binet. Master's, 1932. Ohio. 50 p. ms.

The purpose of the study was the standardization of tests to use in place of the Stanford-Binet.

* 328. **Ford, Frederick Arthur.** The ratio of achievement to ability as found among fifth-grade pupils. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 61 p. (Contribution to education, no. 94.)

Deals with the adjustment of the misfit school to the child so that the work offered him will more nearly fit his particular needs and capacities. The Otis self-administering tests of mental ability and the Detroit alpha intelligence test were given to the pupils in 27 teaching units of the fifth grades of 23 representative schools of Louisiana. Data indicate that the greater the intelligence of the fifth grade pupils, the greater is the net gain in scores made on history and arithmetic tests; and the greater the intelligence of fifth grade pupils, the less is the relative net gain in scores made on history and arithmetic tests.

329. **Harris, June.** An analysis of logical memory tests in terms of vocabulary and rote memory. Master's, 1932. Columbia.

* 330. **Jorgensen, Christopher.** An analysis of certa n psychological tests by the Spearman factor method Doctor's, 1932. T. C. Col. Univ. London, Eng., E. A. Gold and co., 1932. 70 p.

The army alpha (1925 revision); Otis (for business establishments); teaching aptitude (George Washington series); examination in clerical work (Thurstone); technical information (Thurstone); test for mechanical ability (MacQuarrie); A. C. E. phychological examination were analyzed by the Spearman factor method to interpret their composition and clarify their meaning for vocational guidance. They were given to approximately 160 college students and their values compared. Spearman methods gave fairly consistent results.

331 **Kilduff, Sybil Marie.** Correlation of intelligence quotients of siblings at the same chronological age level Master's, 1932. Mills. 48 p. ms.

332. **Masters, Harry V.,** *and* **Upshall, C. C.** A comparison of the value of the Thorndike and American council psychological examinations. Bellingham, Washington State normal school, 1932 3 p. ms.

Data were secured from 41 institutions of higher education in the Inland empire. Many more institutions are using the American council psychological examination than are using the Thorndike intelligence examination for high-school graduates. The American council psychological examination correlated more highly with average first quarter grades than scores from the Thorndike intelligence examination

* 333. **Peatman, John Gray.** A study of factors measured by the Thorndike intelligence examination for high-school graduates. Doctor's, 1931. Columbia. New York City, Columbia university, 1931. 56 p. (Archives of psychology, no. 128.)

Analyzes the Thorndike examination records of 568 male subjects, candidates for admission to Columbia college, taking the examination in June 1925. Data indicate that the common function measured by the examination might best be characterized as verbal ability plus certain factors dependent upon the testing situation.

334. **Pintner, Rudolph.** The influence of language background on intelligence tests. Journal of social psychology, 3 : 235–40, May 1932.

Comparison of two types of tests, non-verbal and non-language, with English and non-English-speaking children. Findings : Language background of child influences mental rating on test.

335. ——— Intelligence tests. Psychological bulletin, 29 : 93–119, February 1932.

A summary of intelligence testing for 1930—bibliography of 179 articles.

347. Kulp, Daniel H., *II.* Concepts in attitude tests. New York City, Teachers college, Columbia university, 1932. 15 p. ms.

An experimental study to distinguish between belief, attitude, judgment, and fact items by utilizing judgments of professional sociologists, and testing students. Findings: "Attitude" and "fact" can be distinguished; "belief" and "judgment" items do not reliably differentiate markings.

348. ——— Form of statements in attitude tests. New York City, Teachers college, Columbia university, 1931. 7 p. ms.

An experiment to test the validity, using varying forms in "attitude" tests—attitudes, beliefs, judgments, and opinions. Findings: Variations in forms produce variations in markings, but they tend to be more alike than they tend to be different. Care in formulation is essential, depending on type of item

349. ——— Prestige, involving single-experience attitude changes and their permanency. New York City, Teachers college, Columbia university, 1932. 25 p. ms.

An experimental study in which 343 students in Teachers college, with experimental and control sections, used Harper's test "A social study." Findings: Can shift attitudes reliably on half the propositions which were originally marked conservatively by manipulating suggestion and prestige; prestige of educators is greatest among these students of education, changes toward liberalism under suggestion were permanent over a 2-month period; only a 10 percent loss to liberalism by a change to conservatism.

355. **Timothy Arthur C.** Study of the sense of humor test as a measure of attitude. Master's, 1931. Stanford.

* 356 **Welles, Henry Hunter, *3rd.*** The measurement of certain aspects of personality among hard-of-hearing adults. Doctor's, 1932. T. C, Col. Univ. New York City, Teachers college, Columbia university, 1932. 78 p. (Contributions to education, no. 545.)

Answers to a questionnaire were received from 225 hard-of-hearing adults, and from 148 hearing adults who served as a control group. The experimental and control groups were compared for age, education, occupational status on the Barr scale, and salary. Data indicate that the hearing defect seems to be associated with a larger number of symptoms of personality maladjustment for the hard-of-hearing in comparison with their hearing friends on three measures of personality. Individual men and women who are hard-of-hearing surmount the handicap and show fewer symptoms of maladjustment than do their hearing friends.

EDUCATIONAL TESTS

357. **Adams, Henry P.** A study to determine the effectiveness of performance tests as a teaching device. Master's, 1932. Ohio. 133 p. ms

Performance tests are an effective means of teaching drawing, of aiding in the mastery of information, and in applying technical drawing information.

358. **Bassett, Dorothy Mayhew.** The army designs test; a study of three scoring systems applied to public-school children of ages 5–15. Master's, 1932. Columbia.

359. **Beck, Roland Lycurgus.** The reliability and validity of a natural test in English composition for high-school seniors and college freshmen Doctor's, 1932. Oklahoma. 173 p. ms.

360. **Bell, George Giltner.** An evaluation of a test technique in spelling Master's, 1932. Iowa. 50 p. ms.

361. **Bibbins, Arthur Sands.** The relationship between scholastic achievements and general intelligence as measured in the classes of 1930 and 1931 of the Darien, Conn., high school. Master's, 1931. Vermont.

362. **Blackwell, Raymond Earl.** The development of an achievement test in high-school journalism. Master's, 1932. Indiana. 61 p. ms.

363. **Burns, Cecil J.** A test for high-school economics. Master's, 1932. Iowa. 99 p. ms.

364. **Byers, Walter E.** A test of "athletic intelligence." Master's, 1932. Iowa.

365. **Coll, Marcella.** The value of certain tests in the prediction of success in high school. Master's, 1932. Chicago. 30 p. ms.

Four semesters' school marks of ninth-grade pupils entering the University of Chicago high school were correlated with their scores on a battery of mental and achievement tests including new Stanford achievement test.

366. **Couey, Fred.** A test of reading discrimination. Master's, 1932 Colo. St. T. C.

367. **Darling, Elmer C.** Relationship of freshman grades to scores on the state academic tests. Master's, 1932. Iowa. 48 p. ms.

368. **Denny, Emerson C.** An investigation of the defects and weaknesses in certain objective test items in American history. Doctor's, 1932. Iowa. 592 p. ms. (Abstract in: University of Iowa studies. Series on aims and progress of research, no 38, new series no. 248. 2 p.)

Describes the problems involved in determining the response of pupils in a test in American history; the method of administering five tests to groups of American history classes in grades 11 and 12.

369 **Devney, Anna Marie.** Construction and evaluation of Western Reserve University—Cleveland unit tests in American history and civics. Master's, 1932. Western Reserve. 151 p. ms.

370. **Diamond, L. N.** A critical examination of objective tests in high-school science. Master's, 1932. Cornell. 121 p. ms.

Examines available objective tests in general science and biology with a view to their scientific validity and accuracy.

371. **Dudley, George H. T.** Construction of objective tests in American history (1789–1927). Master's, 1932. Coll. of the City of N. Y. 208 p. ms

Studies the reliability and validity of the more frequently used new-type question forms. Data indicate that validity and reliability vary with the form of the test. The various test forms studied are not equally suited for testing different types of content.

372. **Eley, Theo. R.** Diagnostic testing and remedial instruction. Master's, 1932. Ohio. 100 p ms.

373. **Emerson, Earle E.** Comparative educational achievement of pupils in Wing and Central schools of the union graded type of district. Master's, 1931. Oklahoma A. and M. Coll.

374. **Eurich, Alvin C.** A method for measuring retention in reading. Journal of educational research, 24: 202–208, October 1931.

Findings: The test constructed is evaluated in terms of reliability, validity, etc.

375. **Featherston, J. Leroy.** A study of the effect of cramming on an achievement test in history. Master's, 1932. Iowa. 64 p. ms.

376. **Gard, Paul Dombey.** New procedures in the administration of standardized tests. Master's, 1932. Kentucky.

377. **Green, Helen J.** Qualitative method for scoring the vocabulary test of the new revision of the Stanford-Binet. Master's, 1931. Stanford.

* 378. **Greene, James Edward.** The relative reliability and validity of rational learning tests as affected by length of test and order of administration. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1932. 36 p. (Contribution to education, no. 95.)

A battery of 15 validating tests selected to measure a variety of higher mental functions were given to 90 University of Georgia students. Data indicate that prior tests are slightly more reliable than subsequent tests, and that the long tests are markedly more reliable than the short tests Small amounts of early practice tend to produce a relatively greater gain in raw score performance than do larger amounts of practice later.

379. **Haag, Albert Theodore, *jr.*** Construction and analysis of tests in horticulture. Master's, 1932. Western Reserve. 195 p. ms.

380. **Hildreth, Gertrude.** Metropolitan achievement tests, Primary I and Primary II. N.Y. edition. Yonkers-on-Hudson, N.Y., World book company, 1931.

Tests in reading, arithmetic, spelling, language, vocabulary, grades 1–3.

381. ——— Metropolitan readiness test. Experimental edition. Yonkers-on-Hudson, N. Y., World book company, 1932.

Tests in perception, numbers, vocabulary, information. Grades kindergarten and first.

382 **Holroyd, Florence E.** A supervisory project in educational measurements carried out by the division of rural education in Cowley county, 1931–32. Pittsburg, Kansas State teachers college, 1932. 71 p. (Kansas state teachers college. Educational monograph no. 1.)

In order to improve the arithmetic work of the pupils in Cowley county, an extension course in educational measurements was worked out. Twenty-three teachers at Kansas State teachers college enrolled for the course. A testing program that included grades 2 to 8 was carried on in the schools. The new Stanford arithmetic test, form V was given to 321 pupils in the schools whose teachers were enrolled in the extension class. Papers were scored by the members of the educational measurements class, and class records were kept for each school. There was evidence that the pupils gained by improvement of arithmetic instruction, teachers became acquainted with many of the leading achievement and diagnostic tests in arithmetic, and gained in the knowledge of the technique of administering and scoring standardized tests.

383. **Houston, John E.** A standardized test for the first semester of world history. Master's, 1931. Ind. St. T. C. 70 p. ms. (Abstract in Indiana State Teachers College. Teachers college journal, 3 : 282, July 1932.)

* 384. **Howell, Edna Vesta.** A progressive design test: a test requiring the selection of new elements added asymmetrically in building a complex design. Doctor's, 1932. Indiana. 55 p. ms.

Describes the development of the progressive design test, and describes the test in its final form. The test was given to 2,193 children in the public schools of Bloomington, Ind. There were no significant sex differences shown by the test results; there was a regular increase in ability to the age of 12. The results of the test may be taken as an indication of the child's ability to progress in school.

385. **Hutcheon, Elsie Mae.** A statistical analysis of the Sones-Harry high-school achievement test. Master's, 1932. Western Reserve. 68 p. ms.

386. **Jaffe, Louis.** The construction of a new-type history test employing vitalizing questions. Master's, 1932 Coll. of the City of N. Y 133 p ms.

387. **Johns, R. L.,** *and* **Wingard,** *Mrs.* **R. E.** Unit tests for sixth grade history. Auburn, Alabama polytechnic institute, 1932.

388. **Jones, Lloyd Llewellyn.** Analysis of business, office and clerical tests. Master's, 1932. Western Reserve. 172 p. ms.

389 **Keeler, Louis W.** Results of the testing program in the Grass Lake public school. Ann Arbor, University of Michigan, 1931. 38 p. (Bureau of educational reference and research, bulletin no. 143, December 15, 1931.)

The testing program was administered in March 1931 to determine the existing levels of achievement in various subjects in the different grades in the school and to compare these with standard levels; to compare the testing results with results obtained from a previous program administered in 1930. Mental, reading, spelling, arithmetic, and language tests were given.

390. **Kirkland, Ruth Hazel.** A study of the validity of the Long Beach eighth grade general science tests. Master's, 1932. Southern California.

391. **Knuth, William Edward.** The construction and validation of music tests designed to measure certain aspects of sightreading. Doctor's, 1932. California. 390 p. ms. (Abstract, 11 p. ms.)

The purpose of the study was to devise tests that would measure the pupils ability in the silent recognition and comprehension of musical ideas in their notation. The testing was accomplished by measuring complete musical patterns rather than the dissected elements of music.

392 **Kulp, Daniel H.** *II.* The role of purpose in scholastic achievement. New York City, Teachers college, Columbia university, 1932 18 p. ms.

Describes an experimental study of 75 students in clinical sociology at Teachers college

393 **Leahey, Lucille Marie.** Analysis of mathematics tests Master's, 1932. Western Reserve. 112 p. ms.

394. **Lee, J. Murray.** Testing programs for secondary schools. Doctor's, 1932. T. C., Col. Univ.

An investigation of the testing practices in secondary schools, the findings to be a guide to administrators in evaluating testing programs and show where emphasis should be placed Study made of 493 check lists from secondary school principals representing schools with 47 to 6,000 pupils from communities of fewer than 1,000 to New York City, and schools in each of the 48 states; in 70 schools an intensive study was made Testing practices of 1,600 teachers were tried Among tests given, 84 percent were intelligence tests; 84 percent standardized achievement tests, and 10 percent, essay and objective tests Results showed weaknesses in the testing programs; a relation between the size of city and amount of testing; size of city is more important in determining amount of testing than is size of school.

395. **Lucas, Ina Grace.** Achievement tests in ancient and medieval history. Master's, 1932. Colo. St. T. C.

396 **Masters, Harry V.,** *and* **Upshall, C. C** Preliminary report of the reliability of tests and final grades given by instructors. Bellingham, Washington State normal school, 1932. 3 p. ms.

Studies the reliabilities of 37 different objective tests given by 25 different instructors in 35 different classes.

397. **Miller, Rose S.** The evaluation of prognostic tests in algebra. Master's, 1932. Iowa. 61 p. ms.

398. **Miner, Glen B.** Measurement of achievement in Spanish. Master's, 1931. Stanford.

400. **Odell, C. W.** Still more about scoring rearrangement or continuity tests. School review, 39: 542–46, September 1931.

401. **Parker, Maryalys.** A study of the work histories of girls who have made low scores on the Toops' I. E. R. Girls' mechanical assembly test. Master's, 1932. Columbia.

402. **Peterson, Reynold A.** Analysis of data secured from Iowa academic test in general science. Master's, 1932. Iowa. 80 p. ms.

403. **Pope, Virginia Hortense.** Construction and evaluation of Western Reserve university—Cleveland unit tests in home economics. Master's, 1932. Western Reserve. 104 p. ms.

404. **Pryor, R. R.** Analysis of data secured from the Iowa academic tests in physics. Master's, 1932. Iowa. 64 p. ms.

405. **Rinsland, Henry Daniel.** Norms for the Tracy short answer tests for Oklahoma, 1931–1933. Kansas City, Mo., Samuel Dodsworth stationary co., 1932.

Norms and scores are based on tests given to more than 50,000 pupils.

406. **Ritchie, Harold.** Administrative and supervisory uses of achievement tests. Master's, 1932. Rutgers.

407 **Rose, Oscar B.** A geometry intelligence test. Master's, 1932. Indiana. 85 p. ms.

408. **Ross, Russell C.** An analysis of the data secured from the Iowa academic test in world history. Master's, 1932. Iowa. 89 p. ms.

409. **Schell, M. M.** Analysis of the 1932 every pupil test in plane geometry. Master's, 1932. Iowa. 89 p. ms.

410 **Scholten, Peter.** A comparison of the content of ninth year tests in general mathematics and algebra. Master's, 1932. Iowa. 91 p. ms.

411. **Seyfarth, V. Elise.** Block test; a critical analysis of scores made on the College of the City of New York block test when given to a group of average children. Master's 1932. Columbia.

412. **Smith, Clinton M.** A standardized test for the second semester of world history. Master's, 1932. Ind. St. T. C. 70 p. ms.

413. **Smith, Grace M.** The reliability of the Cleveland survey arithmetic tests. Master's, 1932. Chicago. 75 p. ms.

Analysis of results of tests given to 1,200 pupils in Enid, Okla., schools, January 1931 The Cleveland survey arithmetic test was found to be most reliable in the eighth grade and least reliable in grades 3 and 4.

414. **Symonds, Percival M.** The comparative reliabilities of standardized and teacher-made achievement tests when given in the middle of the year. Journal of educational research, 25: 127–28, February 1932.

415. ——— The testing program for the high school. School review, 40: 97–108, February 1932.

416. **Tidman, R. J.** An analysis of the data secured from the every-pupil test in economics, 1932. Master's, 1932. Iowa. 78 p. ms.

417. **Upshall, C. C., *and* Masters, Harry V.** Report of the results of the Gates primary reading tests, types 1, 2 and 3, given to the first grades of Bellingham during May 1932. Bellingham, Washington State normal school, 1932. 14 p. ms.

All first grade children in the city were tested These same children had been given the Kuhlmann-Anderson intelligence test during the previous October A comparison of mental age and reading progress was made possible. Findings: The average reading ability of the first grade children in Bellingham is the same as the norms given in the test manual. The mental age at which the higher percentage learned to read satisfactorily was 6 years and 6 months. The children 8 years of age made the poorest progress.

418. ——— ——— Results of the tests given October 1931 to the first, third and sixth grades of the Bellingham city school. Bellingham, Washington State normal school, 1932. 11 p. ms.

All pupils in the first, third, and sixth grades were given standardized tests, the Kuhlmann-Anderson in the first and the Stanford achievement in the third and sixth Findings: Twenty percent of the pupils in the first grade have mental ages below 6 years and no months. The children of the sixth grade in Bellingham are markedly superior to the national norms in geography. Certain of the schools had low achievement in each of the tests.

419. **Walters, Fred C.** Construction and standardization of tests for Puerto Rico. University of Puerto Rico, Rio Piedras, 1931. 50 p.

Describes an achievement test in Spanish for elementary grades, which is suitable for use in all Spanish-speaking countries of Latin America.

420. **Watson, J. H.** A study of the multiple choice test in elementary algebra. Master's, 1932. Iowa. 39 p. ms.

421. **Whitten, Lera Gladys.** The factors of size, of position, and of methods of manipulation in the solution of form boards by young children. Master's, 1931. Iowa St. Coll.

422. **Wilcox, Myron J.** The effect of a corrected inventory test. Doctor's, 1932. Iowa. 87 p. ms. (Abstract in: University of Iowa studies, Series on aims and progress of research, no. 38. New series no. 248, 1 p.)

Discusses the value of the pre-test, with special reference to the corrected pre-test in stimulating mastery of content material Results of an experiment with four groups of sixth-grade pupils indicate that the correct pre-test was an excellent method by which to stimulate study of facts and principles as tested by the pre-test.

423. **Wilson, Verne Edmund.** A contribution to the scientific prognosis of scholastic achievement. Master's, 1931. Florida.

424. **Winkelplech, A. G.** Test items for American government. Master's, 1932. Iowa. 101 p. ms.

425. **Wise, Genevieve.** An estimate of the diagnostic value of the 1931 Iowa academic test in English correctness. Master's, 1932. Iowa.

426. **Woody, Clifford.** Report of testing program October 1931. Ann Arbor, University of Michigan, 1931. 14 p. ms. (University of Michigan bulletin no. 142. November 30, 1931.)

Gives the results of the testing program of the elementary schools of Michigan during the second week of October 1931. The program consisted of the New Stanford achievement test, the Detroit word recognition test, and the Detroit reading test (test 1).

See also under Tests, in the index.

EDUCATIONAL RESEARCH

427. **Caldwell, Otis W.** School experimentation. The work of the Institute of school experimentation. New York City, Teachers college, Columbia university, 1931. Teachers college record, 33: 127–61, November 1931. (Reprinted.)

The study gives synopses of work supported by appointments to the Institute. The first group of studies relates to learning in the tool subjects; the second group to rural school curriculum and organization; the third to elements of character and attitudes; the fourth to secondary school science; the fifth to social and linguistic studies; and the sixth to miscellaneous publications.

428. **Chandler, Herbert E.** A selected list of annotated references dealing with the fields of educational information service, educational interpretation, educational publicity, school reporting, and public-school relations. Lawrence, University of Kansas, 1931. 57 p. ms.

The bibliography is divided into four sections: Periodical and bulletin material, book references, bibliographies in the field of educational publicity, and research studies.

429. **Chicago. University.** Annotated list of graduate theses and dissertations, the department of education, the University of Chicago, 1900–1931. Chicago, Ill. [1932]. 119 p.

430. **Columbia university.** University bibliography, 1931. New York City, 1931. 141 p.

431. **Englehart, Max D.** Problems and techniques of educational research, Doctor's, 1932. Illinois. 432 p. ms. (Abstract, 11 p.)

Data indicate that problems relative to the determination and appraisal of present conditions and practices in education, problems relative to educational measurement, to functional variation or cause and effect, to determination of values rank highest in the thinking of educationists.

432. **Indiana. University.** Abstracts of theses and dissertations in education approved in June and October 1931. Bloomington, Alpha chapter of Phi beta kappa, Indiana university, 1932. 46 p. (Indiana university. Bulletin 6, January 1932.)

433. **Indiana State teachers college.** Abstracts of unpublished masters' theses, Indiana State teachers college 1931 and 1932. Teachers college journal; 3:251–300, July 1932.

434. **Iowa. University.** Programs announcing candidates for higher degrees February, June, July and August, 1932. Iowa City, University of Iowa, 1932 [506 p.] (University of Iowa studies. New series, no. 248. Series on aims and progress of research, no. 38. April 1, 1933.)

435. **Johnson, Basil Orval.** A study of the methods of research, the techniques of collecting data, the statistical methods and procedures, and methods of presentation used in researches in education Master's, 1932. Ind. St. T. C. 45 p. ms.

436. **Kaler, James E.** Functions of research bureaus in 11 California school systems. Master's, 1931. Stanford.

437. **Michigan. University.** Abstracts of dissertations and theses in education, 1917–1931. Ann Arbor, University of Michigan, 1932. 135 p. (Bureau of educational reference and research. Monograph no. 1.)

438. **Monroe, Walter S.,** *and* **Engelhart, Max D.** A critical summary of research relating to the teaching of arithmetic. Urbana, University of Illinois, 1931. 115 p. (University of Illinois bulletin, vol. 29, no. 5, September 15, 1931. Bureau of educational research bulletin no. 58.)

Presents a summary and evaluation of the research relating to the instructional methods employed in teaching arithmetic in grades 1 to 8. Discusses methods of learning and teaching the fundamentals, methods of drill in the fundamentals; methods of teaching pupils to solve their verbal problems; methods of providing diagnosis and remedial treatment; methods of teaching the reading of arithmetical subject matter; and methods of motivating learning activity in arithmetic.

439. ——— *and* **Hamilton, T. T., *jr.*** Bibliography of bibliographies to January 1932—Supplement to bulletin no. 50. Urbana, Ill., University of Illinois, 1932. (University of Illinois bulletin, vol. 29, no. 43. Bureau of educational research bulletin, no. 61.)

440. **Morrow, Paul Reed,** *and* **Mishoff, Willard Oral.** A guide to thesis writing. Athens, Ga., McGregor company, 1932. 16 p. (Guide to reference series, no. 1.)

The manual deals with the format of the typewritten thesis or term paper.

441. **Ohio State university.** Abstracts of dissertations presented by candidates for the degree of doctor of philosophy at the December and March convocations, 1931–1932. The graduate school. Columbus, Ohio State university press, 1932. 256 p. (Abstracts of doctor's dissertations, no. 8.)

Contents: 1. Legislation affecting secondary education in Virginia, by C. H. Phippins, p. 2–23; 2. Athletic and physical education in Virginia colleges, by E. S Kiracofe, p. 24–36; 3. Teaching social science in secondary schools, by R. E. Swindler, p. 37–45

450. ——— Some research studies. University, University of Virginia, 1931. 71 p. (University of Virginia record, extension series, vol. 16, no. 4, October 1931. Secondary education in Virginia, no. 13.)

Contents: 1. A training procedure for teachers of English, based upon analyses of objectives, outcomes, and activities, by Edward Alvey, jr. p 8–17; 2. The high-school library and reading problem in the social studies, by R. E. Swindler, p 17–42; 3. Study of student publications in the white accredited secondary public schools in Virginia, by A C. Cooper, p. 43–61; 4. Freshman week in the American college, by M. L. Dellinger, p. 62–68; 5. A study of rural educational inequalities in 18 counties in Virginia, by R W. House, p. 69–71

451. **Weidemann, C. C.** Financing city bureaus of educational research. Nation's schools.

Data for the year 1930–31 were secured from 72 bureaus, relative to comparative total costs, salary and operation costs, and proposed budgetary divisions for the bureau. During 1930–1931 about $1,000,000 was spent for educational research. The bureaus justify themselves by increasing the efficiency of administration in city schools.

452. ——— Functions performed by the city bureau of educational research. Lincoln, University of Nebraska, 1932. 19 p. ms.

Gives a brief historical résumé of functions performed by city bureaus. These functions are performed by at least 45 per cent of the 77 bureaus reporting: achievement tests; mental tests; special studies; school surveys; instructional tests; training teachers in testing; curriculum and teaching problems; pupil adjustments; records and report forms; educational placement; experimental administrative problems; special classes; reference service and psychological clinic.

453. ——— The professional training of the director of the city bureau of educational research. Nation's schools.

Traces the present status of 72 directors of bureaus of research relative to such factors as sex, age, experience, degrees, education courses, research functions performed, salary, economic significance of doctorate degree for the directorship. Data indicate a need for a course of training on the college graduate level extending over a period of at least two or three years.

454. ——— The relative importance of functions performed by the city bureau of educational research. Lincoln, University of Nebraska, 1932. 18 p. ms.

Functions of major importance to all bureaus are: Achievement tests, mental tests, school service, pupil adjustment, curricular and teaching problems, and instructional tests; functions of minor importance to all bureaus save possibly the larger sized groups of cities are: Reference service and publicity service; functions of secondary importance to all bureaus are records and report forms; functions of varying importance to bureaus according to different population groups are. Educational and vocational guidance and placement, special classes, psychological clinic, special studies and experimental administrative problems, training of teachers in testing, and finance.

455. ——— The research centered school system. Nation's schools.

Traces the development of the bureau of educational research in city school systems. By means of charts, the study shows several different types of placement of the bureau in the plan of general organization of the school system. It lists the basic duties of the director.

456. ——— What functions should be performed by the city bureau of educational research? Lincoln, University of Nebraska, 1932. 23 p. ms.

Data indicate that 44 superintendents of schools would increase their present scheduled program for the bureau; 4 would make no change, and only 1 would dispense with the bureau. Data were secured from 59 bureaus.

457. Whitney, F. L. Methods in educational research. New York City, D. Appleton and company, 1931. 335 p.

This is a systematic treatment of the scientific attitude and methods in educational research.

468 **Ennis, *Mrs.* J. A.** Experimental study of reading in Sylvania school. Master's, 1932. Mercer. ms.

469. **Fertsch, Pauline.** An experimental study of the silent reading habits of blind children. Master's, 1932. Texas.

470. **Force, Thelma.** The relative difficulty of problems in the teaching of reading in grades 4 through 9. Master's, 1931. Minnesota. 74 p. ms.

471. **Fountain, Bessie.** Relation of speed and accuracy in reading and arithmetic. Master's, 1932. Peabody. 24 p. ms.

Attempts to determine the relation of speed to accuracy in reading and arithmetic by analyzing the results of an intelligence test, two arithmetic and two reading tests given to 25 fourth-grade children The relation between speed and accuracy in reading and arithmetic varies with individual subjects.

472. **Gunderson, Agnes.** Materials of a geographical nature contained in readers for the first three grades. Master's, 1932. Wyoming. 50 p. ms.

473 **Holland, B. F.** The relation of sentence structure to the silent reading process. Doctor's, 1931. Texas.

474. **Koepke, William Charles.** Pupil development through oral reading. Doctor's, 1931. Marquette.

* 475. **Lee, Dorris May.** The importance of reading for achieving in grades 4, 5, and 6. Doctor's, 1932. T C., Col Univ. New York City, Teachers college, Columbia university, 1933. 64 p.

A study to determine ways in which reading is related to achievement and to find the relationship of reading ability to the achieving index. Certain reading tests were given 204 pupils in the fourth, fifth, and sixth grades. It was found that the relationship of reading to the achieving index was higher in the fourth, lower in the fifth, and negligible in the sixth grade; the achieving index provides a means for measuring the difference between a pupil's ability and his achievement in relation to pupils of the same IQ level; the higher the IQ the lower the achieving difference, and the lower the IQ the higher the achieving difference.

476. **Lohman, Elsa.** Historical survey of methods and textbooks used in teaching beginning reading in the United States. Master's, 1931. George Washington. 79 p. ms.

477. **Madden, Margaret I.** A study of some of America's national shrines to be used as supplementary reading in the elementary grades. Master's, 1932. Kans St. T. C., Emporia. 92 p ms.

478. **Manley, Mary McKnight.** Effect of physical defects on first grade reading. Master's, 1932. Peabody. 56 p. ms.

479. **Maxey, Effie.** The effectiveness of training in specific reading skills as an aid to achievement in American history. Master's, 1932. Northwestern.

480. **Monroe, Marion.** Children who cannot read. An analysis of reading disabilities and the use of diagnostic tests in the instruction of retarded readers. Chicago, Ill., University of Chicago press, 1932. 205 p. (Behavior research fund monographs.)

A study was made of 415 children who have special reading defects that vary from mild retardation in reading to extreme disabilities, and the children were compared

with a control group of 101 school children. One group of reading-defect children was obtained from the routine examinations of the clinic of the Institute for juvenile research; the children of the second group were referred by parents, teachers, and school psychologists for a study of their reading difficulties; a third group was referred for a study of their reading by the psychologists and teachers of special schools and rooms for borderline and mentally defective children. A study was made of the results of remedial instruction in reading given to 235 children.

481. **Mulroy, Mary D.** The improvement of reading through an analysis of errors in oral reading. Master's, 1932. Chicago. 125 p. ms.

482. **Murphy, Paul G.** The role of the concept in reading ability. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 2 p.)

In comparing the concepts of 10 good readers with 10 poor readers as to characteristics involving reading ability it was apparent that from the point of view of organization, clarity, and accuracy, the concept plays an essential part in reading ability.

483. **Petteys, Grace Fern.** An analysis of the reading activities of secondary school pupils. Master's, 1932. Southern California.

484. **Sangren, Paul V., *and* Wilson, Mary C.** Instructional tests in reading. Bloomington, Ill., Public school publishing company, 1932. Grade 1—Form A, 24 p.; Grade 2—Form A, 24 p.; Grade 3, exp. ed., 24 p.; Grade 4, exp. ed., 24 p.

485. ——— ——— Teacher's handbook and manual of instructional tests in reading. Bloomington, Ill., Public school publishing company, 1932. Grade 1, Forms A and B, 24 p.; Grade 2, Forms A and B, 24 p.

486. **Smith, Blanche Bautzer.** An analysis of the current methods of teaching primary reading. Master's, 1932. Southern California.

487. **Smith, Clara Mildred.** Fourth grade experiment in oral vocabulary building. Master's, 1932. Peabody. 103 p. ms.

488. **Stafford, William Merritt.** A comparison of achievements of Westland and other schools in silent reading, arithmetic and language. Master's, 1932. Butler. 135 p. ms.

489. **Stanton, Frank Nicholas.** The influence of surface and tint of paper on the speed of reading. Master's, 1932. Ohio. 30 p. ms.

Research included six paper surfaces and tints used with 1,200 subjects Chapman-Cook speed of reading forms A and B were used. The speed of reading is increased from glossy-coated stock to dull-coated to antique stock; an addition of a tint of ivory also increases speed.

490. **Stockrahm, Roy L.** A tentative analysis of learning to read with a study of the reading ability of college freshmen. Bloomington, Indiana university, 1932. 64 p.

Analyzes the problem of learning to read in order to determine what all learners must do to master the art of adult reading; to learn by standard reading tests how well college freshmen read; and to determine how the best and poorest of the readers deal with the essential problems involved in effective reading Data indicate a great variation among college students in the ability to read and comprehend what they have read; there is little sex difference in the ability to read; there is great variation in ability to read or get facts accurately. Good readers have a much better method of reading than do poor readers.

525 **Burnham, Fred Raymond.** The grade placement of textbook instruction on the fundamental punctuation and capitalization skill. Master's, 1932. Iowa. 61 p. ms.

526. **Byrns, Bertha.** Creative writing Master's, 1932. Okla. A. and M. Coll.

527. **Cannon, Bessie B.** A proposed laboratory plan in English instruction for below-average children. Master's, 1932. Kansas.

528. **Charles, C. M.** Comparison of rural, small town, and city students in English. [1931.] Kentucky.

529. **Coleman, Opal.** Form and content of third grade children's creative writings. Master's, 1932. Peabody. 41 p. ms.

No marked difference was found in the interests of boys and girls; children with a high IQ show more varied interests than children with a low IQ. Children prefer to write about nature, children, and personal experiences.

* 530. **Driggs, H. Wayne.** Certain aspects of the out-of-school written vocabulary of boys and girls 12 to 15 years of age, inclusive. Doctor's, 1932. New York 152 p. ms.

A total of 288 letters from boys and girls, 12 to 15 years of age, was used to check with the first 1,000 words of the Thorndike word list in this vocabulary study. Approximately 85 percent of the words used in the letters fall within the first 500 words of the list. Boys have a better command of words than girls.

531. **Duell, M. W.** An analysis and evaluation of books on methods of teaching English. Master's, 1932. Illinois. 160 p. ms.

532 **Elliott, Elizabeth.** Phases of English taught in junior high schools. Master's, 1932. Texas.

533. **Eurich, Alvin C.** Homogeneous grouping for instruction in freshman English. Minneapolis, University of Minnesota, 1932. 48 p. ms.

In general, the achievement of the students in English followed the prediction based upon the various initial measures. The classification of the students could be made more accurately, however, if the fall quarter marks were used as the criterion. This scheme would necessitate some change in the present organization for instruction.

534. ——— A preliminary evaluation of the Inglis-Ginsberg English essentials test. Minneapolis, University of Minnesota, 1932 5 p. ms.

535. ——— Scholarship in freshman English of students classified for sub-freshman rhetoric. Minneapolis, University of Minnesota, 1932. 6 p. ms.

Shows that 8 of 15 students who were permitted to take freshman composition after being assigned to sub-freshman rhetoric passed the freshman course On all measures, however, the students ranked low.

*536. **Fellows, John Ernest.** The influence of theme reading and theme correction on eliminating technical errors in the written compositions of ninth grade pupils. Doctor's, 1931. Iowa. Iowa City, University of Iowa, 1932. 56 p. (University of Iowa studies. Studies in education, vol. 7, no. 1. New series no. 222, March 1, 1932)

Data indicate that theme correction as a weekly procedure in the teaching of ninth grade written composition seems highly questionable; this method, if practiced, is more effective in eliminating errors in punctuation and grammar than in correcting those of spelling and capitalization.

537. **Ford, Minnie Stringer.** Lower elementary English in the southern state courses of study. Master's, 1932. Peabody. 167 p. ms.

This is a study of 14 southern states. It was found that the courses of study disagree on what should be the minimum requirements in English for the first three grades.

560 Jenkins, Trixie. Intelligence and language ability of white and colored children. Master's, 1932. Peabody.

Intelligence and language tests were given to 37 white and 37 colored children to determine if there is a correlation between language ability and intelligence The study showed a positive correlation of 0.49 for white children and 0 42 for Negroes. It showed a slight racial difference in intelligence and language ability.

561. Johnson, Burgess. Good writing. An inquiry into the efficacy of the teaching of written composition in American colleges; and a search for the criteria of "good writing." Syracuse, N.Y., Syracuse university, 1932. 76 p.

Attempts to determine whether the colleges are training their students as effectively as possible in the skill of "good writing"; whether there is any obvious fault in the generally prevailing methods of training that might easily be corrected; and whether or not it is possible to determine any criteria of good writing that might be established as their objective. In 38 out of 39 letters from clergymen, doctors, lawyers, financiers, manufacturers, insurance executives, merchants, editors, authors, advertising experts, and leaders in social service and public affairs, the writers believe that the colleges have failed to train their students in "good writing." They indicate that the criteria of good writing are few in number, and the specific terms used are practically identical in meaning.

562. Kolb, Susanna Lotta. A survey of errors in English composition made by freshmen and sophomores during the year 1930–1931 at Agricultural and Mechanical college. Master's, 1932. Okla. A. and M. Coll.

563. La Brant, Lou. Certain language developments of children in grades 4 to 12, inclusive. Doctor's, 1932. Northwestern.

564. Laughlin, Frances A. Verb usage in the oral language of a group of children. Masters, 1932. Iowa. 88 p. ms.

565. **Lee, Harriet E.** The relationship between practice exercises to the improvement of ninth grade composition. Master's, 1932 Chicago. 53 p. ms.

An experimental study in the effect of practice exercises on ninth grade composition, conducted in two ninth grade classes for girls. Findings: A year's growth in composition quality measured by the "Wisconsin scale for judgment of composition quality only" showed increased ability in appraisal and ability to plan.

566. **Lesser, Goldie Darline.** The construction of a flexible program of English in the junior high school. Master's, 1932. Ohio. 156 p. ms.

567. **Likeness, Clara Helene.** Measuring the outcomes of English composition. Master's, 1932. Southern California.

568. **Lyman, R. L.** The enrichment of the English curriculum. Chicago, Ill., University of Chicago, 1932. 251 p. (Supplementary educational monographs, no. 39, January 1932.)

This study assembles, classifies, and interprets representative studies which have attempted to broaden the scope of English instruction in elementary schools, secondary schools, and colleges in the past two decades. It takes up the expanded reading-literature curriculum; enlarged language composition curriculum; informal associations of the English department with other departments; constructive relations between the English department and other departments; and combinations or amalgamations of English with other subjects.

569. **McMichael, Mary L.** A study of English errors made in a series of tests in Teague high school, 1930–1931. Master's, 1932. Texas.

570. **Martin, Blake.** A year's teaching plan for eighth grade English. Master's, 1932. Texas.

571. **Meyland, Gunther Christian.** Effect of theme titles on inventiveness and imagination. Master's [1932]. Chicago. 42 p. ms.

A total of 1,600 themes written by 100 college students were examined for cases of inventiveness and imagination. Motivated titles produce more inventive and imaginative details than conventional titles.

572. **Mielenz, Mary Luella.** Trends in correlating English with other school subjects. Master's, 1931. Chicago. 138 p.

Courses of study and textbooks were analyzed to determine the extent of correlation of English with other subjects in the high-school offering.

573. **Miller, Charles Stephens.** Ruralizing English in rural junior and senior high schools. [Master's] 1932. Peabody. 111 p.

This study embraced Warren county, Miss. Rural subject matter is preferred over non-rural subject matter.

574. **Morris, Roy Kellam.** Grammar in Texas high schools. Master's, 1932. Texas.

575. **Mosby, Mary Virginia.** English grammar in Wyoming high schools: A survey of the grammar taught in the Wyoming high schools as compared with the grammar that should be taught in high schools. Master's, 1932. Colo. St. T. C.

576. **Nesbit, Agnes Blanche.** Teaching junior high school English on an activity basis. Master's, 1932. Southern California.

577. **Newlon, Mildred.** The effectiveness of oral composition. Master's, 1932. West Virginia.

578. **Nixon, Anna M.** Sentence structure in the oral language of certain primary grade pupils. Master's, 1932. Iowa. 142 p. ms.

579. **Njus, Gertrude.** Objectifying a criterion for correct language usage Master's, 1932. Iowa. 256 p. ms.

581. **Obye, Charles.** A study of the 1931 Indiana state high school test in English as related to certain variables. Master's, 1932. Iowa. 88 p. ms

582. **O'Donnell,** *Rev* **Michael Joseph.** English relative—a survey of some of the writings and investigations done on the English relative pronoun. Master's, 1931. Catholic Univ.

583. **Ogden, S. E.** Ways and means of enriching the high-school students' writing vocabularies. Master's, 1931. Illinois. 133 p. ms.

584. **Ortmeyer, W. A.** The relation of mastery of certain punctuation rules to pupil usage. Master's, 1932. Iowa. 37 p. ms.

585. **Payne, Alva.** Teaching paragraphing in the first eight grades. Master's, 1932. Peabody. 79 p. ms.

Eight 1931 state elementary courses of study found in Peabody library were examined. Short paragraphs are recommended, ten sentences being the greatest number suggested by any course of study for a paragraph for the eight grades; six courses of study recommend more than one-paragraph compositions for the eight grades; little attention is given to arrangement, or paragraph form; method is shown principally through the selection and use of topics; there is a gradual decrease of references to paragraph teaching as the grades advance.

586. **Perryman, Virginia.** A study of the teaching of certain grammatical principles to tenth grade pupils of less than normal intelligence. Master's, 1932. West Virginia.

587. **Phillips, Dorothy Trueblood.** Units of work in English composition. Master's, 1932. Southern California.

588. **Plasman, Lois Kennedy.** The comparative disciplinary values of oral and written composition in the junior high school curriculum. Master's, 1931. Chicago. 127 p. ms.

589. **Powell, Raymond Leo.** Valid testing and diagnosis in the mechanics of ninth grade English composition. Doctor's, 1932. Iowa. 192 p. ms. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38, New series no. 248, 1 p.)

Studies themes written on assigned topics and tests in proofreading. The two procedures measured fundamentally different abilities.

590. **Pratt, Harry D.** The vocabulary of fifth grade children's themes. Master's, 1932. Colo. St. T. C.

591. **Quam, Nels.** The effect of special drills on the elimination of certain punctuation errors. Master's, 1932. Iowa. 34 p. ms.

592. **Rice, Letha E.** A study of the status of speech correction in the public schools of the United States and Canada with suggestions and exercises for speech correction in the elementary school. Master's, 1931. Kans. St. T. C., Emporia. 200 p. ms.

* 593. **Rounds, Robert W.** A study comparing the growth made in various elements of English by a class taught under laboratory conditions and that made by a class taught by conventional methods. Master's, 1932. New York. 111 p. ms.

Data indicate that in the junior high school groups studied, poetry appreciation is more effectively taught in a creative writing group; capitalization and punctuation

can be taught effectively by the laboratory method; grammar and sentence structure are more effectively taught by the conventional method.

594. **Sanders, Cynthia Binnion.** Opportunities afforded for written English by a classroom newspaper. Master's, 1932. Peabody. 136 p. ms.

This study is confined to the fifth grade of the East Texas state teachers college demonstration school. It was found that a classroom newspaper affords practice in nine-tenths of the objectives set up by authoritative sources selected for evaluation of English composition.

595. **Sandys, Edward E.** A survey of the English courses offered by the junior colleges of Southern California. Master's, 1932. Southern California.

596. **Scheele, *Sister* M. Augustine.** Methods of teaching composition in the high school. Master's, 1931. Marquette.

597. **Shockey, Pauline M.** Two contrasted methods of teaching English expression. Master's, 1932. Chicago. 92 p. ms.

Compares the merits of the grammar and the composition methods in elimination of error and general merit of written expression. For superior pupils the methods were of equal value; for average and low ability pupils, the composition method was superior.

598 **Smith, W. L.** A summary of research studies relating to English composition. Master's, 1932. Illinois. 332 p. ms.

599. **Sperry, M. K.** A critical analysis of the items of the English correctness test of the 1931 Iowa academic contest. Master's, 1932. Iowa. 132 p. ms.

600. **Stacker, Anne Gaillard.** A digest of material on analysis of verbal problems. Master's, 1932. Peabody. 113 p. ms.

The average child has difficulty in solving verbal problems. The causes of difficulty as listed by 23 investigators and writers include computation, comprehension, vocabulary, and faculty technique of solutions.

601. **Stanley, Leona Jane.** The disappearance of formal grammar in elementary schools in Alabama. Master's, 1932. Peabody. 83 p. ms.

Elementary language textbooks in Alabama and courses of study since 1910 were examined. Findings: Formal grammar has disappeared 66 percent in the elementary textbooks in Alabama since that year, and language activities are taking the place of the formal type of work.

602. **Steger, L. A.** Development of the meaning vocabulary of certain elementary grade pupils. Master's, 1932. Iowa. 172 p. ms.

603. **Steinour, Laura Marie.** How to teach vocabulary as a part of the high-school English course. Master's, 1932. Southern California.

604. **Stone, Gunnar.** A study of the cooperation of all departments in the teaching of English in the high schools. Master's, 1932. Rutgers.

605. **Strate, *Mrs.* Johanna.** Study in ability grouping in ninth grade English composition. Master's, 1932. Washington. 56 p. ms.

Pressey diagnostic tests; Cross English tests; Van Wagenen English composition scales; and the Hudelson English composition scale were used with three classes in ninth grade English composition. Suggests that the lowest fifth and highest fifth of pupils be segregated for special instruction, and that the material and methods of instruction be carefully chosen for use with the retarded and accelerated students.

606. **Symonds, Percival M., *and* Hinton, Eugene M.** Studies in the learning of English expression. Teachers college record, 33: 430–38, February 1932.

607. **Tennant, Edna Pauline.** Recent trends in the aims of the teaching of English composition. Master's, 1932. Southern California.

608. **Thomas, Rose Anne.** An experiment in individual instruction in language in grade 4. Master's, 1932. Chicago. 103 p. ms.

A comparison of individual as contrasted with class instruction in teaching specific items of word usage to fourth grade pupils. Findings: Achievement in mastery of items of word usage and in development of desirable learning attitudes superior for pupils taught under individual technique of instruction.

609. **Wagner, Loretta A.** A comparison of ability in written English and in general scholarship of speech and non-speech students. Master's, 1932. South Dakota. 55 p. ms.

610. **Williams, Estill Daniel.** A comparative study of word lists. Master's, 1932. Kentucky.

611. **Wolfe, Linnie.** Junior high school English. Master's, 1931. South. Methodist.

612. **Woodard, Helen E.** A tested procedure for teaching a unit in high-school English. Master's, 1932. Peabody. 27 p.

Diagnostic tests and practice exercises are essential steps in an effective teaching procedure for a unit in formal grammar, such as correct usage of verbs and pronouns.

ENGLISH LITERATURE

613. **Adams, Frances Aletha.** The teaching of literature in the junior high schools. Master's, 1932. Southern California.

614. **Blythe, Adelaide Elizabeth.** The outcomes of instruction in English literature. Master's, 1932. Southern California.

615. **Cameron, Donald O.** The value of technical analysis in teaching appreciation of poetry. Master's, 1932. Penn. State.

Describes a controlled experiment conducted in the sixth grade of State College, Pa. One group had technical analysis of the Hayward type stressed in music appreciation lessons one day a week through about six months. A second group had a less formal type of music appreciation, and a third type had no teaching for appreciation of music. Groups were very small—only 11 members each, matched on an initial test of music appreciation. Test of ability to discriminate between good and poor music was constructed by experimenter and also Courtis test used The group having technical analysis showed greater gain than the one not having it.

616. **Connolly, Sabina Hart.** A literary vocabulary test for high-school students. Doctor's, 1932. Yale.

617. **Cornell, Lita Elizabeth.** The educative use of the short story. Master's, 1932. Southern California.

618. **Crawford, Elizabeth Mary.** Achievement of secondary school pupils in 12 classics in literature. Doctor's, 1932. Indiana. 214 p. ms.

* 619. **Dithridge, Rachel L.** A study of the value of modern poetry for secondary school students. Master's, 1932. New York. 65 p. ms.

Studies the value of modern English and American poetry as taught in the high schools of New York City.

620. **Dooling, *Sister* M. Benecia.** The idylls of the king, critical summary with application to high-school use. Master's, 1932. N.M. St. Nor. Univ. 109 p. ms.

621. **Edie, I. W.** Study of certain factors related to success in teaching American literature. Master's, 1932. Iowa. 194 p. ms.

622. **Feamster, Garland McClung.** Methods of teaching the essay. Master's, 1932. Southern California.

623. **Franz, David Hartley** Opportunities for inculcating desirable sex attitudes through secondary school poetry. Master's, 1932. Coll. of the City of N. Y. 233 p. ms.

Attempts to show the necessity for inculcating desirable sex attitudes, to determine what constitutes enlightened sex ideals; and to show how they may be taught through the standard works of poetry commonly studied in the high-school English course.

* 624 **Frawley, Honora M.** A study of certain procedures of studying poetry in the fifth grade. Doctor's, 1932. T. C., Col. Univ New York City, Teachers college, Columbia university, 1932. 90 p. (Contributions to education, no. 539.)

Data were secured from the study of a rotation experiment conducted in Queens, New York City, in which 10 poems were taught by five methods to children in the 5B grade in 10 classes, and the results measured by tests. The poem seemed more significant than the method by which it was taught in determining children's choice of poems. There was a closer relationship between intelligence and required memorization method results than between intelligence and activity method results.

* 625. **Frey, Anna Louise.** The swan-knight legend: its background, early development, and treatment in the German poems: 1. Parzival, by Wolfram von Eschenbach; 2 Der Schwanritter, by Konrad von Würzburg; 3. Der Lohengrin of the Wartburgkrieg; 4. Der Lorengel; 5. Lohengrin, an opera by Richard Wagner. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 135 p. (Contribution to education, no. 103.)

Discusses the background and the German development of the legend.

626. **Goodman, Gladys Elinor.** An experiment in teaching classic myths in the middle grades. Master's, 1932. Peabody. 87 p. ms.

A descriptive account of an experiment to find children's responses to classic myths and to compare teaching stories with just reading stories to them. Findings: Children's choices and the effect of different ways of presenting material.

627. **Goodson, Frances Louise.** An experimental study of bases for ability grouping in high-school English. Master's, 1932. Southern California.

628. **Graves, Elizabeth Harriet.** The teaching of literature through free reading. Master's, 1932. Southern California.

* 629. **Gresser, Dessa E.** Factors conditioning comprehension of literature in the senior high school. Master's, 1932. Penn. State. 34 p. ms.

A series of tests on five literary selections were given to 74 pupils in the Lock Haven, Pa., senior high school during the school year 1931–32. Data indicate that poetry is more difficult to comprehend than prose. General intelligence, knowledge of vocabulary, and general information influenced the comprehension of the students. Knowledge of grammar and speed in reading had little to do with a student's comprehension of literature.

630. **Griffin, *Sister* Mary Ambrose.** Latin influences on the composition of English literature of high-school level. Master's, 1931. Loyola. 52 p. ms.

631. **Herndon, Clara Alice.** A study of certain educational implications in the life and works of Browning. Master's, 1932. Southern California.

632. **Lehman, Lela Olson.** A study of the changing trends in the teaching of literature in the secondary schools of the State of Kansas. Master's, 1932. Kans. St. T. C., Emporia. 95 p. ms.

633. **McVey, Eleanor.** Reading lists in English literature used in secondary schools. Master's, 1932. Southern California.

634. **Mitchell, *Mrs.* Cecil Smith.** Type units in literature for the junior high school grades. Master's, 1932. Texas.

635. **Pelton, Mae Belle.** The construction of units of work in literature for the upper high-school grades Master's, 1932. Texas.

636 **Raines, Lester.** Objective tests for the English classics in New Mexico course of study. Las Vegas, New Mexico State normal university, 1932 136 p. ms.

Describes a collection of objective tests covering the classics prescribed by the New Mexico high-school course of study.

* 637 **Ritt, Ann N.** Sheakespeare and adolescent interests Master's, 1932. New York 60 p. ms.

The six plays studied paralleled the adolescent interest in romance, self-assertion, interest in others, altruism, gregariousness, nature and art, and in moral interest.

638. **Robertson, Elsie.** Education in American literature from 1875 to 1890. Master's, 1931. South Methodist

639. **Robertson, Emma.** Education in American literature, 1860 and 1870. Master's, 1931. South Methodist.

640. **Roling, Margaret.** The evaluation of recent prose fiction from the point of view of the junior high school course of study in English. Master's, 1932. Ohio. 177 p ms. (Abstract.)

Data indicate that present-day fiction is appealing to children, has literary merit, and should have a place in the course of study Much of the material is more profitable for school use than many older selections which are now in most courses of study

* 641 **Simon, Henry W.** The reading of Shakespeare in American schools and colleges: an historical survey. Doctor's, 1932. Columbia. New York City, Simon and Schuster, 1932 169 p.

The study discusses the reasons that Shakespeare was not studied in early English schools; the early American attitude toward Shakespeare, Shakespeare's place in American readers, 1800–1870, Shakespeare introduced in the colleges; Shakespeare taught in schools outside of readers; and a survey of modern trends.

642. **Stuckey, Christine.** The use of the story in education. Master's, 1931. South Methodist.

643. **Tyler, Beulah Benton** Educational implications in the poetry of William Wordsworth. Master's, 1932. Colo. St. T. C.

644 **Van Tilborg, Paul W.** A high-school literature survey and placement test. Master's, 1932 Washington.

* 645 **Wagner, Marie Elizabeth.** Ability of prospective teachers in interpretation of poetry and in teaching interpretation of poetry. Doctor's, 1932. New York. 149 p. ms.

Part 1 deals with the ability to interpret poetry as it was presented in a reading test constructed for use on the teacher-training level: part 2 relates to ability in teaching poetry Data were secured from the results of the Hartley poetry test given to 312 students in three teacher-training institutions; from the results of a poetry vocabulary test, and from the findings of a case study of 20 students engaged in practice teaching.

646 **Welch, Roland Alpha.** The vocabulary of a certain ninth grade text in literature not within the comprehension of certain ninth grade pupils of Durfee intermediate school, Detroit, Mich. Master's, 1931. Michigan. (Abstracts of dissertations and theses in education, 1917–1931. p. 127–28.)

The problem was to determine the words in David Copperfield that were not within the comprehension of 100 ninth grade pupils of superior ability. A technique was developed by experimentation which seemed suitable for selecting the words, and the reliability of the procedure was checked by means of new type tests developed for use in connection with the experiment Difficulty of words shows little relationship to uncommonness as indicated in Thorndike's list and Horn's

647 **Wierson, Leonard L.** Pupil evaluation of English selections in the high schools of Illinois. Master's, 1932. Iowa. 210 p. ms

648. **Williams, Florrie.** The essential facts of Shakespeare's life and stage for high-school pupils. Master's, 1932. Colo. St. T. C

649. **Williams, George T.** Pupil evaluation of selections in literature in South Dakota high schools. Master's, 1932. Iowa. 156 p. ms.

* 650. **Winning, Charles Del Norte.** The ideal society in nineteenth century English literature: a study of Utopian phantasies. Doctor's, 1932. New York. 320 p. ms.

Attempted to discover what conditions in English life and thought in the 19th century caused the large volume of Utopian literature; to classify the Utopias according to their controlling ideas; to analyze the characteristics of various representative Utopias of the period; and to evaluate their literary and social importance.

FOREIGN LANGUAGES

ANCIENT LANGUAGES

651. **Barlow, Mary Elizabeth.** An analysis of Cicero's perorations. Master's, 1932. Iowa.

652. **Chapman, Ruby Arnice.** Anthology of material for cultural background in high-school Latin. Master's, 1932. Peabody. 231 p. ms.

Collection of material for supplementary and extracurricular work in high-school Latin.

653. **Clarke, William Lowe.** A comparison of two methods of teaching first year Latin. Master's, 1932. Emory.

* 654. **Clough, Madeline.** The place of Latin in the secondary curriculum Master's, 1932. Boston Univ. 45 p. ms.

In a test to determine the effect of the study of Latin on English grammar and grammatical usage, 20 pupils who had studied Latin for two years were compared with 20 non-Latin pupils of the same year at the Dedham, Mass., high school. The Inglis English vocabulary test, form 1 was used. Data indicate that more Latin students gained proportionally in reasoning ability than did non Latin pupils; the ability to improve in translation of Latin does not carry with it the ability to improve in reasoning.

* 655. **Connell, Margaret H.** A study of conscious transfer of training in the teaching of English derivatives in high-school Latin classes. Master's, 1932. New York. 71 p. ms.

656. **Handman, Ephraim.** Readings in high-school Latin from the point of view of aiding in the appreciation of English literature. Master's, 1932. Coll. of the City of N. Y. 111 p. ms.

Latin works which contained many sources of the allusions in English literature were recommended as additions to the minimum prescription of readings in the present New York State syllabus in ancient languages.

657. **Hanson, Gertrude.** A study of the difficulties of a selected group of ninth grade Latin pupils and the remedial measures employed in an attempt to overcome them. Master's, 1932. Northwestern.

658. **Horst, H. M.** History of student tutoring at West high school, Akron, Ohio. Junior-senior high school clearing house, 6: 245–49, December 1931. (Reprinted.)

A special report is given on 180 students receiving help in Latin from student tutors in the first nine semesters of organized student help. It was found that 146 received sufficient benefits to continue the study of Latin. Help given in second semester Latin did not carry over to the study of third and fourth semester Latin as well as the help given in first semester Latin carried over to the study of Latin in the second semester.

659. **Johnson, Helen Wright.** Examination of elementary Latin texts belonging to the pre and post classical investigation periods. Master's, 1932. Ind. St T. C. 110 p. ms. (Abstract in Indiana State Teachers College. Teachers college journal, 3 : 296–97, July 1932.)

Data indicate that the teaching of Latin in secondary schools is tending toward increased efficiency as shown by the reorganization of material taught which emphasizes the pupil's point of view, the elimination of useless material, and taking a psychological approach of the subject rather than a logical one.

660. **Loar, Marian Dewey.** A critical study of the adjectives in Virgil's Aeneid. Master's, 1932. Colorado.

661. **Lynch, Henry Charles.** Characteristics of the second book of the Aeneid. Master's, 1932. Boston Coll.

662. **McBroom, Emmalou.** A phase of evaluation of provision for drill in elementary Latin textbooks. Master's, 1932. Colo. St. T. C.

663. **McDowell, Gwendolen B.** A comparative study of Latin textbook vocabularies. Master's, 1932. Ohio. 125 p. ms.

A frequency count was made of words used in five standard first year Latin books. Of about 3,120 words, 458 words were common to the five books.

664. **McLellan, Marguerite Helen.** A critical study of the similies in Virgil's Aeneid Master's, 1932. Colorado.

665. **Megill, David.** The probable efficiency of a vocabulary notebook in the teaching of Latin vocabulary. Master's, 1931. Kans. St. T. C., Hays. 70 p. ms.

Vocabulary learning can be increased through use of vocabulary notebook. It also helps to recognize the presence of Latin roots in English words.

666. **O'Grady, Catherine Francis.** Psychological bases for teaching Latin at the junior high school level. Master's, 1931. Marquette.

667. **O'Neill, Daniel Joseph.** A new method of presenting Latin grammar and rhetoric in college composition: a textbook. Doctor's, 1931. Providence.

668. **Puryear, Sarah Frances.** Horace the classicist; critic, and creator. Master's, 1932. Peabody. 113 p. ms.

669. **Ryder, Margaret M.** The adaptation of first year Latin textbooks to curriculum needs. Master's, 1932. South Dakota. 88 p. ms.

* 670 **Stark, Mary Randall.** A course in Latin for secondary schools adapted to the changing ideals of secondary education. Master's, 1932. Boston Univ. 40 p. ms.

Data were secured from 850 pupils in the Cicero and Virgil classes of 10 high schools on the application of Latin in English, other languages, science, history, and in mathematics. Data indicate that the "disciplinary value" of Latin is failing to function in a measurable degree, but that its value for training in English is recognized as giving a clearer understanding of the meaning of words and an increased power and facility of expression. A course of study in Latin for grades 7 to 12 is recommended.

* 671. **Trager, George L.** The use of the Latin demonstratives (especially *ille* and *ipse*) up to 600 A.D, as the source of the romance article. Doctor's, 1932. Columbia. New York City, Institute of French studies, 1932. 199 p.

The study surveys the use of the Latin demonstratives *is, hic, iste, ille,* and *ipse* in representative texts from the classical period to the critical period in the development of Vulgar Latin.

672. **Traveis, William Garcia.** Word power in the fourth book of the Aeneid. Master's, 1932. Boston Coll.

673. **Welch, Sadie Elizabeth.** Experiments in motivating the study of high-school Latin (A curriculum project in Buncombe county, N. C.) Master's, 1931. Duke. 292 p. ms.

674. **Westphal, Earl C.** An analysis of the data secured from the Iowa academic contest in Latin. Master's, 1932. Iowa. 105 p. ms.

MODERN LANGUAGES

675. **Beadle, P. M.** Achievement tests in elementary French. Master's, 1932. Peabody. 211 p. ms.

676. **Carson, Edna.** An analysis and evaluation of the methods of teaching modern foreign languages. Master's, 1932. Illinois. 110 p. ms.

677. **Clark, Charles E.** Instructional principles and devices for the teaching of Spanish. Master's, 1932. Southern California.

678. **Cossman, Clair.** A comparative study of the verbs in two series of French textbooks. Master's, 1932. Iowa.

679. **Cutler, Helen Eaton.** Lower school French. Master's, 1932. T. C. Col. Univ. 60 p. ms.

*680. **Descours, John R.** Comparative study of the report of the Committee of 12 and of the Coleman report on the teaching of modern foreign languages in the United States. Master's, 1932. New York. 96 p. ms.

Compares the two reports and the two investigations which give rise to them, with reference to the modes of procedure and the result. Findings: More extensive in its scope and of a more scientific nature, the Coleman report reaches more practical conclusions on the objectives of the teaching of modern foreign languages, the organization of the course and the method to be used.

681. **Dykema, Karl W.** The problem of the translation of the pronouns of address from French and German into English; with an historical sketch of those pronouns in the three languages. Master's, 1932. Columbia.

682. **Eurich, Alvin C., *and* Burkhard, O. C.** Placement tests in German. Minneapolis, University of Minnesota, 1932. 4 p. ms.

A tentative evaluation of two forms of the Minnesota German placement test. Norms are given for two high school groups and for a group of University of Minnesota students. The reliability coefficient between the two forms of the test proved to be 0.94 ± 0.01.

683. **Fleagle, F. K., LaRochelle, A., *and others.*** A 2-year course in Spanish with suggestions for a third year. Chapel Hill, University of North Carolina press, 1932. 36 p. (University of North Carolina extension bulletin, vol. 11, no. 6, February 1932.)

The outline has been divided into two parts: an "indispensable minimum" and an "expected achievement." The "indispensable minimum" will insure a degree of uniformity in instruction that will not only reduce the difficulties of the individual student who transfers from one school to another, but will provide the same advantage for the whole class whenever the work in the second year is continued with another teacher. This requirement is set low in order to allow ample freedom to develop individuality in accord with the teacher's preparation and experience. The combination of the two is intended to guide the inexperienced instructor, to stabilize the instruction of the experienced teacher, and to give to both the assurance that basically the same sort of work is being done throughout the state.

684. **Fried, Estelle.** German grammars and readers used in the New York City high schools evaluated on the basis of the New York City and New York State syllabi and the Coleman report. Master's, 1932. Coll. of the City of N. Y. 64 p. ms.

* 685. **Geyer, Hugh E.** A comparative study of the German grammars used extensively in the New York City high schools from 1890–1925. Master's, 1932. New York. 114 p. ms.

From 1890–1910 the cut and dried grammar translation method was most used in the textbooks, during the period from 1910–1925 the reading conversation method developed and finally displaced the grammar-translation method.

686. **Gilbert, Pauline C.** Study of active-passive Spanish vocabulary in Florida high schools. Master's, 1932. Peabody. 64 p. ms

687 **Goodwin, Bertha Drabkin.** The teaching of French through extensive reading. Master's, 1932. Southern California.

688 **Green, Louise.** Extent of active-passive French vocabulary in Florida high schools. Master's, 1932. Peabody. 53 p. ms.

689. **Hardin, Achsah A.** Study of a system of guidance in foreign language. Master's, 1931 Stanford.

690 **Harville, Celia T.** Trends of foreign languages in Oklahoma high schools. Master's, 1932. Oklahoma. 105 p. ms.

691. **Hernández, José D.** Laboratory exercises for Essentials of Spanish by Arturo Torres Master's, 1932 Peabody. 64 p. ms.

Demonstrates the use of visual aural devices and their importance in learning the principles of the Spanish language

692 **Holland, Hazel Amelia.** The gradation of six French texts. Master's, 1932. Peabody. 56 p. ms.

693. **Koischwitz, Otto.** Deutsche fibel (elementary German text, illustrated). New York City, F. S Crofts, 1932 140 p.

Textual material developed through experimental teaching on the basis of the picture-method.

694. ——— Selection and application of illustrative material in foreign language classes. New York City, Teachers college, Columbia university, 1932. 68 p.

The application of modern illustrative material to foreign language instruction is advisable for linguistic and psychological reasons.

* 695. **Kretchman, Margaret L.** The type of vocabulary, grammar, and phonetics to be taught in elementary French courses to enable the pupils to read current literature intelligently. Master's, 1932. Penn. State. 74 p. ms.

A study was made of the use of French words and phrases in daily and Sunday newspapers, weekly and monthly magazines, and in three novels. It was found that no specific list of French words to be taught in elementary French courses could be given; that only the simplest type of grammar need be taught; and that a thorough and working knowledge of phonetics should be taught as an aid to pronunciation.

696. **Loubert, Flora M.** The vocabulary content of two recently organized teaching units for first year French. Master's, 1932. Iowa.

697. **MacPherson, Mildred Lewis.** Methods of teaching Spanish by the direct method. Master's, 1932. Southern California.

698. **Mascarino, Mario Chanoux.** A comparative study of the training of modern foreign language secondary school teachers in the United States and Europe. Master's, 1931. Loyola. 66 p. ms.

699. **Masselink, Sady Grace.** An analysis of the classroom practices of 25 teachers of first year French. Master's, 1932. Northwestern.

700. **O'Brien, Agnes Mary.** An analysis of the professional literature relating to the teaching of Spanish. Master's, 1932. Southern California.

701. **Peters, *Mrs.* Mary Olga.** An experimental comparison of grammar translation method and direct method in the teaching of French. Master's, 1932. Ind. St. T. C. 150 p. ms. (Abstract in Indiana State teachers college. Teachers college journal, 3:277-79, July 1932.)

The advantages for grammar translation method are: Higher results during the first semester in translation, vocabulary, and comprehension. The advantages for the direct method are: Higher results during the second semester in dictation, reading, pronunciation, aural comprehension, appreciation, and grammar.

702. **Phillips, Frank M.** Relative value of two methods of teaching Spanish. Master's, 1932. Emory.

* 703. **Poggensee, Anna Louisa.** Organization of materials for creative activities in the teaching of French. Master's, 1932. New York. 69 p. ms.

Suggests the use of dramatization, motion pictures, scrapbooks, exhibits, and the preparation of a newspaper or magazine in vitalizing the teaching of French.

704. **Roberts, Nona Moore.** Dictionary of 100 irregular French verbs. Master's, 1932. Peabody. 208 p. ms.

705. **Sattler, D. F.** A basic French vocabulary syllabus. Master's, 1932. Ohio. 133 p. ms.

Various French words and idiom frequency counts and lists were studied and analyzed. A composite list was prepared of 3,071 French words and idioms, the most useful for the teaching of French.

* 706. **Seibert, Louise C.** A series of experiments on the learning of French vocabulary. Doctor's, 1931. Johns Hopkins. Baltimore, Md., Johns Hopkins press, 1932. 106 p. (Johns Hopkins university. Studies in education, no. 18.)

Discusses the most efficient way to study a vocabulary, either silently or aloud, or with a written recall; of vocabulary studied in associated pairs *vs.* vocabulary studied in the context; or whole *vs.* part method in studying a list of associated pairs; of reading *vs.* recitation; and of the optimum time of relearning.

707. **Shapiro, Bernard.** The determination of the most common errors of first term German students in the New York City high schools. Master's, 1932. Coll. of the City of N. Y. 112 p. ms.

A diagnostic test consisting of 100 items covering the essential grammatical principles studied in the first term of high-school German in New York City was constructed, with the New York City syllabus and many currently used textbooks as the basis. This test was administered to students in 11 New York high schools. Frequency of error lists were constructed.

708. **Srygley, Birdie Feb.** A graduation of six Spanish texts. Master's, 1932. Peabody. 50 p. ms.

Ranks six texts on the basis of vocabulary difficulty depending on the number of new words per running thousand.

The elementary French reading texts used in the University of Iowa high school are patterned after the West readers which embody a new direct-reading technique. They are designed to promote the development of reading ability through the actual reading experience with material which is made less difficult by the gradual acquisition of a controlled vocabulary of maximum reading utility. The vocabulary of the first year

unit was increased by the introduction and usage of 600 additional words and idioms selected from the first 2,500 words of the word list and the corresponding portion of the idiom list. The average density of new words was 65 to 75 running words per new word.

737. **Remmers, H. H., Hadley, Laurence,** *and* **Long, J. K.** Learning, effort, and attitudes as affected by class size in beginning college engineering mathematics. Lafayette, Ind., Purdue university, 1932. 31 p. (Bulletin of Purdue university, vol. 32, no. 9, May 1932. Studies in higher education, 19.)

During a period of two years, three controlled experiments involving 210 engineering students of beginning college mathematics under two different instructors, were carried on to determine the effect of class size upon student learning, effort, and attitude toward the instructor and toward the teaching procedure. Three small classes ranging in size from 19 to 27, and large classes ranging from 43 to 54, were matched, student for student, in terms of school enrollment and probable achievement as measured by the Iowa placement mathematics training test. It was found that the larger classes did slightly better than the smaller classes, although the average difference was not statistically significant. The students favored the smaller classes. The average amount of time spent in preparation was not significantly affected by class size.

746. **Vance, Arthur M.** Problem solving and reflective thinking Master's, 1932. Colorado

Data indicate that problem-solving ability appears early in life and increases to senility

747. **Waggoner, Sherman G.** The ability of pupils to interpret certain basic ideas in linear equations Doctor's, 1932. Iowa 227 p ms. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248, 1 p.)

Data obtained by examination of numerous ninth grade pupils show that 62 percent of the errors made in solving equations were due to not knowing what to do, and not knowing how to do what was recognized to be done. Mental efforts of the pupils have been concentrated on memory work instead of thorough understanding.

748. **Wesselink, William D.** The difficulties of college freshmen in mathematics Master's, 1932. Iowa. 84 p. ms.

749. **Whitcraft, Leslie H.** Some of the influences of the requirements and examinations of the College entrance examination board on the mathematics in the secondary schools of the United States. Doctor's, 1932. T. C., Col Univ.

College entrance board examination questions in algebra and geometry were analyzed; recent state and city courses of study in mathematics were surveyed to determine the influences the College entrance board examinations had on them, questionnaires were sent to 65 superintendents of city schools, 12 curriculum specialists, 200 heads of departments of mathematics in schools from which candidates for College entrance board examinations come; literature on mathematics of secondary schools and textbooks in secondary algebra and geometry were analyzed; and visits were made to two types of schools to observe methods of teaching. Findings: The College entrance examination board can exert great influence on the mathematics of secondary schools; more weight has been given by authors of textbooks in algebra and geometry to the College entrance board requirements than to any other one set of requirements; they have stimulated better teaching by setting definite goals to be attained; their requirements have retarded creative work in mathematics for many teachers of secondary mathematics; their examinations have caused much worry and nervousness on the part of the pupil and on the part of the teacher; preparation of many candidates for the College entrance examinations is made in regular classes in which there are students who will not take the examinations.

773. **Roach, Cornelia B.** A study of incentives. Doctor's, 1932 Cornell. 70 p ms.

Studies the effect of incentives on improvement in column addition in grades 4–6.

774. **Sears, Richard.** The effects on the psychogalvanic response of changes in complexity and time limit of addition tests. Doctor's, 1931. Michigan. 168 p. (Abstracts of dissertations and theses in education, 1917–1931 p. 82–84.)

Carefully selected lists of addition examples were used as stimulus material with a group of 24 junior and senior girls of the University of Michigan. In addition to a preliminary test of 20 easy examples with no time limit, six different tests were given, each containing 20 examples. Three of the tests involved changes in the complexity of the material, with no time limit, the material of the other tests was of approximately the same complexity, but changes were introduced in the amount of time allowed for different parts of the test. Only one test was given at a sitting. Each subject took three, and some subjects four tests in addition to the preliminary test. Findings: The first two or three examples of all tests were accompanied by large galvanometer deflections, exceeded only by deflections at other critical points; when all examples of a test are kept on approximately the same level of difficulty and speed, no deflections of outstanding amplitude occur, except at the beginning; points of abrupt increase of complexity or required speed of performance, are always accompanied by a large increase in amplitude of deflection.

775. **Smith, Cloyd C.** Etiology of pre-seventh grade pupil status in percentage. Master's, 1932. Iowa. 193 p. ms.

776. **Smith, Ethel Eudore.** The effect on achievement in arithmetic reasoning and computation of a supervisory program stressing computation. Master's, 1931. Chicago. 161 p.

The value of supervision is measured in terms of pupil achievement and modifications in the methods of teaching.

777. **Sparling, E. A.** The grade norms and standards for the arithmetic neatness scale. Master's, 1932. Iowa. 40 p. ms.

778. **Stevens, Willie.** Relative efficiency in oral and written arithmetic computation. Master's, 1932. Peabody. 20 p. ms.

An investigation made with 91 pupils in the intermediate grades of the Peabody demonstration school, Nashville, Tenn., showed that pupils do better written than oral work in arithmetic.

779. **Storm, William B.** Practices in teaching arithmetic in the elementary school. Master's, 1932. Chicago. 65 p. ms.

The study covered 8 cities, 850 teachers, 100 college students, and 5 teachers in teachers colleges.

780. **Tidwell, Lyda.** Methods children use in learning combinations and working arithmetical problems. Master's, 1932. Peabody. 39 p. ms.

A study of 120 pupils of the third, fourth, fifth, and sixth grades in the Peabody demonstration school. Findings: Children are aware of using definite methods of learning the combinations; children included in this study, except two, use one or more of the methods employed by their teachers; as pupils advance in grades they seem to use fewer methods of learning the combinations; pupils having a high IQ seem to use fewer methods than pupils with low IQ score.

* 781. **Trott, Carolyn E.** Change in ability of the pupils to perform the four fundamentals of fractions in four 5B classes of West New York, N. J., schools from June 12, 1931, to September 14, 1931. Master's, 1932. New York. 117 p. ms.

Studies the changes in speed, accuracy, kind, and frequency of errors in all processes by each of the 133 pupils in the 5B classes in West New York, N. J.

827 **Oestreicher, Milton D.** Analysis of errors in first semester of ninth grade algebra. Master's, 1932. Chicago. 109 p. ms.

Compares the achievements of the pupils in eight high schools and lists and analyzes typical errors.

828. **Parry, Louise.** Abilities of Spanish-speaking and English-speaking children in ninth grade algebra. Master's, 1932. Texas.

* 829. **Patton, Charles Clark.** The effect of mathematical recreation in the teaching of plane geometry. Master's, 1932 Penn. State. 31 p. ms.

Describes a controlled experiment in which one group gave one day each week to mathematical recreations while the other used the time in the conventional manner. The group using the recreations exceeded the control group in the standardized tests used for measuring progress as the result of the experiment.

830. **Pearson, J. M.** A study of the Orleans geometry prognosis test. Master's, 1932. Peabody. 42 p. ms.

Data indicate that the most reliable prognosis of achievement to be obtained is from a combination of the Orleans test, Terman group test, and the teachers' marks in algebra.

831. **Poplofsky, Solomon.** A comparative study of elementary and intermediate algebra as taught in the schools of England and the United States. Master's, 1932. Coll. of the City of N. Y. 88 p. ms

Algebra in England is studied for a period of from four to five years, with an hourly distribution ranging from four and one-half to six and three-quarters hours a week, while in the United States it is studied for a period of one and one-half years and five times weekly. There have been practically no changes introduced in the English algebra courses during the past 20 years.

832. **Pszenny, Joseph John.** Psychology of number and its relation to algebra. Master's, 1932. Boston Coll.

833. **Richards, Dale W.** An experiment with supervised study in ninth grade algebra, at Newport township high school, Wanamie, Pa. Master's, 1932. T. C., Col. Univ. 16 p. ms.

An experiment covering one semester was carried on with 23 students having supervised study as compared with 23 students not having supervised study in ninth grade algebra. The classes met daily for 50 minutes. There was no decided advantage for either method.

834. **Richter, Rose.** The predictive value of group IQ's for success in elementary algebra. Master's, 1932. T. C., Col. Univ. 16 p. ms.

Data indicate that the lower IQ groups do about as well as the higher ones when extremes are omitted.

835. **Rosenbaum, Henry.** An introduction to the study of division-algebras. Master's, 1932. Columbia.

836. **Shelton, Sam White, *jr.*** The mathematical prerequisites for plane trigononometry. Master's, 1932. Peabody. 31 p. ms.

The mathematical prerequisites for plane trigonometry may be acquired from a study of the ordinary courses in elementary arithmetic, high-school algebra, and high-school plane geometry.

837. **Shibli, Jabir.** Recent developments in the teaching of geometry. Doctor's, 1932. T. C., Col. Univ.

Analyzes and compares representative textbooks, courses of study, reports of committees, and opinions of leaders in the field since 1900.

838. Shover, Carolyn Grace. On the class number and ideal multiplication in a rational linear associative algebra. Doctor's, 1932. Ohio.

This study is concerned with the development of the theory of class number and the multiplication of ideals similarly.

839 Silas, Paul Gordon. Difficulty in first year algebra: a contribution to the understanding of error Doctor's, 1932. Iowa. 266 p. ms.

A set of 32 drills covering 72 skills in first year algebra were given to ninth grade pupils in first year algebra in 21 states. Data indicate that insufficient emphasis is placed on unit-skills; pupils work without insight; and that fundamental concepts are not sufficiently established.

840 Spitz, Benjamin. The evaluation of a combined course in plane and solid geometry. Masters', 1932. Coll. of the City of N. Y. 123 p. ms.

Data indicate that a combined course consisting of the minimum essentials of plane and solid geometry can be satisfactorily completed in one year if pupils have had a course in intuitive geometry in the junior high school.

841 Slattery, Florence. Two methods of teaching algebra. Master's, 1932. Washington Univ. 75 p. ms.

Studies the relative values of teaching first year high-school algebra by the recitation plan and the assignment-sheet plan.

842. Steele, Mildred E. A study of the merits of the algebraic equation and analysis as aids in solving problems in the fifth grade. Master's, 1931. George Washington. 50 p. ms.

Compares the simple algebraic with the simple analysis and discussion method of solving problems in the fifth grade.

SCIENCE

851. Adams, Homer. Value of the notebook in general science laboratory. Master's, 1932. Peabody. 53 p. ms.

Two groups of 25 students each were used in this experiment for a period of nine months. The data indicate that the notebook in general science is valuable.

852. **Astell, Louis A.,** *and* **Odell, Charles W.** High-school science clubs. Urbana, University of Illinois, 1932. 77 p. (University of Illinois bulletin, vol. 29, no. 39, January 12, 1932. Bureau of educational research. Bulletin no. 60.)

Part 1 is an account of the science clubs reported by teachers of science in Illinois high schools during the school year, 1930–31; part 2 contains comments on the science clubs described and offers suggestions concerning such clubs in general, part 3 is an annotated bibliography on the subject.

853. **Bauman, E. K.** Outside reading and progress in general science. Master's, 1932. Nebraska. 33 p. ms.

854. **Becker, Sam D.** Recent trends in science in the high schools of Oklahoma. Master's, 1932. Oklahoma. 100 p. ms.

*855 **Butler, Warren N.** Mechanical ability as a factor which influences achievement in general science. Master's, 1932. Penn State. 47 p. ms.

A group of 68 boys was equated with a group of 68 girls on the basis of intelligence quotients. Their achievement in general science at the end of the school year 1931–32 was measured by the Ruch Popenoe general science test, form A. Their general mechanical aptitude was measured by the Stenquist mechanical aptitude test. Boys possess more general mechanical ability than the girls. The girls received higher grades in general science than the boys. There is little correlation between intelligence and mechanical ability.

856. **Carter, George Henry.** A survey of ninth grade general science in Los Angeles county. Master's, 1932. Southern California.

857. **Cockrum, A. E.** An experimental study of the motion picture film as an aid to teaching general science. Master's, 1932. Illinois. 58 p. ms.

858. **Cordrey, E. E.** Conditions under which science is taught in Arkansas high schools. Conway, Arkansas State teachers college, 1932. 16 p. (Bulletin, Arkansas State teachers college, vol. 20, no. 1, May 1932.)

A study was made for the year 1930–31 of the way science courses are being taught in 370 high schools in Arkansas. The study discussed equipment, teachers, and science courses taught.

859. **Dodson, Charles Lewis.** Analysis of the factors in Florida high-school science teaching and some resulting effects on freshmen grades at the University of Florida. Master's, 1932. Florida. 100 p. ms.

860. **Einbecker, William F.** Comparison of verbal accompaniments to films. Master's, 1932. Chicago. 75 p. ms.

A comparison was made of silent film without captions or oral comment, with comment, moving pictures with and without teacher's comments, and talking pictures. Teacher's comments increase comprehension of technical terms. Talking pictures are not superior to silent pictures for science type films.

861. **Graham, Irvine Henry.** Principles of science needed by airplane mechanics. Master's, 1932. Chicago. 63 p. ms.

862. **Hack, Walter.** A study of incidental learning in general science. Master's, 1932. Iowa. 40 p. ms.

863. **Holy, Thomas C.,** *and* **Sutton, Daniel H.** Lists of essential apparatus for use in high school sciences. Columbus, Ohio state university, 1931. 32 p. (Ohio state university studies. Bureau of educational research monographs, no. 12.)

An inventory of science apparatus taken in more than 600 school districts revealed wide differences in the amount and kind of apparatus in use, even in schools of similar character and enrollment. This study was undertaken for the purposes of: (1) develop-

ing a list of laboratory apparatus essential in teaching a class of 24 pupils in each of the major high-school sciences with the individual items arranged on the basis of their relative importance; (2) furnishing some index of the cost of providing these essential items of laboratory apparatus in each of the four major sciences; and (3) showing the instances of overlapping among items of apparatus necessary to conduct a class of the indicated size in biology, chemistry, general science, and physics.

952. **Fortner, James Thomas.** The correlation of general shop with fifth and sixth grade social sciences Master's, 1932. Southern California.

953. **Freehill, R. A.** A comparative study of the nature and organization of the content of social science courses offered in the public junior colleges and in the freshman and sophomore years of state universities. Master's, 1932. Illinois. 79 p ms

954. **Freeman, Eleanor C.** Tentative course in the social studies for grades 1, 2, and 3, San Mateo county, Calif. Master's, 1932. Stanford.

955. **Gerberich, J. R.,** *and* **Jamison, A. W.** Attitude changes in students of elementary sociology. Fayetteville, University of Arkansas, 1932 7 p ms

An attitudes check test dealing with controversial items of sociology was given at the beginning and close of a semester course in sociology Findings: Sex differences, changes of attitude in certain types of items, etc., were found to exist.

956. **Gibson, Margaret Fulton.** Units of work in elementary socal studies. Master's, 1932. Texas.

957. **Greene, Pat Henry.** A comparison of achievement in seventh grade social studies between schools having integrated and nonintegrated organization. Master's, 1932. Texas

958. **Greenleaf, Mary P.** Course of study in social science for the junior high school, including seventh, eighth, and ninth years. Master's, 1932. Stanford.

959. **Harmsworth, Harry Clayton.** Vocabulary difficulties in junior high school social science Master's, 1932. Colo. St. T. C.

960. **Harper, Whitfield.** A study of the vocabulary content of economics in Kansas high schools. Master's 1932. Kansas.

961. **Hartshorn, Caroline S.** An experimental study of the value of indexing reference material as a teaching method in the social studies. Master's, 1931. T. C., Col. Univ. 39 p. ms.

Reports a project carried on in a public school sixth grade, in which the pupils started a card catalogue by making analytical cards for the references found on transportation

962. **Hess, George O.** Economics in the press. Master's, 1932. Iowa 99 p. ms.

963. **Hollister, George E.** Social studies vocabulary difficulties in the seventh and eighth grades Master's, 1932. Peabody. 125 p. ms.

Studies the vocabularies of 307 children. The factors of sex, age, intelligence, and grade were considered in relation to vocabularly knowledge; the girls were ahead of the boys in average vocabulary by 9,307 to 9,053 words.

964. **Howard, Margaret Louise.** The relation of reading comprehension to success in the social studies in junior high schools. Master's, 1932. Southern California.

965. **Hutchinson,** *Mrs.* **Mary McClure.** Course of study in social sciences for fifth and sixth grades of demonstration school, Mississippi State college for women. Master's, 1932. T. C., Col. Univ. 93 p. ms.

* 966. **Kirnan, Florence M.** The development of the problem-project in social studies. Master's, 1932. New York. 55 p. ms.

Studies the development of projects in geography, history, ethics, political science, economics, sociology, biology, and psychology, and discusses educators who advocated one or more of these subjects in the curriculum.

*967. **Lacey, Mrs. Joy Muchmore.** Social studies concepts of children in the first three grades Doctor's, 1932 T. C., Col Univ New York City, Teachers college, Columbia university, 1932. 90 p (Contributions to education, no. 548.)

Data, based on a test given to 450 children in the first three grades in 22 schools in 16 cities, indicate that there is a continuous development in children's concepts from grade to grade; differences within a grade group seem to be of more importance than differences between grades children in the primary grades possess considerable information about their social world, concepts which involve personal relationships seem more difficult than mere factual information about objects

GEOGRAPHY

982. **Bentel, Lucille E.** Guidance for teachers in the use of pictures afforded in courses of study in geography. Master's, 1932. Chicago. 73 p. ms

An analysis of 45 state courses of study and 54 city courses of study in geography Findings: The city courses afforded more guidance than the state courses

983. **French, Loyd C.** Effect of specific training in vocabulary, reading of maps, graphs, and tables, and organization on achievement in geography Master's, 1931. Pittsburgh.

*984 **Geedy, Calder B.** An experiment comparing the effectiveness of the stereopticon slide when used as an introduction to topics in geography with that of the stereograph when used to supplement class work. Master's, 1932. Penn. State. 90 p. ms.

The experiment was conducted in two fourth grade classes in each of two elementary schools in Lewiston, Pa There were a total of 27 matched pairs of pupils in one school and 28 matched pairs in the other school. The topics used were Japanese, Negro, Arab, and Swiss peoples and their customs. Data indicate that slides used before the lesson as an introduction were more effective than graphs used to supplement the study period

985. **Johnson, Mildred E.** An attempt to validate a set of objectives in commercial geography for senior high schools of the state of Washington. Master's, 1932. Washington. 92 p. ms.

986. **McKee, Kirkland S.** The value of a workbook in teaching sixth grade geography. Master's, 1932. West Virginia.

987. **Moran, Grace B.** Geography learnings resulting from community life studies in primary grades. Master's, 1932. Peabody. 78 p. ms.

Attempts to find out what geography children in primary grades learn through unit work organized around their interests, the home, and the community. Projects centered around children's interests in home and community are rich in opportunities for geography learnings and these studies may rightly be made the core of the curriculum

988. **O'Brien, F. P.** Supervisory assistance in teaching geography and history. Lawrence, University of Kansas, 1932. 32 p. (University of Kansas. Bulletin of education, vol. 3, no. 7, February 1932.)

Describes an experiment conducted in teaching geography and history in the sixth, seventh, and eighth grades of schools at Bonner Springs, Oskaloosa, Highland Park, and Linwood, Kans The purposes of the experiment were: To aid the teachers in diagnosing the accomplishments, needs, or difficulties of the pupils; and to give definite suggestions to teachers with reference to materials, methods, and reading materials.

989. **Parmenter, Helen Madeline.** A unit of study centered around the comparison of the Amazon and the Nile rivers. Master's, 1932. Southern California.

990. **Platt, Elizabeth T.** Aids for the teacher of geography. Master's, 1932. T. C., Col. Univ. 36 p. ms.

991. **Sexauer, Myrtle.** Analysis of geography tests available for classroom use to determine whether the various tests are so constructed as to measure the child's ability to think geographically and to use geographic tools intelligently. Master's, 1931. Pittsburgh.

992. **Snow, Lucille Jeanette.** Background material for use of student and teacher in the study of Egypt, including bibliographies, illustrative material, and creative art problems. Master's, 1932. T. C., Col. Univ. 41 p. ms.

993. **Taylor, Ida Belle.** Development of the content used in geography textbooks of the public schools. Master's, 1931. South. Methodist.

*994. **Thorp, Mary Tucker.** Objective studies showing need for giving instruction in use of geography tools. Master's, 1932. Boston Univ. 109 p. ms.

A test composed of a series of graded exercises was prepared and administered to pupils in rural-consolidated, village, small city, and large city schools, without preliminary drills or suggestive helps. About 50 per cent of the 556 pupils tested were from English-speaking homes. The pupils ranged in age from 9 to 14, and were in grades 4 to 8 inclusive, and worked under varying conditions of curriculum assignment, time allotment, and materials. Data indicate that incidental teaching of methods for handling geography tools has failed to give mastery; it is imperative to abandon this method for a psychological process of training directed toward precise usage; the work is within the comprehension of pupils preparing to enter junior high school, certain grades appear to be better adapted for directed training in the various degrees of usage.

995. **Upton, Loula Bradford.** Teaching the geography of Canada and Alaska. Master's, 1932. Peabody. 164 p. ms.

996. **Watson, Jennie.** Analysis of state and city courses of study in geography. Master's, 1932. Pittsburgh.

HISTORY

997. **Bane, Loren.** The analysis of data secured from Iowa academic contest in American history. Master's, 1932. Iowa. 111 p. ms.

*998. **Bennett, Cecil M.** Experiment showing the effectiveness of the use of the written preview in teaching history in the secondary schools. Doctor's, 1931. New York. 217 p. ms.

The experiment was carried on in six high schools in New York State, ranging in size from 250 to 8,500 pupils. The regular method and the preview and test method were used with experimental and control groups by each teacher, and the groups rotated at the end of each unit of work. Two of the experiments dealt with ancient history in the ninth grade level, the other 10 experiments dealt with American history at the twelfth grade level. Data seem to indicate that the preview and its mastery technique does not justify the time consumed in using it as an aid to learning.

999. **Bennett, Eunice Ercelle.** Use of old world historical material in upper elementary grades. Master's, 1932. Peabody. 114 p. ms.

Shows that the biographical approach to the study of history is the most satisfactory one for elementary grade pupils and that greater emphasis should be placed on local history and the study of women of historical importance.

*1000. **Birkner, Charlotte M.** Supervised study in history. Master's, 1932. New York. 61 p. ms.

Discusses the aims of, needs for, and varying forms of supervised study, and applies them to the study of history.

1001. **Boyd, E. C.** A study of certain factors related to success in teaching world history. Master's, 1932. Iowa. 130 p. ms.

1002. **Calkins, Edward J.** A curriculum study demonstrating the use of the contrast method in American history for eleventh grade pupils of exceptional ability. Master's, 1931. Kans. St. T. C., Emporia. 95 p. ms.

1003. **Cooper, W. P.** The content and method in a course for American history for high schools. Master's, 1932. Maryland. 167 p. ms.

A résumé of the development of methodology in America, particularly for history, with unit organization of American history for high schools.

1004. **Fruewald, E. G.** The teaching of history in military academies. Master's, 1932. Ohio. 72 p. ms.

Shows a decided trend to teach history without the usual "sugar-coating" and indicates that few instructors of this subject have any military background which might form a bias in teaching. The average requirements for graduation are two years of history.

1005. **Gift, Elmer Birdsell.** The teaching of history in grades 7 and 8 in Kansas schools. Doctor's, 1932. Kansas. 180 p. ms.

Traces the change in the concept of history teaching, and the relation existing between knowledge of methods and practice in history teaching.

1006. **Gray, Arthur Dillman.** World history in senior high school. Master's, 1932. Chicago. 89 p. ms.

Shows the need of determination of the aims of world history, the organization of the subject matter, and the determination of emphasis upon the content of the course in the last two years of the high school

1007 **Green, Fletcher Melvin.** Heroes of the American revolution. An outline for individual and group study. Chapel Hill, University of North Carolina press, 1931. 55 p (University of North Carolina extension bulletin, vol. 11, no 5, January 1932.)

PSYCHOLOGY

1053. **Abdun-Nur, Edward Amin.** Mental work: its characteristics and racial comparisons. Master's, 1932. Denver. 115 p. ms.

Describes an experiment consisting of three tests: The National intelligence test; the first three parts of the Compass addition diagnostic test, and a test made up with 24 of the Thorndike addition sheets which were administered to 118 pupils in the seventh and eighth grades in the Englewood, Colo., schools In comparing white, Japanese, and Mexican children, it was found that the Japanese gained in speed and quality, the Mexicans gained in speed but lost in quality, and the white children lost in both speed and quality.

*1054. **Allison, Loy W.** An experimental study of reflex and voluntary eyelid responses. Doctor's, 1931. Peabody. Journal of experimental psychology, 15: 56-72, February 1932. (Offprinted.)

Determines the differential reaction time of the reflex and voluntary eyelid responses as dependent on the interval between the various stimuli.

1055. **Bailey, Maud T.** A study of the effect of environment on intelligence. Master's, 1932. Catholic Univ.

1056. **Cason, Hulsey.** The learning and retention of pleasant and unpleasant activities. New York City, Columbia university, 1932. 96 p. (Archives of psychology, no. 134.)

Data secured from 53 men and 37 women, each of whom recalled from three to eight incidents, indicate that pleasant and unpleasant incidents tend to become indifferent as they are recalled on successive occasions. Pleasant activities are positively correlated with optimistic temperaments, and unpleasant activities are positively correlated with pessimistic temperaments; unpleasant activities and experiences are stronger and have a more positive character than pleasant activities and experiences. Feelings and emotions are pattern activities and can be learned, retained, and reproduced.

1057. **Crawford, Meredith P.** Methods for generating sound stimuli for use in testing auditory capacity. Master's, 1932. Columbia.

1058. **Creed, Buford.** The application of the concept of emergence to the classical problems of philosophy. Master's, 1931. South. Methodist.

1059. **Cureton, Edward E.** Validation against a fallible criterion. Auburn, Alabama polytechnic institute, 1932. American journal of psychology.

1060. **Dauber, Blanche.** The relation between the range of visual apprehension and retention. Master's, 1932. Columbia.

1061. **Dorlac, Lorna Doone.** Fluctuations of speed of production within the work curve of a narrow mental function. Master's 1932. Iowa.

1062. **Ebbets, Pauline.** Possibilities of the training of the will. Master's, 1931. Marquette.

1063. **Erb, George F.** The relation of intelligence to success. Master's 1932 Pennsylvania. 99 p. ms.

1064. **Eurich, Alvin C.** Retention of knowledge acquired in a course in general psychology. Minneapolis, University of Minnesota, 1932. 20 p. ms

This study of retention was conducted by retesting students with the final examination in general psychology six and nine months after they had completed this course. The mean score nine months after the course was completed is approximately 73 percent of the mean at the close of the course.

1065. **Ferree, Edna Mae.** An evaluation of the present status of transfer of training from an experimental standpoint. Master's, 1932. Washington. 232 p ms.

1066. **Galt, William.** Phyloanalysis: A brief study in the group of phyloanalytic method of behavior-analysis. Master's, 1932. Columbia.

1067. **Heering, Gertrude A.** Brightness discrimination of the dark adapted eye and its bearing on color theory. Master's, 1932. Fla. St. Coll. for Women. 52 p. ms.

Forty-six adult subjects were tested for the capacity to discriminate between known intensities of the four primary colors and correlations were found between the differences for each of the colors. A low correlation is found between complementary colors; a high correlation between colors with adjoining wave lengths.

1068. **Honn, Robert Arthur.** An experimental study of transfer of training with underprivileged children in certain sensori motor functions. Doctor's, 1931. Michigan. 135 p. (Abstracts of dissertations and theses in education, 1917–1931, p. 73–76.)

Pupil groups were matched on the basis of sex, grade, IQ, mental age in months and score made in the initial cube-sorting test. Data indicate that the effects of training or practice in cancelling digits and sorting cubes were not confined to those activities, but were transferred to other functions more or less closely related; transfer effects were both positive and negative, there was an inverse relationship between the IQ level of the experimental subjects and the amount of transfer obtained.

1069. **Howard, Marjorie.** A study of suggestibility in weight discrimination. Master's, 1932. Fla. St. Coll. for Women. 50 p. ms.

Size, shape, and color are among the factors studied by the weight discrimination test, as well as this effect on the discriminating capacity of the subject.

1070 **Johnson, Buford J.** Child psychology. Springfield, Ill., Baltimore, Md., Charles C. Thomas, 1932. 439 p.

The study is based on observation of and work with children in the Child institute of the Johns Hopkins university in Baltimore, Md.

1071. **Kaminsky, Freda.** A survey of child psychology in America. Master's, 1932. Columbia.

1072. **Lederman, Nelle Reback.** Psychology in the secondary school curriculum. Master's, 1932. Coll. of the City of N. Y. 85 p. ms.

Traces the development of psychology in the high-school curriculum, and surveys the present status of the subject.

* 1073. **Lick, Artz Samuel.** The measurement of the interest value of representative items taught in elementary psychology. Master's, 1932. Penn. State. 65 p ms.

A list of 256 statements was compiled from five textbooks in psychology which included all the items that would ordinarily be taught in a course in general psychology. Girls showed a tendency to receive slightly more pleasure from a course in psychology than boys. There is no relationship between intelligence scores and the grades received in psychology to pleasure received from a study of psychology. Students of mature age seem to be more interested in the content of psychology than younger pupils.

1074. **Lindsley, Charles Frederick.** Psycho-physical determinants of individual differences in voice quality. Doctor's, 1932. Southern California.

1075 **McClarren,** *Mrs.* **Ruth E.** Psychological study of children's fears. Master's, 1932 Ohio. 40 p. ms.

1076. **McGonagle, Raymond Stephen.** General factor of attention and its relation to cognition. Master's, 1931 Catholic Univ.

*1077. **MacLeod, Robert Brodie.** An experimental investigation of brightness constancy. [Doctor's, 1931 Columbia] New York City, Columbia university, 1932. 102 p. (Archives of psychology, no 135)

Investigates certain aspects of the general phenomenon of color constancy, and observes the effects of various kinds of shadow background upon the color of an object Data indicate that color constancy depends upon the cooperation of a number of factors, physical, physiological, organizational, attitudinal, and empirical

1078. **McNemar, Quinn.** Twin resemblances in motor skills, and the effect of practice thereon. Doctor's, 1932. Stanford.

A study was made of 98 pairs of male twins from the junior high schools of Fresno, Long Beach, Los Angeles, Oakland, Pasadena, San Francisco, and San Jose. These were diagnosed as 47 identical and 48 fraternal pairs, and 3 pairs were undetermined. Reveals that 46 fraternal and 48 identical pairs of male twins show the same order of resemblance in the case of five performances, that heredity hypothesis is the most reasonable explanation of the greater resemblances of identical twins in motor skills.

1079. **Melton, James V.** Education and the Gestalt theory of generalization. Doctor's, 1932. Ohio. 167 p.

1080. **Morgan, J. J. B.** Child psychology. New York City, R. R. Smith, 1931. 471 p.

The study presents the latest findings in the field of child behavior.

1081 **Owings, Walton A.** Introversion and extroversion in relation to the auditory threshold. Master's, 1932. Columbia.

1082. **Palmer, Ronald H.** Conditions influencing retention of knowledge by high-school and college students. Master's, 1931. Iowa St. Coll.

1083. **Parker, F. Thomas.** The function and development of personality in the light of modern psychology. Master's, 1932. Columbia

1084. **Ramsay, Martin N.** Trainability of the audito-digit memory span. Master's, 1932. Ohio. 26 p. ms.

Data indicate that 22 junior high school pupils trained for 21 consecutive days showed that they had received only a small amount of training after great effort on their part.

1085. **Rinehart, Elsie L.** Primary factors in the retention of knowledge. Master's, 1932. Iowa St. Coll.

1086. **Riser, Arthur Franklin.** A study of whole, part, spaced, and unspaced motor learning. Master's, 1932. Chicago. 30 p. ms.

1087. **Rock, Robert T., jr.** The influence upon learning of the quantitative variation of after-effects. Doctor's, 1932. T. C., Col. Univ.

Describes three types of experiments, using graduates, students, and elementary school children, employing code learning material with reward and punishment in an attempt to ascertain if mere "acceptance" influences learning as much as highly satisfying after-effects.

1088. **Romlinson, Charles W.** Studies in memory. Master's, 1932. Kans. St. T. C., Emporia. 47 p. ms.

1089. **Rosenberg, Rose L.** The psychology of punishment. Master's, 1932. Columbia.

1090. Schulte, *Mrs.* Luise M. A study of normal senile mental decline. Master's, 1932. Columbia.

1091. Scott, R. Ray. The stimulus response concept in its educational bearings. Doctor's, 1932 Ohio. 135 p ms

Covers reflex, instinct, and intelligence theories and treats of educational bearings of each Finds that behavior is a unified process in which stimulus and response are merely functional aspects of the reconstruction of experience.

1092 Seward, John P. The effect of practice on the visual perceptions of form. Doctor's, 1931. Columbia. New York City, Columbia university, 1931 72 p (Archives of psychology, no. 130)

A preliminary experiment on six subjects, using pairs of nonsense syllables to be read behind ground glass in varying illuminations, showed continuous improvement through 12 days of practice In the main experiment, seven subjects served for 3 days of preliminary adjustment and 12 days of recorded practice Data indicate that practice was attended by gradual improvement throughout the course of the experiment, improvement was chiefly characterized by · Gradual increase of right responses per trial; increasing variability of responses per trial; and decreasing variability of response to a given stimulus and of stimulus to a given response

1093 Simpson, George. Is a science of "social" psychology possible? Master's, 1932. Columbia.

1094 Smith, Rufus Albert. An attempt to measure scientific attitudes Master's, 1931. Peabody. 60 p. ms.

1095 Speaker, *Mrs* Mary Campbell Psychology and psychic research. Master's, 1932 Ohio. 48 p. ms.

1096. Strong, Edward K., *jr* Change of interest with age. Based on examination of more than 2,000 men between the ages of 20 and 60 representing eight occupations. Stanford University, Calif., Stanford university press, 1931. 235 p.

Discusses changes with age in liking, disliking, and being indifferent; changes of interest from decade to decade, changes in interests in terms of various groupings; resemblance of interests of men in one occupation to those of men in other occupations as affected by age; occupational preferences, age scales, and effect of age upon scores from occupational interest scales

1097 Thorndike, Edward L., *and others.* The fundamentals of learning. New York City, Teachers college, Columbia university, 1932. 638 p.

Reports investigations covering a period of three years, dealing with the fundamental facts and forces in learning. The study discusses the influence of repetition under varying circumstances; the influence of distribution; the polarity of mental connections; the influence of after-effects, the influence of rewards and punishments; the physiological basis of the strengthening of connections by their after-effects; readiness, identifiability, and availability; the influence of mental systems; desires, purposes, interests, and motives, associative shifting, and the conditioned reflex

1098. Welborn, Ernest L. A comparison of verbatim and substance memorization of prose passages with varied distributions of readings. Doctor's, 1932. Ohio. 231 p. ms.

Analyzes statistically the results of tests given to 800 students in classes in psychology based on readings and prepared passages in psychology.

1099. Wiederaenders, Martin F. A critique of the principles of the Bond and the Gestalt psychologies applied to certain problems of education. Doctor's, 1932. Iowa. 260 p. ms. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248, 1 p)

Compares the principles of the Bond and Gestalt psychologies with reference to their respective theories of learning, and points out certain agreements and disagreements between Bond and Gestalt theories of learning

MUSIC

1100. **Anderson, Anna Eleanor.** A study of music education in secondary schools of Ashtabula and Butler counties, Ohio. Master's, 1932. Ohio. 100 p. ms.

*1101 **Bartges, Paul F.** Melody method of teaching sight reading of vocal music versus the mechanical. Master's, 1932. Penn State. 38 p. ms.

Describes an experiment conducted with the third and fourth grades of a village school in which the pupils were tested by the Kwalwaser-Ruch test of musical achievement and Kelsey test of musical achievement. The mechanical method was superior to the melody method except for recognition of familiar melodies, in which the melody method was superior.

1102. **Barnett, Helen Manchee.** Procedures in teaching creative music. Master's, 1932. Southern California.

1103. **Bates, Edith.** Music in the high school. Master's, 1931. South. Methodist.

1104. **Beasley, Willis Carter.** Discrimination of the binary phase cycle. Doctor's, 1931. Ohio. Princeton, N. J., Psychological review company. 100 p.

One basis for the discrimination of beats in mistuned pure binary harmonies is the progressive changes in phase relationship of the components in the compound.

1105. **Belser, Clara Helen.** Music possibilities in units in a state course of study. Master's, 1932. Peabody. 82 p. ms.

Data indicate that music has not functioned properly in the activity school because the teachers failed to interpret the children's moods properly, the teachers were inadequately trained in music, there was a lack of knowledge of sources of music material, and the state course of study was meager in music suggestions.

1106. **Bondurant, Dorothy.** Teaching problems in Weber's Concertino for clarinet. Master's, 1932. Iowa.

1107. **Bowman, Grace.** A comparison of music instruction in selected urban and rural schools in Utah. Master's, 1932. Utah. 2 p. ms.

1108. **Brand, Anna.** Activities in the teaching of pitch and true intonation: an inventory of practices in selected elementary school classes. Master's, 1932. Northwestern.

1109. **Brate, Harriet E.** The string program of the intermediate grades and junior high school. Master's, 1932. Ohio. 49 p. ms.

Gives a general history of instrumental music, and discusses the use of first and second orchestras, small ensemble groups, and string classes in the intermediate grades and junior high schools.

*1110. **Breitenbach, Ruth A.** A study of music in the public schools for physically handicapped children. Master's, 1932. New York. 61 p. ms.

Data indicate that the types of music activities engaged in by normal children are available for handicapped children but in a lesser degree.

1111. **Buchtel, Forrest L.** Music in the secondary schools of Ohio. Master's, 1932. Northwestern.

*1112. **Cameron, Donald O.** An experiment to determine the value of technical analysis in teaching an appreciation of music. Master's, 1932. Penn. State. 23 p. ms.

Instruction in music appreciation was given to two experimental groups of sixth grade pupils of the State College public schools. The groups were given the same material, which was presented differently. The group in which emphasis was placed on technical analysis made more progress than the group taught by the formal analytic method.

1113. Campbell, J. H. Music in the making of a citizen. Master's, 1932. Texas.

1114. Cole, Lilian Nielsen. The musical abilities and interests of junior high school pupils. Master's, 1932. Southern California.

ART

* 1177. **Aznive, Grace Nevart.** The function of art education in secondary schools. Master's, 1932. Boston Univ. 102 p ms.

Data indicate that the field of art education divides itself into art training for the average pupil in appreciations and judgments, and art training for the special talent pupil in technical skill; art education does not carry over into the school life of the majority of pupils; art is not reaching many students in the high schools

1178. **Beug, Hilda M.** The grade correlation of art and other subjects in a second grade. Master's, 1932. Iowa. 91 p.

1179. **Bird, Milton H.** A study in aesthetics Doctor's, 1932. Harvard. 114 p.

Attempts to determine whether or not there is any correlation between intelligence and ability in drawing, and shows that there is a slight relationship between them.

1180. **Calhoun, Catharine Boyd.** Survey of the opinions of leaders in education to determine appropriate material for a general art course for the junior high school. Master's, 1931. Chicago. 132 p.

1181. **Cooper, Lawson Pendleton.** Beginnings of creativeness in art. Master's, 1932. Claremont. 153 p. ms.

1182. **Crosby, Rose M.** Measurement of art appreciation in the Boulder public schools by means of the McAdory art test. Master's, 1932. Colorado.

Tests given 623 children of grades 3, 6, 9, and 12 in the Boulder public schools were correlated for sex, age, and grade differences. Sex differences were evident.

1183. Deldosso, Francis E. A concentrated art appreciation program for Delaware junior high school. Master's, 1932 Colo. St. T. C.

1184. Dixon, Mary Vista. The place of drafting and design in teachers colleges. Master's, 1932. Peabody. 58 p. ms.

1185. Elliott, S. R. Architecture appreciation for secondary schools. Master's, 1932. Colo. St. T. S.

*1186. Engels, Grace W. A study in the psychology of color preferences. Master's, 1932. New York. 42 p. ms.

Color preferences for 30 colors were compared for men and women students in the New Jersey State normal school at Newark

1187. Eurich, Alvin C., *and* Carroll, H. A. Abstract intelligence and art appreciation. Journal of educational psychology, 23 : 214–20, March 1932.

This study leads to the following conclusions: (1) The correlation between the Meier-Seashore and the McAdory tests is positive but very low; (2) The McAdory test appears to be a more reliable instrument; (3) Abstract intelligence has little if any relationship with critical ability in art on the college level; (4) Abstract intelligence at the extreme seems to affect art judgment ability; and (5) Gifted children are superior to borderline children in art judgment ability, but not so superior as they are in abstract intelligence.

1188. Ferguson, Ruth Louise. A comparison: art and other departments in state teachers colleges. Master's, 1932. Peabody.

Art, as compared with other departments of instruction in state teachers colleges for the year 1930–31, is about midway on the ranking scale; it has developed within the last 10 years, but not to the extent of the education and English departments.

*1189. Foster, Helen N. Essentials of historic design as used by students of art in high schools. Master's, 1932. New York. 50 p. ms.

Shows the extent to which historic design is used in the art courses in the high schools of Connecticut, New Jersey, Westchester county and New York City, N Y.

*1190. Gall, Esther. Creative work for children talented in art. Master's, 1932. New York. 81 p. ms.

Aims to show the need for the conservation of the exceptionally talented children in art, and the provisions made for the selection and fostering of talented children with creative ability in art.

1202. **Megenhardt, *Mrs.* Dorothea Tucker.** A tentative art course of study for the senior high school. Master's, 1932. Ind. St. T C 49 p. ms. (Abstract in Indiana State teachers college. Teachers college journal, 3:279–80, July 1932.)

* 1203. **Melhuish, Fannie Elthera.** A study of children's choices of color combinations as conditioned by age. Master's, 1932. Penn. State. 57 p. ms.

Analyzes the color combinations of 669 colored drawings made by 335 children in 16 rural schools of Center county, Pa. No consistent age trends were shown, although the older children tended to use triads, whereas the younger children used the more sharply contrasted analogous colors.

1204. **Moore, Lucy Hunt.** Educational principles and art practices in progressive schools. Master's, 1932. Peabody. 93 p. ms.

1205. **Neal, Catherine.** Some possibilities of everyday materials in art education. Master's, 1932. Peabody. 68 p. ms.

* 1206. **Ray, Bertha Lauretta.** Distribution of emphasis on certain phases of art now taught in the public schools of Pennsylvania. Master's, 1932. Penn. State. 102 p. ms.

Indicates that practically half of the schools studied in Pennsylvania have blackboard drawing in the elementary grades, while there is a decline in the amount of art work taught in the junior and senior high schools, with no art courses in some of the senior high school groups. The Prang color theory is used most extensively in the Pennsylvania public schools

1207. **Ray, Thelma Tipton.** Course of art study for an Imeprial Valley high school. Master's, 1931. Stanford.

1208. **Regnart, Marjorie Jean.** Visual art education. Master's, 1931, Stanford.

1209. **Russell, Edgar F.** Mechanical drawing as a guide to engineering. Master's, 1932. Maryland.

1210. **Sanders, Orpha.** The teaching of art: A study in the historical development of method. Master's, 1932. Iowa.

1211. **Scott, Helen North.** An evaluation of two types of teaching for appreciation of art. Master's, 1932. Indiana. 72 p. ms.

1212 **Shively, Josephine Marie.** The building of an objective examination in art appreciation for college freshmen. Master's, 1932. Colo. St T. C

1213. **Stocklmeier, Adele I.** Course of study in art for the slow, medium, and rapidly progressing pupils of the John Sweet union high school of Crockett, Contra Costa county, Calif. Master's, 1931. Stanford

1214. **Stone, Ada Bell.** Color content in the public-school curriculum Master's, 1932 Colo. St T. C.

1215. **Taylor, Herma Madge.** Children's interests as revealed by their drawings in three grades Master's, 1932. Peabody 60 p. ms.

Children in the kindergarten, first and second grades were more interested in drawing trees and buildings than in any other topic. Sex, grade level, chronological age, and intelligence influenced their drawing interests only slightly.

1216. **Tettelbach, Maude Augusta.** The place of the fine arts in the junior college curriculum. Master's, 1932. Southern California.

1217 **Tubbs, Ruth H.** The teaching of art appreciation in junior high school Master's, 1932. Colo. St. T C.

1218. **Twogood, Arthur P.** Teaching fundamentals of mechanical drawing to beginners by means of film-slides. Master's, 1931. Iowa St. Coll.

* 1219. **Wall, Ernest A.** Aesthetic sense and education. Doctor's, 1931. New York. 415 p. ms

Data were secured by means of questionnaires given to boys and girls ranging in age from 8 to 16 years, in cities, country schools, an duniversity towns in New York and New Jersey. Replies were received for 758 children The questionnaire dealt with art, music, poetry, religion, literature, moving pictures, and games. Data indicate that aesthetic taste is native, intuitive, and universal; and that there are three clearly separated stages in the aesthetic development of children, which seem to fall into the age groups: age 0–8 years, age 8–12 years, and age 12–16 years.

1220. **Woods, Beulah Beatrice.** A study of high-school architectural drawing. Master's, 1932. Southern California.

1221 **Young, Irma O.** A study of the correlation of art with other school subjects in a third grade. Master's, 1932. Iowa.

* 1222. **Zinn, Mary C.** A study of originality in children's drawing. Master's, 1932. Penn. State. 84 p. ms.

Results of a series of four tests given to 1,116 children in the schools of Hanover, York county, Pa. and in the rural districts, and to 100 college students indicate that maturity and experience aid originality in art; that originality is a special skill; and that boys are more original than girls

DRAMATICS AND ELOCUTION

1223. **Barnes, Emily A., *and* Young, Bess M.** Plays. New York City, Teachers college, Columbia university, 1932. 218 p.

Gives six complete plays with stage directions and an account of the development of scenery, costumes, and other materials. All of these plays were originated, planned, developed, and executed by sixth grade children of the Lincoln school.

1224. **Barnes, Harry Grinnell.** A diagnosis of the speech needs and abilities of students in a required course in speech training in the State University of Iowa. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series no. 248, 1 p.)

Data indicate that large groups of university students may be classified systematically in terms of speech handicaps, inadequacies, and special abilities; that there are great

individual differences; that about 5 percent had correct articulation; about 13 percent were found to be emotionally maladjusted; and that a diagnosis and sympathetic understanding and treatment of each case is necessary for speech improvement

1225. **Baumgardner, Emma M.** Dramatization of narrative literature for slow-moving groups in high schools. Master's, 1931. Pacific.

1226 **Boyd, Neva L., *and* Chorpenning, Charlotte B.** Outlines for recording on clubs and dramatic groups. Evanston, Ill., Northwestern university. 1932.

1227. **Clemensen, Frank Nelson.** The status of debate in the high schools of California. Master's, 1932. Southern California.

1228 **Cook, Ruth Forbess.** The teaching of accredited speech courses in Texas high schools. Master's, 1931. Texas Tech Coll.

1229. **Davis, Musa Evans.** Case for high-school dramatics, including a survey of the status of dramatics in the high schools of California. Master's, 1931. Coll. of the Pacific.

* 1230. **Emory, Marion.** Contemporary drama as a means of educating the high-school student in his emotional life. Master's, 1932. New York. 61 p. ms.

High-school students prefer contemporary drama to classical, their emotional needs demand contemporary literature of emotional appeal.

1231. **Erickson, Marceline.** Speech training in the small high school. Master's, 1932. Iowa.

1232. **Farmer, James C.** A social application of the use of public speaking. Master's, 1932. Ind. St. T. C. 43 p. ms. (Abstract in: Indiana State Teachers College. Teachers college journal, 3: 283–84, July 1932.)

A course in public speaking should include speech composition, extemporaneous talks, and oral composition; debating, dramatics, readings, and orations should be offered as part of the extracurricular activity of the high school

1233. **Fife, Evelyn H.** Exercises for the teaching of pantomime in acting Master's, 1932. Iowa.

1234. **Foster, Ruth Young.** The status of dramatics as an extracurricular activity. Master's, 1932. Colo. St. T. C.

1235. **Johnson, Ela Eglantine.** Contemporary literature on the production of plays in high school. Master's, 1932. Peabody. 142 p. ms.

Studies the growth and value of play production, the types of plays suitable for high schools.

1236. **Kester, Katharine Roome.** An acting edition of the Taming of the shrew and Twelfth night for high-school classes in dramatics. Master's, 1932. Southern California.

1237. **Leiter, Cyril F.** Report on play production activities in the high schools of Allegheny county, Pa. Master's, 1932. T. C., Col. Univ. 14 p. ms.

1238. **Lynch, Gladys Emily.** An objective study of the time, pitch, and intensity factors in the reading of emotional and unemotional materials by experienced and inexperienced readers. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

Records were made of 25 tests each of trained and untrained readers by giving them short passages expressing anger, grief, and simple facts Results showed that trained readers read with greater variability of rate, longer pitch range, higher pitch level, greater variability of syllabic pitch, pitch slide, and greater variability of intensity.

1239 **Mathison, Awanda.** Drill book for stage diction for University of Iowa theatre Master's. 1932. Iowa.

1240. **Meyers, Weaver William.** A study of mental imagery as a factor in public speaking. Master's, 1932. Southern California.

1241. **Nichols, Emma Kranz.** Puppetry: Its history and its use in the school. Master's, 1932. Southern California.

1242 **Norvelle, Lee Roy.** Development and application of a method for measuring the effectiveness of instruction in a basic speech course. Master's, 1931. Indiana.

1243. **Seitz, Reynolds Charles.** Measuring the effect of the various emphasis devices that are used in public speaking. Master's, 1932. Northwestern.

1244. **Waltz, Loyd Benson.** A study of the types of students that elect dramatics and their influence on their aesthetic judgments and tastes. Master's, 1932. Southern California.

1245. **Whitney, Leon Kenneth.** Directed speech. Master's, 1932. Denver. 160 p. ms.

1246. **Wilson, Bernice Lloyd.** Junior high school dramatics. Master's, 1932. Southern California.

1247. **Wright, Gaither Cothran.** The effectiveness of dramatization in vitalizing social studies. Master's, 1932. Southern California.

THRIFT

1253. **Burks, Arthur L.** Teaching thrift in the Shawnee public schools. Master's, 1932. Oklahoma. 68 p. ms.

1254. **Caldwell, Jesse Carter.** A comparative study of the practices of teaching thrift in the elementary, junior, and senior high school. Master's, 1932. Colo. St. T. C.

SAFETY

1255. **Judy, Wayne M.** Accidents and safety education as found in the industrial arts shops of Iowa. Master's, 1932. Iowa St. Coll. 37 p. ms.

The 726 accidents in 16 months in 252 school shops indicate the need for shop safety education.

1256 **Lyon, Kyle A.** Injuries of pupils in the Oakland public schools. Master's, 1931. California.

1257. **Metzger, John.** The rise and development of safety education in the public schools of the United States. Master's, 1932. Butler. 119 p. ms.

PRESCHOOL EDUCATION

1258. **Andrews, Olive.** A study of the effect of maturity on the language development of two sisters of preschool age Master's, 1932. Ind. St. T. C. 156 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal, 3: 287–88, July 1932.)

Compares the language development of two sisters, one of whom was 5 years of age and had an IQ of 133, the younger sister was 3 years of age with an IQ of 140. Shows a definite relation between size of vocabulary and intelligence, as proven by the fact that the vocabularies of both children were above the average for their age

1259. **Barber, Mildred.** The nursery school and its relation to the child care and development courses of the land-grant colleges with a study of nine nursery school children. Master's, 1932. Louisiana.

1260. **Caille, *Mrs.* Ruth Kennedy.** Resistant behavior of preschool children. Doctor's, 1932. T. C., Col. Univ.

Studies 30 children, ranging in age from 19 to 49 months who were attending the nursery school of the Child development institute at Teachers college, Columbia university. The children resisted other children more than they did adults; the peak of resistance occurred within two months of the third birthday except for language resistance which had its highest point among the oldest children. Physical resistance tends to decrease with age while vocal resistance tends to increase Individual differences were found with regard to the number of instances of each type of behavior and to techniques of resistance.

1261. **Clark, Velma Rose.** The development of the language of nursery school children as determined by direct observation and by vocabulary tests. Master's 1931. Iowa. St. Coll.

1262. **Crook, *Mrs.* Billie Clark.** A scale for measuring the antero-posterior posture of the preschool child. Master's, 1932. Texas.

1263. **Dow, Mildred.** A study of individual and personality differences of preschool children with reference to artistic performance. Master's, 1932. Iowa.

1264. **Driscoll, Gertrude Porter.** Developmental status of the preschool child as a prognosis of future development. Doctor's, 1932. T. C., Col. Univ.

Attempts to determine the reliability of the Kuhlman-Binet and Merrill-Palmer scales, and by use of other indices of development to evaluate general developmental status at the preschool age as a prognosis of future development. Reliability of the Merrill-Palmer scale was found to be lower than the Kuhlman-Binet scale. Prognosis was more accurate from the preschool composite rating than from the preschool IQ rating alone

1265. **Driver, LaVerne.** Prediction of later performance test ability from performance tests at the preschool ages. Master's, 1932. Iowa.

1266. **Grigsby, Olive John.** An experimental study of the development of concepts of relationship in preschool children as evidenced by their expressive ability. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248, 1 p.)

Results of six series of questions given to 83 children of preschool age, indicate that the questions yield grades of maturity affected by mental age more than by chronological age.

*1267. **Hagman, Elizabeth Pleger.** The companionships of preschool children. Doctor's, 1932. Iowa. Iowa City, University of Iowa, 1933. 72 p. (University of Iowa studies. New series, no. 255. Studies in child welfare vol. 7, no. 4.)

Attempts to develop a valid and reliable method for measuring the frequency of companionships in preschool children.

1268. **Jarrell, Mary.** Quantitative experiences of nursery school and kindergarten children. Master's, 1932. Peabody. 188 p. ms.

The children's quantitative experiences were inseparable from their other learning experiences; they employed in their activities elements of all the mathematical processes emphasized in the elementary school.

1269. **Loomis, A. M.** Technique for observing the social behavior of nursery school children. New York City, Teachers college, Columbia university, 1931. 100 p.

A study was made of physical contacts of 27 nursery school children for 2 hours in 15-minute periods. Correlations were found between physical contacts and muscular tension, use of language, and age.

1270. **McCarthy, Dorothea A.** The language development of the preschool child. Minneapolis, University of Minnesota press, 1931. 174 p. (Institute of child welfare monograph series no. 4.)

This is a study of 140 children of 18, 24, 30, 36, 42, 48, and 54 months, in Minneapolis The children represented every strata of society. Each child was observed individually either in his own home, or in some place very familiar to him. Fifty consecutive verbal responses were recorded for each child exactly as they sounded to the experimenter. Data indicate a more rapid development of language among girls, and earlier language development among the children of the upper socio-economic classes. At 3 years of age the child has acquired several thousand words, he has a ready command of all the inflections of the language and can use language for communicating all his thoughts, needs, and desires.

1271. **Mitchell, Eleanor Morgan.** Observations of nursery school children. Master's, 1931. Louisiana.

1272. **Mumford, Mary.** An evaluation of play activity of the preschool child based on potential postural improvement. Master's, 1931. Iowa. St. Coll.

1273. **Phillips, David Pollock.** Techniques for measuring the results of parent education: Eating and sleeping in the case of preschool children in the home environment. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

Discussion of methods and materials used in analyzing and solving certain problems of parents in dealing with their children.

*1274. **Roberts, Katharine Elliott.** Learning in preschool and orphanage children: an experimental study of ability to solve different situations according to the same plan. Doctor's, 1932. Iowa. Iowa City, University of Iowa, 1933. 94 p. (University of Iowa studies. New series no. 251. Studies in child welfare, vol. 7, no. 3.)

Compares the mental initiative of 21 4-year-old children in a preschool group of the Iowa welfare research station with 19 children from 4 years, 9 months, to 7 years,

10 months in the Iowa soldiers' orphans' home. Data indicate that learning ability is more closely related to mental age than to chronological age

*1275. **Skeels, Harold Manville.** A study of some factors in form board accomplishments of preschool children. Doctor's, 1932. Iowa. Iowa City, University of Iowa, 1933. 148 p. (University of Iowa studies, new series, no. 249. Studies in child welfare, vol. 7, no 2.)

Describes a series of seven experiments in form board performance with a group of preschool children The ability to discriminate form seems to appear before the ability to see the relationship between two units of the same form

1276. **Strayer, Mary Jane.** Age factors in sociability of children. Master's, 1932. Ohio. 57 p. ms.

Describes a 2-year study of sociability ratings on nursery school children and a group formerly in nursery school.

1277. **Swanson, Lydia V.** Some social needs of the preschool child, and how these are met in the nursery school. Master's, 1931. Iowa St. Coll.

1278. **Wellman, Beth L., *and others*.** Speech sounds of young children. Iowa City, University of Iowa, 1931. 82 p. (University of Iowa studies. New series no. 212. Studies in child welfare, vol. 5, no. 2)

The purpose of this study was to determine the development of preschool children's ability to produce correctly the sounds of the English language in the symbols of the International phonetic association. Findings: The reliability of the test obtained by correlating the number of alternate sounds on the record blank given correctly, was 0.96 ±0.01 for children from 2 to 6 years of age

1279. **Whorley, Katherine.** An experimental investigation of the preschool child's sensitivity to compositional unity. Master's, 1932. Iowa.

See also 209, 278, 283, *and under* Child study, Child welfare.

ELEMENTARY EDUCATION, INCLUDING KINDERGARTEN AND FIRST GRADE

1280. **Beale, Desiree.** Factors influencing vocabularies of intermediate grade pupils of Murray, Ky. Master's, 1932. Peabody 96 p.

It was found that educated parents influence the vocabularies of children; type of training at school, environment, telephone and radios in the homes, newspaper and magazine reading all influence the vocabularies of children.

1281. **Brayton, Margaret.** Classroom difficulties of student teachers in the kindergarten. Master's, 1932. Northwestern.

1282. **Brooks, Frederick E.** Defective vision as a handicap to the elementary school child. Master's, 1932. Washington Univ. 55 p. ms.

1283. **Burke, Emmet.** Life activities in an elementary school. Master's, 1932. Rutgers.

1284. **Cadoo, Sarah E.** An appreciation of occupations in the elementary school. Master's, 1932. Rutgers.

1285. **Crum, Jess Ray.** The comparative merits of the departmentalized elementary school and the junior high school pupil. Master's, 1932. Washington. 61 p. ms.

Compares the scholastic attainment of elementary school and junior high school pupils in a Seattle high school. The junior high school group was superior in IQ, CA, and MA

1286. **Dean, Lura May.** Procedures for the better articulation of kindergarten and primary education. Master's, 1932. Southern California

1287. **Doane, Maude E.** Practices in history in grade 5. Master's, 1932. Chicago. 105 p. ms.

Studies practices in history in grade 5 from 1904 to 1931 in time allotted, course of study, reading materials, and methods.

1288. **Drummond, Nellie M.** Constructive contacts between the home and the primary school. Master's, 1932. Ohio. 93 p. ms.

1289. **Finston, Fanny.** A study of some personality traits in a sixth grade group. Master's, 1932. Columbia.

1290. **Fitzgerald, Agnes Rita.** The influence of seating positions on classwork in a third grade. Master's, 1931. Loyola. 105 p ms.

1291. **Fitzgerald, Josephine C.** Analysis of the rhythm of oral expression of primary children. Master's, 1932. Chicago. 68 p. ms.

Compares the placement and duration of pauses in the reading and oral language of children in the primary grades.

1292. **Gariss, Ferne Grimes.** The present status of the public-school kindergartens of the State of Colorado. Master's, 1932. Colo. St. T. C.

1293. **Grandstrand, Mabel Virginia.** The preparation of a word list for elementary schools. Master's, 1932. Southern California.

1294. **Green, Grace B.** Physical status and school progress of pupils in seventh and eighth grades. Master's, 1932. Chicago. 73 p. ms.

From the records of 299 pupils of Monsarrat school, Louisville, Ky., it was determined that there is a relationship between health and school progress, and that prediction may be made for a group but not for an individual.

1295. **Gregory, Jesse E.** A study of educational achievement in six elementary schools in Smith county, Tenn. Master's, 1932. Tennessee. 133 p. ms.

1296. **Hewell, Elizabeth.** Transition from formal to informal teaching in a first grade. Master's, 1932. Peabody. 41 p. ms.

Sets forth clearly how a transition from a formal to an informal program came about which affected conditions for teaching and learning in a first grade, Parker district, Greenville, S.C. Findings: That the changed set-up of room, schedule, place of teacher and child, subject-matter organization, gave better conditions for teaching and learning.

1297. **Jennings, Edna Carew.** A study of the nutrition work in the elementary schools of the Los Angeles school district. Master's, 1932. Southern California.

1298. **Jones, R. L., *and others*.** Large units of instruction for elementary and secondary schools. Auburn, Alabama polytechnic institute. 1932.

1299. **Kelly-Little, Mary.** Development of the elementary schools of the Seventh Day Adventists in the United States. Master's, 1932. Washington. 100 p. ms.

1300. **Kirkman, Gardie Elizabeth.** The place of the kindergarten in the child's adjustment. Master's, 1932. Peabody. 88 p. ms.

Records of the kindergarten of Peabody college were analyzed. The kindergarten helped the child to acquire a better coordination of his body; improve in his ability to work and play with others; grow in the persistence of an undertaking; use equipment and materials in carrying out his ideas.

1301. **Kohnen, *Sister* Loyola.** A history of St. Elizabeth academy, St. Louis, Mo., 1882–1932. Master's, 1932. St. Louis. 113 p. ms.

1302. **Leichhardt, Nelle Dora.** The time spent on home study by intermediate school pupils of Wichita. Master's, 1932. Wichita. 107 p. ms.

1303. **Lucore, Lois Elizabeth.** Home and school contacts in the kindergarten and first grade Master's, 1932. Colo. St T. C.

1304. **McIntyre, Gloria Q. Montgomery.** The objective measurement of the social adjustment of fifth and sixth grade pupils receiving instruction under an activity curriculum. Master's, 1932. Southern California.

1305. **Mock, Thomas Milton.** A comparative study of the behavior of pre-adolescent elementary school boys. Master's, 1932. Southern California.

1306. **Monroe, Walter S., *and* Streitz, Ruth.** Directing learning in the elementary school. Garden City, N.Y, Doubleday, Doran and company, 1932. 480 p. (Teacher-training series)

Part 1 covers the techniques applicable to all teaching procedures; part 2 gives concrete illustration and expansion of the general principles discussed in the first part by its treatment of specific procedures in reading, language, social studies, arithmetic, handwriting, and arts.

1307. **Mosley, Ira B.** The status of educational achievement of the elementary schools of Lyon county, Kans. Master's, 1932. Kans. St. T. C., Emporia. 241 p. ms.

1308. **Plummer, Helen Corbett.** Cultural content of the public-school curriculum. Master's, 1932. Colo St. T. C.

1309. **Roch, L. M.** The assembly in Texas elementary schools. Master's, 1932. Texas.

1310. **Shank, John W.** Supervisory programs in elementary schools. Master's, 1932. Northwestern.

1311. **Tinker, Charlotte Mae Prichard.** Studies in lesson assignments in elementary grades. Master's, 1932. California. 180 p. ms.

Sets up 10 criteria for judging assignments.

1312. **Tutt, Clara.** Development of a technique to provide for individual differences in a large first grade. Master's, 1932. Northwestern.

1313. **Whitney, F. L., *and* Willey, G. S.** Advantages of small classes. School executives magazine, 51 : 504–506, August 1932.

Reports the results of an experimental study of class size in the elementary schools of Trinidad and Pueblo, Colo.

1314. **Williams, Jessie Wardlaw.** Methods of teaching through activities in the primary school. Master's, 1932. Southern California.

1315. **Williamson, Helen C.** Self-dependence and responsibility in kindergarten children. Master's, 1932. Chicago. 117 p. ms.

Data indicate that age is a positive factor in the attainment of these traits; girls attain self-dependence more quickly than boys; position in family group is a negative factor with relation to these traits.

1316. **Woody, Clifford.** New problems in elementary school instruction. Bloomington, Ill., Public school publishing company, 1932. 66 p. ms. (Educational problems series. No. 15, an extension of no. 3.)

The problems were selected from the author's observation, or from problems referred to him for solution by teachers or by members of his classes. They were prepared primarily for use in universities and normal schools. They were intended to bridge the gap between

theory and practice in the application of the principles of educational psychology to elementary school instruction

1317. Yockey, F. Milton. Thievery in the public schools. Doctor's, 1932. California 83 p. ms.

The outstanding factors contributing to thievery in the public schools were: Lack of facilities to protect property; carelessness on the part of teachers and pupils in leaving valuables accessible; and lack of training to build up standards of honesty and to define clearly the rights of property in the mind of the child.

1318. Young, Isabel Scott. Behavior problems of elementary school children. Doctor's, 1932. Yale.

1320. Alkire, Ralph H. Person content of the minds of a selected group of high school pupils. Master's, 1932. Chicago. 85 p. ms.

Shows that the choice of the persons considered important by 1,963 high-school pupils was greatly affected by recency, nationality, and that there was no distinction between fame and notoriety

1321. Andrews, Burdette W. A comparative investigation of 22 graduates of Culver military academy and 22 graduates of public high schools. Master's, 1932. Michigan. 116 p. ms.

* 1322. Arnold, Frank J. A study of the cooperative method of education in the New York City high school. Doctor's, 1932. New York. 137 p. ms.

Data were secured from the employers of cooperative pupils in New York City and the school authorities who have had cooperative work under their supervision. Cooperative education refers to the alternate week plan of school attendance and employment and not to other types of part-time schooling and employment. Replies to a questionnaire sent to employers of cooperative pupils seem to indicate that a further extension of the cooperative plan is desirable and practicable.

1364. **Klein, T. S.** The small high school in Maryland: its possibilities and limitations. Master's, 1932. Maryland. 74 p. ms.

Data indicate that most of the small Maryland high schools could be consolidated to their advantage.

1365. **Leonard, J. Paul,** *and* **Weeks, Helen Foss.** A syllabus in fundamentals of secondary education. Ann Arbor, Mich, Edwards brothers, 1932. 109 p.

Experiment with 300 junior students in two colleges to determine the best materials to offer students beginning education. Findings: Carefully planned problems course covering one year's work for students beginning education This course contains the significant issues discussed in such beginning courses as educational psychology, principles of secondary education, educational measurement, history of secondary education, and principles and methods of teaching. It is an orientation course and is designed to replace the above beginning courses.

1366. **Lewman, John F.** A prognostic study of success in high school based on eighth grade marks and on intelligence test. Master's, 1931. Ind. St. T. C. 35 p. ms. (Abstract in. Indiana State teachers college. Teachers college journal, 3: 272–74, July 1932.)

Describes the use of eighth grade marks in arithmetic, history, English, general scholarship average, and IQ's as predictors.

*1367. **McCulloch, Mary.** A study of the written English equipment of freshmen entering the Point Pleasant high school, Point Pleasant, W. Va. Master's, 1932. New York 43 p. ms.

Analyzes the results of Driggs-Mayhew national scales and the Lewis narrative scale used in testing 117 pupils entering high school in September 1928, and 82 pupils entering in September 1930.

1368. **McDonald, Thomas Hobson.** High-school class sponsors: a study of their selection and duties. Master's, 1931. Texas Tech. Coll.

1369. **McGuire, Harry Max.** Migration of high-school graduates, 1921 to 1925, Warren county, Iowa. Master's, 1932. Iowa St. Coll. 79 p. ms.

1370 **Maller, J. B.** Age versus intelligence as a basis for predicting success in high school. Teachers college record, 33: 402-15, February 1932.

The purpose of the study was to determine the relationship between age at entrance to high school, intelligence, and scholastic success in the high school, and the extent to which scholarship can be predicted from age and from intelligence. The study was based on the records of 5,753 high-school graduates from St. Louis, Mo., Springfield, Mass., Trenton, N. J., and Sacremento, Calif. The correlation between age and scholarship was found to be slightly higher than the correlation between intelligence and scholarship. Scholastic success in high school may be predicted from age at entrance with as much (or as little) reliability as from the results of a standard intelligence test.

1378. **Nevison, Beverly Malcolm.** Factors conditioning the need for study rooms in secondary schools. Master's, 1931. California. 60 p. ms.

Attempts to determine the space for study required for a high-school period of 60 minutes in the "directed study" type of organization, and the study space required for a high school of 40–50-minute periods in the traditional type of organization.

1379. **Norris, Ralph Clarence.** Achievement and progress in Washington county high-school system. Master's, 1932. Colo. St. T. C.

* 1380. **O'Connell, J. Harold.** The present status of commercial law in the public senior high schools of New York State. Master's, 1932. New York. 68 p. ms.

Discusses the objectives, ideas of educators concerning the place of commercial law in the curriculum of the senior high school, opportunities in New York State for teacher training in commercial law, questionnaire data on the teaching of commercial law in the high schools of New York, and the content of commercial law textbooks.

1381. **Olander, Edgar A.** A survey of retail selling programs in secondary schools. Master's, 1932. Colo. St. T. C.

* 1382. **Oye, Ida St. John.** Trends in behavior problems in a senior high school for girls. Master's, 1932. New York. 54 p. ms.

Describes trends and causes leading to behavior problems, deciding factors leading to discharge from high school before graduation, and changes which would tend to reduce the number of unsuccessful high-school careers.

1383. **Pennington, J. A.** A comparative study of day and dormitory students. Master's, 1932. Peabody. 50 p. ms.

1384 **Propst, Alma Scott.** Migration of high-school graduates, 1921 to 1925, Montgomery county, Iowa Master's, 1932 Iowa St Coll. 106 p. ms.

1385. **Puckett, Roswell C.** Making a high-school schedule of recitations. New York City, Longmans, Green and company, 1931. 164 p (Review in Phi delta kappan, 14: 84, October 1931)

Analyzes practices in schedule making in nearly 300 high schools of the country

1386. **Remmers, H. H.** The achievement of our high schools—results of the state high-school testing program, 1930–1931 Lafayette, Ind., Purdue university, 1931. 30 p (Bulletin, vol. 32, no 2, October 1931)

During the first year of the service 101,597 pupil subject tests were used by 240 high schools of Indiana The validity of the tests as related to curricular content is high because they were based on the printed state course of study; they were prepared cooperatively by subject-matter experts in high schools and colleges; and every test item was finally evaluated by from 20 to 50 high-school teachers in Indiana teaching the subject the tests for which they evaluated The coefficients of reliability are in the majority of cases higher than those reported for standardized commercial tests in high-school subjects

1387. **Rogers, John George.** Migration trends of graduates of Iowa county, Iowa, high schools, 1921–1925 Master's, 1932. Iowa St. Coll. 97 p ms

1388. **Rollins, Harry E.** An experiment in determining the efficiency of teaching methods in secondary schools. Master's, 1931. T. C, Col. Univ. 15 p. ms.

Describes an experiment conducted in grades 9–12, in three schools in Massachusetts, and Connecticut covering algebra, chemistry, physics, commercial arithmetic, United States history, and general science.

1389. **Ross, C. R.** Individual differences in senior high school. Master's, 1932. Ohio. 90 p. ms.

Discusses the provision for individual differences in teaching social studies in the senior high school.

1390. **Rundell, Edwin Frederic.** Some sociological and psychological factors affecting the selection of the small secondary school. Master's, 1931. Buffalo.

1391. **Safley, Frances.** The high school in the press. Master's, 1932. Iowa. 48 p. ms.

1392. **Schubert, Cecil.** A survey of the high-school students of Highland Park, Ill. Master's, 1932. Northwestern.

1393. **Schuchardt, Charlotte R.** Scientific thinking among high-school pupils as shown by tests. Master's, 1932. Chicago. 92 p. ms.

Data, based on a study of freshmen, juniors, and seniors at Garfield high school, Akron, Ohio, and at J. Sterling Morton high school, Cicero, Ill., and on eighth grade classes at the Walter Scott school, Chicago, Ill., indicate that there is no noticeable increase in ability to do scientific thinking, as tested by the Downing scientific thinking test, with increase in amount of science instruction.

1394. **Sherbon, Elizabeth.** A study of the relationship between certain measures of motor ability and rhythmic ability in upper grade and high-school girls. Master's, 1932. Iowa.

1395. **Stewart, John Wendell.** A study of trends in high school enrollments in Ohio, 1912–1930. Master's, 1931. Ohio. (Abstracts of theses, p. 202–204.)

Data were collected and tabulated by 3-year periods beginning in 1912 and ending in 1930. The subjects studied were: English, mathematics, foreign languages, social sciences, science, practical arts, physical education and hygiene. There was a shift in enrollments from the academic courses to the practical arts courses.

1396. Stewart, Joseph S., *and* Downs, W. L. The accredited high schools of Georgia. Athens, University of Georgia, 1931. 16 p. (Bulletin of the University of Georgia, vol. 32, no. 1, September 1931. Serial no. 505.)

All accredited high schools of Georgia are placed in two groups. Group 1 represents the best schools in teaching staff, equipment of laboratory, library, and building, and those that have three-fourths of the academic teachers holding degrees from approved colleges. Group 2 represents those schools that have less equipment in laboratory and library, or that do not have three-fourths of the teachers college graduates, but offer 16 units

*1400. Tonne, M. Henriette. A survey of the social business subjects in the public senior high schools of the United States to determine and evaluate current practices. Doctor's, 1932. New York. 167 p. ms.

Attempts to determine the present situation in enrollment, aims, content, methods of instruction, supplementary material, testing, administration, and teacher status, and to prevent evaluations of practices in the social business subjects.

1401. Turner, Mary Lillian. Factors that influence attendance in the high schools of rural communities. Master's, 1932. Southern California.

1402. Vickers, James Albert. A statistical report of the secondary schools of the southern states. Master's, 1932. Peabody. 205 p. ms.

The 4-year high school is the most common type in the 16 southern states studied, although 3-year senior high schools and junior-senior high schools are increasing rapidly in number Three-year, four-year, and two-year junior high schools were commonly used in recent years. The junior high school of the 7–8–9 type was reported as most numerous by the southern states.

*1403. Warner, Ira L. The present status of cocurricular activities in the secondary schools of West Virginia. Master's, 1932. West Virginia. 155 p. ms.

Determines the extent and nature of the cocurricular activities; the types of activities organized and the nature of their organization and administration; the preparation of the principals and teachers for organizing and conducting the activities, and their attitudes toward them; the teacher cost of the activities; and the modifications that could be made to increase their service to the pupils.

1404. Washburn, Carl D. The rise of the high school in Ohio. Doctor's, 1932. Ohio. 325 p. ms.

A history of the origins and rise of the public high school in Ohio; its expansion to 1875.

1405. Wedge, Walter B. Instructional needs of Preble county, Ohio, high schools and possible methods of curriculum extension. Master's, 1932. Ohio. 148 p. ms.

A survey was made of the programs of study and costs of instruction in 11 rural centralized and consolidated high schools with proposals for curriculum extension by means of the alternation of courses, the tutorial plan, and correspondence courses.

1406. Weigel, J. Curtis. A study of the influence of the home, the school, and employment upon the educational and vocational plans of employed high school boys in Indianapolis, Ind. Master's, 1932. Indiana. 93 p. ms.

1407. **White, Bruce E.** A study of 160 high-school seniors in an attempt to discover any characteristics peculiar to performers or nonperformers. Master's, 1932. Washington. 120 p. ms.

Finds performers superior to the average in cultural, moral, and religious characteristics, in education of their parents, in interest in school activities, whereas nonperformers have little interest in school activities and are below the average in the other traits studied.

1408. **White, Daisy.** An investigation of the likes and dislikes of high-school pupils. Master's, 1932. Louisiana.

1409. **Whitney, F. L.** How to study in high school. Greeley, Colorado State teachers college [1932].

This is a handbook for high-school pupils, giving in popular form detailed standards for study based on accepted psychological research.

* 1410. **Wilcox, Rothwell.** Private secondary education in the Association of colleges and secondary schools of the southern states. Doctor's, 1932. Johns Hopkins. Baltimore, Md., Johns Hopkins university press, 1932. 151 p. (Johns Hopkins university. Studies in education no. 19.)

Data were secured on the 163 private schools listed in the 1928 yearbook of the southern association. Discusses the relation of the southern private school to health, efficiency of instruction, home, vocational guidance, citizenship, worthy use of leisure time, religious training and the formation of ethical character, problems, and claims of private schools, and the private school and the association.

1411. **Williams, Daniel T.** A study of the department head as supervisor in some large California high schools. Master's, 1931. California.

JUNIOR HIGH SCHOOLS

1415. **Beatley, Bancroft.** Achievement in the junior high school. Cambridge, Mass., Harvard university press, 1932. 92 p. (Harvard studies in education, vol. 18.)

Compares growth in achievement in reading, language, arithmetic, certain aspects of science and the social studies from the seventh to the ninth grade in six Massachusetts school systems. Three of the systems were organized on the 6–3–3 plan and the others on the 8–4 plan. Pupils in the junior high school system were paired on the basis of sex, chronological age, intelligence quotient, and educational age at the beginning of the seventh grade, with similar pupils in the non-junior system. Data indicate that neither type of school has demonstrated its superiority over the other type in furthering gains in achievement in fundamentals.

1416. Bietry, J. Richard. Problems in teaching speech in secondary schools. Master's, 1932. Southern California.

1417 Bowles, James O. The advisory system in the Woodrow Wilson junior high school. Master's, 1931. Ind. St. T. C., 128 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal, 3: 274–75, July 1932.)

Finds the advisory program helpful in improving student conduct, enriching interests of superior students, helping students who were continual failures, and in reducing truancy and elimination

JUNIOR COLLEGES

1454. Adams, Harold Bertram. Some aspects of the popularizing function of the junior college. Master's, 1931. Claremont. 180 p. ms.

Finds that students prefer college-preparatory to terminal courses, and that many students now attending junior colleges would formerly have attended universities and colleges of liberal arts.

1455. Baldwin, Clayton Martin. Building provisions for a 2-year junior college in California. Master's, 1932. Southern California.

1456. Chamberlain, Leo M., *and* Gard, Paul D. Study habits of junior college students. Lexington, University of Kentucky, 1931. 39 p. (University of Kentucky, Bulletin of the bureau of school service, vol. 4, no. 1, September 1931.)

Data were secured on 15 private junior colleges of Kentucky during the school year 1930–31. Data indicate that the working load of the students averaged 2.43 hours for each semester hour of credit, differences in the study habits of the students do not favor either the men or women students ; evidence indicates that there are wide variations among the instructors within a single junior college, and among all instructors of the colleges studied, in the average amounts of work obtained from students per week per semester hour of credit ; the average load per week per semester hour of credit ranges from 5 38 hours for the commercial subjects to 2.08 hours for psychology ; there is little variation in the study load effected by class size after the number of students enrolled exceeds 30 ; when the students of the 15 colleges are considered as one group, it appears that the heavier the carrying load of the student, the less will be the amount of preparation for each semester hour of work ; there is little variation in the unit measure of preparation effected by the credit value of a course as long as the number of semester credits is not fewer than two nor more than four.

1457. Clement, John Addison, *and* Smith, Vivian Thomas. Public junior ollege legislation in the United States. Urbana, University of Illinois, 1932. 1 p. (University of Illinois bulletin, vol. 29, no. 58, March 18, 1932. Bureau f educational research. Bulletin no. 61.)

Data were secured from school laws of the various states, state statutes or codes in the aw library of the University of Illinois, recent studies of several phases of junior ollege legislation, and replies to a questionnaire received from 43 states There are 12 junior colleges in 35 states, in 20 of which there is some kind of junior college legis- ation. Recent legislation tends to standardize the junior college rather than encourage it. 'he laws and state department standards of the states recognize the junior college as an nstitution on the secondary level but insist that it do work of college grade

1461. Hale, Wyatt Walker. Assimilation, success, and attitude of junior ollege graduates in higher institutions. Doctor's, 1932. Stanford.

The purpose of this study was to ascertain the extent to which junior colleges have been uccessful in preparing their graduates for advanced work and the student life in chools of higher education. Cooperation of 116 junior colleges and 318 higher institu- ions was enlisted and records of 4,100 graduates of junior colleges from 1926 to 1929 vere studied. Findings show that graduates of junior colleges assimilate the work and ctivities of higher institutions; the junior college is performing its service of preparing upils for higher schools in a relatively satisfactory manner.

*1500. **Pannell, Henry C.** The preparation and work of Alabama high-school teachers. Doctor's, 1932. T. C, Col. Univ. New York City, Teachers college, Columbia university, 1933. 118 p. (Contributions to education, no. 551.)

Investigation of the principles underlying the preparation and work of high-school teachers in Alabama, and suggestions for a program of improvement. Data from 2,018 white teachers in accredited schools during 1928–29, and from records in the state

department of education were collected Conclusions: The small high school should be eliminated, definite standards for the training of high-school teachers should be maintained; strict compliance with these regulations should be exacted, sound minimum salary schedule devised to reward individual merit and training

1501. **Peterson, Francis.** Philosophies of education current in the preparation of teachers in the United States. A study of 4 state teachers colleges, 12 normal schools and 9 liberal arts colleges. Doctor's, 1931. T C, Col. Univ.

Data indicate that the members of each of the teaching staff often differ widely among themselves in their point of view on educational problems; teacher opinions are often "sloganized"; the staffs of the teachers colleges tend to approximate a 50–50 conservative-liberal score more often than do the normal schools; liberal arts college faculties tend to be more academic and formal in educational thought and practice than the separate teacher-training institutions.

1502 **Quackenbush, George McConkey.** Study of the professional preparation of the industrial scholarship group of State teachers college, Buffalo, N.Y. Master's, 1931. Buffalo.

*1503. **Ridgway, Carroll William.** A comparative study of the training and teachers combinations of Kansas high-school teachers. Master's, 1931. Kans St. T C., Emporia. Topeka, Kansas State printing plant, 1931. 31 p. (Bulletin of the graduate division, Kansas State teachers college of Emporia. Studies in education, no. 5. October 1931)

Attempts to determine the common teaching combinations; the percent of Kansas high-school teachers who have majored or minored in college in the subjects they are teaching in high school; the percent of teachers who are teaching one, two, three, or more subjects in fields which were not considered as majors or minors in the college course of the teacher; the subject fields in which teachers are paid the best salaries; and the differences in salaries paid the graduates of the different Kansas colleges.

1504. **Rouse, Laurance Tunnicliffe.** A further study of the value of social education in the professional preparation of teachers. Master's, 1932. Colo. St. T. C.

*1505 **Shannon, Edith Reed.** The professional education of teachers in New Jersey. History of its origin and development. Doctor's, 1932. New York. 431 p. ms.

Part 1. Early history of teacher education in New Jersey from 1662 to the establishment of the first normal school, 1855; part 2. Development of the program for the professional education of teachers; part 3. Era of complete expansion of the state program for educating teachers; part 4 Present status of the program for the professional education of teachers in New Jersey.

*1506. **Smith, Travis Edwin.** The rise of teacher training in Kentucky. Doctor's, 1932. Peabody. Nashville, Tenn., George Peabody college for teachers, 1932. 194 p. (Contribution to education, no. 99.)

Discusses the educational status of pioneer Kentucky, the early influences on the training of teachers, the influence of educational organizations, the department of education, and of private institutions on the professional education of teachers, and the convergence of various influences on the final establishment of state normal schools in Kentucky.

*1507. **Spanton, William T.** Training teachers in supervised farm practice methods. The pre-employment training of teachers of vocational agriculture to conduct supervised farm practice in all-day schools. Doctor's, 1932. American Univ. Washington, United States Government printing office, 1932. 125 p. (U. S. Federal board for vocational education. Bulletin no. 165. Agricultural series no. 42.)

Data were tabulated from reactions secured from the head of every teacher-training department and from each state supervisor in the United States except one, and from a total of 267 teachers in 47 states.

* 1508. Street, Claude W. State control of teacher training in the United States. Doctor's, 1932. T. C., Col. Univ. Pittsburg, Kansas state teachers college, 1932. 105 p (Kansas state teachers college Educational monograph, no. 2.)

This is a study of five fairly distinct types of state control of teacher-training institutions Data were secured from constitutional and statutory laws of the 48 states; surveys of state educational systems and other studies in the fields of education and American government; and check lists Findings. Provision of an effective plan for the control of teacher training is dependent on having a properly constituted state educational organization; general education policies should be determined by legislative rather than constitutional decree; suggestions are made for the formulation of a state board of education, for the choice of a state commissioner of education, and of a specialist in teacher training; the state board of education should have direct control of all state institutions exclusively for the preparation of teachers

* 1509. Townsend, Marion Ernest. The administration of student personnel services in teacher-training institutions in the United States. Doctor's, 1932. T. C., Col Univ. New York City, Teachers college, Columbia university, 1932. 115 p. (Contributions to education, no. 536.)

The study discusses the various phases of personnel services, selection, orientation, advisement, health services, extracurricular activities, placement, follow-up, research in personnel, organization of programs, and desirable staffing in an attempt to aid the administrator in setting up and evaluating his program

1510. Uhlken, Sophia M. Trends in professional training for high-school instructors in teachers colleges. Master's, 1932. Stanford.

1511. Wilson, Robert B. Training, salary, tenure, experience, and subject combinations of the science teacher in the accredited public non-North central high schools of Michigan. Master's, 1931. Michigan, 41 p. (Abstracts of dissertations and theses in education, 1917–1931, p. 131–32.)

The study included 98.7 percent of the accredited non-North central public high schools in Michigan for the school year 1929–30, reports on the other 1 3 percent were not available. Data indicate that there is little relationship between the salary received and the training of the teacher; between the salary received and tenure; and between the training of the teacher and tenure.

TEACHERS COLLEGES

* 1518. **Baker, Barney K.** The status of the department of education and the functions of its head in state teachers colleges and normal schools. Doctor's, 1931. Kansas. Peru, Nebraska State teachers college, 1932. 15 p.

Surveys the status of the department of education and the functions of its head in state teachers colleges and normal schools; notes variations and significant differences with reference to the status of the department and the functions of its head; evaluates a list of functions which the head of the department of education sometimes performs; makes suggestions with reference to the stabilization of the department of education and the functions of its head in state teachers colleges and normal schools. Data were received from 94 state teachers colleges and normal schools.

1519. **Bentley, Imogene.** Secondary education courses in southern state teachers colleges. Master's, 1932. Peabody. 74 p. ms.

Covers secondary education courses in the state teachers colleges that are members of the Southern association of colleges and secondary schools and finds that there is little or no uniformity of titles or any of the items that go to make up the catalogue description of the courses; many different texts are used in each of the 12 groups of courses included in this study.

1520. **Black, Lula Kent.** Clothing inventory of women students in teachers college. Master's, 1931. T. C., Col. Univ. 14 p. ms.

1521. **Bowden, A. O.** What is the per capita cost of educating teachers in the teacher-training institutions of the United States? School and society, 35: 748–50, May 28, 1932.

Data were collected to determine the per capita outlay of educating teachers in teachers colleges, to determine the percentage of this cost which goes to salaries, and to determine the percentage which is paid for by students' tuition and fees, etc. There is no significant relationship between size of the school and the student per capita cost; with faculties of equal training, teachers colleges are cheaper to maintain than universities; there is a direct relationship between student cost and number of curricula offered.

1522. **Callender, Leslie H.** The professional preparation of industrial education teachers from Iowa State teachers college. Master's, 1932. Colo. St. T. C.

* 1523. **Case, Gilbert E.** Student participation in school government in teachers colleges and normal schools. Doctor's, 1932. New York. 155 p. ms.

Data were secured from questionnaires submitted to 20 teachers college and normal school administrators, and 20 outstanding educators, and from visits to 19 teachers colleges and normal schools The study established some 42 criteria for the proper conduct of student participation in school government.

1524. **Cook, Harris Malone.** The training of state teachers college faculties. Nashville, Tenn., George Peabody college for teachers, 1931. 143 p. (Contribution to education, no. 86.)

Data indicate that teachers in teachers colleges, who are training teachers for high-school positions have relatively the same collegiate preparation as is required for high-school teachers.

1525. **Cromer, Meredith D.** A study of some influences attracting students to the Kansas State teachers college of Emporia. Master's, 1931. Kans. St. T. C., Emporia. 82 p ms.

1526. **Ely, Wayne H.** The scholastic success of students from small high schools versus students from large high schools as shown by a study of the records made by the freshmen of Indiana State teachers college in 1925, 1926, 1927 and 1928. Master's, 1931. Ind St. T C. 43 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal, 3: 269–70, July 1932.)

1527. **Emerson, Daniel Webster.** The State teachers college as an agency in the training of rural elementary teachers in service. Doctor's, 1932. Oklahoma. 300 p. ms.

1528. **Hard, Ruby Maude.** Training of elementary education majors. Master's, 1932. Peabody. 202 p. ms.

Approximately one-fourth of the majors in elementary education entered Peabody on the junior college level, while nearly three-fourths entered on the senior college level; there was much duplication in the work done before coming to Peabody The rank order of fields in which the students have had training were: English, science and mathematics social science, psychology, languages, education, practical and fine arts, health, philosophy.

1529. **Kindred, Royal McKinley.** Industrial education at Colorado State teachers college: An evaluation of the course of study. Master's, 1931. Colo. St. T. C.

* 1530. **McGinnis, Howard J.** The state teachers college president. Doctor's, 1932. Peabody. Nashville, Tenn., George Peabody college for teachers, 1932. 187 p. (Contribution to education, no. 104.)

Describes the historical development of the office of teachers college president, and the principles and tendencies in college administration, based on replies to a questionnaire filled out by 32 presidents of state teachers colleges, personal interviews with 25 teachers college presidents, 11 deans, and instructors in these institutions, and personal letters from superintendents of public instruction, officers of state boards of education, and presidents and other employees of 18 state teachers colleges.

* 1531. **Odam, George Allen.** Research in State teachers colleges and normal schools of the United States. Doctor's, 1932. New York. 200 p. ms.

Finds that research work in teachers colleges should be confined to studies dealing with internal and public-school problems

1532. **Piper, Edwin E.** A study of representative education courses in selected teachers colleges and normal schools. Master's, 1932. Colo. St. T. C.

1533. **Scott, Lettie.** An analysis of representative English courses in selected teachers colleges. Master's, 1932. Colo. St. T. C.

1536. **Travers, Michael.** The present status of extra academic activities in teachers colleges and normal schools of the Eastern States association of professional schools for teachers. Master's, 1932. Rutgers.

1537 **Ullrich, Fred T.** Teachers colleges in relation to the training of Smith-Hughes teachers of agriculture in high schools. Platteville, Wis., State teachers college, 1932.

1538. **Upshall, C. C., *and* Masters, Harry V.** Evaluation of a course designed to foster individual initiative Bellingham, Washington State normal school, 1932. 23 p. ms.

The course was arranged so that the student was held responsible for the subject chosen for study, treatment of the subject, organization of the subject matter, and amount of help secured from the faculty member to whom he was assigned. The course was evaluated by the faculty members in terms of quarter hours of credit.

1539. **Whitney, F. L.** Effective factors of teachers training in the teachers college. Phi delta kappan, 14: 73–78, October 1931

Finds that the teachers college should make an organized attempt to improve the public-school curriculum, and should organize its own curriculum to meet actual teaching needs.

1540. ——— *and* **Milholland, John.** The relationship of teachers college preparation to subjects taught after graduation. Greeley, Colorado State teachers college.

Detailed report is made for Colorado State teachers college classes of 1926 and 1929, of courses taken in college and actual subjects taught under contract.

1541. **Wright, Frank L.** A comparison of college and university graduates with graduates of teachers colleges in their preparation as prospective secondary school teachers. Washington university, St. Louis, Mo. Educational administration and supervision, 17: 453–61, September 1931.

*1542. **Wrinkle, W. L.** An analysis of the difficulties of beginning student teachers with particular reference to Colorado State teachers college. Doctor's, 1932 New York. 96 p. ms.

See also 709, 728, 931, 1145, 1149, 1184, 1188, 1479, 2815, 3050; *and under* Libraries and reading.

PRACTICE TEACHING

1543. **Anderson, Diana Wroughton.** Supervision of student teaching of physical education for women in teacher-training institutions. Master's, 1932. Southern California.

1544. **Armentrout, W. D., *and* Wrinkle, W. L.** Directed observation and teaching in secondary schools. New York, The Macmillan company, 1932. 399 p.

Analyzes the preliminary preparation and gradual induction of students into the teaching activity.

1545. **Braswell, Mamie.** Supervision of practice teaching in mathematics departments of teachers colleges. Master's, 1932. Peabody. 105 p. ms.

Studies reports from 84 critic teachers in 70 teachers colleges, and finds that practically all of the teachers meet the standards approved by the various accrediting associations with respect to academic degrees, professional preparation, specific subject preparation, number of pupils per critic teacher, and number of student teachers per critic teacher.

1546. **Cisne, W. G.** Comparison of practice teaching facilities in on- and off-campus schools. Master's, 1932. Chicago. 98 p. ms.

Compares practice teaching in 56 teachers colleges and finds that off-campus schools are used extensively to increase practice facilities as to extent and to various levels upon which practice is carried out; off-campus schools afford a more typical teaching situation than the on-campus school.

1547. **Cline, William Rodney.** Study of student teaching in Louisiana. Master's, 1932. Louisiana.

*1548. **Flowers, John Garland.** The content of student-teaching courses designed for the training of secondary teachers in state teachers colleges. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1932. 83 p. (Contributions to education, no. 538.)

Finds there are 102 major activities in the course in student teaching designed to train secondary teachers.

1549. **Hertzler, Silas.** Duties of critic teachers in the secondary schools of Indiana. Peabody journal of education, 9: 90–97, September, 1931. (Reprint.)

A study was made of what the critics thought their duties were, and this study was compared with their own statements as to what they actually did in directing the activities of the student-teachers. The total time given per semester for individual guidance averaged 15 clock hours, or a little less than an hour a week.

1550. **Horn, Ralph.** The integration of theory and practice in the program for student teaching. Doctor's, 1932. Ohio. 199 p. ms.

A study of the relation of theory and practice in relation to historical development of student teaching and a suggested program for improved integration

1551. **Hoyman, Verna A.** The selection and assignment of student teachers in state teachers colleges. Master's, 1932. Northwestern.

*1552. **Jarman, Arthur M.** The administration of laboratory schools. A study of laboratory schools connected with departments, schools, and colleges of education in state universities. Doctor's, 1932. Michigan. Ann Arbor, Mich., George Wahr, 1932. 158 p.

Data were secured from 49 institutions by a study of catalogs and other official publications, professional literature, reports to regional accrediting agencies, questionnaires, and visits to 10 of the institutions. The study attempts to present a picture of laboratory school procedure, and to formulate tentative administrative guides related to the various aspects of laboratory school procedure.

*1553. **Nichols, Augusta Matilda.** The value and procedure in using schemes for evaluating student teachers with special reference to New Hampshire. Master's, 1932. Boston Univ. 147 p. ms.

Takes up the necessity of rating teachers; the history of rating and objective measurement; common practices in rating teachers; the situation in New Hampshire; criteria for judging good teaching technique of instruction; critera for judging good teaching based on the personality of the teacher, community reactions, and the standpoint of superintendents and headmasters; practice teaching as a prediction of teaching success.

*1554. **Voelker, Otto H.** Provision for laboratory school experiences in New York State. A study of the available laboratory school facilities for systematic observation of teaching and for apprentice or supervised student-teaching in the State teacher-training institutions of New York and of the prevailing administrative and supervisory policies and instructional practices of these institutions related thereto. Doctor's, 1932. New York 137 p ms.

Data were secured by personal interviews with responsible officials of the state teacher-training institutions; a check sheet on the administrative and supervisory policies and instructional practices in each of the laboratory schools; a study of year books, bulletins, catalogs, and other printed and mimeographed material from each of the State normal schools and teachers colleges.

1555. **Westhoff, Margaret M.** Current practices in supervised practice teaching in public-school music in certain normal schools Master's, 1932. Northwestern.

1564. **Harris, Molly Mae.** A study of the academic needs of teachers of intermediate grade reading. Master's, 1932. Minnesota. 138 p. ms.

1565. **Hayden, Harry Eugene.** What is the relation between teachers' judgments and scores derived from tests of intelligence and achievement? Master's 1932. Vermont. 31 p. ms.

The study deals with elementary schools of North Adams, Mass

1566. **Herbein, William B.** The organization and administration of teachers' meetings in secondary schools of Berks county. Master's, 1932. Pennsylvania, 74 p. ms.

1567. **Hunter, Eula Frances.** A study of the out-of-school activities of junior and senior high school teachers. Master's, 1932. Colo. St. T. C.

* 1568. **Jones, William Clarence.** A comparative study of certain phases of the status of graduates of state teachers colleges and liberal arts colleges in the teaching profession (Missouri and Texas). Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 75 p. (Contribution to education, no. 102.)

The study included 1,002 teachers who received their baccalaureate degrees from a selected group of Missouri and Texas colleges in 1925 and 1926, and covered positions held, salaries received, pupil enrollment of schools taught, amount of transiency, tenure, membership in state education associations, and amount of graduate work completed.

* 1569. **Kuhlmann, W. D.** Teacher absence and leave regulations. Doctor's 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1933. 75 p. (Contributions to education, no. 564.)

Purpose of this study is to devise a logical absence regulation based on facts and principles related to the temporary absence of teachers. Data were secured from records of teachers, correspondence, and field trips. Discusses granting pay for employees necessarily absent from duty, showing trends; absence regulations providing for security of the teacher are suggested.

1570. **Lisenby, John B.** Comparative study of single and married women teachers in Louisiana high schools. Master's, 1932. Louisiana.

1571. **Luker, Leonard J.** Extent to which teachers in South Dakota high schools are teaching subjects outside their major and minor fields and the causes for such variation. Master's, 1931. South Dakota.

1572. **Mallary, Benjamin Elisha.** The use of objective techniques in selection of trade and industrial teachers. Doctor's, 1932. California. 207 p. ms.

Evaluates the program of selecting trade and industrial teacher trainees carried on by the Division of vocational education of the University of California, at Berkeley, during the years 1925 to 1931, inclusive.

1573. **Mann, Philander L.** The visiting teacher. Master's, 1932. New Hampshire. 35 p. ms.

1574. **Mattson, Martha M.** The work and status of supervising teachers in eight southern and south central states. Master's, 1932. Minnesota. 158 p. ms.

1575. **Meints, Viola Catherine.** Incomes and expenditures of Iowa state college faculty families. Master's, 1931. Iowa St. Coll.

1576. **Onsted, Raymond W.** A study of the health of teachers in Defiance, Henry and Williams counties, Ohio. Master's, 1932. Ohio. 76 p. ms.

* 1577. **Pinkel, Ray B.** Changing status of commercial teachers in the state of Pennsylvania. Master's, 1932. New York. 76 p. ms.

Compares the number of commercial teachers with the number of noncommercial teachers in 1920–21 and 1928–29, the length of their teaching experience, their preparation, certification, and salaries.

1578. **Popenoe, Herbert.** A study of attitudes among public-school teachers. Doctor's, 1932. Stanford.

Tests were given to 795 public-school teachers in San Jose and Oakland, Calif., which included 308 elementary, 247 junior high, and 240 senior high school teachers, representing 20 elementry, 5 junior high and 3 senior high schools. The test results represent 90 percent of the teachers in each school. Findings indicate that the attitudes of public-school teachers vary. Techniques employed can be used to analyze and measure attitudes toward conditions and relationships.

1579. **Sarten, Okla R.** Comparative study of the teachers of Sevier county, Tenn., with the teachers of Dickson, Hickman, Morgan, and White counties, Tenn. Master's, 1932. Tennessee. 72 p. ms.

1580. **Seuter, Andrew Franklin.** The relation of grades made in college by 27 teachers and their success in teaching. Master's, 1932. Kansas.

1581. **Smith, Helen Alden.** Verbal responses of experienced and inexperienced teachers to certain hypothetical behavior problems. Master's, 1932. Southern California.

1582. **Snyder, Agnes,** *and* **Alexander, Thomas.** Teaching as a profession, guidance suggestions for students. New York City, Teachers college, Columbia university, 1932. 69 p. (Teachers college bulletin, 23rd series, no. 3, January 1932.)

The study takes up beginnings and growth; opportunities and the preparation needed; some practical aspects; and the teacher.

1583. **Starkey, Earle R.** A personnel analysis of married women teachers in Iowa. Master's, 1932 Iowa. 131 p. ms.

1584. **Swan, Nora.** Teachers' activities in primary reading. Master's, 1932. Minnesota. 412 p. ms.

1585. **Thomas, Harold Prescott.** An analysis of the time factor in the distribution of school duties among teachers. Doctor's, 1932. Harvard

1586. **Turner, Robert C.** Status of high-school mathematics teachers in Kentucky. Master's, 1932 Peabody. 153 p. ms

Studies of salaries, general and specific qualifications, tenure in present position, total tenure, and teaching combinations of all mathematics teachers of the public white high schools of Kentucky for 1931–32

1587. **Waits, Logan A.** A study of the status of married women teachers in the public schools of Ohio. a comparative study of efficiency in teaching. Doctor's, 1932. Ohio. 187 p. ms.

Data were secured from literature on the subject, annual reports to the state department of education for 1929–30, and from an investigation carried on by the writer The efficiency of married and single women teachers was measured by a special efficiency report form and by the use of standard educational tests. Data indicate that there should be no discrimination against married women teachers by school officials or the public

1588. **Williamson, Anne O'H.** Social intelligence—a basic factor in teaching efficiency Master's, 1932. Ohio. 98 p. ms.

Describes a diagnostic exercise involving teacher-social relationships administered to senior teachers in training and outlines a proposed program for teacher-training institutions to allow for guidance in social intelligence

* 1589. **Wotring, Clayton W.** The legal status of married women teachers in the public schools of the United States as determined by judicial decisions and legal opinions (from 1778 to March 29, 1932). Doctor's, 1932. New York. 108 p. ms.

Attempts to ascertain the basic legal principle controlling the status of single women teachers who marry while in service, and the right of married women teachers to continue to serve as revealed in the judicial decisions of the highest courts in the various states and the federal courts, including the Supreme Court of the United States. Data were secured by a study of the reports of the various courts in the several states, from replies to a questionnaire sent to the state commissioners of education. Approximately 60 percent of the cities of 2,500 population or more do not employ married women as new teachers; approximately 50 percent of the single women teachers who marry may continue to teach, about one-fourth are required to resign at once, and about one-fourth are required to resign at the end of the school year.

APPOINTMENT AND TENURE

* 1590. **Adams, Walter H.** The placement of students in teaching positions as carried on by teacher-training institutions, including normal schools, teachers colleges, colleges, and universities. Doctor's, 1932. T. C., Col. Univ. Abilene, Tex., Abilene Christian college, 1933. 131 p.

Finds that 87 percent of the teacher-training institutions have some kind of organized placement, in most cases the duties have been assigned to an administrative officer whose principal work was other than placement.

1591. **Blackwell, Robert Henry.** Employment of home talent and married women teachers in Texas. Master's, 1932. Peabody. 99 p. ms.

Studies 189 Texas cities of from 2,500 to 50,000 population and finds that few of the boards of education have rules favoring the employment of home talent women teachers, but the practice of 47.5 percent of the schools is to favor home talent women when employing teachers, 31 percent of the schools have rules which discriminate against married women as teachers

1592. **Carr, Herman Wesley.** The legal status of teacher tenure in the United States. Master's, 1931. Ohio. 119 p. ms.

*1593. **Dean, Council.** A study of the tenure, training, salary, sex, age, experience, and position of Arkansas teachers and of the wealth of counties, size of towns, and types of schools in that state. Doctor's, 1931. New York. 107 p. ms.

Analyzes data on 3,091 teachers of Arkansas from forms sent in to the Arkansas state department of education. Data indicate that the typical Arkansas teacher is inadequately paid, poorly trained, lacks experience, and enjoys little tenure.

1594. **Doe, Chester W.** The induction of teachers into service a factor in creative supervision. Master's, 1932. New Hampshire. 33 p. ms.

*1595. **Foote, Irving P.** Tenure of high-school teachers in Louisiana. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 120 p. (Contribution to education, no. 93.)

Data were secured from 1,068 principals and teachers in white state-approved high schools of Louisiana, ranging in size from 8 to 20 teachers, collected in April and May 1931. It attempts to determine the differences in tenure on the basis of position, sex, marital status, accredited status of schools, salary, size of school, size of community, hours of professional training, and teaching fields, rate of turnover for the session 1930–31; the average tenure in high-school positions as well as in other positions; causes teachers have given for changing positions; and causes given by teachers for remaining in positions held longest.

*1596. **Holmstedt, Raleigh W.** A study of the effects of the teacher tenure law in New Jersey. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1932. 111 p. (Contributions to education, no. 526.)

Evaluates the effects of the teacher tenure law of New Jersey on the stability of the teaching staff, the professional improvement of teachers, and procedures of personnel administration.

1597. **Hunter, Florence.** The tenure law in California—opinions of teachers. Master's, 1931. Claremont. 102 p. ms.

CERTIFICATION OF TEACHERS

1607. Cushing, Herbert L. The present status of certification in Nebraska. Educational research record, 4: 73–87, 90, February 1932. (University of Nebraska publication, no. 93, February 1932.)

There are eight distinct agencies authorized by law to issue teachers' certificates in Nebraska, of which seven are actually issuing certificates. The study discusses each of these agencies, and finds that the present procedure is unsatisfactory, and suggests that a conference made up of representatives of the present certificating agencies, school administrators, school board members, teachers' associations, farm organizations, and business organizations be called to work out a practical plan for certification.

1608. Davis, Gilbert J. County examination and certification of teachers in California. Master's, 1931. Stanford.

1609. Kelley, Earl Lewis. The state certification of business education instructors in the United States. Master's, 1932. Southern California.

1610. McMullen, Raymond Fay. Reciprocity among the states in the certification of teachers. Master's, 1932. Ohio. 162 p. ms.

*1612. Stine, Mark E. State certification as a potential influence on the education of teachers in service. Doctor's, 1932. New York. 200 p. ms.

Studies the certification regulations of the several states relative to the in-service education of teachers on the basis of requirements for the renewal and exchange of state teacher certificates. Life certificates are issued in all states except Arizona, Delaware, Maryland, Massachusetts, and Virginia. Nearly all states differentiate among certificates.

1613. Wold, Eva. The history of certification of teachers in Minnesota. Master's, 1931. Minnesota. 134 p. ms.

IMPROVEMENT OF TEACHERS IN SERVICE

*1614. Brown, Francis James. College and university education for teachers in service. (A survey and evaluation.) Doctor's, 1932. New York. 171 p. ms.

Determines the nature and extent of all activities conducted by colleges and universities for the in-service education of teachers; secures an evaluation of the activities from the point of view of the producer and the teacher in service; recommends ways of conducting the activities to be of assistance to the teachers. Data were secured from 39 colleges and universities; from 1,010 administrators and teachers in 182 cities scattered throughout the country, and from catalogs and other printed material of the colleges and universities from which replies to questionnaires were received. Data indicate that the majority of colleges and universities are not providing the comprehensive and significant program of in-service education of which they are capable.

1615. Clark, Emmett. Improvement of teachers in service. Master's, 1932. 105 p. ms.

*1616. Craig, Victor Young. A study of the sources from which rural teachers in service seek and receive aid in teaching and school management. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 136 p. (Contribution to education, no. 92.)

Discusses aid given to teachers in six counties in Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia, for the school year 1930–31. Teachers received more aid than they sought, and received it from source from which they did not seek it. The school board and the State department rank low in amount of aid given. Correspondence courses were rated as a poor source of aid.

1617. **Davis, Doris D.** Teacher's meetings in an elementary school. Master's, 1931. T. C., Col. Univ. 44 p. ms

Finds teacher's meetings an important aid for training teachers in service

1618. **Liming, Sherman O.** Critical analysis of in service training of teachers. Master's, 1932. Ohio. 89 p ms.

Deals with supervision teachers' meetings, demonstrations lessons, summer schools, professional reading, extension courses, and certification

* 1619. **Pickett, Lalla H.** An analysis of the in-service training programs of 25 selected normal schools and teachers colleges. Doctor's, 1932. New York. 165 p. ms.

The purpose of the study was to analyze the in-service training of teachers through a survey of the training as offered by 25 selected professional schools for teachers; to present the outstanding features in their programs; to present the evaluation of the in-service education offered by teachers colleges and normal schools from the point of view of 1,010 consumers; and to indicate current tendencies in in-service training.

RATING OF TEACHERS AND PROGNOSTIC TESTS

1620. **Armstrong, Noble Boyd.** Teacher accounting records for large cities. Doctor's, 1932. Peabody.

1621. **Booker, Paul Estle.** The relation of teachers' scholarship and intelligence scores to teaching success determined by achievement of pupils. Master's, 1932. Washington. 75 p. ms.

1622. **Brooks, B. P.** Ability of high-school seniors to judge teacher failure. Master's, 1932. Peabody. 75 p. ms.

Determines that in Mississippi high-school seniors are able to judge teacher failure.

1623. **Dobbins, Ernest Otto.** The construction and standardization of a test in classroom organization and management. Master's, 1932. Ind. St. T. C. 55 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal, 3: 295–96, July 1932.)

1624. **Hughes, Edna Effie.** A comparison of the experience and training of social science teachers of Los Angeles county with their success rating. Master's, 1932. Southern California.

1625. **Simmons, Edna.** Correlation of administrative ratings of teachers' and pupil achievement. Master's, 1932. Peabody. 97 p. ms.

A study was made of the relationship that existed between progress made over a period of time by 1,047 children in grades 3–8, inclusive, and ratings given 40 teachers by three competent administrators. It was found that there is little, if any, relation between the ratings given the teachers on the basis of a score card and the ratings given teachers as a result of the progress made by the children under her influence when this progress is measured by a standardized test.

TEACHER LOAD

1626. **Dunn, Clarence Edwin.** Teacher-load in the junior high school in Fort Worth, Tex. Master's, 1932. Peabody. 59 p. ms.

This study included number of hours spent by teachers in activities connected with classroom instruction, activities not directly connected with classroom instruction, and number of hours in actual classroom instruction.

* 1627. **Griffin, Grace Alice.** The teacher's load in the public high schools of Massachusetts. Master's, 1932. Boston Univ. 54 p. ms.

Attempts to discover the results of a direct, planned relationship between the instructional and extrainstructional load assigned to full-time teachers in the public high schools of Massachusetts.

1628. Hagood, L. R. A comparative study of the teaching load of inexperienced high-school teachers in Nebraska, 1927–28 and 1931–32. Master's, 1932. Colo. St. T. C.

1629. Reed, Rufus D. Range of subjects taught, teaching load and preparation of science teachers of New Jersey. State teachers college, Montclair, N.J. [1931]. Journal of chemical education, 9: 326-43, February 1932.

Studies, as title indicates, the range of subjects taught, teaching load, and preparation in science of science teachers of more than 90 percent of the junior and senior high schools of New Jersey. Findings · About two-thirds taught science only. The median load preparation was 3 years' biology, 3 years' chemistry, 1 year's physics and less than one-half year of earth sciences.

1630. Rogers, Gladys. Teacher load in the junior high schools in Detroit, Mich. Master's, 1932. Peabody. 85 p. ms.

* 1631. Spigelmyer, John R. A study of the effect of certain instructional elements on teacher load in Pennsylvania public high schools. Master's, 1932. Penn State. 27 p. ms.

Studies the time required for teaching various subjects as conditioned by the nature of the subject, the years of teaching experience, the number of teaching fields, and the number of different preparations required.

1632. Stevens, Leila. Extra class school work of the kindergarten-primary teacher. Master's, 1932. Chicago. 117 p. ms.

Discusses preparation for instruction, professional improvement, physical care of children, and housekeeping of the schoolroom. Activities of a low level type received a great deal of the teacher's time.

1633. Sutton, David H., *and* Holy, Thomas C. The effect of the total teaching load in high school. Columbus, Ohio State university, 1932.

An experiment conducted at Akron to discover whether teachers could teach all large classes as effectively as all small classes. The mean gains of the students as determined by test scores showed no significant differences.

1634. Weil, Anna. An analysis of teaching load, training, and salaries of teachers of Whittier Union high school for the first semester of 1930–31. Master's, 1932. Southern California.

1635. Yoakum, C. S. Functions of the faculty: the work load. A historical survey. Ann Arbor, University of Michigan press, 1932. 64 p. (University of Michigan administrative studies. Vol. 1, no. 2.)

This is a brief summary of material relating to the work load of members of faculties in institutions of higher education.

TEACHER SUPPLY

1636. Anderson, Earl W., *and* Foster, Richard R. Teacher supply and demand in Ohio, 1929–30. Columbus, Ohio State university, 1932. 170 p. (Ohio State university studies. Bureau of educational research monographs, no. 11.)

Part 1 deals with teacher supply and demand in the elementary schools. Part 2 takes up teacher supply and demand in the high schools.

1637. Campbell, Doak S. Beginning teachers in the accredited secondary schools of the Association of colleges and secondary schools of the southern states. A report to the commission on secondary schools. [Nashville, Tenn., George Peabody college for teachers, 1931.] 84 p.

Considers the availablee annual supply, within the southern association, of college graduates with bachelors' degrees and 12 semester hours in education, the annual demand for beginning teachers in the accredited secondary schools of the association, and the training and teaching assignments of the beginning teachers in the accredited secondary schools of the association in 1930–31

1638. **Devricks, Robert K.** Teacher supply and demand in Indiana. Indiana State teachers college. Teachers college journal, 3:171–92, March 1932.

Studies the enrollments for the fall of 1930, the number of graduates for 1929–30, and the employment of graduates in 1930–31.

* 1639. **Hubbard, Frank William.** Teacher demand and supply in the public elementary and secondary schools of the United States. Doctor's, 1931. T. C., Col. Univ. Washington, D. C., National education association, 1931. 100 p.

Attempts to show the major teacher supply and demand problems, to point out the significance of these problems to the welfare of the professions, and to arouse the interest of state departments of education and other agencies in making careful investigations

1640. **Peterson, E. T., Lindquist, E. F., *and others*.** Teacher supply and demand in Iowa. Iowa City, University of Iowa, 1932. 464 p. (University of Iowa studies. Studies in education, vol. 7, no. 2, new series no. 229, June 15, 1932.)

Deals with rural and city elementary teachers; junior and senior high school teachers; elementary, junior high, and senior high school principals; and school superintendents.

1641. **Ullrich, Oscar A.** Taxation and oversupply of teachers. Williamson county sun, December 26, 1931. 4 p. (Reprinted.)

Statistical data were obtained from the 26th biennial report of the Texas State department of education, 1928–1930, vol 7, no 3, March 1931. In the teaching force there is a lack of understanding the purpose of the public-school system due to the low standards required for the certification of teachers; to the enormous turnover in the teaching personnel; and to the overwhelming proportion of young and immature teachers. Data indicate that the taxpayer pays for training about 10 teachers for every one that is needed.

TEACHERS' PENSIONS

1642. **Haulot, Leona M.** Teacher retirement system for Arizona. Master's, 1931. Stanford.

* 1643. **Wang, Chee.** State retirement systems for public-school employees. Doctor's, 1931. New York. 99 p. ms.

Discusses the theory underlying the provisions for teacher retirement and the early history of the movement; the legal provisions of state systems for public-school employees; deduces the underlying principles of retirement systems and classifies them for use

TEACHER'S PERSONALITY

1644. **Ewing, Gertrude.** Individual personality studies. Master's, 1932. Ind. St. T. C. 253 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal, 3:176–77, July 1932.)

Compares scholarship, citizenship, and intelligence records in showing how a teacher might study her pupils.

1645. **Hoffman, Ivan M.** Rating of teacher characteristics by high-school pupils. Master's, 1932. Washington Univ. 78 p. ms.

1646. **Wadsworth, Loda Mullen.** A study of pupils' opinions regarding their teachers. Master's, 1932. Southern California.

1647. **Walker, Harold Brooks.** Pupils' attitudes towards teachers as a basis for selection, placement, and rating of teachers. Master's, 1932. Southern California.

1648. **Worrall, *Mrs.* Sue D.** Characteristics of junior high school teachers which their pupils like or dislike. Master's, 1932. Nebraska. 59 p. ms.

See also 1553.

TEACHERS' SALARIES

1649. **Barney, Eugene Festus.** The salaries of high-school teachers of Oklahoma for 1931–32. Master's, 1932. Oklahoma. 108 p. ms.

1650. **Farnsworth, Philo T.** A study of wages and salaries paid in Utah. Utah educational review, 25 : 355–56, April 1932.

Compares the salaries paid to teachers in Utah in 1930 with the standard wages paid to workers in various trades in the state.

* 1651. **Hinson, Murphy Roy.** Equations for predicting senior high school teachers' salaries in Florida. Doctor's, 1931. Peabody. Nashville, Tenn., George Peabody college for teachers, 1931. 48 p. (Contribution to education, no. 96.)

Compares the use of age, training, experience, and tenure in predicting teacher's salaries in 1923–24 and in 1930–31.

1652. **Holy, Thomas C., *and others.*** Cleveland teachers' salaries. A study sponsored by the Cleveland teachers federation in cooperation with the Cleveland board of education. Columbus, Ohio State university, 1932. 196 p. (Ohio State university studies. Bureau of educational research monographs, no. 16.)

Attempts to answer the questions: What salaries do the Cleveland teachers merit as compared with other groups of similar training and experience? and What can the Cleveland school district afford to pay its teachers? The cities with which conditions in Cleveland were compared were: Baltimore, Boston, Buffalo, Detroit, Pittsburgh, St Louis, and San Francisco. Usable replies to a questionnaire were received from 3,257 Cleveland teachers 48.5 percent of the high-school teachers, 40.8 percent of the junior high school teachers, and 53.2 percent of the elementary teachers received the maximum or above for standard training in October 1931. The percentage of all taxes going to schools is larger in Cleveland than in the other comparable cities. Two-fifths of the staff were appointed without experience and three-fifths with previous teaching experience. Recently there has been a slight tendency to employ a larger proportion of new teachers between 20 and 35 years of age.

1653. **Ludeman, W. W.** Teachers' salaries versus other prices. Nation's schools.

Teachers' salaries over a series of years were translated into index numbers and compared with index numbers of farm and food prices. Findings: It was found that up until 1922 teachers' salaries lagged behind other prices. Since then teachers' salaries have been higher.

1654. **Noall, Irvin S.** Real wages of teachers. Utah educational review, 25 : 350–55, April 1932.

Presents the basic facts regarding the salaries paid and the real wages received by the teachers of Utah from 1915–16 through 1930–31.

1655. **Pence, A. C.** Compensation of teachers when absent from duty. Master's, 1932. Ohio. 70 p. ms.

HIGHER EDUCATION

1659. **Anderson, E. W., Alberty, H. B., *and* Lewis, E. E.** An attempt to determine for what positions the College of education should train students. Columbus, Ohio State university, 1932.

A list of educational positions for which the college trains students was developed

1660. **Anna, Anthony Eusebius.** The written vocabulary of freshmen in their first semester at the University of Kentucky. Master's, 1932. Kentucky.

1661. **Armentrout, W. D.** Improving college teaching by consulting the consumer. School executives magazine, 51 · 476–77, July 1932.

Presents the results of using the Purdue rating scale for instructors in Colorado State teachers college.

1662. **Arnesen, Arthur Erlynn.** Effect of shortened period of preparation on college work. Master's, 1932. Chicago. 42 p. ms.

Studies success as college freshmen at the University of Utah of a group of 384 graduates of the Salt Lake City high schools, part of whom graduated under the 12-year plan and part under the 11-year plan.

1663. **Asher, E. J.** Relations of tested intelligence to scholarship at the University of Kentucky. Master's, 1931. Kentucky.

1664. **Badgley, Herbert H.** Study of fellowships and scholarships in universities. Master's, 1931. Stanford.

1665. **Bakeman, Albert R.** A study of the Springfield alumni. Master's, 1932. Y. M. C. A. Coll. 120 p. ms.

1666. **Batcheller, Delmar Elliott.** A study of certain traits differentiating superior from inferior freshmen. Master's, 1931. Buffalo.

1667. **Bay, Clinton Otto.** A study of the counseling activities of college deans of men. Master's, 1932. Southern California.

1668. **Beiser, Mack J.** Information required from new students by colleges and universities. Master's, 1932. Michigan. 41 p. ms.

* 1669. **Bildersee, Adele.** State scholarship students at Hunter college of the City of New York. Doctor's, 1932. T. C, Col. Univ. New York City, Teachers college, Columbia university, 1932. 138 p. (Contributions to education, no. 540.)

Data indicate that the scholarship of state scholars at Hunter college amply justifies the state in awarding the scholarships.

* 1670. **Brody, Alexander.** The relation of government to higher education. A study of the legal, political, and constitutional status of American state universities. Doctor's, 1932. New York. 301 p. ms.

Discusses higher education and the rise of the national state; legal administrative distinctions between the common school system and higher education; juristic nature of state universities; mechanics of the administration of state higher education; the university as a corporate entity; higher education as an independent function of state; universities as independent agencies of the state government and as quasi-independent agencies of the state government.

1671. **Brown, Edwin J.** A study of the facts and conditions involved in the problem of college admissions. Topeka, Kansas State printing plant, 1931. 56 p. (Bulletin of the graduate division of Kansas State teachers college of Emporia. Studies in education, no. 4. April 1931.)

Based on a study of college admission requirements, a proposed plan on admission was prepared and sent to colleges and high schools From a study of the replies of

977 high-school principals and of 331 college officials it seems that it would be undesirable and impracticable to attempt to secure entire uniformity in the matter of college admissions.

1672. **Bullock, Henry Morton.** A history of Emory college, 1834–1915. Doctor's, 1932. Yale.

1673. **Butler, Ethel Lois.** A study of the distribution of grades in Loyola university. Master's, 1931. Loyola. 166 p. ms.

1673. **Caine, James Patrick.** A study of Newman's theory of higher education. Master's, 1932. St. Louis. 57 p. ms.

1675. **Comstock, Kathryn V.** A comparative study of native versus imported students at Ohio State university. Master's, 1932. Ohio. 125 p. ms.

1676. **Connor, Jerome Alton.** Survey of housing conditions for students at the University of Florida. Master's, 1931. Florida.

1677. **Cooney, Juanita Mae.** Adaptability of cooperative purchasing to campus organizations. Master's, 1932. Okla. A. and M. Coll.

1678. **Cowley, W. H.** A study of the relative merits of the quarter and semester systems. Report of faculty committee, approved by the faculty and board of trustees of the Ohio State university. Columbus, Ohio State university, 1932. 52 p

The six major problems investigated in the study were: The quality of instruction; effectiveness of examinations; the better plan for the student body; the better plan for the instructional staff; administrative efficiency; and the success and quality of the summer session. Questionnaires were filled out by members of the faculty; graduate students who had studied under both systems; professional students who had studied under both systems; undergraduates who had studied under both systems; and by 519 students who had studied under the quarter system only. The recommendation that the university continue on the quarter system was adopted almost unanimously.

1679. **Crink, Cedric L.** Specifications for stage lighting equipment for a university theatre. Master's, 1932. Iowa.

1680. **Davis, Eva M., *and* Distad, H. W.** A plan for vitalizing the teaching of two courses in education. Educational administration and supervision, 18: 178–84, March 1932. (Reprinted.)

Describes an attempt to carry out principles of learning and teaching in two classes in education during the 1931 summer session at New Mexico State teachers college.

1681. **Dobbin, Paul Robinson.** A study of Sterling college with special reference to its educational investments and educational contributions. Master's, 1932. Kansas.

1682. **Eurich, Alvin C.** Enlarging the vocabularies of college freshmen. English journal (college edition), 21: 135–41, February 1932.

Reports the results of an experiment designed to enlarge the vocabularies of college freshmen. The study was conducted in freshman English classes during the academic year of 1929–30. Students in the experimental group were given intensive drill on 100 words each week throughout the fall quarter. The members of the control group did not participate in the special exercises. Both groups were given final tests at the end of the fall, winter, and spring quarters. The evidence reveals significantly greater gains in vocabularly for the experimental group than for the control group. This difference persists three and six months after the training period.

1683. ——— Improvement in scholarship during the probationary period. School and society, 35: 129–34, January 23, 1932.

Data indicate that the reading ability of probation students is inferior to that of other students of equal mental ability who are succeeding with their college work; poor students

improve their scholarship during the probationary period; improvement does not seem attributable to the program of special training

1684 ——— Should freshman composition be abolished? English journal (college edition), 21: 211–19, March 1932.

*1685. **Findley, Warren George.** Specialization of verbal facility at the college entrance level. Doctor's, 1932. T. C, Col. Univ. New York City, Teachers college, Columbia university, 1933. 76 p. (Contributions to education, no. 567.)

Discusses the possibility of differentiating between a general scientific vocabulary and a general literary vocabulary at the college entrance level in a population of 72 at Cooper Union, in a population of 35 pre-engineering students at Yale university, and in a population of 45 liberal arts students at Yale university.

1686. **Ford, Edith G.** Relation between academic success and self-support while in college. Master's, 1931. Kentucky.

1687. **Fraser, Mowat G.** Plans for the American college. A critical study of underlying assumptions and their implications. Doctor's 1932. T. C., Col. Univ.

Formulates and applies criteria for evaluating the aims and methods used in liberal arts colleges.

1688. **Froehlich, *Mrs.* Aleen K.** Opportunities for women in colleges. Master's, 1932. Ohio. 435 p. ms.

1689. **Garrison, Carmi L.** Orientation for college students, a textbook. Master's, 1932. Colorado.

1690. **Gerberich, J. R.** Scholastic success of graduates from the University of Arkansas, 1927 to 1930. Fayetteville, University of Arkansas, 1932. 10 p. ms.

*1691. **Glover, John George.** Functional organization of purchasing in university administration. Doctor's, 1932. New York. 205 p. ms.

Discusses the historical development of the purchasing activity; the organization and operation of the purchasing function in the Federal government; analyzes textbooks on purchasing; principles of purchasing, and scientific requirements for the functional organization of purchasing in modern American colleges and universities.

*1692. **Godfrey, Noel Davis.** Some phases of collegiate and university education in Maine—historically studied. Doctor's, 1931. New York. 191 p. ms.

Discusses higher education in Maine from the standpoint of sources of support, conditions of entrance, methods of college teaching, system of electives and prevocational courses, and the evolution of the college curriculum.

1693. **Gordon, Mary Agnes.** Sigma values for scholarship marks at the University of Kentucky. 1931. Lexington, University of Kentucky.

1694. **Gould, Gertrude.** The value of remedial exercises in reading for college freshmen. Master's, 1932. Wyoming. 141 p. ms.

1702. **Hardy, Margaret Boude.** Preprofessional requirements in schools of education. Master's, 1931. George Washington.

Compares course requirements by semester hours in major subject fields in publicly controlled universities, privately controlled universities, publicly controlled colleges, and privately controlled colleges, and by totals.

* 1703. **Harris, Daniel.** The relation to college grades of some factors other than intelligence. Doctor's, 1931. Columbia. New York City, Columbia university, 1931. 55 p. (Archives of psychology, no. 131.)

Studies 456 members of the freshman class of the College of the City of New York, homogeneous as to cultural background, classified according to various criteria, and compares the groups as to grades and average Alpha scores. Studies school attitude, personality, books and periodicals, recreations, extracurricular activities, sports, course, subjects studied, vocational choice, age, race, economic status, social background, physical health, and outside work.

1704. **Hartmann, William C.** An investigation of the growth and present status of private business colleges. Master's, 1932. Ohio. 86 p. ms.

1705. **Heilman, J. D.** The reliability of college teachers classroom tests. Educational administration and supervision: 17: 535–43, October 1931.

The reliability coefficients of college teachers' tests vary from 0.60 to 0.95. About one third of the tests are highly reliable, about one third are fairly reliable, and about one third are very unreliable Teachers' tests vary widely in length, some containing five times as many items as others. They also vary enormously in difficulty. The average class score is 56 percent of the total in some cases and 88 percent in others. The average college teacher requires a test or series of tests with 300 items to obtain a satisfactory degree of reliability.

1706. **Hillman, Louis Frederick.** Do Indiana university graduates follow a vocation for which they are trained? Doctor's, 1932. Indiana. 347 p. ms.

1707. **Howes, Norman Ellsworth.** The significance of personality traits as factors in college success. Master's, 1932. Colo. St. T. C.

1708. **Hung, Ko-Wong.** Student tuition and fees in American universities, 1889–90 to 1929–30. Doctor's, 1932. Stanford.

Data indicate that most of the state universities charged no tuition in the college of arts and sciences during the period studied; those charging fees increased them during the past decade; total student charges increased from 1889–90 to 1929–30.

1709. **Irvine, Jessie F.** A comparison of fraternity and nonfraternity groups in the University of Kentucky as to mortality in college. Master's, 1931. Kentucky.

1720. **Lloyd-Jones, Esther McD.** Pertinent opinions of deans of women: [redacted] study of change in social attitudes. New York City, Teachers college, Columa university, 1932. 15 p. ms.

[redacted]A study of the attitudes of 36 deans of women in graduate study at Teachers college, [redacted] measured by a revision of the G. Watson test of opinion. The test was given the [redacted]up again after an 8-months' period of study Findings The group, as a whole, was [redacted]te conservative.

[redacted]721. **Lockridge, *Mrs.* Elsie Shockley.** Prognostic significance of the re[redacted]ts of a composite test for college freshmen as shown by a critical study of [redacted]e component scores. Master's, 1931. Indiana.

1722. **Lupo, Madeline.** A study of the value-tendencies of 63 college girls. Master's, 1932. Columbia.

*1723. **McCafferty, Lucy A.** Preprofessional and professional training in Catholic women's colleges. Doctor's, 1932. New York. 154 p. ms.

Data were secured from the catalogs of the large majority of the 4-year Catholic women's colleges; questionnaires sent to the graduates of a sampling of the 4-year Catholic women's colleges; answers to personal letters sent to the presidents or other administrative officials of certain of the colleges; and answers to letters sent to representatives of certain educational agencies. The cultural aim is paramount in these colleges. Most of the colleges prepare their students to teach in secondary schools rather than in elementary schools. Music and home economics are taught in the Catholic women's colleges. The majority of their graduates are engaged in teaching.

1724. **McCain, John Walker, *jr.*** The development of financial support for the University of South Carolina, the Citadel, Clemson college, and Winthrop college as revealed in legislative action. Master's, 1932. Duke. 204 p. ms.

1725. **McLendon, J. Arnold.** A study of the first freshman class of the Texas technological college, September 1925 to January 1926. Master's, 1931. Texas Tech. Coll.

1726. **McMurtrey, George Winnette.** A study of the scholastic achievement of the intellectually lowest 10 percent of the freshmen who entered the college of liberal arts of the State University of Iowa, 1920–1929. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series no. 248. 2 p.)

Of the work undertaken by 803 students who ranked in the lowest decile on the Iowa qualifying examination during a 10-year period, 22 percent was of non-passing quality, and 29 percent was above the level required for graduation; 71 percent of these students do not do satisfactory work in the standard liberal arts course; yet it is not advisable to deny admission to all students of this level of ability; the wide variation in difficulty of freshmen and sophomores suggests the advisability of a modified curriculum for students who may be on the campus not more than two years, since nine-tenths of the low decile students who drop out do so before the beginning of the third year.

*1727. **MacNeel, Joseph Raymond.** A study of some problems encountered in the admission of students as candidates for the degree of Master of arts at Teachers college, Columbia university. Doctor's, 1931. T. C., Col. Univ., New York City, Teachers college, Columbia university, 1932. 91 p. (Contributions to education, no. 524.)

The purpose of the study was: (1) to determine the relative effectiveness of various types of undergraduate preparation for graduate work in education at Columbia university; (2) to study the records made at undergraduate institutions and at Teachers college by 509 persons who received the degree of Master of arts from Columbia university during the years 1928–29 and 1929–30; (3) to determine the relationship between certain items in these records and success at Teachers college; (4) to determine if the results of such comparisons can be used in predicting degrees of success in graduate work in education; and (5) to make recommendations regarding the admission to graduate work in education at Columbia university of candidates for the degree of Master of arts.

1728. **Mahan, Harry C.** The relative ability and scholarship of college students coming from accredited and non-accredited high schools. Master's, 1931. Ohio. 36 p. ms.

Students from accredited high schools were found to be higher in intelligence measured by the Ohio State university entrance examination; difference in scholarship did not decrease during the seven semesters studied, and was not as great as the difference in intelligence.

1729. **Maine. University.** Survey of higher education in Maine. [New York City, Teachers college, Columbia university, 1932]. 430 p.
H S. Boardman, director.

Discusses the needs of Maine for higher education; the ability of the State to satisfy the needs; surveys the four colleges—Bates, Bowdoin, Colby, and the University of Maine—in respect to their physical plants, teaching staffs, student bodies, finances, organization and administration, and alumni.

1730. **Maller, J. B.** Personality of the candidates for the Edison scholarship School and society, 35: 438–42, March 26, 1932.

A survey of the records of 98 candidates for the Edison scholarship during 1928–29 and 1929–30 found that the candidates were of superior intelligence and achievement in the study of science.

1731. **Mallon, Wilfred Michael.** The Jesuit college: an investigation into factors affecting the educational efficiency of the Jesuit colleges in the central states. Doctor's, 1932. St. Louis. 600 p. ms.

1732. **Mandrey, William Henry.** Facilities for higher education available to the youth of Connecticut. Doctor's, 1932. Yale.

* 1733. **Mason, Mary Elizabeth.** Registration in relation to the advisory system during registration periods, School of education, New York University. Master's, 1932. New York. 51 p. ms.

Part 1. Analysis of undergraduate registration in relation to the advisory system during registration periods, School of education, New York University, September 1929–September 1930. Part 2. Analysis of graduate registration in relation to the advisory system during the registration periods, School of education, New York University, September 1929–February 1931.

1734. **Miller, Leon.** The organization and efficiency of intra-mural programs in colleges and universities. Master's, 1932. Iowa.

1735. **Minnesota. University.** Laws and regulations governing the University of Minnesota compiled from the statutes of the United States, statutes of Minnesota, regulations of departments of the Federal government, minutes of the board of regents, acts of the university senate. Minneapolis, University of Minnesota press, 1931. 501 p.

1736 **Mirus, Maxine.** Language errors of college freshmen. Master's, 1932. Washington Univ. 42 p. ms.

* 1737. **Parker, Lockie.** Factors in the development of the higher education of women in the United States. Master's, 1932. New York. 90 p. ms.

Discusses learned women before the Restoration; the Reformation; the dissenting sects and the American colonies; the new nation and natural rights, 1775–1825; education of women from 1826–1870; and the growth of institutions for higher education of women from 1870 to the present.

1738. **Parr, F. W.** The status of how to study work in State universities. School review.

Questionnaire data were received from 41 out of a possible 45 institutions

1739. **Polonsky, Israel B.** A comparative study of Phi beta kappa men ith others at the College of the City of New York. Master's, 1932. Columbia.

1740. **Qualls, Orron Alvan.** Relation of high-school subjects to student suc- s at Fresno State college. Master's, 1931. Stanford.

741. **Reeves, Floyd W., Russell, John Dale, *and others*.** The liberal arts ege, based upon surveys of 35 colleges related to the Methodist Episcopal rch. Chicago, Ill., University of Chicago press, 1932. 715 p.

art 1: The service and administration of colleges; part 2 · Physical plants, equipt, and libraries; part 3: College instructional facilities, part 4: Student personnel colleges; part 5: College finance; part 6: Future of the college.

1742. **Robinson, Sallie Elizabeth.** An analysis of the content of orientation courses for freshmen in American colleges and universities. Master's, 1931. Chicago. 91 p.

The study is a questionnaire investigation of the extent of use and present practices of orientation courses in 107 universities and colleges.

1743. **Schaal, Eugene A.** A comparative study of the opinions and attitudes of students of four undergraduate classes in 10 colleges and universities in Maryland, Delaware, and the District of Columbia. Doctor's, 1931. American Univ. 158 p. ms.

* 1744. **Schwiering, Oscar C.** Curricular reorganization in the lower division of state universities with special application to the University of Wyoming. Doctor's, 1932. New York. 240 p. ms.

Data were secured from catalogs of state universities, and from replies to questionnaires sent to the deans of the colleges of liberal arts, education, commerce, agriculture, and engineering in the state universities, to show the present trends as to practices in administrative organization and function, changes being introduced, the nature of the changes, and expert opinion regarding the desirability of certain of the changes. A detailed study was made of 380 freshmen of 1930–31, and of the graduating class of 1931 of the University of Wyoming. Deans of colleges of liberal arts, education, and commerce of state universities seem to favor the segregation of the lower division of the curriculum by a distinct line of demarcation or a junior college organization, while deans of the colleges of agriculture and engineering favor segregation to a much lesser degree.

1745. **Sebern, H. W.** An analysis of achievement of dormitory and fraternity freshmen. Master's, 1932. Iowa.

1746. **Sensing, Thurman.** College business management. Master's, 1932. Peabody. 7 p. ms.

Studies college business management in general and the business management of 124 teachers colleges in the United States.

1747. **Shofstall, Weldon Perry.** Relative value of freshman-sophomore courses as predictors of scholastic success in the professional schools and colleges of Missouri. Doctor's, 1932. Missouri.

1748. **Silverman, Y., *and* Jones, Vernon.** A study of early entrance to college. Journal of educational psychology, 23; 58–72, January 1932.

Studies a large number of students who entered college at a young age. Follow-up study indicates that the young students are not, as a general rule, placed at any disadvantage in college due to their age.

1749. **Storey, Millie Eugenia.** The status and objectives of the dean of women in the small colleges. Master's, 1932. Washington. 52 p. ms.

1750. **Taylor, William David, *jr.*** A study showing the vocational opportunities obtainable through the academic channels of the University of Washington. Master's, 1932. Washington. 290 p. ms.

* 1751. **Tewksbury, Donald G.** The founding of American colleges and universities before the Civil War with particular reference to the religious influences bearing upon the college movement. Doctor's, 1932. T. C., Col. Uni New York City, Teachers College, Columbia University, 1932. 254 p. (Co tributions to education, no. 543.)

The study takes up the moving frontier and the American college; the founding denominational colleges before the Civil War; and the founding of the state universi before the Civil War.

1752. **Timothy, Ralph Killion.** Study of a group of university men qualified because of poor scholarship. Master's, 1931. Stanford.

1753. **Tyler, Ralph W.,** *and others.* Service studies in higher education. Columbus Ohio State university, 1932. 283 p. (Ohio State university studies. Bureau of educational research monographs, no. 15.)

Contents: (1) Methods followed in the teaching of general botany, by Homer C Sampson and Lewis H. Tiffany, p. 3–42; (2) Construction of examinations in botany and zoology, by Ralph W. Tyler, p. 43–51, (3) Reorganization of the elementary courses in zoology, by William M. Barrows, p 52–71, (4) Special treatment for superior students in general zoology, by David F. Miller, p. 72–78; (5) An experiment in sectioning students in the second course in zoology, by John W Price and John A. Miller, p. 79–92; (6) Remedial instruction for students having difficulty in zoology, by Blanche B. M. Meyer, p. 93–108; (7) Certain administrative procedures in botany and zoology, by Ralph W. 1754. **Ullrich, Oscar A.** Higher education and more taxes. Georgetown, Tex., Southwestern university, 1932.

1755. **Umstattd, J. G.** Independent study plan 1930–31. Minneapolis, University of Minnesota, 1932. 95 p. ms.

1756. ——— The Minnesota freshmen of 1929. Minneapolis, University of Minnesota, 1931. 107 p. ms.

Studies age, college aptitude, birthplace of father, occupation of father, occupation of mother, and size of home town.

1757. **Upshall, C. C.,** *and* **Masters, Harry V.** The achievement of freshmen who take sophomore and junior courses. Bellingham, Washington State normal school, 1932. 5 p. ms.

The students in all sophomore, junior, and senior classes were classified according to the number of quarters of college work they had taken. Of 580 students registered in these courses 80 were found to be freshmen. The achievement of these 80 freshmen was studied in detail. Findings: Slightly better than average freshmen were admitted to these courses. In spite of the supposed handicap that they experienced in entering advanced courses they were able to make slightly better than average grades. Only 1 of the 80 freshmen students received a failing grade in the courses primarily designed for sophomores, juniors, and seniors

* 1758. **Walker, Hubert C.** The change in international and interracial attitudes from the freshman to the senior year in some schools of the Pennsylvania State college. Master's, 1932. Penn. State. 29 p. ms.

The test of international attitudes was administered to groups of freshmen and seniors in the schools of liberal arts, engineering, and agriculture at Pennsylvania State college A total of 145 freshmen and 134 seniors took the test. Data indicate that the seniors were more liberal than the freshmen. Little effort seems to have been made by the college to make the student more liberal minded.

1759. **Walker, Minnie McLaughlin.** Future of the small college as suggested by Dr. William Rainey Harper in 1900. Master's, 1931. Stanford.

1760. **Warren, Noah.** Relation of college specialization to vocational occupation. Master's, 1932. Emory.

A study of the relation between departmental speecialization and subsequent occupations of the graduates of the department of commerce of the Georgia school of technology.

1761. Watson, Goodwin, *and* Green, Geraldine. Scientific studies and personal opinion on sex questions. Journal of abnormal and social psychology, 27: 130–46, July-September 1932.

A comparison was made of expectations in minds of graduate students of education with actual findings of Hamilton-Davis. Variability among student estimates was large; no one type was especially well informed; there were 20 points of agreement and 20 points of disagreement

1762. Weaver, U. Grant. Factors associated with success of graduate students in the College of education of the University of Colorado. Master's, 1932. Colorado.

1763. Wesley, Emory Jones. A relation of vocabulary and academic achievement in college. Master's, 1932. Kentucky.

1764. Whitney, F. L. Success of students in college. Colorado school journal, 47; 27–28, November 1931.

This is a committee statement relative to what constitutes college success and the responsibilities of the college for the success of its students.

1765. Williams, Robert L. A comparative study of enrollments and costs in the State college for women. Columbus, Mississippi State college for women, 1932. 7 p. ms.

The study included enrollment data of all types of state-supported schools in states operating colleges for women. Findings: (1) Retention of students in state colleges for women compares favorably with retention of students in state universities and other state-supported schools; (2) practice of charging fees (amounts, type, etc.) varies greatly in all schools

1766. ——— A partial survey of collegiate alumnae relations in 106 colleges. Journal of higher education.

1767. ——— Present practices in administering quality points in 107 American colleges and universities. Columbus, Mississippi State college for women, 1931. 9 p. ms.

Replies to a questionnaire were received from 172 colleges having 500 or more students. Practices in awarding quality points vary greatly from one school to another.

1768. Wilson, Jessie Louise. Degrees received, geographical locations, occupations followed, and distinct achievements attained by the alumni of the University of Kentucky. Master's, 1932. Kentucky.

* 1769. Witherington, Henry Carl. A history of state higher education in Tennessee. Doctor's, 1931. Chicago. Chicago, Ill., University of Chicago, 1931. 271 p.

The study took up the progress of state higher education from an institutional point of view; the social and economic conditions which caused indifference towards education for a century; and the rise of new forces and conditions which determined a new trend of higher education after about 1900.

1770. Wolf, Lyle Havener. Orientation of high-school graduates in certain fields of collegiate specilization. Master's, 1932. Chicago, 100 p. ms.

STUDENT PERSONNEL PROBLEMS

1772. **Beaumont, Henry.** Student employment at a state university. Lexington, University of Kentucky, 1931. Personnel journal, 11: 17–19, June 1932.

* 1773. **Collins, Charles P.** An employment blank to be used in school of education placement bureaus. Master's, 1932. New York. 111 p. ms.

An analysis of the registration blanks used by university and college placement bureaus

1774. **Cowley, W. H.** The personnel bibliographical index. Columbus, Ohio State university, 1932. 433 p.

This is an annotated bibliography of the best writings on problems of student personnel administration.

1775. **Culver, Benjamin F.** Study of the vocational intentions of students with advanced standing at Stanford University. Master's, 1932. Stanford.

* 1776. **Distler, Theodore A.** A case study of 65 men who were dropped for poor scholarship from the University college of New York University in February, 1930. Master's, 1932. New York. 139 p. ms.

A study was made of the high-school entrance credentials, the 4-years high-school record, the personal application for admission to college, the record of the psychological examination, and the college record of each of the men students who were dropped for poor scholarship.

1777. **Eurich, Alvin C.** College failures. Minneapolis, University of Minnesota, 1932. 39 p. ms.

In this study a student is considered as a failure if he has failed a particular course two or more times, or if he has failed three or more courses. The records of these students show that within the college of science, literature, and art, only a small proportion of failing students reach the junior and senior years (4 percent).

1778. ——— A comparative study of probation, average, and honor students. Minneapolis, University of Minnesota, 1932. 94 p. ms

The differences between probation, average, and honor students are presented in this study under the headings: Personal history, home background, the home, college life, ability of groups, and interests. The most striking differences appear in scholarship, intelligence, reading ability, and reading interests.

1779. ——— The photographic eye-movement records of successful and unsuccessful college students. Minneapolis, University of Minnesota, 1932. 10 p. ms.

In this study the photographic records of eye-movements for probation students are compared with similar records for nonprobation students. The groups have been matched on the basis of ability as measured by the Miller analogies test. The results reveal a tendency indicating that the probation students are slower readers than nonprobation students. The differences, however, are not significant.

1780. ——— The reliability and validity of photographic eye-movement records. Journal of educational psychology. 24: 118–22, February 1933.

In this study the photographic eye-movement records of 173 college students are shown to be fairly reliable. However, when reading comprehension and rate tests, intelligence tests, achievement tests, and college marks are used as criteria, the records do not appear to be valid. The group of subjects used in this study is larger than any heretofore in investigations of this kind.

1781. **Friswold, I. O.** The measurement and utilization of student reactions in the study of college problems. Minneapolis, University of Minnesota, 1931. [illegible] p. ms.

A survey of literature, 1912 to 1931, dealing with the measurement and use made of student reactions—interests, attitudes, and judgments—in studying various problems in the college and university level.

1782 Gerberich, J. R. Persistence in attendance of students entering the University of Arkansas as freshmen in September 1927 and 1928. Fayetteville, University of Arkansas, 1932. 28 p. ms.

Data indicate that persistence in college of initial registration varied from college to college; percentage of graduation in the various colleges was affected by other factors than mere persistence; intellectual selection accompanying persistence varied from college to college.

1783. ——— Prediction of general scholastic success and of specific subject success in the University of Arkansas, 1928–29 to 1931–32. Fayetteville, University of Arkansas, 1932. 11 p. ms.

Correlation and tabular methods were used in showing the relationships between mental ability and general scholastic success and between aptitude for and success in specific subjects. Satisfactory relationships were found, both for standardized and locally constructed aptitude measures. Tests used in the Arkansas educational guidance survey for high-school seniors were found to be predictive of college success.

1784. ——— *and* Cade, George N. The "reading and methods of study" course at the University of Arkansas, 1931–32. Fayetteville, University of Arkansas, 1932. 5 p. ms.

A controlled study to determine the value of remedial training in reading for freshmen deficient in reading ability and study methods. Students of the special course achieved higher general grades than control students. Students allowed to drop the special course after 4 or 10 weeks of training because of improved reading ability surpassed in scholarship those continuing in the course.

1785. ——— Reading background and interests of students entering the University of Arkansas as freshmen in September 1931. Fayetteville, University of Arkansas, 1932. 15 p. ms.

Data were secured from the answers to a questionnaire filled out by about 350 entering freshmen in September 1931. Data were also secured on 50 students who because of reading deficiencies were obliged to take a course in reading and methods of study. The special students had a background less conducive to the development of reading ability and interest than the average freshman.

1786. Gillette, Annette L. A study of the Thurstone personality schedules of well-adjusted and maladjusted college freshmen. Master's, 1932. Columbia.

1787. Johnson, Palmer O. The collegiate destination of high school graduates. Minneapolis, University of Minnesota, 1932. 25 p. ms.

Discusses the collegiate destination of the graduates of approximately 3,100 high schools accredited by the North central association of colleges and secondary schools according to the distribution of students among the several types of institutions within and without the State of residence; the public and private universities most frequently selected; the comparative drawing power of specific State institutions.

1788. ——— Factors associated with student ability and accomplishment. Minneapolis, University of Minnesota press, 1932. 82 p.

A consideration of the achievement and ability of students according to classification in college; the elimination and survival of students; the relation of ability to achievement; scholarship and ability of students not planning to be graduated; the association of ability and achievement of students with: Types of elementary and secondary schools attended; the size of home community; age of college entrance; reading interests; subject-matter interests; fields of specialization; time spent in college activities.

1789. ——— Resident and nonresident students of land-grant institutio Minneapolis, University of Minnesota, 1932, 25 p. ms.

Deals with the enrollment of students in their home institutions; the proportio resident to nonresident students; the proportion of nonresident students by classes; source of nonresident students; state interchange of students.

1790. ——— The student personnel of the College of agriculture, forestry, and home economics. Minneapolis, University of Minnesota, 1932. 55 p. ms.

Studies the occupational classes represented; the education and economic status of parents; the attitude of parents toward higher education; the motivating factors in college attendance, the type and character of activities engaged in residence; student plans subsequent to graduation.

1791. **Kinney, Ernestine Adele.** An analysis of the student personnel problem in the small college. Doctor's, 1931. California. 144 p. ms.

Studies the plans of student personnel work in certain large institutions, in representative small colleges, and formulates a plan of organization incorporating the best in student personnel procedures for the small college

1792. **Kirkpatrick, Mary S.** Emotional adjustment among freshman women. Master's, 1932. Texas.

* 1793. **Krugman, Abraham.** A comparison of grades of scholarship students and all students in the Washington Square college of New York university. Master's, 1932. New York. 47 p. ms.

Finds the distribution of grades of scholarship students considerably higher than the normal and college distributions in percentage of A's and B's, and considerably lower than both in percentage of C's, D's, and F's

1794. **Lehman, Edward N.** A comparative study of the records of the students of Townsend Harris Hall with those of students of the general high schools of the City of New York in both high school and college. Master's, 1932. Coll. of the City of N.Y. 225 p. ms.

1795. **Leonard, Eugenie A.** Problems of freshman girls: a study of mother-daughter relationships and social adjustments of girls entering college. New York City, Teachers college, Columbia university, 1932. 139 p. (Child development monographs, no. 9.)

1796. **Lloyd-Jones, Esther McD.** College and character. New York City, Teachers college, Columbia university, 1931. 250 p. ms.

Studies 150 representative seniors in three colleges to determine the factors in college experience which were most influential in character development. Findings show home still of paramount importance, friends next, with courses of study and professors a close third.

1797. **McCarthy, Ruby G.** The personal interview as a technique in student personnel service. Master's, 1932. Iowa.

1798. **McKay, Nathalie.** A study of certain characteristics of University of Texas freshman women participating in extracurricular activities. Master's, 1932. Texas.

* 1799. **Maxwell, Elizabeth.** College and university placement bureaus. Doctor's, 1932. New York. 281 p. ms.

Data were secured from a study of the catalogs of 374 educational institutions located throughout the United States, and from 166 replies to a questionnaire sent to each of the 275 colleges whose catalogs indicated any form of placement. Findings: 48 of the bureaus concentrate on the placement of students in permanent positions; 33 place candidates in permanent, temporary, and summer positions; 14 in permanent and temporary positions; and 81 give no data; 92 bureaus confine their recommendations to direct calls; 88 use both direct and indirect calls.

1800. **Rhulman, Jessie Luella.** A student personnel program for the college education. Master's, 1932. Ohio. 150 p. ms.

1801. **Schaefer, Fred W.** A survey of scholastic probation. Master's, 1931. Kentucky.

1802. Smith, Earl Dillon. Engineering personnel service for universities. Master's, 1932. Iowa St. Coll.

*1803. Smith, Herbert Pelham. Methods of improving the reading rate of college students. Doctor's, 1931. New York. 165 p. ms.

The purpose of the study was to determine the actual reading rate of 654 students in the required course in educational psychology at New York University during the period 1928–30 in relation to their mental abilities as measured by an intelligence test, and to discover the degree of improvement in reading rate shown after a brief period of instruction and practice. Experiments were conducted with classes in educational psychology during the school years 1928–29 and 1929–30. Data indicate that college students may improve their reading rate 20 to 25 percent by 5 minutes practice a day for two or three weeks

*1804. Stratton, Dorothy C. Problems of students in a graduate school of education. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1933. 169 p.

The major personal problems reported were finance, leisure and recreation, part-time work, placement, and social relationships; the most important academic problems were courses, degrees, study, and advisement.

1805. Touchstone, Thomas Nolan. Study of personnel work in Mississippi colleges. [Master's] 1932 Peabody. 56 p. ms.

The purpose of this study is to ascertain to what extent Mississippi colleges are doing personnel work in order to adjust and hold the first year students attracted to them. Certain needed reform was found in both high schools and colleges.

1806. Umstattd, J. G. Limited honors course, College of education, University of Minnesota, 1930–31. Minneapolis, University of Minnesota, 1931. 57 p. ms.

Compares the organization and administration of this course with similar courses offered in other universities. Studies the achievement of honors course students and regular students of equal ability.

1807. ——— Student self-support at the University of Minnesota. Minneapolis, University of Minnesota press, 1932. 205 p. ms.

Gives a detailed study of the kinds of jobs filled, the amounts earned, the effect of employment on scholarship, health, and participation in extracurricular activities, and discusses the relationships existing between student and employer, student opinion regarding gainful work, the vocational value of jobs held by employed students, and the employment aids furnished by the university.

SCHOOL ADMINISTRATION

1808. Adkins, DeWitt Talmadge. The legal status of the pupil as it bears on public-school administration. Master's, 1932. Southern California.

1809. Aitken, Malcolm D. Organization and administration of an evening high school. Master's, 1931. Stanford.

*1810. Aldrich, Benjamin McCall. A critical study of certain factors determinative of school organization with special reference to secondary school divisions. Doctor's, 1931. California. McGill, Nevada, Public schools, 1931. 5

Deals with the articulation of the secondary school divisions with other units of public-school system.

*1811. Arnett, Claude E. Social beliefs and attitudes of American school board members. Doctor's, 1932. Columbia. Emporia, Kans., Emporia gazette press, 1932. 237 p.

Data were secured from 1,076 replies to a questionnaire received from school board members in 45 states. The board members studied were well above the average cit

in education, income, and occupation. The Harper attitude test was slightly modified for use in this study Approximately 60 percent of the 71 questions were given conservative responses, while 40 percent of the items received varying degrees of nonconservative responses from the board members

1812. **Binney, James Albert.** The cost of voluntary written publicity in certain school districts of Western Pennsylvania. Master's, 1931. Pittsburgh. (Abstracts of theses, 7: 256–57, 1931.)

The territory covered in this study includes the independent districts of Allegheny county (excluding Pittsburgh), Beaver county, and Lawrence county About the same number of smaller nonindependent districts, selected at random from the map, are included, as well as other districts not in these three counties A total of 47 districts was studied. The cost of written publicity varies among the different schools, and seems to be relatively greater in small schools Local conditions differ even in communities close together, which would make the establishment of standards difficult

1813. **Buckles, Maynard Robert.** Activities of deans of boys as an administrative position in California high schools. Master's, 1932 California. 119 p. ms.

Attempts to ascertain the current practices in the field of administrative activity in California high schools in order that some bases for the training of these special boys' officers and for assignment to their tasks may be determined.

* 1814. **Butler, Katharine Tredwell.** A study of administrative assistants in continuation schools. Master's, 1932. New York. 72 p ms.

Data indicate that there is no widespread uniformity of administrative organization and procedure in continuation schools, and that the position of administrative assistant is not well established.

1815. **Carter, William Z.** Rules of school boards pertaining to custodians. Master's, 1932. Chicago. 70 p. ms.

One hundred and fifty sets of rules were analyzed to determine the type of custodial service required by school boards.

1816. **Chilton, Carl S.** Certification for school administrators in Texas. Master's, 1932. Texas.

1817. **Clark, Amos Edwin.** Rules and regulations of the City board of education. Master's, 1931. California. 101 p. ms.

Considers present practices of city boards of education as set forth in their printed rules and regulations, as compared with certain fundamental principles of sound school organization as set forth by recognized authorities in the field of educational administration, particularly with regard to the relation of the superintendent to the board.

1818. **Compton, Cromwell Dennis.** Popular control of state and county school systems in Tennessee. Master's, 1932 Peabody. 68 p. ms.

Each of the state constitutions proclaims the people the ultimate source of governmental authority, but neither reserves to the voters any direct control of public education; immediate sovereignty rests with the general assembly and much control of public education given to voters came through the laws which it enacted; the general school law has never provided for the election of county superintendents by popular vote; since 1923 the issuance of county school bonds must have popular sanction.

1819. **Coop, Walter Farris.** Status of Kentucky boards of education. Master's, 1932. Kentucky.

1820. **Cressman, George Righter.** Local units for educational administration; studies in selected counties in Pennsylvania and Maryland. Doctor's, [illegible]. Pennsylvania. Philadelphia, University of Pennsylvania, 1932. 266 p.

Detailed administrative, financial, and supervisory studies were made of a sampling of seven counties in both Pennsylvania and Maryland Data indicate that the Maryland plan of county administration is superior to the township, borough, and city plan in Pennsylvania.

*1821. **Dienst, Charles F.** The administration of the public-school and institutional endowments of Idaho. Doctor's, 1932. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1933. 131 p. (Contributions to education, no. 560.)

Deals with the problems of administration of public-school and institutional endowments of Idaho from the federal land grants to the state. A program for improvements in the endowment administration by a business organization with an able official in charge, to take the place of the political and traditional organization, is defined.

*1822. **Engleman, James Ozro.** Centralizing tendencies in educational administration in Ohio since 1900. Doctor's 1932. Ohio. 280 p. ms. Kent, Ohio, Kent state teachers college, 1933. 186 p. (Kent state college quarterly, vol. 20, no. 2, February 1, 1933.)

1823. **Fox, Daniel W.** Filing practices in the office suite of the high-school principal. Master's, 1932. Ohio. 250 p. ms.

The study of the common filing practices and the equipment covered 200 high schools of 500 enrollment and up in 41 states is limited to the office suite of the principal.

1824. **Froseth, Hilbert Ingwald.** By-laws of boards of education of small cities. Master's, 1932. Colo. St. T. C.

1825 **Frushour, John H.** A plan of equalization of educational opportunities in some Indiana counties. Master's, 1932. Ind. St. T. C. 125 p. ms. (Abstract in: Indiana State teachers college. Teachers college journal. 3:297 98, July 1932.)

Finds inequalities between Indiana school communities in resources, population, school enrollment, school expenditures, financial ability, and in educational burden.

1826. **Gilbert, Roy W.** Direct powers of the electorate in local school districts. 1932. Peabody. 245 p. ms.

The local unit of administrative control, the location of the state, and the date of entrance of the state into the union, all seem to bear some relation to the direct powers of the electorate. Specialists favor the direct authorization of but a very few of the powers now being exercised directly by the electorate.

1827. **Hall, Florence M.** The long assignment versus informal procedure. Master's, 1932. West Va.

1828. **Hanson, Agnes Natalie.** Procedures involved in asking questions in the classroom. Master's, 1932. Southern California.

1829. **Haugan, Stella.** Student participation in school control in the high schools of North Dakota. Master's, 1932. North Dakota.

1830. **Hemphill, Franklin Clay.** How to secure suitable publicity for a city school system. Master's, 1932. Southern California.

1831. **Howard, Gertrude Grinnell.** An experimental study of the comparative achievement of pupils with unified subject matter and a single teacher and with subject divisions and departmentalization. Master's, 1932. Southern California.

1832. **Jones, Georgia R. Bathe.** A study of the duties and activities heads of departments of English in secondary schools. Master's, 1932. Southern California.

1833. **Jones, John Mason.** Status of rural school board members in I, county. Master's, 1932. Ohio. 60 p. ms.

A study was made of 100 rural board members of Ross county, Ohio.

1834. **Kenley, C H.** A method of registration for high schools. Mast 1932. Texas.

1835. **Leifur, Conrad.** School publicity in North Dakota. Master's, 1932. North Dakota.

1836. **Lura, Casper P.** Public-school property insurance in Iowa. Doctor's, 1932. Iowa. 337 p. ms.

* 1837. **Neal, Daniel R.** Responsibility of the board of education and recreation commission in the promotion of play, physical education, and community recreation. Master's, 1932. New York. 55 p ms.

Discusses the factors of space, time, leadership, facilities, and administration of play, physical education, and community recreation for children and adults.

1838. **Nebraska. University.** Practical economies in school administration, prepared by members of the staff of the department of school administration and others. Lincoln, 1932. 212 p. (Educational monographs, no. 3.)

Discusses general administrative procedures and control; securing and safeguarding school funds; purchasing, handling, and utilization of supplies; instructional service; operation of the school plant, maintenance of the school plant, fixed charges; capital outlay; debt service; auxiliary agencies, how school costs can be reduced by the elimination of small school units; equalizing the tax burden of education; value of well-trained leadership and steps in securing it; present-day opportunities and responsibilities faced by superintendents who show themselves capable of educational leadership; and a check list for evaluating present administrative practices

1839. **Nicewarner, Joe Bailey.** County school lands and county endowment funds in Texas Master's, 1932. Peabody. 82 p. ms.

Studies constitutional provisions, legislative acts, and supreme court rulings in regard to the granting, disposal, and investment of the revenues derived from the sale of county school lands.

1840. **Odell, C. W.** Special school features reported by Illinois superintendents and principals. Urbana, University of Illinois, 1932. 11 p. (University of Illinois bulletin, vol. 29, no. 37. January 5, 1932. Educational research circular no. 56.)

Data were secured from 84 superintendents and principals, including 9 county superintendents, 37 city superintendents, and 38 high-school principals The special features suggested were: Accounting and budgetary procedures, activity programs, character and social education, community relations, curriculum construction and content of courses, general organization, guidance, personnel, and disciplinary work, health and physical education, instructional methods, libraries, records and reports, supervision, teachers, testing and marking, and a number of miscellaneous items.

1841. **Otto, Henry J.** Current practices in the organization of elementary schools. Evanston, Ill., Northwestern university, 1932. 118 p. (Northwestern university contributions to education. School of education series, no. 5.)

A total of 420 replies to a questionnaire were received from superintendents of schools in cities ranging in population between 2,500 and 25,000, in 31 states. The study discusses the development of elementary school organization; the unit for the administration of elementary schools; classification of children; organization of the program for instruction; administration of the curriculum; promotion of pupils; and the administration of special classes.

1842. **Patterson, J. P.** Investigation of liability of California school districts for injuries arising from negligence. Master's, 1932. Southern California.

1843. **Patton, Arlye Douglas.** Fire insurance on Oklahoma school property. Master's, 1932. Oklahoma. 104 p. ms.

1844. **Phillippe, Martin J.** The opinions of members of boards of education concerning the duties of superintendents of schools. Master's, 1932. Oklahoma. 187 p. ms.

1845. Pritchard, E. H. Public-school publicity in the newspapers of Kansas. Master's, 1932. Chicago. 90 p. ms.

Daily and weekly papers in first, second and third class city newspapers were analyzed for the year 1930. The phases of education that have been neglected are finance and the curriculum.

1846. Quam, Edwin A. County school officers' associations in North Dakota. Master's, 1932. North Dakota.

1847. Raberding, Orville R. Survey of the public-school property insurance of Sandusky county, Ohio. Master's, 1932. Ohio. 35 p. ms.

Inadequate records and accounting systems were found. Economies would be possible through longer term policies. The reduced rate co-insurance clause was used in only a few schools. There was no system of evaluation of property; values of school property were mere estimates. Fund insurance system is not feasible for a small county system.

1848. Robertson, Fred F. The dean of boys in the North central association. Master's, 1932. Colorado.

1849. Rogers, V. Zue. Public-school fire insurance in Texas. Master's, 1932. Texas.

1850. Russell, Floyd Orville. A study of the administrative and supervisory practices in Ohio in the light of principles of educative leadership. Doctor's, 1932. Ohio. 250 p. ms.

1851. Senn, Carl Milton. A survey of methods used in school news presentation in Ohio high schools. Master's, 1932. Ohio. 60 p. ms.

1852. Strayer, George D., Engelhardt, N. L., *and others*. Supplementary bibliography for problems in educational administration. New York City, Teachers college, Columbia university, 1932. 50 p. ms.

1853. Thomas, Pearl W. Effects of compulsory education in Ohio. Master's, 1932. Ohio. 128 p. ms.

A study was made of 1,295 cases taken from the village schools of Hardin county, whose age range from 18 to 18. Two and one-half percent of the total number of cases are affected by Ohio's compulsory education law.

* 1854. Van Kleeck, E. R. Local school news in weekly newspapers in certain incorporated villages in New York State. Master's, 1932. Cornell. 180 p. ms.

During the 22 weeks in the second term of the school year 1931–32 covered by the study, the school news in each of 43 weekly newspapers was classified, measured, and tabulated. Data indicate a marked lack of proportion in the division of the school news space among the various classifications or subjects; the amount of school news reported varies from week to week.

1855. Willis, James Gill. Composition of boards of education of Limestone county, Texas. Master's, 1932. West. St. Coll. 49 p. ms.

1856. Yaden, J. L. A proposed reorganization of the common school system of Georgia. Master's, 1932. Mercer. 52 p. ms.

EDUCATIONAL LEGISLATION

*1858. **Brooks, Ralph Gilmour.** A proposed codification of the Nebraska school laws. Master's, 1932. Nebraska. 178 p. ms.

The purpose of the study is to codify the present school laws so that tney may be made conveniently accessible to the layman.

1859. **Bryan, Mildred.** School health legislation in the various states of the North central association. Master's, 1932. Nebraska

1860. **Chenoweth, John Anthony.** A study of the laws governing the issuing of school bonds in the 48 states. Master's, 1932. Washington.

Compares the laws and regulations governing the issuing of school bonds as found in the school codes and laws of the 48 states.

1861. **Clove, James, *jr.*** The legal liability of the school district for damages. Doctor's, 1932. Southern California.

1862. **Davis, Ward W.** A legal handbook for Ohio teachers. Master's, 1932. Ohio. 140 p. ms.

A study was made of all statutes in the general code of Ohio and all decisions of Ohio courts which have affected teacher status. The teacher in Ohio is chiefly an employee of a school corporation and is subject to its rules and regulations, within limits.

1863. **Garber, Lee O.** The legal implications of the concept of education as a function of the state. Doctor's, 1932. Chicago. 224 p. ms.

Data were taken from reports of constitutional conventions and court decisions. Finds that education is a function of the state. The courts refer to this concept continually in arriving at the solution of many problems involving educational matters.

1864. **Hammond, William R.** An examination of federal legislation affecting public education. Master's, 1932. Peabody. 145 p. ms.

A study based on the original land grants to vocational education and rehabilitation. A consideration of these federal statutes reveals one consistent policy up to 1862, and a radically different policy since then; the evolution of the federal subsidy system.

1865. **Harding, George Carlton.** Analysis of the nature and frequency of supreme court decisions of the various states of the United States for 1929 and 1930 in respect to their application to school administration. Master's, 1932. Southern California.

1866. **Hauge, Edwin.** Supreme court decisions affecting North Dakota public schools. Master's, 1932. North Dakota.

1867. **Hogue, Charles Francis.** A comparative study of the three types of high-school laws operative in Kansas in 1930. Master's, 1932. Kans. St. T. C. Emporia. 119 p. ms.

1868. **Kester, Glenn E.** A summary of the outstanding state school finance legislation proposed and enacted during the year 1931. Master's, 1932. Ind. St. T. C. (Abstract in: Indiana State teachers college. Teachers college journal, 3: 291–93, July 1932.)

Public-school finance legislation taken up in the United States during the year 1931, [illegible]lt with equalizing educational opportunity, equalizing the financial burden of school [illegible]pport, and relieving property of the excessive burden of school taxes.

[illegible]869. **Le Doux, Alma Catherine.** The legal relation of boards of health [illegible] boards of education. Master's, 1932. Chicago. 150 p. ms.

[illegible]iscusses the legislative acts and court decisions of the 48 states in the union with [illegible]tion to health administration in the schools.

*1870. Leech, Carl Graydon. The constitutional and legal basis of education in New Jersey. Doctor's, 1932. Pennsylvania. Philadelphia [University of Pennsylvania], 1932 462 p.

The study aims to determine the constitutional and legal provisions upon which education in New Jersey is based, and to discover the legal principles lying at the foundation of these provisions, insofar as the principles are expressed or implied in the constitution and laws of the state, and in the decisions or rulings of the courts or of other established authority.

1871. Markle, Arthur D. Essentials to an understanding of the New Jersey school law. Master's, 1932. Rutgers.

1872. Matthews, Elbert Hardin. Legal basis of consolidation in the 48 states. Master's, 1932. Peabody. 56 p. ms.

A study of school laws and literature on consolidation. Trends and laws are for consolidation.

1873. Schiller, Leonard Lawrence. Judicial decisions relating to the creation, alteration and existence of school districts. Master's, 1932. Chicago. 66 p. ms.

A study of the judicial decisions in the various supreme courts of the states in the United States which dealt with the creation, alteration, and control of school districts. Many legal principles are not clearly given by statute.

1874. Sheldon, Edwin R. A critical study of Kansas supreme court opinions as handed down in public-school law cases. Master's, 1932. Kans. St. T. C., Emporia. 116 p. ms.

1875 Stoaks, Charles E. Educational legislation in France during the Revolution and the Napoleonic era. Master's, 1932. Columbia.

1876. Thompson, Amon G. Legal status of school transportation in the United States. Master's, 1932. Peabody. 392 p. ms.

The study includes the investigation of actual statutes and is not concerned with court decisions or other legal interpretations concerning the legal status of school transportation in the United States. It was found that 46 States have legal provisions concerning school transportation, though the mention by some is very brief. All states have school transportation in some form. The laws concerning school transportation are by no means uniform and are rather meager in details.

1877. Vincent, Harold S. An analysis of the Ohio supreme court decisions relating to public-school administration. Master's, 1932. Ohio. 200 p. ms.

All decisions rendered by the Ohio supreme court since 1880 (about 160) were studied. The study developed 117 fundamental principles of judicial interpretation.

1878. White, Frank D. Legal aspects of public-school transportation, with special reference to Iowa. Master's, 1932. Iowa. 100 p. ms.

*1916. De Young, Chris A. Budgetary practices in public-school administration. Doctor's, 1932. Northwestern. Evanston, Ill. Northwestern university, 1932. 152 p (Northwestern university contributions to education. School of education series, no. 8.)

Discusses the preparation, presentation and adoption, and the administration of the budget, and gives an appraisal of budgets and budgetary practices.

1917. Edmunds, Samuel. A comparative study of the actual cost per pupil-hour of teaching industrial arts and the average cost of teaching all other subjects in the high schools and junior high schools of 39 cities in the State of Missouri for the year 1929–30. 1932. Iowa St. Coll. 192 p. ms.

The average cost of teaching industrial arts is 31.92 cents per pupil-hour and the average cost of teaching other subjects is 18.48 cents per pupil-hour.

1918. Fish, Silas L. The expenditures for government and the expenditures for education in Arizona 1912–1929. Master's, 1931. California. 110 p. ms.

Attempts to determine what part of the net expenditures for governmental purposes in Arizona is used for education and what part for governmental functions other than education, and the relationship between the two. There have been large increases in the total and per capita costs of education and of governmental functions other than education in Arizona during the period studied.

1919. Friswold, I. O. How the schools petty cash may be handled: petty cash practices and procedures in small school systems. Minneapolis, University of Minnesota. American school board journal, 85: 31–32, 83, August 1932.

A survey of practices found in 85 school systems in nine mid-western states with suggestions for their improvement from the viewpoint of good business management and financial accounting. Three types of petty cash procedures are commonly found in public-school systems; individual donor, miscellaneous extracurricular fund, and the specialized petty cash fund. The first two types are objectionable in practice, so the third should be employed when possible because it complies with the requirements both of good business and of approved accounting procedure.

1920. Gaiser, Paul F. The taxation of public utilities for school support in Washington. Doctor's, 1932. Washington. 300 p. ms.

Study of 1,000 Washington school districts to determine objectively what part the system of taxing public utilities by school districts and counties plays in creating inequalities of school support.

1921. Green, William Samuel, *jr.* The school bond situation in Colorado. Master's, 1932. Denver. 62 p. ms.

Data found in the biennial reports of the State superintendent of public instruction regarding indebtedness were carefully analyzed, and studied, and a questionnaire was designed which gave much information on the type of bonds, length of term, rate of interest and purposes of the issues.

1953. Seyfried, J. E. Public-school budgetary procedure in New Mexico. Albuquerque, University of New Mexico press, 1932. 27 p. (University of New Mexico bulletin. Education series, vol. 6, no. 1. Whole no. 210. July 1, 1932.)

The study answers the questions: How does New Mexico public school budgetary procedure conform to the recommendations of authorities in educational administration, and what do New Mexico public-school administrators think of the present budgetary plan as they see it in practice? Data were secured from 128 inquiry blanks sent to New Mexico public-school administrators. Findings: The New Mexico plan places financial matters too much in the hands of noneducational boards, and makes it necessary to determine educational needs mainly on the basis of arbitrary rules and according to inexpert opinion. A majority of the superintendents favor the present plan of determining school budgets, and the most important parts of it. Opinion is divided and enough oppose it to indicate that changes are needed.

1956. Smith, Maurice Lemuel. A study of the inequalities in the burden of school support and in educational opportunities in the state of Michigan. Doctor's, 1932. Stanford.

Discusses the present method of school support, its inequalities, especially in the rural districts; its relation to taxes and educational opportunities. Data were obtained from the Michigan State department of education, state tax commissioner's reports, state assessor's reports, county school directories, and two reports by the county school commissioners. Twenty-five typical counties are studied, classifying the schools on the basis of number of teachers. Causes of inequalities are established, the method for their removal is pointed out, and information is furnished for formulating remedial legislation.

The purpose of the study is to develop a technique for the apportionment of state school funds so as to equalize more adequately the financial burden among the several units of support. Data on elementary and high-school districts in California for the years 1927–28 were obtained from the annual reports of the county superintendents of schools. Actual equalization of the burden of support for education is conditioned upon the adoption of larger units of support and is based on the principles Each of the local units for the support of education should levy the same tax rate for the provision of the equalization program; the state should apportion to each local unit of support a sum equal to the difference between the amount available by application of the local tax and the amount necessary to finance the equalized program. Increased state aid for the support of education is involved in the equalization of the burden of support.

2042. **Heilman, J. D., *and* McKee, Paul.** The relative influence upon educational age of grade location and mental age. Journal of applied psychology, 16: 184–200, April 1932.

For 1,300 children, a comparison was made of the average educational age differences of those who, being in the same grade, differed two years in mental age with the average educational age differences of those who, having the same mental age, differed two years in grade location.

2043. ——— The translation of scores into grades. Journal of educational psychology, 24: 241–56, April, 1933.

The grades and the scores on which they were based were obtained from about 20 teachers for each of two consecutive quarters For each of the classes the scores were translated into grades by two different methods as a part of this investigation. These two methods were compared with the teachers' methods The comparison was made by determining coefficients of reliability between the average grades as determined by each of the three methods for the two quarters The results show that the teachers' methods of translating scores into grades can be much improved.

ATTENDANCE AND CHILD ACCOUNTING

2045. **Chamberlain, Leo M., *and* Crawford, A. B.** The prediction of population and school enrollment in the school survey. Lexington, University of Kentucky, 1932. 27 p. (Bulletin of the bureau of school service, vol. 4, no. 3, March 1932.)

The purposes of the study have been to analyze and classify the methods that have been employed for predicting population and school enrollments in the educational survey and elsewhere, to check the accuracy of such predictions, and to demonstrate the relative effectiveness of various methods of forecasting population and school enrollment The methods of prediction studied were: Predictions based wholly on past census figures; the Bell telephone company's method or the method of index analysis; the equation method; the multiple factor method; and a combination method. The most satisfactory method used in the past was that involving the use of data provided by the Bell telephone company. In the future, simple and direct methods for predicting school enrollments should be substituted for time consuming procedures of a technical nature. A direct analysis of school facts, with only incidental attention to total population trends, promises the best basis for school predictions.

2056. **Rose, Anna L.** Ability in relation to school progress. Doctor's, 1932. T. C., Col. Univ.

Gives the results of a study to determine the extent of consistency of promotions in relation to achievement and in intelligence of pupils. Data were used from records of two groups of pupils, 391 in white schools in Washington, D. C., and 474 in Pittsburgh, Pa., of which 44 were colored. Findings: In Pittsburgh there is evidence of promotion by age groups; percentages are consistent and high; in Washington, they are not so high nor so regular, and promotion by mastery of subject matter is indicated. Recommendation for a policy of philosophy of promotion based on ability, past achievement, and present needs of the individual is made.

2057. **Russell, Charles.** Rating school pupils. New York City, Teachers college, Columbia university, 1932. 74 p.

Discusses current practices in rating pupils, and gives suggestions for improving the various types of rating systems.

2117. Brown, Marion. Study of pupils selected by fellow pupils for positions of leadership in the extracurricular program in a particular school. Doctor's, 1932. T. C., Col. Univ.

A study was made of 259 pupils in positions of leadership from data secured from high-school records for individual pupils, questionnaires to pupils, interviews with pupils, records for the population of the individual school, records for the high-school population of the city. It was found that two-thirds of the leaders were members of the graduating class; were younger than their classmates; came from homes of a relatively high occupational status; expect to enter business and professional work. Leaders in major positions were superior to those in minor positions in posture and general appearance, intelligence, and scholarship. There was a wide range of abilities and of interests in the leader group. They had a wide variety of experiences in the student body, leagues, clubs, and class organizations. They had a variety of experience before their selection for leadership positions.

* 2138. Keefe, Helen Frances. A study of the causes of failure with special reference to Grade 10. Master's, 1932. Boston Univ. 105 p. ms.

Part 1 Defines the term failure and the causes of failure as set forth in other studies which have been made of the subject, part 2 is a report of a study of failures made in grade 10, high school 10, Boston; part 3 gives quotations and excerpts from a group of remedial and preventive experiments made in an effort to reduce the failures in secondary schools.

*2139. **Magoon, Mayo M.** Relation of failure to pupil seating. Master's, 1931. T. C., Col. Univ. New York City, Teachers college, Columbia university, 1932. 42 p.

There is a tendency toward concentration of failures in certain groups of seats, and the concentration becomes more marked in the upper years of high school; some groups of pupils, because of their positions in the classroom, receive better supervision and assistance than others, some pupils need to be brought into positions nearer the teacher, there is strong evidence in favor of teachers assigning seats; considerable advantage is to be gained in the frequent changing of seating plans; teaching is most effective when it takes place from different positions; there is a tendency for some pupils to select outside seats deliberately in order not to be too close to the center of activity.

MARKS AND MARKING

2145. **Atherton, Harlan E.** The distribution of marks in Charlestown high school. Master's, 1932. New Hampshire. 19 p. ms.

2146. **Besley, Walter B.** Marking systems in use in secondary schools. Master's, 1932. Chicago. 112 p. ms.

The study included 200 public secondary schools representing 42 states. More than two-thirds of the 200 schools use a purely letter type of marking system or some variation of the letter type.

2147. **Bradbury, Roscoe Clifford.** A study of D and F grades in senior high school mathematics. Master's, 1932. Southern California.

2148. **Jones, Richard C.** A comparison of grades assigned to American history papers. Master's, 1932. Peabody. 99 p. ms.

A study of the variability in grades assigned to new-type test scores and essay-type test papers in American history. It was found that greater variability is shown in grading essay-type papers, but there is sufficient variation in grading both types to be significant.

2149. Kluss, Fred J., *and* Kirby, Thomas J. Pupils' marks in high-school subjects in 38 Iowa schools. Iowa City, University of Iowa, 1931. 60 p. (University of Iowa extension bulletin. Bulletin no. 278. College of education series no. 30. October 15, 1931.)

The study inquires into the current practice in subject enrollment, pupil withdrawals, failures, and the assignment of pupil marks in 38 Iowa high schools and attempts to discover how administrative procedures affecting these practices may be improved. Data indicate that administrators must assume responsibility for controlling the practices affecting enrollment and pupil progress in their schools. State-wide adoption of a uniform child accounting system is advocated.

2150. Kulp, Daniel H., *II*. What measures for grading? New York City, Teachers college, Columbia university, 1932.

An analysis of tests, before and after,, to discover what data best represent the work and achievement of students. Findings: Final score is the best measure.

2151. Lenfesty, Ralph G. A comparative study of the academic scores of the upper 25 percent of the senior class (1930–31) of the Ohio high schools with their relationship to age, sex, and vocation. Master's, 1932. Ohio. 123 p. ms.

A comparative study of 3,646 high-school seniors. These pupils took the second general scholarship contest for high-school seniors in Ohio. Findings: Boys made better scores than the girls in all subjects except English. Ohio high schools need a better guidance program. The larger the school the better the pupils are prepared at the completion of the senior year.

RECORDS AND REPORTS

2154. Atkinson, John Allen. A study of county and state school reports. Master's, 1932. Colo St. T. C.

2155. Courtright, Jeanette Holmes. A comparative study of the school records and the occupational records of high-school graduates who were secretarial majors. Master's, 1932. Southern California.

2156. Galbreath, Frank Earl. A State system of educational reports for Colorado. Master's, 1932. Colo. St. T. C.

2157. Murphy, J. Fred. The present status of high-school principals' annual reports to superintendents and boards of education. Master's, 1932. Ohio. 119 p. ms.

There was a spread of 125 different items reported in the 93 high-school principals' annual reports analyzed. The three groups of school administrators who rated the 35 items reported most frequently were in agreement that these 35 items were either "necessary" or "desirable but not necessary" in a high-school principal's annual report.

* 2158. Reed, J. McLean. An annual report for the Fostoria city schools for the year ending August 31, 1931. Our public schools. Master's, 1931. Ohio. Fostoria, Ohio, Board of education, 1931. 111 p.

Part 1 contains a history of the Fostoria public school from its beginning in 1882. Part 2 contains the present program including such factors as building, school population, curricular and extracurricular activities, special functions, school revenues, and school costs. Part 3 contains the modern requirements and responsibilities of the public school.

2159. **Skarda, Emil J.** Accounting methods in 16 school systems in Illinois. Master's, 1931. Chicago. 115 p.

Describes the nature and extent of financial records and reports kept in the selected school systems.

2160. **Taylor, J. Carey.** The reliability of quarterly marks in the seventh grade of junior high school, together with the value of certain standard tests in predicting them. Baltimore, Md., Johns Hopkins press, 1931. 54 p. (Johns Hopkins university studies in education, no. 17.)

Undertakes to determine the predictive value of scores made in the Otis group test and Stanford achievement tests. In Baltimore junior high schools, the Otis group test of mental ability correlates more highly with the teachers' 7B marks in English, mathematics, geography, history, or an average of these, than does the Stanford arithmetic test, the Stanford reading test, or the combination of any two, or all three taken together. The teachers' term mark, when based on several marks rather than a few, is a good measure of the achievement of the pupil.

2175. **Clemente, Tito.** A comparative study of the vocabularies of Philippine and American readers for the first grade. Doctor's, 1932. T. C., Col. Univ.

Attempts to compile a reading word list suitable for use in the first grade in the Philippine public schools and to determine whether there are any significant differences between the vocabularies of the Philippine and American first grade readers. Data indicate that as compared with American primers, the Philippine primers contain a significantly larger number of different words, of important words found among the first 1,000 most common words in Thorndike's word list and in Gates' word list, and of words not found in either of the word lists; that the American primers have a significantly lighter vocabulary load than the Philippine primers; that the Philippine primers have a significantly larger number of words in common with the American first readers than have the American primers in common with the Philippine first readers.

2176. **Coyner, Ruth E.** Trends in United States history textbooks on the upper elementary school level. Master's, 1931. George Washington. 115 p. ms.

A study of 28 United States history textbooks published between 1830 and 1930 shows that history textbooks approximately doubled in size every 30 years between 1830 and 1920; miscellaneous aids dominated the aid space until 1920; in 1930 visual aids were more prominent than miscellaneous aids.

2177. **Crawford, Mary Ann.** Parallel readings listed in junior high school history textbooks. Master's, 1932. Peabody. 144 p ms.

References were compiled from a selected list of 10 junior high school history textbooks Findings: No reference was given by all 10 textbooks studied; 3 were given by 9 textbooks, 2 by 8 textbooks, 13 by 7, 16 by 6, 29 by 5, 65 by 4, 124 by 3, and 252 by 2 textbooks.

2178. **Davis, Alta.** Parallel readings listed in junior high school history textbooks. Master's, 1932. Peabody. 163 p. ms.

From a study of 10 textbooks in junior high school history, it was found that they varied in organization and subject matter for collateral reading

2179. **Dinning, Wilmoth Figuers.** Parallel readings listed in senior high school history textbooks. Master's, 1932. Peabody. 184 p. ms.

This study disclosed the fact that textbooks for senior high school history vary both in the type of parallel reading recommended and in the number of references mentioned by the 10 texts studied More than 1,600 references of all kinds were suggested by one text only of those texts examined, and 681 references were recommended by 2 or more of the 10 representative texts studied. Of this latter number only 2 (both histories) were suggested by all of the texts

* 2180. **Dubreuil, Elizabeth C.** The selection and application of criteria for the judging of arithmetic textbooks for the primary grades. Master's, 1932. New York. 73 p. ms

Criteria were selected and used in rating 10 primary arithmetics printed since 1925, which are used in New York State.

* 2263. Andrews, Emily Russell. Methods and results of a system of physical examination in a private school. Master's, 1932. New York. 180 p. ms.

Describes the system of physical education in use at the Chandor school for girls in New York City.

2264. Barmack, Joseph E. Glands and personality—the possibilities of influencing the development of personality traits through the medium of the endocrine glands. Master's, 1931. Coll. of the City of N. Y. 44 p. ms.

The endocrine glands have definite influence on the development of personality traits; thyroid and adrenal secretions are subject to change by environmental stimuli; a study of the sympathetic control of the endocrines is valuable for the technique of glandular control in the school; endocrine imbalance is common enough to warrant the employment of a trained endocrinologist by each large school; our present adherence to the old techniques of extrinsic stimulation in the classroom is not conducive to the development of the most desirable type of personality.

* 2310. Labarre, Earl. What does the grade school teacher of physical education expect of the supervisor of physical education? Master's, 1932. New York. 51 p. ms.

Studies the school system of Bethlehem, Pa., and shows that a large majority of the teachers wished the supervisor to order all kinds of instructional equipment and supplies, that demonstrations be given in all activities pertaining to the teaching of health and physical education, and that a health program be organized and furnished them.

2311. **Law, G. C.** A study of physical defects of University of Illinois students, with special reference to the members of the class of 1933 assigned to corrective physical education for four semesters. Master's, 1932. Illinois.

* 2312 **Lee, Mary Alden Morgan.** The relation of the knee jerk and standing steadiness to nervous instability. Doctor's, 1931. Chicago. Journal of abnormal and social psychology, 26: 212–28, July–September, 1931. (Reprinted.)

Describes a preliminary experiment with two subjects, a man and a woman to determine the variability of the knee jerk and steadiness under standardized laboratory conditions; an experiment conducted in February and March 1928 with 10 medical students selected as exhibiting different degrees of nervousness according to the ratings of their classmates, the tests used with these students were Knee jerk, standing steadiness, and a salivary reflex, and a study held during March to June 1928, of 258 children in the third, fourth, fifth and sixth grades of the elementary school of the University of Chicago Findings· True individual differences exist in the knee jerk and in the Romberg test in the organically sound population; there is considerable social agreement in the meaning of "nervous instability"; there is no evidence that neurotic tendencies are associated with an active knee jerk; the neurotic adult and child tend to be more unsteady than the phlegmatic in the erect position with eyes closed; there is no sex difference in children in either the amplitude of the knee jerk or in steadiness; within the age range of the children studied, there is a low inverse correlation between age and amplitude of the knee jerk, degree of unsteadiness, and questionnaire scores.

* 2313 **Leland, Mary Louise.** A method for determining posture standards with special reference to children in the second and third triennia. Master's, 1931. New York. 45 p. ms.

A total of 121 normally healthy children between the ages of 4 years and no months and 9 years and 11 months were studied, and from posture silhouettes and measurements of the children, two standards were set up, one for the average posture of children in the age group of from 4 through 6 years, and one for chilrdren from 7 through 9 years.

2314. **Lewis, Morton Abraham.** A survey of health education and practice in the schools for colored children and their communities. Master's, 1932. Ind. St T. C. 44 p. ms. (Abstract in. Indiana State teachers college. Teachers college journal, 3 · 294–95, July 1932)

Studies the status of health education as administered in the schools for colored children in Vigo county, Ind, and shows that the attitudes of the teachers and of the parents are wholesome toward health instruction and its administraion

* 2315. **Liljenstein, Oscar John.** A job analysis of health and physical education in Pennsylvania. Master's, 1932. New York. 68 p. ms.

Data were secured from answers to a questionnaire received from 66 graduates in health education of the East Stroudsburg State teachers college employed in Pennsylvania. Physical education teachers are often required to teach subjects outside their field

2316. **McCarraher, John D.** Survey of physical education and hygiene in country day schools for boys. Master's, 1932. Int. Y. M. C. A. Coll. 137 p. ms.

2317. **McCollom, Francis Brown.** Measurement of progress in corrective physical education. Master's, 1932. Southern California.

2318. **MacCurdy, H. Leigh.** The measurement of the physical capacity of secondary school boys. Doctor's, 1932. T. C, Col. Univ.

Attempts to construct a test that will be a valid and reliable measure of the physical capacity of the large muscle groups, which may be used to classify pupils into homogeneous groups for physical education activities. A total of 1,414 cases were used in the different phases of the study The boys, aged 13–20, were in the physical education programs of the Gorton high school, and the Saunders trade school, Yonkers, N. Y. The experimental group was cosmopolitan in its make-up and included only American-born white boys The experimental groups were subjected to a battery of varied tests

A physical capacity index was worked out statistically. The physical capacity index proved to be a valid and reliable measure of the power of the big-muscle groups; it does not measure specific athletic skill.

2319 McGee, Nacy Waters. Public health administration in Iowa. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

The public health services in Iowa are similar to those in other states where a number of unrelated agencies administer its program, resulting in a duplication of effort, division of responsibility, and lack of coordination.

* 2320. McKinstry, Helen. A study of estimated and actual success of graduates of a normal school of physical education. Master's, 1932. New York. 174 p. ms.

Data were secured from records made by the Central school of hygiene and physical education dating from the beginning of the school in 1919.

2321. McMullen, William. A survey of the teaching of physical education in western Kansas. Master's, 1932. Kans. St. T. C., Hays. 54 p. ms.

* 2322. Macneil, John P. The organization and administration of laboratory experience in teaching physical education. Doctor's, 1932. New York. 160 p. ms.

Criteria for the organization and administration of laboratory experience in teaching physical education were formulated and validated by 36 competent judges. A check list of current practices and policies in providing laboratory experience in teaching for prospective physical education teachers, was formulated and sent to all institutions offering professional curricula in physical education. Nearly half of the institutions preparing supervisors and administrators of physical education fail to provide special facilities and a program for laboratory experience in supervision.

2324. Mendenhall, L. L. A professional curriculum of physical education for men for the Iowa state teachers college. Master's, 1932. Iowa.

* 2325. Messer, Guerdon Norris. Critical analysis of the application of the Rogers physical fitness test to Williams college students. The establishment of revised normal strength indices for Williams college men. Doctor's, 1932. New York. 118 p. ms.

Attempts to determine whether the Frederick Rand Rogers physical fitness test and normal strength indices were applicable on the college age level for the purpose of grouping students into homogeneous groups for physical education activities. In 1930, 216 freshmen and 187 sophomores were given the Rogers tests. Data indicate that the Rogers normal strength indices were not valid for the Williams college students tested. A new set of norms, known as the Williams college norms, was established and proved to be more valid for the college age group.

2326. Minnesota. University. Qualifying examinations for prospective physical education teachers. Minnesota, 1932. 29 p. ms.

Background courses in theory and activity course content for elementary, secondary, and college levels.

* 2327. Mitchell, William E. A study of health programs in senior high schools. Master's, 1932. Penn. State. 100 p. ms.

Presents available information regarding the present status of the organization, administration, and content of health programs in senior high schools of western Pennsylvania. The health programs of 30 schools were studied. The health programs are not generally well balanced. More emphasis is placed on physical education than on any other phase of the health program. They contain little provision for corrective or remedial gymnastics. There is a lack of cooperative responsibility for them. Facilities and equipment in the health and physical education departments are inadequate.

* 2328. **Mitterling, Ralph.** The control of physical education activities, outside of school hours, by, or in conjunction with, the board of education: A study of 18 cities in the United States. Master's, 1931. New York. 74 p. ms.

Data indicate that the school provides physical education activities, outside of school hours, to some extent, but there is no outstanding example of complete control of physical education activities by the school, for the school age child, during the entire year.

2329. **Morgan, Lucy Shields.** Microbiology as presented in a university course in health education. Master's, 1932 Tennessee 225 p ms.

2330. **Murphy, Mildred Travis.** Physical defects and impairments of school children. Master's, 1932. Peabody. 93 p ms.

Too many children in the United states are suffering from physical defects and impairments which may be detected, prevented, and possibly corrected by the classroom teacher Methods, examination forms, and suggested lessons are given for the use of the untrained teacher.

Gives a history of the origin of the research, the program, and findings of the research.

2337. ——— Some curricular practices in sex education. A survey and a program. Minneapolis, University of Minnesota press, 1932. 25 p. (Social hygiene bureau. Studies in parental sex education, paper 5.)

Interviews were held with 100 members of the faculty of the University of Minnesota on the outline of topics and subject materials in sex education which had been prepared. The survey wished to determine whether or not a course contained subject material on any of the topics of the outline; and whether or not such material was applied in the classroom to life situations involving the mating urge behavior. Of the 2,395 courses offered in the University, 101 were said by the persons interviewed to contain some of the subject material listed in the outline. No course or combination of courses gave adequate subject materials in sex education together with an effective application to life situations and relationships involving the mating urge.

Attempts to search out, organize, and classify material on stunts, tricks, and optical illusions which would be of value to recreational leaders or to anyone desiring such material for indoor social entertainment.

2443. **Quig, Emily.** The value of recreation in summer sessions. Master's, 1932. Rutgers.

2444. **Raynor, Lois Willette.** Organized recreation for girls. Master's, 1932. Columbia.

2445. **Roberts, Mary Price.** A study of children's play in the home environment. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series no. 248. 1 p.)

Fifteen records were made and analyzed in the home environment of 10 children to discover relationships in various factors in play activities. Results would suggest the reduction of the minutes of overt emotional disturbance and parentally inhibited

play activity, the amount of dangerous play, increasing the amount of manipulatory and constructive activity, and the reduction of the proportion of verbal controls which offered the child no choice of behavior.

2446. Roberts, O. E. A survey of recreational activities within six representative denominations. Master's, 1932. Peabody. 54 p. ms.

Shows the type of work promoted, facilities, and personnel employed in recreational activities carried on by the Methodist, Baptist, Catholic, Presbyterian, Latter-day Saints, and Episcopal denominations.

2447. Rohret, Agnes L. The institutionalization of recreation. Master's, 1932. Iowa.

* 2448. Schwendener, Norma. Game preferences of 10,000 fourth grade children. Doctor's, 1932. Columbia. New York City [Columbia university], 1932. 49 p.

By means of questionnaires, data were collected from administrators of the public-school systems of Springfield, Mass., Toledo, Ohio, Houston, Tex., Detroit and Kalamazoo, Mich., and Tampa, Fla. The 10,000 fourth grade children studied show no sex differences in choice of games, and show a remarkable agreement in their choice of games. The number of games preferred by the children was small.

SOCIAL ASPECTS OF EDUCATION

2450. Boyarsky, Benjamin. Sociological aspects of Jewish schools in the United States. Master's, 1932. Columbia.

* 2451. Chamberlain, Lucy J. Organizing community forces to meet social needs. A descriptive study of the methods employed by social groups in two rural counties in organizing community forces to meet social needs, together with an analysis of the methods used in collecting and recording the material. Doctor's, 1932. New York. 304 p. ms.

The case studies illustrate new types of community case records as kept in a rural county in the middle western section of the United States and in St. John's county, Fla.

2452. Cochran, Ethel L. A survey, in the light of social needs, of high-school and college instruction on marriage and parenthood and a prepared outline for such a course. Master's, 1931. Coll. of the Pacific.

* 2453. Durost, Walter N. Children's collecting activity related to social factors. Doctor's, 1932. T. C. Col. Univ. New York City, Teachers college, Columbia university, 1932. 115 p. (Contributions to education, no. 535.)

Determines the relationship which existed between collecting activity of children and other measurable social factors such as intelligence, economic and cultural background, social and emotional adjustment. An experiment was carried out in Lewiston, Maine, during the summer of 1931 with two groups of children. Data indicate a similarity between the sexes in collecting activities; there were evidences of unreliability in the questionnaire check list method, especially in the matter of average number of collections per child; no significant relationship can be found between collecting activity and economic status, cultural background, or social adequacy or inferiority.

2454. Elroc, Henry. A survey of the practices of local parent-teacher associations. Master's, 1932. Coll. of the City of N. Y. 77 p. ms.

The majority of persons, coming into contact with the work of the home and school movement, agrees that it is a valuable agency for aiding in the solution of many problems confronting the home and the school; organized and properly planned guidance of the work of the local parent-teacher associations must displace the present confusion as to the proper aims and objectives for these bodies.

* 2455. Emerson, Lynn A. History and present status of employment service in the Y. M. C. A. of New York City. Doctor's, 1931. New York. 247 p. ms.

Data were secured from annual reports of the New York City association since 1852; personal interviews with secretaries in the several branches; records of 5,816 men and boys served by the employment departments of six branches; reports of similar studies and records of employment services of other social agencies in the New York area, replies to a questionnaire of 400 men placed by the branches during 1929 and replies to 279 letters to employer-users of the service; and from all cities in the United States and Canada which provide organized Y. M. C. A. employment service.

2456. Evans, Dina Rees. Changes in social behavior and emotional attitudes of high-school students participating in dramatic art in the high school of Cleveland Heights, Ohio. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

Tests applied to 75 high-school students showed: Individuals of the ascendant type showed better social adjustment, a revitalized interest in school work, and more desirable habits of conduct; submissive individuals gained in self-confidence; the behavior of the neurotic personalities, with but two exceptions, showed a marked gain in poise, self-control, and emotional balance; students in the average group showed better social and emotional adjustment; a few showed no change.

2457. French, Ethelinda. Changes in the American home. Master's, 1932. Peabody. 107 p. ms.

Surveys the physical changes in the home from the settlement of America to the present: Houses, interiors, effects of science and invention, and domestic economy.

2458. Hall, Irma M. The function of drive in education Master's, 1932 Colorado.

2459 Hanlon, Katherine M. The foster home movement in the United States. Master's, 1932 Columbia.

2460. Hansell, Alice Mildred. The influence of the number of children upon the distribution of family expenditures. Master's, 1932. Iowa St. Coll.

* 2461. Hoffeditz, E. Louise. Family resemblances in personality traits. Master's, 1932. Penn. State. 53 p. ms.

A study was made of family resemblances in neurotic tendency, self-sufficiency, and dominance in 100 families containing at least two children of high-school age or older The 456 members of the 100 families answered the questions on the Personality inventory. Data indicate that there is little agreement beween family members. Sons and older children appear less neurotic and more self-sufficient than daughters and younger children.

A study was made of 439 members of the Young men's Christian association of Englewood, Ill. The study describes the development of the interest finder which could be filled out and interpreted with the applicant within the space of an hour Scoring norms were worked out from the answers of 75 of the most active and influential members from the committees of management, program committees, and members of several years' standing, to the 301 items on the interest finder.

2481. **Swieda, *Mrs.* Wanda G.** A survey of research in problems of the family and marriage. Master's, 1932. T. C., Col. Univ. 67 p. ms.

Analyzes 71 studies in problems of the family and marriage using research methods for collecting data, published during the period 1920–1930.

2491. **Hansburg, Henry.** The effect of emotional stimulations of fright and interest in producing changes in the intelligence quotient. Master's, 1931. Coll. of the City of N. Y. 79 p. ms.

2492. **Hanson, Rose L.** A study in children's use of money. Master's, 1932. Iowa.

* 2493. **Heinrich, Desdemona L.** Dietary habits of elementary school children. An evaluation of the quantitative and qualitative adequacy of the daily food intake of 463 elementary school children of American, Jewish, and Italian parents living in urban and suburban New York City. Doctor's, 1932. New York. 144 p ms.

The children studied were boys and girls ranging in age from 4 to 12 years, whose families lived on different economic levels. About 70 percent of the cases had the recommended amount of food for their ages: about 50 percent of the children eat only approved foods The evening meal reflected racial food habits to a greater degree than the other meals.

2499 **Sangster, Charles Ford.** Educational retardation of children exhibiting behavior disorders. Master's, 1932. Chicago. 180 p. ms.

Finds that intelligence is the outstanding difference, with many small differences between normal and retarded children in physical, mental, social, and behavior disorders.

2500. **Sargent, Elise Hitt.** A study of girls' welfare centers in the Los Angeles city schools. Master's, 1932. Southern California.

* 2501. **Schmidt, George H.** The relation of certain anthropometric characteristics to the weight of high-school boys. Doctor's, 1932. New York. 56 p. ms.

Determines the relation of the length of the total skeleton, depth and breadth of the torso skeleton, size of certain muscular tissues, and the thickness of the subcutaneous tissue to the total body weight of high-school boys. A total of 1,000 boys, ranging in age from 13 to 17 years, inclusive, were measured during the year 1931. The boys were from the Richmond Hill high school in New York City. It was found that the correlation of height with weight is not as high as some other skeletal characteristics. There is a shift in the importance of the weight and skeleton relationship from hip width to chest size as the person grows older.

2502. **Shirley, M. M.** The first two years, a study of 25 babies. Vol. 1. Postural and locomotor development. Minneapolis, University of Minnesota press, 1931. 227 p.

The infants studied were of a somewhat superior and social class. They were observed in the homes at intervals ranging from daily to biweekly towards the end of the period of observation. The results favor a maturation theory of the development of ability, and the existence of innate differences in motor skill is strongly suggested.

2503. **Wallis, Ruth Sawtell.** How children grow. An anthropometric study of private school children from 2 to 8 years of age. Iowa City, University of Iowa, 1931. 137 p. (University of Iowa studies. New series no. 208. Studies in child welfare, vol. 5, no. 1. August 1, 1931.)

The main group of children in this study attended private schools in New York City. The majority are from the City and Country school, a smaller group with fewer

measurements from the Horace Mann school, and 29 children from the Institute of child development of Columbia university. The records studied are mainly of two types, direct measurements taken on the living child and measurements made on roentgenograms of the same individuals. The number of New York private school children is 239, of whom 151 are from the City and Country school. Data indicate that a child, unless he is accelerated or retarded by change to a better or a worse environment or checked by severe illness, will continue to grow at an approximation of his original rate in relation to others of his racial and social group. The tendency of the human body is to grow with the various parts proportionate to one another in all stages from fetal life to maturity and for all parts to increase in harmony to total stature.

2504. **Wilker, Marguerite.** The behavior of children and adults. Course for parents and teachers. Ann Arbor, University of Michigan, 1931. 65 p.

This course of study is the result of experience with study clubs for four years. Most of the experimental work was carried on at Cornell university in connection with the nursery school of the New York State college of home economics. The study material was used by several hundred groups in New York State home bureau units, parent-teacher associations, the Child conservation league, the American association of university women, by classes in parent education at Cornell university, and several classes in child education at the University of Michigan

2514. Geznique, Charles A. A historical sketch of the character education movement in the United States. Master's, 1931. T. C., Col. Univ. 91 p. ms.

Indicates that the present emphasis on character education is due partly to the secularization of education and partly to a consciousness on the part of educators that something is wrong with our educational system as evidenced by social conditions.

* 2515. Gill, Joseph Clarence. The extent to which high-school papers aid in developing loyalty. Master's, 1932. Penn. State. 47 p. ms.

Attempts to determine the extent to which the high-school paper is being used to develop loyalty, the type of loyalty that is being encouraged, and the degree to which the different types of loyalty are being urged. Data were collected from 180 high-school papers from 29 states and the territories of Hawaii and Alaska. The high-school paper devotes 9.59 percent of its space to developing loyalty. The higher types of loyalty are being frankly cultivated, the vicious types are being urged to a slight extent.

2579. **Stryker, Veda.** Relationship between Biblical comprehension, knowledge of moral and ethical concepts, and some phases of conduct among students of the E. Mitchell school. Master's, 1932. Northwestern.

* 2580. **Tate, Edward Mowbray.** Church school curricula and education for Protestant church unity. An analysis of religious education materials used by six denominations in training children for church membership, in the light of denominational pronouncements favoring the movement for church unity. Doctor's, 1932. Columbia. Philadelphia, Pa., James M. Armstrong, 1932. 95 p.

The denominations studied were: Congregational and Christian, Disciples of Christ, Methodist Episcopal, Methodist Episcopal South, Northern Baptist Convention, and Presbyterian, U.S.A. A study was made of church school texts, denominational periodicals for teachers, junior and intermediate society programs, and some week-day school courses. Data indicate that the church school reaches most of the boys and girls, but that its materials make little provision for practical training in cooperation.

Data were secured from educators in various fields of education, especially from teachers of vocational agriculture. Findings: Thirteen factors characterizing an effective vocational training program were established. They characterized conditions far in advance of the conditions generally found In practically every instance, the vocational agriculture course was very rigid in its requirements, and was administered just as was the academic course in the secondary schools.

2675. Smart, John A. A study of the use of individualized instruction in vocational agriculture. Master's, 1932. Va. Poly. Inst. 73 p. ms.

The purpose of the study was to develop a contract form for individual student use; to experiment by a parallel group procedure with one class as a check, and to try it out with 14 classes in Pittsylvania county under four teachers of agriculture. Individualized instruction seemed to be superior to instructors and pupils.

2682. Bancroft, Clara Marie. Vocational education in home economics in the all day schools of Ohio. Master's, 1931. Ohio.

This study shows the expansion and development of the vocational home economics program in the all-day schools of Ohio over a period of 12½ years. From 1918 to 1930 the number of schools increased from 6 to 80 with proportionate increases in enrollment in the schools and number of teachers employed and moneys expended. The development of the curriculum and the type of equipment used has been in accord with modern trends in home economics education.

* 2804. Hamilton, Charles W. What is the status of office practice and secretarial training in New York State public high schools outside of New York City. Master's, 1932. New York. 60 p. ms.

Data were secured from 43 cities of various sizes, in New York State, by answers to questionnaires. There is almost no uniformity of practice in setting up courses in office practice The objectives of the course seem to be to correlate previous work, build character, develop ability to work with people, learn new devices, and to give practical experience.

2805. Hare, Mildred. Commercial education and a modern trend. Master's, 1932. Maryland.

2806. Hawkins, George Allen. A study of the equipment used and desired in the commercial departments of the large senior high schools of the state of Ohio. Master's, 1932. Ohio. 157 p.

Finds out the present quantity of equipment, and that desired by teachers in large high-school commercial departments in Ohio; the machine skills considered desirable and necessary, and the relative rank of importance to the major machine skills, estimated by representative business men; and correlate these variables. Replies were received from 489 businesses Conclusions: Correlation of about 70 percent exists between present quantity of different types of commercial equipment found, and the relative ranks of importance of these types; calculating machine, duplicating machine, and filing system instruction are underestimated and undertaught in schools; business men differ in opinion concerning proper commercial practices in schools; commercial teachers are undertrained in the field of machine instruction.

* 2807. Haynes, Benjamin R. Elementary business training in the public junior high schools of the United States. Doctor's, 1932. New York. 297 p. ms.

Data were secured from answers to a questionnaire received from 811 junior high schools scattered over the United States; and from a critical examination of the written statements from teachers, administrators, and others interested in commercial education. Of the 811 schools, 434, or 53.51 percent teach elementary business training; and 377 schools, or 46.49 percent do not teach it.

2808. Helmstadter, Carl W. Some trends in commercial education in Nebraska high schools. Educational research record, 4: 99–102, February 1932.

Data were secured from questionnaires mailed to each school offering one or more technical commercial subjects, or offering two or more nontechnical subjects; a study of the records at the State house for the years, 1923–24, 1924–25, and 1927–28; and a résumé of the literature in the field. Findings: Thirty and four-tenths percent of all the high schools in the state are teaching commercial subjects; the commercial curricula are uniform in certain aspects, but vary widely in others; schools as small as 50 in enrollment in high school were found to have commercial curricula; there is variation with reference to the grade in which the various subjects are given; the most commonly taught commercial subjects are: Typewriting, bookkeeping, and shorthand; it is not common practice to grant commercial certificates to graduates of the commercial curriculum.

A detailed special study of types and frequencies of bookkeeping errors made by 1,500 students in the first term of high school. Findings: The frequent errors were due to usual causes of poor preparation, attendance, poor ability, and unwillingness to work.

2818. **Larabee, L. S.** Survey of commercial education in Tennessee approved high schools, 1926–1931. Master's, 1932. Peabody. 88 p. ms.

Comparative study of the status of commercial education in Tennessee over the past five years, 1926–1931 It was found that the teaching personnel and the quality of work done compared favorably with other departments in high schools of Tennessee.

2819. **Lauritsen, Marie.** A critical examination of research in methods of teaching shorthand transcription. Master's, 1932. Iowa.

2820. **Liftin, Max.** The Smith versus the Rational method of teaching typewriting. Master's, 1932. Coll. of the City of N. Y. 54 p. ms.

Chiefly on the basis of an initial accuracy test based on the Fritz-Eldridge method, two groups of 54 subjects each were equated. One group was then taught by the Smith method, while the other group was instructed by means of the Rational method. The groups continued under the respective methods for a period of eight weeks. At the conclusion of the experimental period the groups were retested for accuracy and speed. Conclusions: There was no significant difference between the groups on the final test. Apparently then, the Smith and Rational methods are equally efficient.

EDUCATIONAL AND VOCATIONAL GUIDANCE

2857. Baller, Stuart. Instruments for selecting telephone operators. Master's, 1931. Nebraska.

The study deals with 100 operators.

2858 Barnhart, Jesse Leonard. A study of the functioning of guidance in grades 7–12 of the rural schools of Huron county, Ohio. Master's, 1932. Ohio. 75 p. ms.

Finds that the 1-room schools offer no guidance training, that the centralized schools offer little direct guidance.

2859. Blough, Telford B. A study of the vocational preferences of 2,233 boys and girls from kindergarten to the 12th grade. Master's, 1932. T. C., Col. Univ. 83 p. ms.

Includes stated occupational preferences of 1,130 boys and 1,103 girls, pupils in the Ferndale, Dale, and Westmont schools, Johnstown, Pa., tabulations, etc.

2860. Brame, Scott M. Post high school survey of the graduates of Bolton high school, Class of 1924. Master's, 1932. Louisiana.

* 2861. Brinker, Robert Durie. A study of the vocabulary content of vocational guidance textbooks. Master's, 1931. George Washington. 115 p. ms.

The material used was derived primarily from three ninth grade vocational guidance textbooks which were recommended by vocational guidance counsellors in the larger cities of the United States, as being widely in use. The purpose of the study is to determine the words which vocational guidance textbook writers deem important in an acquaintanceship with the fields of occupational activity. It was found that there are many highly technical words and professional terms which have a very low frequency of occurrence, in ninth grade vocational texts. Much of the vocabulary is much too highly specialized and is drawn from purely technical nomenclatures.

2865. Clarke, Elizabeth Mar. Changes in vocational choices of students. Master's, 1932. Chicago. 63 p. ms.

About 50 percent of the freshmen in college know definitely the work they will enter after college; 15 percent are considering the work they will do after graduation, and the rest are not certain or definitely change their vocational choices during college. Teaching is the most frequently chosen vocation.

* 2866. Conrad, Sara M. A study of the work carried on in the third and fourth class schools of Pennsylvania in guidance. Master's, 1932. Penn State. 45 p. ms.

Data were secured from replies to a questionnaire received from 205 schools in the third and fourth class districts of Pennsylvania. Student guidance was found to be a growing problem commanding increased recognition and study by administrative and teaching staffs in the secondary schools. Detailed techniques in guidance are being developed.

2867. Crawford, Albert Beecher, *and* Clement, Stuart Holmes. Choice of an occupation. New Haven, Conn., Yale university, 1932. 495 p.

This study, which was planned for the use of students at Yale university, takes up the qualifications and opportunities in various professions and businesses, with the earnings in the different fields.

2868. Cunliffe, Rex B., *and others*. Guidance practice in New Jersey. New Brunswick, N.J, Rutgers university, 1932. 31 p. (Rutgers university bulletin, series 8, no. 10a, April 1932. Studies in education, no. 2.)

Attempts to determine what guidance activities are most emphasized, or reported most often by the secondary schools of New Jersey; the distinguishing characteristics of the guidance programs offered by the various types of secondary schools; the relationship between school size and the nature of the guidance program; the provision made in diversified programs for meeting the needs of major economic and social groups, and the provisions made for guidance definitely vocational in nature and for the coordination of all guidance activities. Findings: New Jersey secondary schools emphasize most activities of the educational guidance type and least those of a definitely vocational guidance kind, the junior high schools offer more guidance activity and a better-balanced program than do the 4-year high schools; the medium sized 4-year high schools offer more activity and a better balanced program than do the very large or the very small schools; the nature of the 4-year high-school program is determined by school size rather than economic interest; few schools make any provision in the curriculum for teaching sound concepts of and intelligent attitudes toward the world of industry; few schools make provisions for placement or follow-up; in most of the schools the counselors give one-quarter or less time to counseling; the control of the guidance activities rests largely with the principal.

* 2883. Menger, Clara. Significance of vocational choices of school children and college students. Doctor's, 1932. T. C. Col. Univ New York City, privately printed, 1932. 178 p.

Collects vocational choices for more than 19,000 youths from the third grade through the senior year in college. Finds that boys chose a greater number of occupations than did girls; vocations chosen by retarded children covered a wider range than those chosen by accelerated youths; except for the choice of farming and nursing, rural youths chose similar occupations to urban youths; and that for the most part vocational choices are ill-considered because of lack of information about occupations and due to social attitudes.

Includes an account of attempts to educate the Cherokee Indians.

* 2907. Crump, *Mrs.* Bonnie L. The educability of Indian children in reservation schools. Doctor's, 1932. T. C., Col. Uni., Durant, Okla. Southeastern State Teachers College, 1932. 58 p. (Southeastern State teachers college. Contributions to education no. 3.)

The problem was to determine the educability of Indian children of the five civilized tribes of Oklahoma in the first three grades in Government reservation schools. Three individual intelligence tests were administered to the 250 full-blood Indian children in

the reservation schools. Data indicate that the average IQ of the 250 Indian children is 90 on the Stanford-Binet test. The Indian is found to possess enough native intelligence to show him capable of great improvement along educational lines.

2931. **Byrne, David D.** A comparison of white and Negro schools of Montgomery county, Tex. Master's, 1932. Colorado.

* 2932. **Daniel, Robert P.** A psychological study of delinquent and nondelinquent Negro boys Doctor's, 1932. T. C. Col. Univ. New York City, Teachers college, Columbia university, 1932. 59 p. (Contributions to education, no 546.)

Ascertains the differences in character and personality traits between groups of delinquent, behavior-problem, and nonproblem Negro boys A study was made of 100 delinquent boys from the State reform school in Virginia, 80 boys in the public schools of Richmond who were considered as problem cases, and 120 nonproblem boys who were classmates of the problem boys. In the three groups the boys were predominantly from the fifth grade. Seven tests were given to all the groups between November 4 and December 4, 1931. Data indicate that the delinquents differ from nondelinquents in the things they do and the way they feel, chiefly in degree rather than in kind; results indicate a value in the use of objective personality and character measures in the discovery of personality symptoms of delinquency tendencies which should be the basis of an attendant individual diagnosis and adjustment procedure.

* 2933. **Erwin, T. C.** A comparison of 5-point pupils with non-5-point pupils in the Negro elementary schools of Newport News, Va. Master's, 1932. Hampton. 38 p. ms.

The 5-point standard of health covers vision, hearing, teeth, throat, and weight. The study compares the scholastic achievement of the two groups for the four school years starting September 1927, and describes the methods used in improving the physical condition of many of the pupils.

2934. **Ferguson, Willie Leonora.** A reading survey of Negro homes of Beaumont, Tex. Master's, 1932. Peabody. 74 p. ms.

A survey of books, periodicals, and newspapers in the homes of a Negro junior high school of Beaumont, was made Of the 131 homes, 121 contained a Bible, 75, dictionaries, and 13, encyclopedias Besides Bibles and dictionaries, there were 47 sets of books; 456 miscellaneous books, and 392 newspapers and periodicals.

2935. **Flannigan, Clare Frances.** A study of the occupational adjustments of a selected group of colored high-school students. Master's, 1932. Catholic Univ.

*2936 **Foreman, Clark.** Environmental factors in Negro elementary education. Doctor's, 1932. Columbia. New York City, W. W. Norton and company, 1932. 96 p.

Stanford achievement tests in reading and arithmetic were given to Negro children in the third and sixth grades in 16 southern counties between October 1929 and May 1931. A total of 569 schools were visited and 10,023 tests given. Data indicate that the educational achievement of Negro pupils is greatly influenced by their environment, including the school and community, and that as the environments of the Negro pupils approaches that of the white children from whom norms of achievement were derived, the achievement of the Negro pupils approaches the norm.

2937. **Grace, Alonzo Gaskell.** The effect of Negro migration on the Cleveland public-school system. Doctor's, 1932. Western Reserve. 197 p. ms.

2938. **Horne, Frank Smith.** The present status of Negro education in certain of the southern states, particularly Georgia. Master's, 1932. Southern California.

GIFTED CHILDREN

2957. **Dransfield, J. Edgar.** A technique for the administration of enrichment to superior children. Doctor's, 1932. T. C., Col. Univ.

Complete instruction units were compiled which supplied directions, references, objectives, and guiding questions to stimulate thinking, contained check tests at logical sections; were self-administering and sufficiently long to occupy the spare time of the superior pupils for at least a semester. The study was conducted in nine schools

selected so as to cross-section the types of schools in operation from the rural school to the large junior high school, located in communities varying from selected rural and foreign industrial to the wealthy, cultured city The technique is within the range of time and effort of the typical classroom teacher, recitation time of superior pupils can be reduced in one or more specific subjects without injury to their regular studies; total time required is comparatively small; obviates the necessity of withdrawing of superior children from their social unit to form classes

2958 Kramer, Harm. Present practices in training provided for gifted children in selected cities of the United States Master's, 1932. Northwestern.

2959 Moeser, Geneva. A study of 100 accelerated pupils in a junior high school. Master's, 1932. Northwestern

2960. Odell, Charles W. Provisions for mentally atypical pupils. Urbana, University of Illinois, 1931. 73 p. (University of Illinois bulletin, vol. 29, no. 6, September 18, 1931. Bureau of educational research bulletin no. 59.)

Aims to present the results of a study of provisions for mentally superior and inferior pupils in a number of school systems in the State of Illinois. Replies to a questionnaire were received from 160 principals of township or community high schools and superintendents of elementary or elementary and high-school systems with enrollments of 300 pupils of more Data indicate that few elementary systems of fewer than 500 pupils and high schools of fewer than 300 are doing much along this line, but that a large majority of both enrolling 1,000 or more pupils are making some such provisions.

PROBLEM AND DELINQUENT CHILDREN

2975. **Andrews, Roxie M.** The principal and problem children. Master's, 1932. Michigan. 154 p. ms.

* 2976. **Babcock, Marjorie E.** A comparison of delinquent and nondelinquent boys by objective measures of personality. Doctor's, 1932. Columbia. Honolulu, 1932 74 p.

By the use of certain self-rating measures and other personality tests a total of 158 delinquent boys were compared with 178 nondelinquent boys similar in age, intelligence, and social status The boys were from New York City, Rochester, N.Y., and Whittier, Calif Data indicate that delinquent boys cannot be clearly differentiated from nondelinquent boys by any of the measures used; the delinquent boys tend to show a slightly greater personality maladjustment; the delinquent groups are more easily disturbed by change from activity to another similar activity than are the nondelinquent

2977. **Bailey, Elba N.** High-school deliuquency. Master's, 1931. Stanford.

2978. **Barrington, John S.** Historical development of the treatment of the truant and delinquent in Ohio. Master's, 1932. Ohio. 200 p. ms.

Literature and Ohio laws quite thoroughly searched that pertained to the subject, from 1803–1932. Findings: The early history of Ohio revealed nothing that showed that the juvenile delinquent was treated any different than the adult. In 1850 the Cincinnati house of refuge was opened and then followed the Boys industrial school at Lancaster in 1856, the Cleveland industrial school 1857, and the Girls industrial school at Delaware 1869 The next forward step was the passage of compulsory education laws in 1877 and rewritten and made more effective in 1889. Then finally came the passage of the Juvenile court laws, which are working so admirably today.

2979. **Bowers, Deloss Harrison.** The Los Angeles county juvenile court. Master's, 1932. Southern California.

2980 **Burkey, Ruth Elizabeth.** A follow-up study of 97 defective delinquent girls. Master's, 1932. Ohio. 50 p. ms.

2981. **Caldwell, Margaret E.** The relationship between truancy and adult delinquency. Master's, 1932. Columbia.

2982. **Casselberry, William Sturgeon.** Symptomatic factors in delinquency. Doctor's, 1932. Stanford.

Discusses the factors symptomatic of delinquency; classification, prediction, and a scientific basis for treatment. Tests given 53 nondelinquent and 329 delinquent boys from 16 to 21, in the Preston school of industry, show 35 percent of the latter appeared to have adjustment possibilities An objective method for examination of delinquent boys from 16 to 21 is developed which secures valuable results

* 2983 **Courthial, Andrée.** Emotional differences of delinquent and nondelinquent girls of normal intelligence. A study of two groups paired by

chronological age, intelligence, and environment. [Doctor's, 1931] Columbia. New York City, Columbia university, 1931. 102 p. (Archives of psychology, no. 133.)

A group of delinquent girls of normal intelligence ranging in chronological age from 14 years, 3 months to 17 years, 11 months were paired by chronological age, intelligence, cultural environment, and occupational level of father with a group of nondelinquent girls Two tests of emotionality, a test of moral knowledge, a test of deceptive behavior, a test for measuring resistance to suggestion, a persistance test, and a questionnaire referring to the recreational activities of the girls were given both groups of girls Data indicate that delinquent girls experience more conflicts with their environment, are less well adjusted socially, and suffer more under feelings of physical discomfort than do nondelinquent girls, they possess about the same amount of moral knowledge as nondelinquents, and both groups are more or less alike in regard to the approval or disapproval of things conventionally called "good" or "bad." Delinquent girls seem to have the same kind and amount of recreational opportunities at home as the nondelinquents, and come from the same cultural and economic milieu

Data were secured on boys of junior high school grade located in the junior high schools of San Francisco, Berkeley, and Oakland, supplemented by a group of boys of junior high school grade in the Whittier State school at Whittier, Calif. Tests of social attitudes, vocabulary, virtues, and morbid attitudes were given the boys in these schools. Data indicate that the tests used differentiate reliably between problem and control groups, regardless of the criteria used in selecting the groups.

2992. Maller, J. B. Broken homes and juvenile delinquency. Social forces.

A study of the relationship between juvenile delinquency and broken homes. Among delinquents the proportion coming from broken homes was significantly larger than among normal children.

2994. Orner, Arthur T. A preliminary investigation into the basal metabolism of problem boys. Master's, 1932. Ohio. 129 p. ms.

Twenty-one problem boys from the Ohio bureau of juvenile research were given metabolism tests, medical and social case histories were collected. No relationship was found between intelligence and metabolism. A very significant inverse relationship between basal metabolism and dynamometer have pressure.

2995 **Reusser, John L.** Personal attitudes of delinquent boys: A study of certain social and psychological factors in the lives of 400 delinquent boys in Iowa. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

Ascertains the extent to which certain attitudes which bear on the relation of the self to society are associated with delinquency in boys from 12 to 18 years of age Three groups were studied; 423 from a training school for boys, 419 from the public schools in representative towns in the state; and a special group of 60 boys who were on probation in four cities in the state The first- and last-named groups were composed of delinquent boys. All boys in the three groups were given a test of personal attitudes. Influences of factors as age, intelligence, grade classification, home background, and residence in the training school were traced Results show that the training school boys as a group are more critical of the attitudes of the average boy; they feel themselves nearer to the ideal than do the public-school boys when considered as a group. The personal attitudes of the training school boys, according to the test, were unchanged by residence in the institution.

Washington, D.C., Catholic university press, 1932. 90 p (Catholic university of America. Educational research monographs. Vol. 7, no. 2, May 15, 1932.)

Data were secured from the file record book of the Department of child guidance of the Toledo Catholic charities for the two years of 1930 and 1931. Three groups of figures were given. Group 1 represents children of the elementary school level for the years 1930–31; group 2 covers pupils who were in secondary schools during those years; and group 3 gives figures for 1929, omitting the distinctions between elementary and secondary levels. A plan is outlined for the education of the behavior problem child.

3000. **Sprague, Willard S.** The nature of the disciplinary problems of boys in a New York City high school. Master's, 1932. Coll. of the City of N. Y. 67 p. ms.

The disciplinary problems of the school were studied by examining the records of 969 boys and the teachers' reports to the principal. The data were examined from the point of view of age, IQ, and socio-economic status of each type of offense. The classroom incidence of offenses and the question of habitual offenders was intensively gone into. The factor of the teacher in the behavior problem was approached through the analysis of the types of cases reported by the various teachers.

PHYSICALLY HANDICAPPED CHILDREN

* 3006. Anderson, Roy N. The disabled man and his vocational problem. Doctor's, 1932 T. C., Col. Univ. New York City, Institute for the crippled and disabled, 1932. 102 p.

Makes a minute study of the specific handicaps of individuals correlated with the various types of occupations in which they have been engaged. Data for the orthopedic cases studied were secured from the Employment center for the handicapped in New York City, for the years April 1917 to April 1930. A total of 97 disabilities were listed The men were employed in 635 different occupations. Stability was uniform, although there was a tendency for the men with the most serious disabilities to remain on the job longer than the men with the less serious disabilities. Earnings ranged from $5 to $64 a week, with the median in the interval of $15 to $19 a week It was found that these men had a far greater vocational versatility than is usually attributed to such cases. Their earnings are only slightly below those of comparable nonhandicapped workers. The study shows that physically handicapped persons are not liabilities, but are social assets.

3009 Caldwell, Floyd Franklin. A comparison of blind and seeing children in certain educational abilities. Doctor's, [1931]. California. New York City, American foundation for the blind, 1932. 28 p. (Abstract.)

All of the blind pupils enrolled at the California school for the blind who could read and write Braille readily were compared with all of the low seventh grade in the junior high school department of the Oakland high school on the results obtained on the Stanford achievement tests, on the reading tests 1, 2, and 3, forms A and B. Blind children require from three to three and one-half times as long as do seeing children to complete the tests. Achievement of the blind compares favorably with that of the seeing when ample allowance is made for the speed handicap. The blind are found to be 5 years and 3 months older than the seeing children used in the experiment, which indicates that the blind children have required about three years longer to reach the level of achievement indicated on the tests than the seeing children have required to reach approximately the same level.

3019. **MacKane, Keith.** A comparison of the intelligence of deaf and hearing children. Doctor's, 1932. T. C., Col. Univ.

Studies 130 deaf subjects, consisting of 42 children from an institutional school, and 88 from a public day school. Three types of tests were given the children. Hearing children were matched with the deaf, on the basis of sex, chronological age, nationality of parents, racial origin, and socio-economic status, and were given the same tests as the deaf children The two groups were compared on the basis of mean group performance, variation within the groups, and by determining the estimate of reliability. Performance tests find the hearing superior to the deaf. The hearing boys do not appear to be as proportionately superior to the deaf boys, as the hearing girls are to deaf girls. The Drever-Collins performance scale and the Pintner nonlanguage mental test measure different things The same deaf children may be less than a year retarded in their responses to the performance scale, and be two years below the hearing in their responses to the nonlanguage test.

EDUCATION OF WOMEN

*3044. Acheson, Eunice Mae. Personal and professional characteristics of a selected group of deans of women. Doctor's, 1932. T. C., Col. Univ. Chicago, Ill., University of Chicago press, 1932. 211 p.

The purpose of the study was to analyze the personalities of a selected group of "successful" deans of women and their relationships with their students. The deans studied were from all types of colleges: 15 from non-state colleges and universities, 14 from state and city teachers colleges and normal schools, 8 from women's colleges, and 7 from state universities and colleges. Data were secured from 2,228 seniors who filled out questionnaires dealing with the favorable or unfavorable evaluations of their contacts with their dean of women; from questionnaires filled out by the deans and their presidents; and from tests given them to measure personality, emotional stability, adjustability to life and its problems, fair mindedness, social intelligence, and general intelligence. These deans seem to be a well-balanced, intelligent, fair-minded and socially inclined group of women. They are able to keep abreast of the world and to understand modern youth; have sympathy which inspires students to have confidence in their dean; think straight; take a personal interest in each student; are impartial in all dealings with students and others.

3046. Andrews, Elizabeth Gordon. A study in personnel of 1,633 students in Florida State college for women, 1930–31. Tallahassee, Florida State college for women, 1931. 12 p. (Bulletin, vol. 24, no. 4, December 1931.)

The study takes up the birthplace of parents and students, education of parents, paternal occupations, professions, religion, number of children in family, place of students in family, age of students, vocational choices of college women, subjects of interviews.

*3047. Bird, Norma. Relationships between experience factors, test scores, and efficiency, as shown by a study of four selected groups of women office workers. [Doctor's, 1931. Columbia.] New York City, Columbia university, 1931. 51 p. (Archives of psychology, no. 126.)

The aims of this study are: To analyze women office workers into groups based on type of work done; to study the groups analyzing their likenesses and differences; to determine the criteria of success for these clerical positions; to study tests which will differentiate successful from unsuccessful workers; to study significant experience factors as found on experience records; to study test results and experience factors as correlated with efficiency in office work. The groups of workers studied were: File clerks, typists, ledger clerks, and stenographers. They were divided as follows: 80 file clerks, 100 typists, 80 ledger clerks, and 100 stenographers. Data indicate that in general intelligence scores had little direct relation to the success of the clerk. Factors other than intelligence are largely operative in determining the success of a clerk. There are

two essentials for wise selection in placement as well as for promotion and transfer: (1) definite knowledge of physical and mental requirements of the job; and (2) definite knowledge of physical and mental characteristics of the individual.

3075. Eurich, Alvin C. The amount of reading and study among college students. Minneapolis, University of Minnesota, 1932. 17 p. ms.

This study attempted to determine the amount of time various groups of college students spend in reading and study and the number of pages read in a given amount of time. The results reveal in general a fairly high relationship between the time spent and pages read, insignificant class and sex differences, and a negligible relationship between the amount of reading and either intelligence or scholarship.

3076 ——— The extent to which the library is being used. Minneapolis, University of Minnesota, 1932. 11 p. ms.

This study as one aspect of a larger investigation has shown that books in history, education, general literature, and economics comprise the major portion of library circulation. Furthermore, there appears to be a definite and almost perfect relationship between the rank order of subject-matter categories in terms of the number of books placed on reserve and the number circulating.

3077. ——— Seasonal variation in the use of the library. Library quarterly.

The data included in this report were derived from the library study made during the year 1930–31 In general, the results show periodic peaks in the use of the library.

3078. ——— The significance of reading in the library. School and society, 36 : 92–96, July 16, 1932.

Some of the significant results derived from this study of library reading may be summarized as follows (1) The relationship between the amount of library reading and intelligence is negligible; (2) students who spend some time reading in the university library have a significantly higher scholarship average than those who do not; (3) the degree of relationship between the total amount of reading or amount of reading in the library and either intelligence or scholarship is significant

* 3083. Hennig, Ruth M. E. Investigation of "Courses of study in the use of libraries" in high schools. Master's, 1932. Boston Univ. 100 p. ms.

In an attempt to determine the degree of knowledge of books and libraries the average high-school student possesses, a set of questions was given to 39 grade 11 students who had had no library instruction. A total of 112 replies to a questionnaire on training in the use of libraries, was received. Data indicate that teaching the use of books and libraries is steadily progressing. A course is outlined to meet the demands of students in a 4-year high school, where no previous library training has been given.

3084. Henry, Oral V. The mathematics needed for intelligent reading of periodicals and journals. Master's, 1932. Washington. 90 p. ms.

Analysis of mathematics found in the American, Ladies' home journal, Saturday evening post, Popular science monthly, and New York times Findings: It was found that the greatest need is for knowledge of mathematical terms, especially geometric and arithmetical. Other important phases are: (1) Graphical methods; (2) ratios; (3) percentage; (4) foreign money.

* 3102. **Pringle, Adeline Helen.** An evaluation of the book review as a means of stimulating children's library reading. Master's, 1932. New York. 90 p. ms.

3103. **Randall, William M.** The college library. A descriptive study of the libraries in 4-year liberal arts colleges in the United States. Chicago, Ill., University of Chicago press, 1932. 165 p.

Covers the financial aspects of college libraries, buildings, staff, size and growth of book collections, content of the book collections, miscellaneous techniques and routine, and college library standards.

3104. **Reeves, Pearl V.** The reading interests of senior normal training students in Iowa. Master's, 1932. Northwestern.

3105. **Robb, Kathryn.** Some standards by which to judge children's books. Doctor's, 1932. Iowa. (Abstract in: University of Iowa studies. Series on aims and progress of research, no. 38. New series, no. 248. 1 p.)

In this study it is found that children's literature in different periods of history has been influenced by the adult attitudes toward children, and that children's stories are

determined by this attitude. The same standards by which the literary value of adult books are established can be applied to books intended for children.

Oklahoma, University of, 138, 144, 303, 350, 498, 556, 690, 854, 889, 917, 976, 1122, 1128, 1142, 1253, 1451, 1429, 1477, 1527, 1649, 1843–1844, 1883, 1885, 1988, 1912, 1955, 1958, 2028, 2049, 2116, 2222, 2350, 2462, 2901, 2925, 2972, 3017, 3025, 3112.
Oklahoma agricultural and mechanical college, 2, 18, 229, 242, 256, 373, 526, 562, 888, 1048, 1161, 1248, 1558, 1657, 1677, 1889, 1951, 1954, 1970, 1977, 1992, 2016, 2039, 2047, 2383, 2385, 2466, 2537, 2600, 2614, 2650, 2668, 2680, 2708, 2755, 2783, 2902, 2677, 2909–2910.

P

Pennsylvania, University of, 82, 1063, 1566, 1820, 1870.
Pennsylvania State college, 126, 252, 615, 629, 696, 799, 829, 847, 855, 865, 886, 937, 984, 1073, 1101, 1112, 1203, 1206, 1222, 1480, 1631, 1758, 1946, 2086, 2096, 2187, 2232, 2327, 2346, 2372, 2376, 2361, 2615, 2631, 2637, 2775, 2866, 2871, 3034.
Philippines, University of, 1.
Pittsburgh, University of, 983, 991, 996, 1812, 2262.
Platteville State teachers college, Platteville, Wis, 496, 1009, 1537, 2077.
Princeton university, 13, 110.
Providence college, 667.
Puerto Rico, University of, 419.
Puget Sound, College of, 56.
Purdue university, 737, 1386.

R

Rutgers university, 162, 406, 604, 1018, 1283-1284, 1332, 1337, 1425, 1433, 1536, 1871, 2135, 2389, 2443, 2868, 2970.

S

St Louis university, 211, 1301, 1674, 1731, 2182, 2990,
Smith college, 2195, 2799.
South Dakota, University of, 546, 609, 669, 740, 1971, 1611, 2170, 2369, 2449, 2495.

Southern California, University of, 15, 23, 41, 48, 81, 101, 105, 151, 197, 212, 217, 275, 295, 297, 390, 461, 463, 483, 486, 491, 493, 497, 545, 552, 567, 576, 587, 595, 603, 607, 613–614, 617, 622, 627–628, 631, 633, 677, 687, 697, 700, 713–714, 716, 719–720, 725, 729, 764, 767, 801, 824, 856, 870, 879, 892, 922, 929, 932, 944, 951–952, 964, 973–974, 981, 989, 1026, 1045, 1047, 1074, 1102, 1114–1115, 1151–1152, 1166, 1216, 1220, 1227, 1236, 1240–1241, 1244, 1246–1247, 1286, 1293, 1297, 1304–1305, 1314, 1344, 1363, 1374–1375, 1398, 1401, 1412, 1416, 1418–1419, 1422, 1427, 1431, 1449, 1451–1452, 1455, 1458, 1464, 1466–1470, 1474–1475, 1494, 1496, 1499, 1543, 1563, 1581, 1609, 1624, 1634, 1646–1647, 1667, 1717, 1808, 1828, 1830–1832, 1842, 1861, 1865, 1891, 1893, 1957, 1972, 1975, 1985, 2006, 2054, 2060, 2071, 2087, 2090–2091, 2093, 2097–2098, 2100–2101, 2106, 2113, 2115, 2127, 2130, 2136–2137, 2147, 2155, 2162, 2173, 2218–2219, 2237, 2243, 2260, 2262, 2274, 2284, 2296, 2298, 2306, 2308, 2317, 2357, 2365, 2388, 2395, 2429, 2500, 2510, 2526, 2540, 2547, 2561, 2576, 2599, 2626, 2630, 2666, 2669, 2695–2696, 2712, 2729, 2733, 2742–2743, 2747, 2781, 2785, 2797, 2809, 2814, 2825, 2827, 2836, 2842, 2855, 2873, 2878, 2892, 2899, 2912, 2914, 2916, 2938, 2942, 2952, 2961, 2965, 2968, 2973, 2979, 2984, 2987–2989, 2999, 3001, 3007, 3028, 3036, 3039, 3071, 3079, 3100, 3118

Southern Methodist university, 59, 92, 233, 238, 611, 638–639, 642, 805, 909, 993, 1058, 1103, 1153, 1599, 1603, 1881, 1906, 1971, 2196, 2477, 2553, 2569, 2584, 2611, 2629, 2633, 2853, 2986, 3023, 3054

Southwestern university, 1641, 1754, 1963

Stanford university, 20, 42, 70, 77, 90, 98, 102, 117, 122, 130, 133, 146, 161, 177, 183, 214, 226, 244, 270, 302, 343, 353, 355, 377, 398, 436, 446, 494, 503, 689, 880, 938, 954, 958, 1038, 1040, 1044, 1078, 1090, 1124, 1176, 1195, 1207–1208, 1213, 1319, 1333, 1420, 1461, 1463, 1483, 1495, 1510, 1517, 1578, 1604, 1608, 1642, 1656, 1658, 1664, 1708, 1740, 1752, 1759, 1775, 1809, 1910, 1927, 1937, 1940, 1956, 2005, 2024, 2035, 2153, 2184, 2226, 2242, 2248, 2335, 2398, 2436, 2654, 2823, 2879, 2889, 2903, 2926, 2977, 2982

State college for teachers, Albany, N.Y., 819.

State teachers' college, Montclair, N J., 1629

Stetson university, 2963

Syracuse university, 561

T

Temple university, 1996.

Tennessee, University of, 111, 116, 121, 134, 790, 876, 1138, 1295, 1342, 1579, 1922, 2013, 2032, 2279, 2329, 2594, 2622, 2757, 2760, 2768–2769, 2872, 2906, 3010, 3020.

Texas, University of, 19, 49, 64, 74–75, 219, 464, 469, 473, 532, 569–570, 574, 634–635, 757, 803, 823, 828, 844, 850, 868, 956–957, 1027, 1042, 1049, 1113, 1262, 1309, 1438, 1792, 1798, 1816, 1831, 1849, 1895–1898, 1949, 2014, 2133, 2199, 2215, 2239, 2265, 2287, 2305, 2341, 2583, 2908, 2911, 3015, 3108, 3120

Texas technological college, 52, 72, 227, 230, 933, 1228, 1368, 1725, 1990, 2034.

U

Utah, University of, 1107, 1904, 2267

V

Vermont, University of, 199, 361, 1324, 1565, 2141, 2236, 3031.

Virginia, University of, 228, 449–450.

Virginia polytechnic institute, 1894, 2655, 2667, 2673, 2675.

W

Washington, University of, 21, 60, 97, 114, 119, 165–167, 200, 215, 246, 255, 458, 605, 644, 731, 804, 846, 874, 985, 1024, 1065, 1285, 1299, 1399, 1407, 1472, 1621, 1749–1750, 1860, 1905, 1914, 1920, 1936, 1941, 1978, 2052, 2103, 2112, 2122-2123, 2214, 2251, 2309, 2441, 2593, 2639, 2698, 2719, 2856, 2906, 2923, 3084

Washington State normal school, Bellingham, 332, 396, 417–418, 1031, 1538, 1757.

Washington university, 354, 796, 841, 1282, 1541, 1645, 1736, 2004, 2038, 2205, 2803.

Wesleyan university, 50

West Virginia university, 521, 577, 586, 715, 795, 901–902, 927, 986, 1403, 1827, 2015, 2229, 2399, 2606, 3070

Western Carolina teachers college, Cullowhee, N C , 2902.

Western Reserve university, 71, 89, 369, 379, 385, 388, 393, 403, 2065, 2078, 2082, 2831, 2937, 3067.

Western State college, 1606, 1855, 1906

Western State teachers college, Kalamazoo, Mich , 337, 484–485

Whittier college, 283.

SUBJECT INDEX

[The numbers refer to item, not to page]

A

Ability grouping, 207–214.
Academies *See* Private schools.
Acceleration of pupils, 944.
Accidents, 2299, 2378, 2391, 2395.
Accredited high schools, 1396, 1413, 1444.
Achievement tests *See* Tests, educational
Activity programs, 215–221.
Adolescence, 353, 637, 2421, 2495.
Adults, education, 174. *See also* Education extension
Aeronautics, 2590, 2626.
Aesthetics. *See* Art education.
Age-grade studies, 1182, 1370, 1710, 1748, 2044.
Agricultural education, 2642–2677.
Agricultural missionaries, 2844.
Airplane mechanics, 861.
Alabama, education, 25, 27, 29, 57, 601, 1199, 1500, 1616, 1930, 2048, 2050, 2645, 3089; Florence, 325.
Algebra, 785–850.
All-day school, 2682.
Alumni, 1665, 1766, 1768.
American government. *See* Civics.
American literature, 619, 621, 638–639.
American university of Beirut, 142.
Americanization, 216, 3033.
Ancient classics, 651–674.
Animal husbandry, 2666.
Animal learning, 265.
Anna T. Jeanes foundation, 2929, 2941.
Apprenticeship education, 2688, 3088.
Architectural drawing, 1220.
Architecture, 2061.
Arithmetic, 751–784.
Arizona, education, 302, 1642, 1656, 1658, 1918, 1979; Superior, 130.
Arkansas, education, 822, 858, 1854, 1593, 1616; Little Rock, 1913, Pulaski county, 1923.
Arnold, Matthew, 62.
Art education, 1177–1222.
Assembly. *See* School assembly.
Athletic associations, 2383–2884.
Athletics, 2375–2400.
Attendance. *See* School attendance.
Attitudes, 737, 765, 955, 1017, 1041, 1048, 1094, 1578, 1647, 2361, 2412, 2456, 2840, 2905, 2995, 3017. *See also* Higher education; Religious and church education.
Atypical children. *See* Subnormal children.
Auditorium. *See* School assembly.
Automobile mechanics, education, 2610.
Aviation. *See* Aeronautics.

B

Backward children. *See* Subnormal children.
Badanes method, 752, 766.
Baldwin, Joseph, 85.
Bands. *See* School orchestras.
Bedouin education, 154
Beecher, Catharine Esther, 82.
Behavior, 1066, 1581. *See also* Child study; Child welfare; Educational psychology; Elementary education; Moral and character education; Preschool education; Problem and delinquent children; Secondary education; Social aspects of education.
Belgium, education, 148.
Bengal, education, 164.
Bible study. *See* Religious and church education.
Bibliographies, adult education, 3026. Bibliography, 439; Educational administration, 1852; Educational information, 428; English literature, 633; Industrial education, 2635; Physical education, 2266; Psychology of play, 2439; Reading, 494; School surveys, 131; Social studies, 974; Student personnel, 1774; University, 430.
Bing law, 1976.
Biology and botany, 880–904.
Black death, 11.
Blind. *See* Physically handicapped children.
Bookkeeping. *See* Commercial education.
Books. *See* Libraries and reading.
Borden institute, 61.
Boston university, 88.
Botany. *See* Biology and botany.
Boy scouts, 2089, 2113, 2116, 2119.
British Columbia, education, 161, 165, 167.
British Malaya, education, 145
Browning, 631.
Building. *See* Manual and vocational training.
Burleson college, 59.
Business colleges, 1704.
Business education. *See* Commercial education.

C

Cafeterias, 2254–2255, 2712.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D.C., May 1933.

SIR: In every school system the education of mentally handicapped children presents serious problems. In the larger cities where such pupils may be gathered from the various classes in the school and placed in one room in charge of a specially prepared teacher, the problems are somewhat simplified. In the country schools where children cannot be so easily classified according to handicaps, or even according to grades, the problems become most serious. One of the chief difficulties in dealing with mentally retarded children, whether in urban or rural schools, comes from the lack of materials of instruction. During recent years the Office of Education has been giving some attention to this problem. The author of this bulletin, Dr. Elise H. Martens, has visited classes for exceptional children in a number of cities and States in which they are being successfully conducted, and, with the help of a number of teachers whose names appear in connection with the projects they have developed, has collected a number of fully tested group activities. They include activities concerned with community life in the home and in the city, the food market, child care, a project in manicuring for the older girls, a study of trees, a natural history museum, etc. The activities selected are those related closely to the life of the communities in which mentally exceptional children live and in which they must eventually find a place economically and socially. I consider the collection of group activities presented in this bulletin very suggestive of approved methods for educating children of limited mentality, and therefore respectfully recommend its publication as a bulletin of this Office.

Respectfully,

WM. JOHN COOPER,
Commissioner.

THE SECRETARY OF THE INTERIOR.

GROUP ACTIVITIES FOR MENTALLY RETARDED CHILDREN

INTRODUCTION

To those who interpret the school curriculum as a graded series of purposive experiences directly related to the interests and the needs of the child, a group of activities such as are described in the following pages will seem but the natural vehicle of instruction. Their significance and value in the education of mentally retarded children have long been recognized by teachers who have tried to make of classroom work a real experience in living, designed to bring about the greatest self-development of the child coupled with a constructive relationship between him and his environment. Indeed the very foundation upon which special classes for mentally retarded children have been built has involved recognition of the need for greater freedom in self-expressing activities on the part of the child and of the group of children. If the child of limited mentality is to become an adult who lives in his community with some measure of self-reliance and self-respect, then he must be given every opportunity for continuous practice of those qualities during his formative years. The group activity, in which each child may express some power of initiative, carry some responsibility of performance, and have some part in judging the merits of the outcome, offers a medium for such practice that the traditional recitation method of teaching reading, writing, and arithmetic could not approach.

Yet the possibilities of such a program are by no means universally recognized nor its principles universally applied. There are still many teachers of retarded children in special classes who think they are making adequate adjustment of the curriculum when they reduce academic work to its minimum essentials and allot a considerable portion of the day's program to manual work of one kind or another. They still carry on a program in which each subject fits into its own tight compartment. They realize and let the

children realize none of the joy that comes from tying together into one major activity all the elements which help to develop the skills and habits and attitudes that they are trying to teach. And many teachers who know that something ought to be done about it do not know how to proceed. The activity program is to them a desirable procedure, but an exceedingly difficult one to apply.

Yet, after all, the basic principles of curriculum construction for the mentally retarded child are no different from those which should characterize its development for average or even gifted children. Abundant literature on the subject of the activity program serves to show what these principles are. It is only the application to immediate needs and the adaptation to individual abilities which need special consideration. In order to show how these problems have been met for mentally retarded children in specific situations, this group of activities is offered for whatever suggestions they may bring to teachers who are eager for help in planning the programs of their own classrooms.

Because a special class for retarded pupils includes children of various age levels, sometimes representing a considerable range, it shows some similarity to the situation confronting the teacher in the rural school of one or two rooms. An activity suited to either one of these conditions can in most cases be modified without serious difficulty to fit the requirements of the other. The mental levels of the children in the rural school will show wider variability, but provision can be made for this by increasing the range of difficulty in the tasks undertaken. It is true that special classes are in most communities restricted as to size,[1] in order to make possible a great amount of individual assistance for each member; but in larger classes of average capacity this demand for continued individual help is not so urgent. Hence, while the activities described in this bulletin have actually been carried on in special classes for mentally retarded children, there is no reason why they should not be adapted by teachers of mixed classes or ungraded classes in certain localities. In every case the responsibilities and achievements of the

[1] Since the accounts of these group activities were compiled, noticeable increases in the size of special classes have been made in many localities, due to the inauguration of economy programs

pupils will be dependent upon individual differences in age, in capacity, and in interests.

The activities presented are the contributions of teachers of special classes for mentally retarded children in various parts of the country. Some of them were specifically planned for primary groups, others were carried on by older and more advanced pupils, while still others were the work of mixed groups composed of both younger and older children. The contributions were made in response to an invitation sent out by the United States Office of Education to some 50 cities in which it was thought the activity program was in progress. Since more than 200 manuscripts were sent in, there arose obviously the problem of selecting representative ones for publication. Because it was possible to print only a very small number of the contributions made, not more than one complete activity was used from any one city, even though others might have been included that were equally good. So also only a limited number of cities could be represented, although others submitted material that was exceedingly worth while.

The final selection of activities to be printed was made with the desire of showing a representative sampling of subject matter, of types and ages of children, and of geographical location of cities. The child's immediate environment—the home and the community—constitutes the subject matter of the first activity described, giving abundant opportunity to emphasize the privileges and the responsibilities that are his in connection with these agencies. The production and preparation of foods, child care, home and school beautification (as these are discussed in succeeding projects) are vital elements in the development of this general theme. Then we dip into the fields of social studies, natural science, music, literature, and vocational preparation, each one of which is important in the education of the whole child.

Some of the activities have been described in greater detail than others. Some are major units covering a full semester, or large part thereof, and provide for a complete integration of all school experiences. Others are designed for shorter periods of time or are more limited in their opportunities for coordination of subject matter. But all of them represent

activities closely linking the work of the classroom with out-of-school situations Probably no teacher will wish to follow any one of them verbatim; she will wish rather to use them for their suggestive value and adapt them to her own environment, working out in detail many of the items that have been here only briefly sketched In many cases special bibliographical material has been furnished by the author and will be helpful to the teacher who would work along similar lines.

It is regretted that all of the excellent contributions made cannot at this time be issued in printed form. However, in order to make so much valuable material accessible to those desiring to refer to it, much of that which is not being printed will be gathered together in typed form into a circulating loan-book, which will be available upon request to any individual for a stated period of time. To those who have through their contributions made possible this bulletin and the loan-book which will follow in its wake, we express our grateful appreciation. The interchange of ideas and experiences in the education of mentally retarded children constitutes one of the primary means of helping us to bring our practices to ever higher levels.—E. H. M.

I. COMMUNITY LIFE

A. THE HOME

By Elizabeth Werner, *Minneapolis, Minn.*

[Note.—The building of a playhouse is an age-old activity for primary grades, and one which every teacher can adapt to her own environment. So also the study of "our city" (or town or village) is of immediate concern to every group of children. These two activities together represent a complete unit on community life which offers great possibilities in practically any situation in which the teacher finds herself.]

This activity on the home found its origin in the unusual amount of interest shown by the children in the construction of a house not far from the school. From day to day they noted the progress made in the building, beginning with the steam shovel digging the basement, continuing throughout the erection of the structure of the house, the addition of the walls and roof, and finally the finishing processes. Thus, for some time previous to the actual initiation of our project, the children showed great enthusiasm in this type of work. Consequent observations and comparisons with their own homes were encouraged, and finally the incident was seized upon as the crucial moment in which to develop a plan of work embodying all the various phases of our school activities under the guise of real life situations.

From the general discussion, admittedly directed, we found many things pertaining to homes which we were anxious to learn about, and these in turn became our objectives, the chief of which were the following:

1. To have a knowledge of the different types of homes.
2. To know the importance of cleanliness and beauty in the home.
3. To have some appreciation of the relationships, duties, and responsibilities of persons in the home.
4. To have some idea of the cost of construction and maintenance of a home.

The group of children participating in this activity numbered 10 boys and 5 girls—the enrollment of a special class (preprimer through the third grade) in an elementary school. The entire group with the exception of perhaps two children came from the lower grade of middle-class homes, their fathers for the most part being laborers—many of them out of work.

These 15 children were divided into four separate groups—preprimer, primer, second grade, and third grade—according to their abilities, as indicated by the list given below. While the activities of all the groups were closely interrelated, each group worked independently of the others, the only exception being in the construction of the playhouse itself, in which every member of the class had a part.

One morning some of the children talking together suggested that it would be fun to build a house of our own. This led to a spirited discussion of ways and means. Before beginning the project, however, we felt it was necessary to decide what was the best kind of a house for us to build. With this in mind we took a walk to observe different types of homes in our community, and also a walk to a nearby lumber yard to inquire about building materials. Returning to school we discussed these trips at some length and made notes. Some of the children brought pictures and posters of homes, home interiors, and family life about which we

also had many interesting conversations. All of this helped to maintain to a high degree the interest in the work.

We received valuable cooperation from the parents, who allowed the children to bring to school toy furniture and many other articles; also from the local storekeepers, who were very kind in furnishing us an extensive supply of boxes which we used in making tables, chairs, cupboards, window boxes, and even the chimney on our playhouse.

All the various phases of our regular school work were carried on hand in hand with our progress in the erection of the playhouse; and while much the same in content for the whole class, the activities were, as has been indicated, divided into four groups commensurate with the different grade levels.

Reading.—The reading material for the lower groups consisted almost entirely of original stories based on the actual activities of the day before, with the addition of simple stories about home, such as The Three Pigs, The Three Bears, The Wee Wee Woman, etc. These stories were printed on the board and on charts, and were typewritten to be pasted in each child's "home book." The seat activities to accompany this work included making the home books, matching words and phrases, cutting pictures, cutting words such as door, window, etc., from magazines, and drawing pictures according to simple directions printed on the blackboard.

The reading material of the older groups included selected stories about home life taken from different readers, original accounts of our trips, notes we had taken, descriptions of various homes, language stories, and the reading of plans and blueprints. A great deal of work-type reading was introduced in the seat activities, which included informational reading, following written directions, making house plans, planning home interiors, etc. Achievement cards in reading were planned for the entire class as a check on the reading activities and these acted as a definite motivation in securing good results. Each card bore the child's name and was marked into groups of five squares representing the five school days. Every day three marks were entered in the proper square, indicating in turn the grades obtained in attention, seat activity, and the actual reading lesson. A

perfect lesson merited a silver star. On Friday of each week the child having the highest average for his particular group was given a gold star.

Arithmetic.—The number work for the lower group was chiefly incidental, but included an acquaintance with the ruler and tape measure. For the older groups were added problems involving concrete applications in counting and the four fundamental processes, as well as problems concerned with the costs of the construction, furnishing, and maintenance of a home. These problems were made up in groups of 20, were typewritten and mounted on separate cards numbered consecutively. To be used with the cards, a large chart was made bearing each child's name with 20 numbered spaces after it. Whenever a child solved one of the problems correctly and unaided, he pasted a silver star in the space corresponding with the number of his card. If he had to have help with the problem, he marked the space "O.K" when his work was completed.

Language.—The work in language for the lower groups was for the most part made up of dramatizations, such as playing house, and of discussions of the work being done on the house. The work for the older groups included some original poems, many oral and written discussions of experiences and observations, as well as the writing of letters, descriptions of homes and home interiors, and reports of work done.

Writing, spelling, music.—The writing and spelling materials used in connection with the unit were entirely incidental. So also was the music, which consisted of the singing of songs pertaining to home and family life which happened to fit the particular part of the project on which we were working.

Manual activities.—The art work presented an unusual opportunity for the children to display their originality. Aside from drawing, which included work at the easel and with crayon, illustrating simple stories about home life, the children contributed many original designs which were used in making wall paper, in stenciling curtains and pillows, and in producing various other decorations for the playhouse. They also planned color schemes for different rooms, designed covers for their home books, and made many free-hand posters depicting furniture and various household objects. All the related handwork hinged directly upon the progress made in

the construction of the playhouse, in which each child had a part. There were enough activities to permit every boy and girl to choose, after some experimentation, which phase of the work he wanted to pursue, and thus to add his contribution to the unit. The class was divided into woodworking, sewing, and painting committees. At the end of each industrial period a brief report was given of the work accomplished and plans for the next day were made. To safeguard any waste of time, the chairman of each committee was held responsible for seeing that every member of his group was kept busy at his assigned task.

Following is a list of some of the things accomplished by the committees besides the building of the playhouse itself:

Woodworking committee.—Made and painted furniture for playhouse: Table, arm chair, straight chair, cupboard, doll bed, lamp, window boxes.

Painting committee.—Made wall paper, lamp shade, awnings for windows.

Sewing committee.—Made bedding for doll bed, curtains for playhouse, pillows, lunch cloths and napkins, table scarf, and clothes for baby doll.

By the time the playhouse was completed the children had gained many ideas which they were able to carry out in their own homes. This was evidenced by the instances cited in which the girls had arranged their rooms to look "prettier", and the boys had put up some handy shelf to help mother, etc.

The significant values of the project, aside from the actual knowledge obtained in fundamentals, involved (1) an appreciation of the relationships and responsibilities in the home; (2) an appreciation of the cost of constructing and maintaining a home; (3) a development of desirable habits and attitudes. The children learned to work well together and to appreciate the advantages of cooperative effort. They gained a sense of carefulness and accuracy made necessary by the nature of the work they were doing. They developed the ability to express themselves clearly and to give and take directions. They learned the value of planning their work carefully and of using books and other materials to help them in making their plans. Their initiative was constantly challenged by the need of experimentation in new fields. An ample variety of work with due progression provided for the

individual differences of the children in the various groups. They found themselves very happy in being able to accomplish unexpected things in the wide field of self-expression which their chosen work and its resulting benefits presented to them.

B. OUR CITY

By Mary Laughlin, *Minneapolis, Minn*

The contribution which our city makes to its citizens formed the basis for a unit of study in our special class, which is a single class in an elementary school. Interest was first aroused by a visit to the book exhibit at the public library. When the children returned from the library, very enthusiastic about the beautiful display of books they had seen, they were asked what other agencies are provided by the city to aid its populace in living a happy, wholesome life. As a result, we had an outline for our activity.

Our class is made up entirely of children of foreign descent, principally Polish. Four come from homes where English is seldom spoken. All come from families where the standard of living is exceptionally low, seven of them depending entirely upon the city for financial support.

The wide variation of mental ages, intelligence quotients, and general ability made it necessary to divide the group into three divisions. This grouping may be more readily understood from the following table:

Pupil	Sex	Grade level in achievement tests	C A.	I.Q.	Time spent in special class
GROUP I (INTERMEDIATE)					
A	F	5B	13–4	78	6 mos.
B	F	5B	11–6	80	6 mos.
C	M	5B	13–4	78	2 yrs.
GROUP II (PRIMARY)					
D	M	3B	13	74	4 mos.
E	M	3B	12–5	73	1 yr., 4 mos.
F	M	2A	12	69	1 yr., 4 mos.
G	M	2A	10–5	74	4 mos.
GROUP III (PRIMARY)					
H	M	2A	8–0	80	6 mos.
I	F	1A	12–6	56	3 yrs.
J	M	1B	10–8	69	3 yrs.
K	M	1A	12–4	54	1 yr.
L	M	1A	9–5	71	1 yr.
M	M	1B	8–10	78	1 yr., 6 mos.
N	M	1B	9–0	72	1 yr., 6 mos.
O	M	1B	9–0	65	1 yr., 6 mos.

The teacher's principal reasons for encouraging this activity were (1) to assist the child to develop a knowledge of the services offered by the locality in which he resides and to understand those rendered by the city at large; (2) to teach him to whom he should go for guidance; (3) to develop in him an interest in the civic affairs of his city; (4) to assist him in discovering the facilities his city offers for wholesome leisure activities; (5) to help him formulate habits of wise and effective citizenship and group cooperation.

The activity was divided into four types of interests—namely, local commercial, city-wide commercial, municipal, and social. Under local commercial interests, we studied the bakery, grocery, meat market, and drug store. City-wide interests included the creamery, some of the important manufacturing centers of our city, the public market, banks, and hotels. The municipal interests embraced the postal service, the police and fire departments, the public library, the street car company, and the city hall. Social interests centered about the parks, playgrounds, and settlement houses of our city. Excursions were made to each center included in the last two mentioned groups, and in each case a representative explained the organization, value, and functions of his particular division.

This activity furnished excellent opportunity for correlation of subject matter with the center of interest. Examples of such correlation follow:

Reading.—We read stories from New Stories, The Child Story Reader, Jip and the Fireman, Mary and the Policeman, and The Postman. We also read clippings from library references about community life as well as the stories which the children wrote about their excursions.

Language.—During the language period, the children wrote stories of excursions made and brief synopses of library books read during the recreational reading period. The book reviews were classified under the headings of animal stories, stories of boys and girls, fairy stories, hero stories, stories of foreign children, stories about toys and dolls, and adventure stories. Appropriate book covers were made for each group, and the book reviews were copied and placed in these books under the correct title. The books were put into a book house and used to help furnish the library.

Three books of original stories, bound with attractive covers, were presented to the Shriner's Hospital for Crippled Children, located in Minneapolis.

Arithmetic.—Arithmetic problems based on the post office, scales for maps and charts, and measurements for related hand work activities furnished ample opportunity for work with numbers.

Hand work.—During the art period, the children made friezes showing the activities of the postal department, the fire department, and the police department. Posters of winter and summer sports were also made and used to make the classroom more attractive Group III made a movie telling the story of a letter from the time it is written until it reaches the person to whom it is addressed. Group I made a very interesting frieze depicting the various stages of mail transportation.

Social studies.—The social-studies period was used for a variety of interesting outgrowths. Group I made a large map of the community, locating the school, the nearest branch library, the post-office branch, the fire and police stations, the local settlement house, and the home of each child in the room. A chart was made showing the division of the Minneapolis tax dollar. Group II made a modern playground in miniature form on the sand table. This group also supervised much of the work done by Group III.

Under such conditions of cooperation, large wooden blocks were used to construct models of the police and fire stations, the post office, the school, the settlement house, and several varieties of stores and shops. Emphasis was placed upon the post office, and all postal activities were represented. Packages were wrapped, weighed, and properly stamped. We often wrote letters to be taken home which our classroom postman and his sorters had to stamp and cancel before they could be delivered.

The most elaborate phase of the activity consisted of building a library. A corner of the classroom was partitioned off by the children. We purchased two large pieces of compo board, 18 feet long and 6 feet high. Our most capable boy cut windows and a door, fastened the partition to the wall by means of braces, and put a molding on the top and bottom

to make the structure secure The interior walls were stippled in the orchid and green color scheme which was used throughout the library. The outer walls were painted a solid green. All the furniture used in the library was made by members of the class Unusual cooperation was shown in the finishing and assembling of the furniture Even the most unskilled members of the group were proud to be able to help the more capable pupils sandpaper and assemble the material which was to become furniture for the library.

Children from every room in our building brought books for the library Group I spent an afternoon with our branch librarian, then returned and cataloged and classified the books in keeping with the system used in the public library. A student was appointed each week to act as librarian.

Throughout the 8 weeks of study spent on this activity, interest and enthusiasm were very evident. There was an attitude of inquiry and investigation which yielded excellent results during the entire time.

The real joy of the situation, however, came in the children's use of the library after its completion. Class work was often taken there for study and discussion. The children were frequently found at the benches absorbed in some book or magazine. Weeks after the activity was completed, the same interest was evident. There was always a feeling of pride in this completed unit of work, and each individual child felt the joy of having achieved something very worth while.

In reviewing this unit of work, it seems that it was successful because of the children's interest in the subject and because information and cooperation were easy to secure. Planning offered not too many difficulties but challenged the initiative of the more competent pupils. The construction of the library was easy enough so that all could participate, yet sufficiently difficult to call forth maximum effort for the more skilled individuals. The finished piece of work was one of which all could be proud. The library was large enough to live in, make use of, and enjoy. It provided a social atmosphere which was most valuable.

If one adds to these factors the information which came to the children, their appreciation of community and civic

activities, and the influence on their habits and ideals which resulted from this study, there can be no doubt that it was a worth-while activity for all concerned.

II. THE FOOD MARKET

By Elizabeth Kelly, *Newark, N.J.*

[Note.—Playing store is a common enough project in elementary grades. How it can be used with mentally retarded children to motivate the whole class program in coordinated activities that call into play every subject of the curriculum is told here in detail.]

THE SCHOOL AND THE COMMUNITY

The type of school in which this unit was worked out is primarily for the younger children, having a kindergarten, grades 1 to 4, and three classes for mentally retarded children. The total enrollment is 1,600, and the teachers number 45 with a vice principal in charge. The pupils on completion of the primary grades pass to an adjoining building which houses the grammar grades. The conditions in this district speak very loudly of poverty. Hence indefatigable efforts are carried on to improve individual health, nutrition, cleanliness, and social conditions in the homes. A school attendance of 100 percent is usually the order of the day, unless illness intervenes. All forces work together toward one goal, that of good for the child.

Most of the people in this community are foreign. On the whole the rate of mental retardation is very high. Here only the meager things of life are afforded and the provision of basal necessities with which to live is the chief interest of the group. The acquisition of food to eat, quarters to live in, and covering for the body, punctuated with an occasional or a frequent "movie", engrosses their attention.

Debasing agencies seek to absorb the youth in their early teens. Those that are unfortunately absorbed assume the braggadocian air of the lawless "adolescent strutter" and this carriage is soon reflected in those of tender years. The home that consists of four bare walls drives its younger occupants out into roads that are devious, seeking for excitement. The illegitimate thrill that is initially felt is but the first of many

that take on expandingly, and the accompanying language that attends the big thrills includes such expressions as "burned", "put on the spot", "take the rap", "bulls", "racket", "hijack", and endless others. All this the school must contend with and the conflict with education and gangland is sharp, the former striving to be paramount through a wave of interesting features and the latter seeking supremacy by a snare of adventurous, get-rich-quick banditry.

The class

Name	C A	M A	I Q	Name	C A.	M A.	I.Q
Vincent	9	5–10	65	Louis	11–5	6–6	57
Carmine	10	6–6	65	Frank	10–2	6–4	62
Salvatore	10–1	7	69	Albert	9–6	6–4	67
Lucy	10–6	6	56	Lucy	10–11	6	55
Howard	9–2	6–10	75	Dominic	9–10	6–6	66
Florence	10	6	60	Joseph	10–6	7–2	68
Victor	11–1	6–6	59	Jennie	10–1	6–10	68
Mabel	8–4	6	72	Vito	10–10	7	65
Thomas	9–1	6–6	72	Ida	9–4	6–10	73
Jerry	9–8	6–2	64	Ormando	9–6	6	63

The classes for the mentally retarded cull their members from the primary grades. Their sojourn in those grades may have been short or long depending principally on the vacancies occurring in the special class. Because of their inability to compete with their classmates in the regular grade, any type of delinquent tendency may develop. Because of the struggle in each to compensate for his individual deficiencies, there is revolt. Upon being transplanted from a faster-moving group to one traveling at his own speed the child enjoys all the embellishments of the regular group in ease and contentment. Though the program may have to be adjusted and a longer period required for its accomplishment, the desirable points that a properly worked unit may afford will be absorbed.

SELECTION AND BEGINNING OF THE ACTIVITY

Since real learning involves the selection of a unit, all parts of which "will draw upon all phases of experiences and make use of all kinds of subject matter", I selected the food market with accompanying smaller enterprises as the hub for my center of interest.

Since in this locality the acquisition of food is regarded as one of the most important problems of life, and since malnutrition is a ghost that stalks here, a cursory study of the home and of the manner in which food is secured, together with the nutritive value of food, stimulated a trip to the market.

Going to the store for mother or a neighbor constitutes a large portion of the normal life activity of the child. Yet, though he may go countless times, the sort of stock carried by the storekeeper will never be known to him outside of the particular article he has been requested to secure. After a class trip to the market, the children were fired with the desire to have their own store, so, with much discussion as to how the stock might be secured, it was decided to start with a grocery store. When we set out to make some of our own stock for the store the perplexity that followed brought forth the suggestion that we secure additional dummy stock from the wholesale grocers. Immediately the clamor to get what we needed as soon as possible led to letter-writing for free supplies. That done, the discussion fell to the erection of our store. This was finally accomplished by committees and subcommittees, and with the arrival of our shipment of goods we were soon ready for business. With the play store stocked, the vista of the child took on broadening proportions, and the eye encompassed a spread that made him alert to the brand, price, and variety of groceries carried by the grocer.

DEVELOPMENT OF THE ACTIVITY

Playing store disclosed hidden aptitudes in the children. In play the children are most revealing, natural, and sincere. The "feel of doing" brings out the assertiveness in the child, and an opportunity for the exercise of individual talents holds sway. One child is an able administrator of the whole project, another surprises one with his genial manner in selling groceries, a third has ideas about the best site for the erection of our store, a fourth is almost penurious in the handling of the cash, and a fifth takes over the business of advertising. Each of the five selects helpers, and business is conducted under high-pressure methods. All are serious and playing hard. This is the procedure for all the succeeding enterprises, such as the fruit and vegetable market,

the fish market, and the meat market. As a summation of these food sales of various types, a luncheon program serves as the finale. This was motivated by the desire of the children to taste some of the food that they had never experienced eating before. It made the experience with food very real and lifelike. Carrying out these desires necessitated the making of a table, which was done easily with ordinary boards. Chairs were made from orange boxes, the linen of paper, the plates, cups and saucers, and tools for eating from cardboard. Aprons for the cooks and waitresses were made from unbleached muslin. A hostess and a host were selected by the children and, besides learning what food made a balanced menu with knowledge of the nutrition it gave, the children were given the opportunity to learn the correct forms of setting a table, of eating, of serving, and of guest placement.

With the unit well on its way to perfection, there is afforded time in which the children may demonstrate with their "brain child" to others in the school. Through the invitation to other classes to visit the market, there is opportunity for the mentally retarded to find their place in the sun that will automatically demand respect and admiration from their normal brothers. This increases respect for themselves, causes others to respect them, and slowly and quickly dispels that air of being insufficient, so strongly felt by the mentally retarded. In the embracing of life activities by all children the mass of children as a whole tend to become more like one another and then again more unlike, since the "dunce" of other days competes favorably with his "smart" brothers in at least some capacities that all are alike in embracing.

RECORD OF ACTIVITY CENTERING AROUND THE UNIT

A. Objectives

1. To arouse a desire and an interest in group activities and a readiness to participate in them to the end of fulfilling individual responsibility as a member of the group.
2. To direct desirable interests, aptitudes, and abilities into productive and creative channels.

3. To develop an opportunity for self-expression.
4. To realize our dependency on the community for foods
5. To develop specific health habits that pertain to cleanliness and eating.
6. To provide a list of foods and their values.
7. To develop an appreciation of the health problems of the group.
8. To give children the opportunity to talk readily and freely of home and community
9. To develop originality, initiative, and constructive abilities in planning and furnishing a food market.
10. To develop social, moral, and intellectual habits and aptitudes through experience.
11. To lead the child to an appreciation that his needs for food are met by the home and society.
12. To utilize the child's environment.
13. To discuss informally:
    (*a*) What the family should eat.
    (*b*) Why one should eat certain foods.
    (*c*) How food should be taken care of.
    (*d*) How the food is distributed to the family.
    (*e*) How food is cooked in the family.
    (*f*) Source of food.
    (*g*) How food is served and eaten.
14. To cultivate the habit of critical thinking.
15. To help the child to appreciate and employ worth-while activities.
16. To develop through guidance worthy social attitudes and behavior.

B. Activities

1. Approach:
    (*a*) Discussion of where mother buys food.
    (*b*) Trip to market (a composite of all types of food stores):
        (1) Observing how the market is arranged.
        (2) Observing what is for sale.
        (3) Observing the storekeeper.
        (4) Inquiring how the food is bought at the market—cash and carry methods.
        (5) Observing the lunchroom at the market.
2. Initiation of the unit:
    (*a*) Discussing the trip.
    (*b*) Making plans to erect market.
    (*c*) Deciding where to place it in the room.
    (*d*) Recalling the different departments in the market.
    (*e*) Deciding on what stock is to be made.
    (*f*) Planning the responsibility of each child in erecting the stands.
    (*g*) Selecting materials and tools to be used.
    (*h*) Recalling the set-up of tables in the lunch room.

3. Manual activities:
   - (*a*) Erecting the store:
     - (1) Grocery stand.
     - (2) Vegetable and fruit stand.
     - (3) Meat and fish stand.
     - (4) Bake shop.
     - (5) Luncheon table, chairs, etc.
   - (*b*) Acquiring goods to sell
     - (1) Molding from clay—vegetables, fruits, meat, rolls, and cakes.[1]
     - (2) Shellacking and painting them.
     - (3) Sending to grocery houses for dummy goods.
     - (4) Making paper bags.
     - (5) Printing signs and labels.
     - (6) Making shopping bags and purses.
     - (7) Making aprons for store keepers, cooks, and waitresses.
     - (8) Making a delivery wagon.
     - (9) Making table cloth, paper plates, napkins, and cardboard tools.
4. Correlated activities:
   - (*a*) Reading.
     - (1) Reading from the chart a record of the work done in the activities.
     - (2) Signs, labels, prices in the store.
     - (3) Progress as set forth in the daily newspaper of the class.
     - (4) Directions as to individual work to be done.
     - (5) Luncheon menu.
   - (*b*) Language·
     - (1) Stories developed from excursions.
     - (2) Discussion of problems.
     - (3) Dramatization.
     - (4) Conversation between clerk and customer.
     - (5) Making a sale.
     - (6) Conversation between host, hostess, and guests.
   - (*c*) Literature: Reading material in library pertaining to the store.
   - (*d*) Writing:
     - (1) Simple orders.
     - (2) Simple bills.
     - (3) Simple receipts for bills.
     - (4) Menus.

[1] In order to keep a permanent supply of goods on hand during the course of the activity, it seemed necessary to model likenesses of these articles Pedagogically it would be of greater value to handle the real products.

4. Correlated activities—Continued.
   (*e*) Number
      (1) Addition and subtraction in giving change for money tendered for goods bought.
      (2) Counting number of cans and packages in the store.
      (3) Counting places to be set at luncheon with regulation set-up
   (*f*) Music: Paraphrasing a standard song with words suitable for use in the project.
   (*g*) Art:
      (1) Making signs to advertise stock.
      (2) Making attractive food booklets.
      (3) Arranging cans and packages in the store attractively.
      (4) Making hectograph sheets for supplementary work material.
      (5) Coloring tablecloth, napkins, plates, etc., with simple design.
   (*h*) Physical training: A pantomime in conjunction with a song.
   (*i*) Nature:
      (1) Observation of common fruits and vegetables.
      (2) Learning the names and factors of growth.
   (*j*) Health. Discussion of—
      (1) How the grocer keeps food clean and fresh.
      (2) Why there should be care in the handling of food.
      (3) How to recognize the best foods for health.
      (4) How to make charts of all types of foods that are rich in vitamins.
      (5) How to regulate the temperature of refrigerator to insure freshness.

C. Outcomes

1. Outcomes from the entire unit:
   (*a*) Attitudes:
      (1) Appreciation of the part that the storekeeper plays in the community.
      (2) Appreciation of the rights and efforts of others.
      (3) Appreciation of the results that attend close cooperation in work.
      (4) A desire to work.
      (5) A desire to know people and things.
   (*b*) Habits and skills—Expansion and broadening of such desirable traits as:
      (1) Application to work.
      (2) Critical analysis.
      (3) Self-discipline.
      (4) Attention to hygienic principles.
      (5) Politeness.

1. Outcomes from the entire unit—Continued.
   (*c*) Knowledges
      (1) Recognition of foods that comprise a well-balanced meal
      (2) Appreciation of dependence of the community upon its stores.
      (3) A better understanding of the responsibilities of the storekeeper.
      (4) A better idea of what can be purchased at the store.
      (5) An appreciation of how money can be used.
2. Outcomes in:
   (*a*) Reading:
      (1) Ability to read silently understandingly.
      (2) Knowledge of words connected with activities.
      (3) Reading of class news.
      (4) Ability to associate word with picture.
      (5) Ability to follow printed directions
      (6) Ability to read stories connected with food.
   (*b*) Language·
      (1) Ability to express ideas in short, clear sentences for story booklet and newspaper.
      (2) Ability to write clear sentences.
      (3) Ability to use capitalizations and punctuations as needed in written sentences.
      (4) Ability to dramatize.
      (5) Knowledge of new terms and their meanings
      (6) Ability to express thoughts in a social group.
      (7) Ability to use the English language correctly.
   (*c*) Literature.
      (1) Appreciation of good literature.
      (2) Enjoyment of rhythm in musical sentences and lines of poetry.
      (3) Repetition of verse in a manner to bring joy to listeners.
      (4) Cultivation of the habit of applying one's self attentively in listening.
   (*d*) Writing:
      (1) Ability to write simple words and numbers necessary to carry on the activity.
      (2) Habits of neatness and care in use of paper and movement in writing.
   (*e*) Number:
      (1) Ability to count materials and money.
      (2) Ability in use of scale, such as ruler in measuring inch or foot.
      (3) Ability to add figures on a bill and to make change.
      (4) Recognition of value of money.
      (5) Ability to add automatically any two numbers included in the 45 combinations.

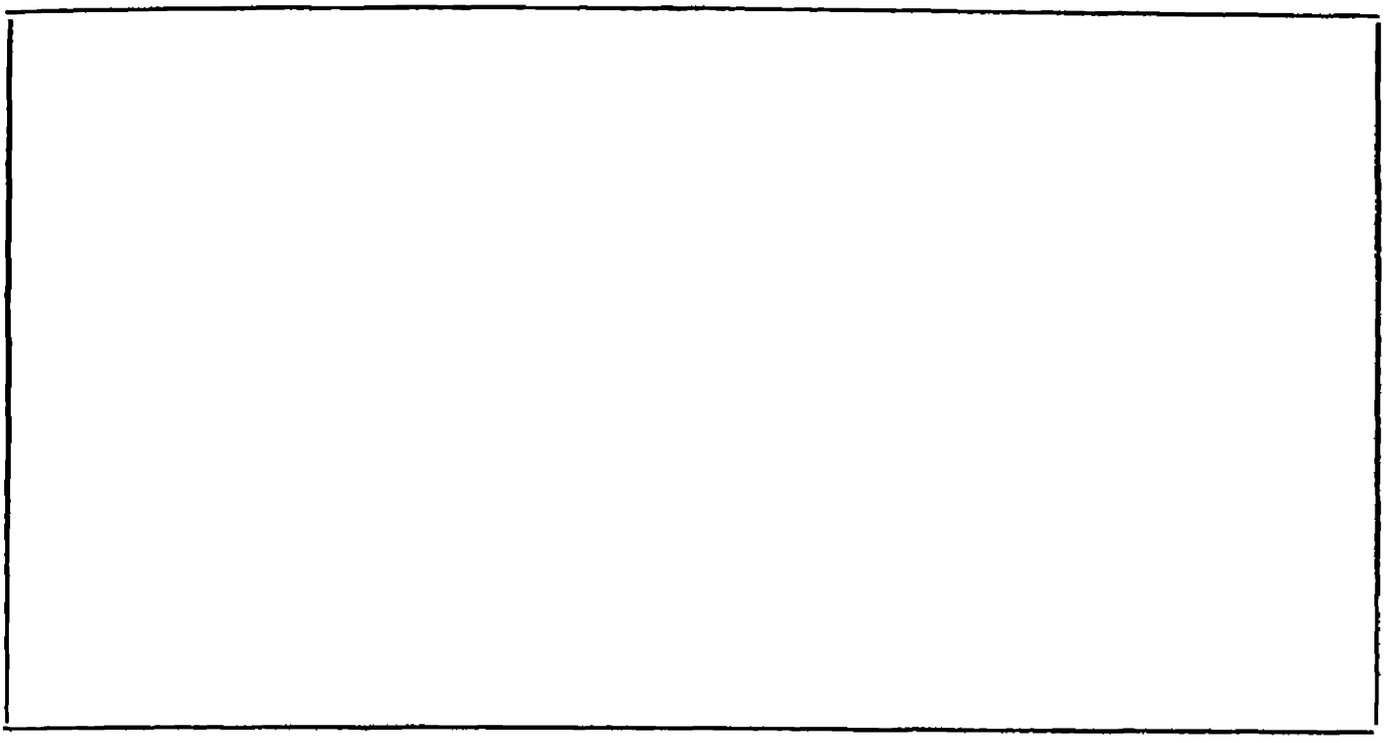
2. Outcomes in—Continued.
   (*e*) Number—Continued.
      (6) Ability to subtract automatically any situation in the 45 combinations.
      (7) Knowledge of arrangement of table; as top, right, left, etc.
      (8) Recognition of square and circle
      (9) Recognition of a number containing symbols and figures.
      (10) Appreciation of significance of terms such as *small, large, heavy, light, long, slender, thin.*
      (11) Appreciation of the idea of measure, as *dozen, half-dozen, quart, peck,* and *pound.*
   (*f*) Music:
      (1) Ability to enjoy and sing songs related to the unit of work.
      (2) Ability of class as a whole to sing softly and with good, true qualities.
      (3) Ability to make songs.
   (*g*) Manual arts.
      (1) Skill in manipulating tools and materials.
      (2) Habit of economy in use of materials.
      (3) Carefulness and order in care of materials.
      (4) Ability to select proper colors.
      (5) Ability to make original drawings, paintings, modelings, cuttings of illustrations related to unit of work.
      (6) Appreciation of pictures.
      (7) Ability to mix water colors.
      (8) Habit of observation, with ability to recognize significant difference in form.
      (9) Recognition of individual responsibility in caring for tools and materials.
      (10) Ability to make simple, attractive place cards with names of guests.
   (*h*) Physical training:
      (1) Spirit of good sportsmanship.
      (2) Contentment and satisfaction produced by child's wish to spend his energy in physical activity.
      (3) Joy in participation in games.
      (4) Expansion of large and small muscles together with control and coordination.
   (*i*) Nature:
      (1) Ability to point out different food elements wherever seen.
      (2) Ability to give them their names.
      (3) Ability to recall colors of different vegetables and fruits.
   (*j*) Health:
      (1) Knowledge of healthful food.
      (2) Knowledge of correct care and preparation of foods.

2. Outcomes in—Continued.
   (*j*) Health—Continued.
      (3) Knowledge of correct and good foods to eat.
      (4) Habit of cleanliness developed with reference to body and garments
      (5) An understanding of how home and society meet food needs of the child.

SUPPLEMENTARY WORK MATERIAL

In conjunction with the activity, it is desirable to have children use supplementary work material of the silent-work type. At first, directions for the work are given orally, the teacher illustrating carefully just what is to be done. In this way the child becomes accustomed to work procedures and acquires desirable habits in the use of material and tools. As soon as possible these oral directions are supplemented by simple printed statements.

The exercises presented in connection with this work were worked out with a gradation of steps of difficulty in mind. They are classified as follows:



A Cut and paste.
B Draw.
C. Answer "Yes" or "No."
D. Selection.
E. Similarities
F. True and false.
G. Reading comprehension.
H. Matching.
I. Phonetics.

A. Cut and Paste

1 What is the color of a beet?
2. What is the color of a tomato?
3 What is the color of milk?
4 What is the color of a prune?
5. What is the color of a pea?
6. What is the color of butter?
7. What is the color of graham crackers?
8. What is the color of an apricot?
9. What is the color of a huckleberry?
10. What is the color of a plum?

red	yellow	green
brown	white	red
black	green	blue
	orange	

B. Draw

1. Draw a grocery store.
2. Put shelves in it.
3. Color the shelves brown.
4. Make a store.
5. Color the counter brown.
6. Draw an awning for the store.
7. Color the awning
8. Draw cans for the shelves.
9. Color the cans
10. Put the price tags on the cans.

C. Answer "Yes" or "No"

1. Was Tom the storekeeper?
2. Do we sell flowers in our grocery store?
3. Was Howard the cashier?
4. Did Ida go to the store with Lucy S.?
5. Is bread a vegetable?
6. Was Carmine the director?
7. Are peas a vegetable?
8. Are prunes dried plums?
9. Do we get pineapples from Hawaii?
10. Is bacon made from pork?

D. Selection

D–1. *Underline the correct answer*

1. Dominic bought ——— at the store
   lard, eggs, peaches, soap
2. Louis bought ——— at the store
   prunes, corned beef, flour, pork and beans
3. Tom went to the store with———
   Carmine, Louis, Frank F., Jerry
4. Lucy D. went to the store with ———
   Salvatore, Vito, Dominic, Albert

182058°—33——3

5. Peanuts are raised in ———
   Oregon, California, Virginia, New Jersey
6. Pineapple is raised in ———
   Indiana, Illinois, New York, Hawaii
7. Sixteen cents from one dollar is ———
   25 cents, 52 cents, 84 cents, 16 cents
8. Five cents from a half dollar is ———
   45 cents, 32 cents, 89 cents, 33 cents
9. Frank F. bought ——— at the store
   crackers, peanut butter, chocolate, milk
10. We sell ——— in our grocery store
    flowers, groceries, fish, books

D–2. *Cross out the word that does not belong*

1. peaches pears apricots bacon prunes	2. Lux Dutch Cleanser butter Life Buoy Fels Naphtha	3. peas beans carrots corn lard
4. cheese butter milk cream spaghetti	5. canned corn beef package bacon package sausage package frankfurts crackers	6. Quaker Oats hominy Lux Farina wheat biscuit

D-3. *Insert the right word*

1 When I go to the store in the morning, I say ———
2. When I leave the store, I say ———
3. When I ask the storekeeper for something, I say ———
4. When I go to the store in the afternoon, I say ———
5. When the storekeeper gives me something, I say ———
6. When I go to the store in the evening, I say ———

Good morning.
Good afternoon.
Thank you.
Good evening.
Please.

E. Similarities

Underline the words that are alike

1. Fels Naphtha, Quaker Oats, Life Buoy.
2. Canned peas, canned corn, Lux.
3. Canned corned beef, package bacon, canned peaches.
4. Dried prunes, package lard, dried raisins.
5. Canned peaches, canned peas, Fels Naphtha.
6. Graham crackers, Uneeda Biscuit, canned peas.
7. Condensed milk, canned pears, Farina.
8. Quaker Oats, evaporated milk, package bacon.
9. Package lard, package prunes, canned Crisco.
10. Lux, soap powder, Uneeda Biscuit.

F. True and False

Mark the sentences as true or false

1. Pork is raised from seeds.
2. Butter comes from plants.
3. Corn can grow in any soil.
4. Ida and Florence built the store.
5. Mabel and Jennie stocked the shelves.
6. Howard is the storekeeper.
7. Corn is 15 cents a can.
8. Soap is 5 cents a bar.
9. Bacon is wrapped in a box.
10. Farina is a cereal.

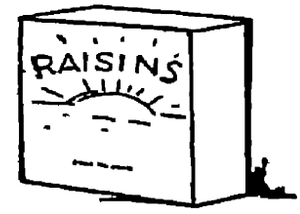
G. Reading Comprehension[3]

Louis, Salvatore, and Mario built a grocery store. The store has five shelves, a counter, and an awning. Carmine and Dominic stocked the shelves. Howard and Frank F. printed the names for the groceries and the prices for them. Carmine is the director. Lucy S. is the cashier and Howard is the storekeeper.

Who built the store?
How many shelves in the store?
Who stocked the shelves?
Who printed the names and prices for the groceries?
Who is the director?
Who is the cashier?
Who is the storekeeper?
How many counters in the store?

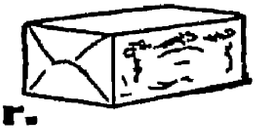
[3] This exercise was presented last in the series, after the work in matching (H) and in phonetics (I) had been done.

H. MATCHING



H-I. CUT OUT AND PASTE THE PICTURES IN THE CORRECT PLACES

1. **The chicken lays me.**
   What am I?



Peanut

2. **The children eat me for breakfast.**
   What am I.

Raisins

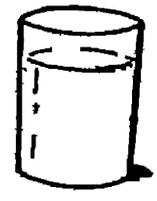
3. **I come from the cow.**
   What am I?

Butter

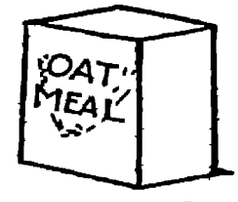
4. **I make the house clean for mother.**
   What am I?

Sausages

5. **I grow in Hawaii.**
   What am I?



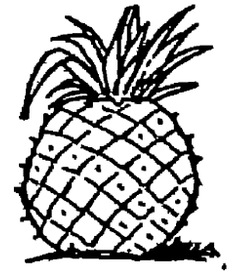
Egg



Soup

6. **I come from the pig.**
   What am I?

7. **I am raised and dried in California.**
   What am I?

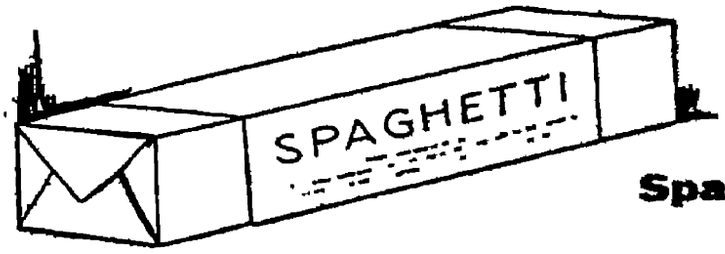


Milk

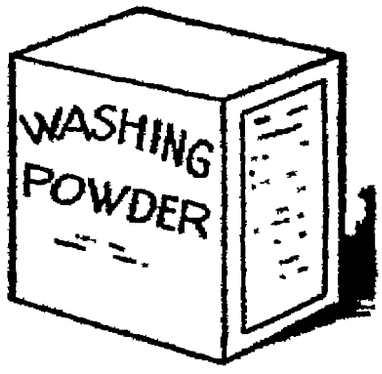
Cereal

8. **I grow in Virginia.**
   What am I?

Pineapple

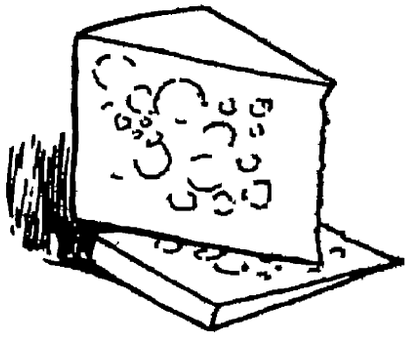


9. **I am canned in Camden, N.J.**
   What am I?



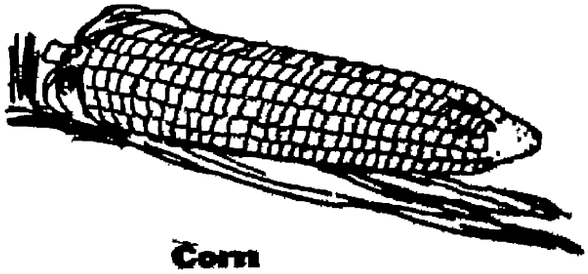
Cleaning Powder

10. **I am spread on bread.**
    What am I?

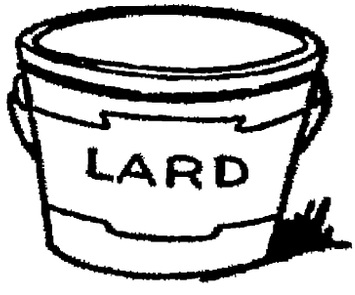


H-2. MATCH THE WORD WITH THE PICTURE

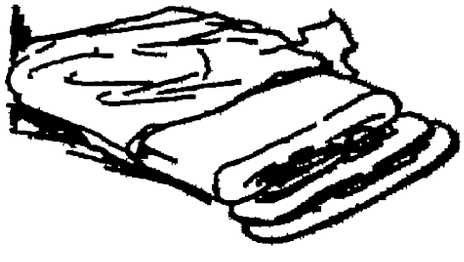
Spaghetti



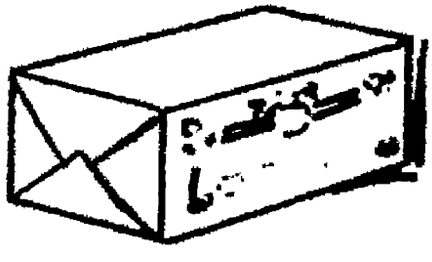
Washing Powder



Cheese

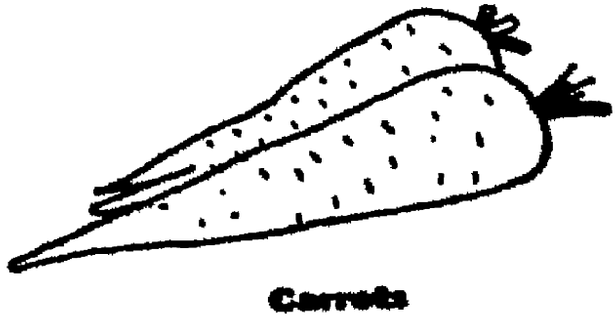


Peaches



Corn

Lard



Bacon

Butter

Eggs

Carrots

Spaghetti

Peaches

Cheese

Washing Powder

Corn

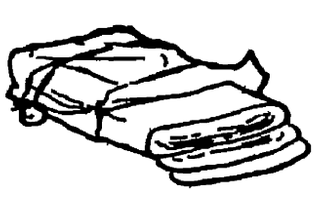
Butter

Lard

Bacon

Carrots

Eggs



I. PHONETICS

PASTE THE PICTURES UNDER THE RIGHT SOUNDS

B C D F G H

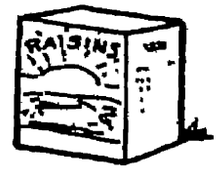
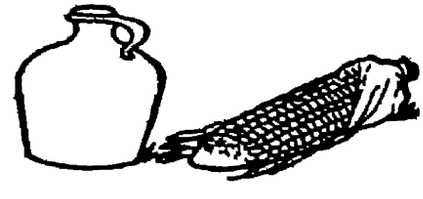
Q R S T V W



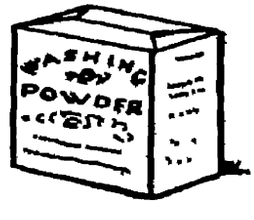
Bacon



Ginger Ale

Lard

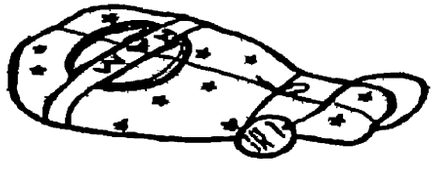
Raisins



Vinegar Corn

Jelly

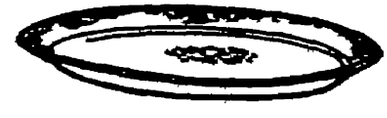
Mince-Meat



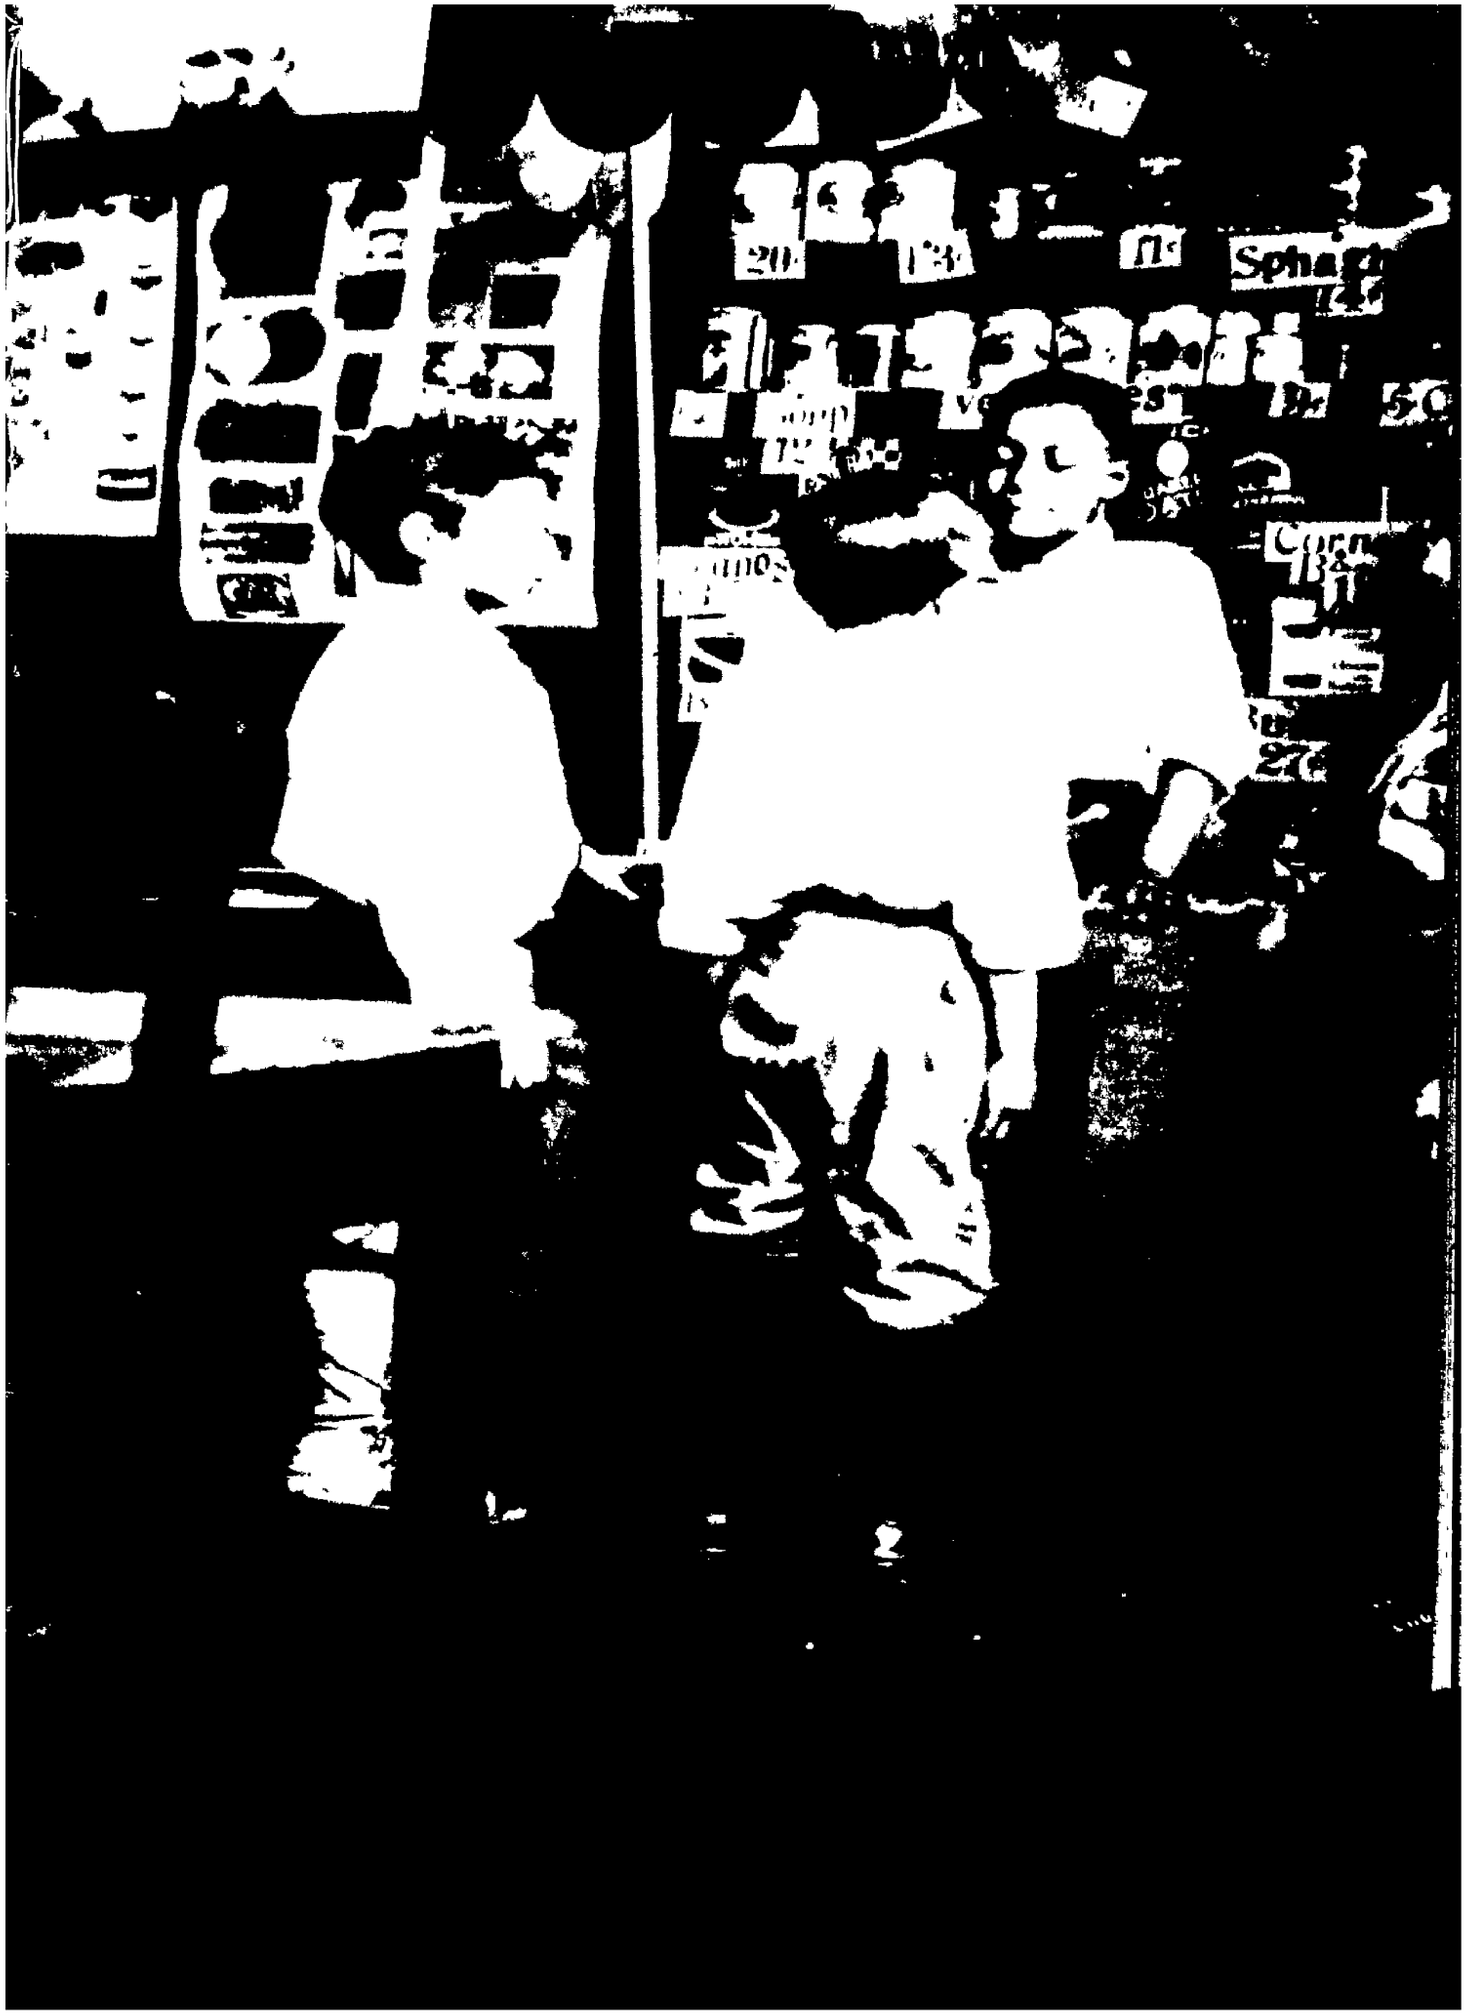
Washing Powder

Flour

Peaches



Ham



Soap

Tomatoes

Dish

III. FOODS FOR BOYS

By ADA M. WHYTE,[1] *Rochester, N.Y.*

[NOTE.—To help boys to appreciate food values as well as to prepare a real meal is indeed a worth-while undertaking. How such an activity functioned both at school and at home with a group of retarded boys is here concretely described.]

This activity was carried on with a class of 19 boys whose chronological ages ranged from 11–9 to 15–5, with a median chronological age of 13–0, and with intelligence quotients ranging from 46 to 80. The median I.Q. was 67. This class was the only special class in an elementary school of six grades having 17 regular teachers and 620 pupils. Five of these boys came to the class directly from the third and fourth grades, while 14 of them had experience in primary and intermediate special classes.

A few more than one half of the boys were indigent, 5 came from broken homes, 2 from a boys' orphanage, and 3 had homes above the average. The boys came from several neighborhoods in the west end of the city. Five were carried by the school bus, and 2 whose parents could afford it furnished their own transportation from the other side of the city. As to nationality, we had 1 colored boy, 2 Jews, 2 Irish boys, 1 Polish boy, 1 Italian boy, 2 boys of Italian and American parentage, and 10 American boys.

Besides the general objectives of the elementary school in the tool subjects, our special classes aim at a program that will enable the boy (1) to use his leisure time profitably, and (2) to contribute his share to home and civic life. Owing to the great diversity of ability, a boy might be in the best group of the class in one subject and in the lowest group in another. We try to place him with the group where he can make the best adjustment and work to his fullest capacity, always holding before him the goal of working up to the next level.

[1] Miss Jessie Cole, teacher of home economics, cooperated in carrying on this activity.

THE SETTING

About one half of the class had a pleasant experience in home economics during the previous year. They were eager to know more about the food materials with which they had worked. They were interested in the label on the salmon can, in knowing how the grocer gets the fresh vegetables from the farmer, whether salt grows and why we put it on the ice when we freeze ice cream, how the oyster gets its food, what makes the biscuits rise, why cream comes to the top of the milk, and so on.

HOW THE ACTIVITY WAS CARRIED OUT [2]

We started out to see how much we could find out about foods and how many of our problems we could solve. We took as our first big question, "Where does the grocer get the food he sells?" One boy had lived near the public market and had seen the farmers bring in daily loads of produce. He also told of the people in the neighborhood going there to buy their supplies. The boys made inquiries at home and reported that the public market was the place to find out about food supplies. One boy went to the office and found that the 4B class in our school was studying about Rochester. So he borrowed from that class the book which told us some of the things we wanted to know. We found that the people of Rochester had always needed a public market; that, when Rochester was only a small village, they had started one on the Main Street bridge and the farmers brought their produce there to sell. The building finally fell into the river. Then the farmers began to sell on the corner of East Avenue and Main Street where Sibley's now is, but that was too crowded and the main corner became so noisy and cluttered that the people complained and began to ask for a city public market. So after years of study a fan-shaped piece of land was bought on Union Street by the New York Central tracks. The boys looked in their telephone books to find out if the market was still located there. We planned to visit it. As it was 2 weeks before we could arrange our trip, we spent that time finding out what we could about the market. We did much reading and English

[2] The work on "foods" was carried over the entire semester. Only part of the activity is reported in this article.

work along this line. We borrowed photographs from another class and set them up on the blackboard rail for study. They were:

1 End view of one of the sheds.
2. Banana wagon
3 Shed in public market. Box car in distance
4. Shed in public market. Wholesale store.
5. Fruit and vegetable display on walk under the shed.
6. Type of box car which brings produce to public market.
7. Huckster's wagon partly loaded.

By using the Keystone Views with stereoscopes, we found that the markets of Europe sell all kinds of merchandise, while in this country we usually sell only farm produce. We found the following views interesting:

No. 488. Bread market —Poland
No. 375. Livestock market.—Ireland.
No. 385. Open-air china market.—Germany.
No. 406. Busy harbor.—Copenhagen.
No. 555. The native market.—L. Victoria, Africa.

At last the day arrived for our trip. Each boy carried a pencil and a piece of tagboard on which he wrote down in order the streets on which we traveled. When we arrived we found the place thronged with people. There were farmers with wagons, autos, and trucks, loaded with produce to sell; housewives with autos, carts, baskets, and even baby carriages to take the vegetables away; and lastly, many hucksters loading up their trucks as attractively as possible, to peddle around the city to the busy housewives who could not come to the market. We felt as though we wanted to buy something, too, so we used 35 cents of our small fund to buy a basket of grapes to bring home with us. The boys took turns in carrying the basket and there were no bigger or prouder men there than the ones entrusted with that job.

We noticed that the sheds were made of steel with pavements sloping to the curb to hold the trucks. We were told that the farmers had to pay 50 cents a day for a stall there; that, since they must close at noon, they came very early in the morning; in fact, they were there at daylight. We noticed the license on the hucksters' trucks. We watched the weigher put live chickens on the scales and noticed that there was a policeman there to keep order.

Long before we were ready to leave, the driver told us our time was up, so we had to return to the bus. On the way back we again checked our streets. As soon as they were inside the classroom, the boys immediately turned to the seven photographs before mentioned, and it was interesting to note the increase in zest and enthusiasm with which they studied each little detail.

In the discussion which followed our visit to the public market, we learned that "wholesale" means selling in large quantities, and "retail" means selling in small quantities. An excursion was then made to a wholesale company where the boys saw the goods handled in large lots; noticed how cases were loaded on the train by the door; saw the raw coffee and the entire process of roasting, weighing, and putting in packages. The boys sampled raw peanuts, were surprised to find they grew under the ground, and were presented with some to take back to school, where we afterwards roasted them in the oven.

Then we visited a retail store where produce is sold in small quantities. We noticed the arrangement of the goods—where the meat was, the baked goods, the dairy products, the candy, the fresh fruits and vegetables, the dry groceries, etc. We found they were having a steak sale. When we returned to our classroom, one of the boys raised the question as to why stores had sales. They decided that a sale might attract customers who would probably buy other things, that the merchant might have an oversupply, and that perishable food such as meat might spoil. This led to discussion of ways of preserving food, which we had to leave for another day. The boys drew maps to show the arrangement of the store. We could not quite agree as to where the cheese counter was, so one boy was appointed to go that night and check on it.

At about this time two boys living on the other side of the river reported that there was a barge of sugar at the dock. We decided to go over to the bridge, which is about 10 minutes' walk from the school, to see for ourselves. By the time we reached the river, the fleet, consisting of the tug and three barges, had started back. It was very interesting to watch the busy little tug doing all the work. We noted which way the Genesee River was flowing, pointed in that direction, thought about our maps and figured out that it was north.

Then we tried to think into what larger body of water it would flow. Many of the boys knew that it was Lake Ontario Many of them had been there We saw the Lehigh Valley Railroad on one side of the river and the Erie on the other. A train came whizzing along the Lehigh tracks, and we contrasted shipping by rail and by water. It was very evident that the railroad was much faster, but when we thought of how much money the cars, the big black shiny engine, and the miles and miles of railroad track must have cost, we concluded that it must also be more expensive to ship goods by rail. Later we were told at the chamber of commerce that sugar was about the only kind of food that was shipped to Rochester by water. Gas, oil, and lumber were the main products shipped in that way.

In the home-economics class, which met twice a week, we used the foods about which we were studying. Tomatoes were very much in evidence in every grocery. The boys canned them, and when they opened the cans in January to make scalloped tomatoes, they were delighted. They also made grape juice, but that did not turn out quite so well. Among the fruits used were apples in apple sauce, lemons for lemonade, and dried apricots. The latter had to be soaked over-night in order to put back into them the moisture that had been taken out by drying—a splendid illustration of evaporation in drying. We saw the raw peanuts at the warehouse, and then made peanut brittle. The crowning achievement, however, was our Christmas dinner. In our classroom we made favors of little green Christmas trees decorated with tiny colored paper circles. We also arranged other decorations and the home-economics room wore quite a festive air. The boys prepared the dinner, and because they had they reveled in it. We had meat loaf, mashed potatoes, and creamed onions. They pronounced it the best dinner they had ever had.

During December the class made sewed cook books with oilcloth covers containing the recipes for all the dishes they had prepared during the term, and presented them to their mothers for Christmas. This proved to be an excellent tie-up with the home.

The activites in tool subjects, health, and social studies are summarized below. Individuals participated and profited according to their abilities.

Number:

1. Using in simple oral and written one-step problems the number facts taught
2. Carrying out fundamentals learned in examples using dollars and cents
3. Knowing units of measure so far as taught and making simple applications of them
4. Increased understanding of fractional facts.

The following are examples of problems used:

1. There were 7 pounds of grapes in the basket which we bought at the public market. We paid 35 cents for it. How much was that a pound?
2. If butter costs 32 cents a pound, how much must I pay for one-half pound? For one-fourth pound?
3. Mother buys one-half pound of tea. How many ounces is this?
4. On the outside of this can of peas it says 1 pound 4 ounces. How many ounces in the can? Weigh and check.
5. We bought 2 pounds of raw peanuts at Brewster Gordon at 9 cents a pound. How much did they cost?
6. What change did we get back from our quarter?
7. We used 1 dozen lemons for our lemonade. How much were they worth at 4 cents apiece?
8. We had 4 pounds of sugar at 6 cents a pound. How much for the sugar?
9. Find the whole cost of making lemonade that day.
10. How much for each boy?

English:

1. Writing a letter to United Fruit Co., 1 Federal Street, Boston Mass., asking for information about bananas.
2. Discussion of how to conduct ourselves when on a trip according to standards of courtesy set up by the boys.
   (*a*) We won't crowd.
   (*b*) We will take off our hats when we enter a building such as the library.
   (*c*) We will look at the person who is talking to us.
   (*d*) We will try to learn all we can on every trip.
3. Listing boys who have gardens at home.
4. Listing vegetables we are getting from garden now.
5. Listing fruits grown here.
6. Study and discussion of a picture of the Killarney Live Stock Market, Ireland, followed by written test.
   (*a*) How many wheels on the wagons?
   (*b*) Do you think it is raining? Give two reasons.
   (*c*) Name two kinds of animals for sale.
   (*d*) What do we call the meat we get from cattle? from sheep?
   (*e*) What do we mean by pastures? What makes the pastures of Ireland good?

English—Continued.

7. Keeping a vocabulary list in notebooks and adding new words as they arise. *Example.* Market, stall, huckster, pasture, beef, mutton, beverage, etc.
8. Borrowing book from library and reading aloud by the teacher.

Spelling

1. Learning to spell new words in connection with unit.
2. Keeping of individual spelling notebooks. Every boy's book was different. It contained only the words which he needed.
3. Finding the words in the dictionary.
4. Arranging spelling words in alphabetical order.

Reading:

1. An account of the public market as given in "Rochester, Its Service to People at Home and Abroad," 4B grade, page 16.
2. Making and reading group outline of leading points regarding the market.
   - (*a*) Location.
   - (*b*) Interesting sights.
   - (*c*) Stalls:
     - (1) Fruit.
     - (2) Vegetables.
     - (3) Butter and eggs.
   - (*d*) Scales and measures.
   - (*e*) Policeman.
   - (*f*) Service to:
     - (1) The farmer.
     - (2) The housewife.
   - (*g*) Wholesale companies:
     - (1) Located near the railroad.
     - (2) Carry a large supply.
     - (3) Sell to the grocer.
   - (*h*) Retail companies (chain stores).
3. Reading to the class by some of the best readers of descriptive parts from the backs of the Keystone Views.
4. Collection and classification of labels and analysis of information obtained from them. Labels were brought for the following products:
   - (*a*) Dairy products: Milk.
   - (*b*) Delicatessen: Vegetable soup, chicken soup, spaghetti, sauerkraut, tomato soup.
   - (*c*) Fruit: Pineapple, grapefruit, tomatoes, apricots, apples, peaches.
   - (*d*) Vegetables: Beans, string beans, peas, corn, artichokes.
   - (*e*) Meat: Sardines, salmon, mackerel.
   - (*f*) Beverages: Coffee.
5. Reading recipes from the cook book which we made.
6. "Patty Pans," Chapter 9: "Washing the Dishes."

Reading—Continued.

7. "Household Arts for Home and School,"[3] by Cooley and Spohr, Chapter I: "Storing Fruits and Vegetables for Winter."
8. "Every-day Foods," [3] by Harris, Chapter XXIV: "Let's go Marketing."
9. Drawing book from library, "The Lively Adventures of Johnny Ping Wing", by Phillips Best readers read it to class.
10. Reading signs.
11. Looking at pictures in encyclopedias and trying to read enough of the title to get an idea of what the picture is about.
12. Using Book of Knowledge.
13. Using Compton's Pictured Encyclopedia.

Health.

1. Noting cleanliness in caring for food in Wegman's grocery.
2. Finding out what the pure food laws mean and how they help us.
3. Observing the wrapping of our bread in oiled paper to protect from dust, germs, flies, and dirty hands.
4. Observing the uniformity of bread as to size, shape, color, and taste.
5. Studying and using proper foods for growth and health.
   (*a*) Foods that give us strength for work and play:
   Starches. Potatoes, bread, macaroni, rice.
   Sugar: Sugar, candy, syrup, raisins.
   Fats: Butter, lard, cream, fat in nuts.
   (*b*) Foods that build and repair: Meat, fish, eggs, milk, cheese, nuts, cereals.
   (*c*) Foods that regulate: Fruits, vegetables, water.
6. Buying fruits and vegetables at public market in season and preparing for winter by canning or drying.
7. Studying the preservation of meat by freezing, salting, and drying.

Social studies.

Social studies were carried on throughout the unit in the preparation and handling of materials. The sources of food, the service of the public market, the shipping of foods, the handling of foods in large quantities have all become subjects of interest and knowledge. Constant reference was made to the direction, distance, and location of places. Maps were drawn of trips, places were located on maps and on the globe. Questions such as the following were discussed:

In which direction did we travel to the wholesale company? In which direction did John walk when he went home from Wegman's? Look at the smoke from the factory and see which way the wind is blowing.

We walked about a mile to the library. What corner is about one half mile from here?

[3] Read to pupils. Then yes-no test given.

OUTCOMES

Because the parents became so interested in our unit, we sent them a questionnaire to find out just how the work had helped the boys to improve in their homelife As the majority of the parents were below average, the replies may be judged accordingly. Some of the mothers' comments may be summarized as follows:

Has taken certain duties such as ——— of his own accord and likes to do them.

Tells me where certain foods come from, wants to know about others.

Asks how food is prepared. Sometimes makes suggestions.

Wrote two letters to relatives without any suggestions from us. They were well composed and well written. They were all ready for mailing before we knew they had been written.

Most every night takes something interesting out of the newspaper so as to help in school.

Getting better in his behavior than ever before. (Said of boy with reputation of being "troublesome.")

Watches how things are done and talks about them, and helps around the home.

Greatly interested in other people as to what they are doing and what for.

More like boys of his age. (Said of most incapable boy in group.)

Able to deliver newspapers and make change, also dependable on errands. (Said of a boy with a broken home—living with grandparents who are much too old to be interested in the problems of an active 12-year-old boy.)

In contrast to the formal type of learning, I would say the outcomes may be summed up as follows:

1. The boys learned more in the same length of time because they really wanted to know.
2. The boys were interested in studying about materials which they were actually handling.
3. The boys developed a feeling of self-respect because they were finding out for themselves.
4. The boys learned how to behave in many different environments.
5. The boys were enabled to take part in the ordinary conversation of the family.
6. The boys developed an incentive to read the newspapers.
7. The boys gained the respect of other pupils and teachers.

8. The work carried over into the home and the parents were interested

9. The activity gave the teacher practical goals to work for, freedom to carry out her class work, and a feeling of satisfaction when the unit was rounded up.

IV. CHILD CARE

By Julia Lyons, Gertrude Jarm, Florence Page, Beatrice Zdara, *Cleveland, Ohio*

[Note.—One of the most important fields in which the retarded girl needs special training is the care of children. Both as a preparation for motherhood and as a possible means of earning her own livelihood, it should be given careful consideration in all special classes of adolescent girls.]

The school in which this activity was carried on is an ungraded center enrolling 87 pupils. Thirty-six of these (all girls) took part in the units described. Their chronological ages ranged from 14 to 16 years. In mental age they varied from 8 years 2 months to 9 years 8 months. Foreign parents of the laboring class, predominantly Slavic, thrifty and neat, constituted the major home background.

The activity is divided into three units, each comprising an essential part of the total project.

UNIT A

Entertainment of child from 1 to 6

I. Objectives

1. Direct objectives:
   - (*a*) To develop the ability to tell stories.
   - (*b*) To help in selection of suitable stories.
   - (*c*) To teach reading through a new interest.
   - (*d*) To develop better judgment by discussion of play and games.
   - (*e*) To create new ideas for play and original entertainment.
2. Indirect objectives:
   - (*a*) To prepare girls to give better service when caring for children.
   - (*b*) To fit girls for nurse-girl positions.
   - (*c*) To build ideals for future homes.
   - (*d*) To instill the value of play.

II. Methods and Activities Used

1. Story telling:
   - (*a*) Method used to prepare girls for socialized activity:
     - (1) Teacher and pupils told stories in classroom.
     - (2) Class discussed advisability of outline.
     - (3) Outline for story was developed, as follows:
       - (*a*) Introduction: Who, when, where.
       - (*b*) Events of story, with correct sequence.
       - (*c*) Conclusion, with some satisfaction in the experience of the listener.

1. Story telling—Continued.
   (*a*) Method used to prepare girls for socialized activity—Contd.
      (4) Stories were outlined at school and written from outline at home
      (5) Groups of four or five girls worked for perfection and then told story to class.
      (6) Class graded ability of story teller and judged whether she was prepared for application of the method.
   (*b*) Activity applying the method:
      (1) Stories were told to a group of 28 preprimary children at 9 a.m. and at 1:30 p.m. Girls went in groups of three or four.
      (2) Preprimary teacher passed judgment and girls reported on one another's work.
      (3) Stories were told at home and reported on.
      (4) Stories were told publicly at the baby party, described later.
2. Selection of material (inseparable from 1, above):
   (*a*) Class discussed types of stories suitable for children.
   (*b*) Teacher told various types of stories:
      (1) Nursery rhymes.
      (2) Stories of animals personified.
      (3) Fairy stories.
      (4) Short stories of people and events.
   (*c*) Class agreed that library books offered much good material.
   (*d*) Books were brought from home and from library, and judgment was passed on them.
   (*e*) Lists of books were tabulated for future needs.
3. Games:
   (*a*) Class discussed different types of games:
      (1) Instructive games· For counting, for recognition of objects, for habit formation.
      (2) Constructive games: Drawing, painting, pasting, building, cutting, gardening.
   (*b*) Girls observed children at play.
   (*c*) Reports were made on play as conducted in other groups, such as the kindergarten and nursery school.
   (*d*) Class discussed the value of play from the standpoint of health and recreation.
   (*e*) Girls applied knowledge at home and reported.
   (*f*) Each girl made a scrapbook and a cut-out puzzle. (Home work.)
   (*g*) The girls planned and conducted a baby party of their own, at which they entertained with games, toys, and stories. They also made and served the refreshments. Twenty children under 6 years of age were present.

4. List of stories told by girls to preprimary group:

Mrs. Tabby Gray.
The Bean.
The Porridge Pot.
The Little Pig.
Little Black Sambo.
The Mouse and the Frog.
The Wind's Work.
The Stork and the Frogs.
The Seven Little Goslings.
Little Two-Eye.
How the Turtle Saved His Life.
Tiny Rosebud.
The Tar-Baby.
Little Halfchick.
The Wolf and the Seven Kids.
The Hare and the Grasshopper.
Two Dogs, Jip and Jack.
The Pig With a Curly Tail.
The Three Bears.
The Star Dipper.
The Fox and the Bag.
The Foolish Frog.
The Three Little Pigs.
The Teeny-Tiny Woman.
The Fox and the Hen.
The Girl Who Would Not Work.
The Foolish Turkey.
Please and Thank You.
The Lion and the Mouse.
The House With a Star inside.
The Little Helpful Engine.
The Billy Goats Gruff.
Red Riding Hood.
The Hare and the Tortoise.
The Little Boy Who Forgot to Wash His Hands.
Henny Penny.
The Old Woman and Her Pig.
The Greedy Cat.
Why the Bear Has a Stumpy Tail.
The Elves and the Shoemaker.

UNIT B

Food for the preschool child

I. Objectives

1. To enable the girl to prepare in the most sanitary manner foods prescribed by the doctor, nurse, or dispensary.
2. To give the girl a working knowledge of the first solid foods for the baby and of the change in preparation with the advance in age.
3. To help the girl to recognize a well child from the following indices: Weight, height, color, appetite, activity, sleep, eliminations, eyes, ears, nose.
4. To enable the girl to plan, prepare, and serve an attractive simple dietary which meets the bodily needs of the growing child.
5. To teach good food habits for children and to help parents and older children to set an example by their manners and food habits.
6. To teach the girls how to make a child happy; the effect of unhappiness upon his appetite and disposition; the matter of discipline at the table.
7. To teach the importance of keeping the child well and the factors which aid growth, such as proper food, sleep, water, sunlight, freedom from physical defects, regular habits, exercise, and fresh air.
8. To teach the care of a sick child.

TOAST

9. To change the attitude of the girl toward the feeding of her smaller brothers and sisters and toward nurse-girl services; to help her share in creating happiness by helping younger children and by relieving tired mothers

II Methods and Activities Used

1. The girls collected articles and pictures from newspapers and magazines for their notebooks.
2. Baby bottles and other equipment were collected from the homes and brought to school. Bottles were sterilized, a formula was prepared, and all other details incident to baby feeding were put into practice.
3. Mimeographed copies of daily food plans were distributed and discussed. Dietaries from the girls' homes were also used.
4. The child's four daily meals were prepared in class over a period of four lessons. The girls worked in family groups and each group borrowed an underweight child from the kindergarten to eat the meal prepared. A small table with small chairs was used. The girls made a tablecloth, embroidered bibs and napkins, and bought gay dishes from the 10-cent store. This plan provided a laboratory for the working out of the good food habits discussed in class. It also stimulated a new respect for oatmeal, whole-wheat bread, milk, and other simple foods on the part of the girls.
5. After the course was completed, we had a children's party to which each girl brought a small child. Suitable toys, books, and puzzles were made; stories were told; and refreshments suitable for a small child were served.

UNIT C

Care and hygiene of preschool child

I. Objectives

1. To develop in our girls a wholesome, right attitude toward babies and younger children in the home.
2. To give some understanding of care and hygiene of infants and children.
3. To teach the selection of materials and the making of simple garments for infants and children.
4. To show girls how to make suitable and inexpensive toys of materials which they have in their own homes.
5. To help the girls to be more efficient and to get more joy out of caring for children after school hours and during vacation as a means of earning money.

II. Contacts Made

1. With department stores for study of baby garments and other items.
2. With day nursery school for observation of children and care given them.
3. With baby clinic for study of infant behavior and attention required.

III Outline of Content Presented

1. Early observations of the infant·
   (*a*) Height and weight: At birth; at 6 months; at 1 year.
   (*b*) Posture when asleep.
   (*c*) Breathing
   (*d*) Skin.
   (*e*) Expression of face
   (*f*) Muscular development. At 3 months; at 6 months; at 1 year.
   (*g*) Exercise: Kicking, crying, crawling, playing.
   (*h*) Methods of handling baby: Lifting, holding, carrying
2. Clothing:
   (*a*) For the infant: We compared and discussed layettes and decided upon a simple layette of inexpensive materials. Flannelette and long cloth were used with trimmings of fancy stitches.
   (*b*) For the child from 1 to 6:
      (1) Bases of selection: Health, comfort, convenience, pleasure of child, training of child.
      (2) Articles needed: Underwear, sun suits, play garments, night clothes, shoes and stockings, mittens, storm garments. Some of these garments were made in class by the girls for their families, for friends, or for sale
      (3) Care of clothing· Changing, washing; child's responsibility in hanging up and handling.
3. Water:
   (*a*) For drinking: Amount; time; sterilization.
   (*b*) For bathing: Temperature; types of baths; methods of giving. Our school nurse bathed a 9-months-old girl in class. The baby was a child from the neighborhood. The bathing of an older preschool child was also observed and discussed in class.
4. Fresh air; sunshine; ventilation.
5. Sleep: Requirements and cautions to be observed.
6. Special care of eyes, hands, ears, nose, teeth, hair, finger nails, genitals.
7. Nutrition and health.
8. Summer care of babies and children.
9. Habit training.
10. Toys: The girls made inexpensive toys in class, such as rag dolls and cats; yarn dolls; tinker toys.

SIGNIFICANT OUTCOMES OF THE UNITS

1. Change in attitude toward motherhood and babies.
2. Appreciation of importance of consulting skilled aid (doctors or nurses) through the free agencies (dispensary, nursing centers, or visiting nurses) and of following their orders.

3. A new interest in clothing, feeding, and habit formation for younger children.

4. A desire to show skill in entertaining children.

5. A marked improvement in English, growth of vocabulary, and poise.

6. A new interest in reading, as the girls found children's stories within their own comprehension.

7. A new respect for the position of "nurse girl."

8. An interest in establishing favorable conditions for homes of their own.

V. THE NURSERY PARTY

A CHRISTMAS ACTIVITY FOR SLOW LEARNING CHILDREN

By GLADYS MAY MACLIN, *Denver, Colo.*

[NOTE.—Here is a concrete means of giving a festive air to real training. Attitudes, habits, and skills are all brought into action through the plans that were made for a party.]

As teacher of a senior special class I was confronted with an unusual situation in which the prevailing characteristics of both the pupils and their environment were unique, since most of the children were inmates of an institution for dependent and neglected children.

CHARACTERISTICS OF GROUP

Before attempting to initiate an activity with such a group of pupils it was necessary to become familiar with the individual characteristics of the group and with the environment in which these children lived. This was done through several short units of work planned to reveal the abilities of the individuals in subject matter. A careful testing program of the 24 children (13 boys and 11 girls) showed the following characteristics:

Chronological ages ranged from 12 years to 15 years.
Mental ages ranged from 8 years to 11 years.
Binet I.Q.'s ranged from 56 to 74.
Average chronological age was 13 years 1 month.
Average mental age was 9 years 2 months.
Average I.Q. was 67.

The grade abilities of the group were found to be as follows, according to Denver tests:

In reading:

2 had less than 2B ability.
9 had 2A ability.
7 had 3B ability.
3 had 3A ability.
2 had 4B ability.
1 had 4A ability.

In arithmetic:

Two scored 0.
Five had less than 3B ability.
Nine had 3B ability.
Six had 3A ability.
Two had 4B ability.

These abilities represented lower accomplishments than I had yet experienced in a senior group of slow-learning children of these ages. Investigation of the sources from which most of my pupils came revealed the following facts:

1. Their parents were in some cases practically illiterate.
2. They had proved themselves unfit, for one reason or another, to rear their families; hence the children had become State dependents.
3. Many of the children had lived too far from outlying schoolhouses to attend regularly.
4. Many of the older children had been kept at home for farm and family duties during spring and fall, missing a large part of the school term.
5. When these children did attend school they were placed in classes with normal 7- and 8-year-old children; the teacher did not know how to handle such cases; usually she lacked the time and materials as well as the training for doing much with them.
6. Two of the children were mentally impaired through infantile paralysis. One was a cretin 14 years of age but of kindergarten development both mentally and physically. Four came from neighboring schools, three of them living in squatters' shacks along the river banks.

The attitude of the group made it difficult to know what might interest them. Some of them resented being in school at all. Some were unsocial toward one another. Their treatment of younger children on the playground made it advisable to give them separate recesses. They were not interested in books because they were able to get little satisfaction from them. They chafed under the authority of the employees of the Home and were not appreciative of the advantages it offered in the way of good food, comfortable clean beds, and an opportunity for wholesome play and work.

During September and October I worked to gain some spirit of cooperation and solidarity in the group, using each week simpler plans and materials, as I found that even methods suited to their mental ages brought poor results

because of lack of foundation in tool subjects. By November I was using primary methods for developing reading abilities.

HOW THE ACTIVITY BEGAN

As Christmas approached these children showed interest in gifts for their little brothers and sisters. Eleven of the group had brothers and sisters in the nursery at the Home and were particularly anxious to remember them at Christmas.

We decided to plan a visit to the nursery to see these little folks in their own surroundings. A note was written to the superintendent asking permission to go, and our visit followed. We enjoyed inspecting the gayly decorated dormitories and the sunny, cheerful playrooms. The big brothers and sisters proudly exhibited the younger members of their families to the class. We saw what toys they had, a stock now in need of replenishment.

THE CLASS PURPOSE ARISES

Upon our return the children showed an earnest desire to contribute in some way to the Christmas joy of their own brothers and sisters who lived in the nursery. Some of the outsiders (who did not live at the Home) wished to contribute to other little ones they saw there. It was finally suggested by one of the children that our class could make toys for all the 28 children in that department. This idea was discussed and later accepted by the class.

Various types of toys were suggested, with no particular plan in mind. Some attractive pictures of Goldilocks and the Three Bears led one boy to suggest that we make toys to represent the characters in that story. Then books of interest to nursery children were perused to find other ideas for toys.

This furnished strong motivation for intensive reading of many easy stories. An older girl read aloud some stories to her little sister to see which ones she enjoyed most. Soon several children were asking to read aloud to the first-grade class to see what stories and characters pleased them most. This desire motivated much needed practice in oral reading.

PLANNING IS BEGUN

The following questions arose in deciding what toys were to be made and how to make them:

What are the main characters in this story?
Would they be interesting to little children? Why?
What should be the appearance of the doll representing each character? (Size, sex, apparent age, dress, facial expression, and distinguishing characteristics were all needed to answer this question.)

This led to much interpretative reading, through which a foundation was laid for improvement in many reading skills which these children needed. When the period of exploration was over the group as a whole was ready to make definite plans. Since planning was one type of thinking in which these children were deficient, every opportunity was given them to engage in it. Each child contributed his suggestions, which were written on the board with the initials of the contributor. These were discussed and the plans most acceptable to the class were written in more permanent form, to be enlarged upon or improved as experience dictated. The first general plans read as follows:

Our plans for the nursery Christmas party

I. Make toys for the children. Each toy will stand for a character in a favorite story.
II. Give a party for these children when we present their toys.
(*a*) Have a Christmas tree and Mr. and Mrs. Santa Claus.
(*b*) Have something for our guests to eat.

Several English lessons were given over to discussion of detailed plans to carry out the two main ideas, the making of the toys and the giving of the party. More detailed plans were made in chart form, the class contributing ideas gained from reading books on toy making. Such a chart as the following resulted:

How to make the toy

1. Choose the toy to be made.
2. Write out description of toy.
3. Decide on size and materials.
4. Make or find pattern for toy.
5. Finish according to special directions.
6. Label toy for child who is to receive it.

The chart given below was made to record individual responsibilities and achievements. It was filled out as work was completed.

Name of story	Character or article to be made	Maker of toy	Date		Remarks
			Begun—	Finished—	
The Three Bears	Papa Bear	Louis	Dec. 11	Dec. 18	Louis made his own pattern.
	Mama Bear	Helen	Dec. 9	Dec 17	Helen learned to use sewing machine
	Baby Bear	Grace	Dec. 10	Dec. 17	Grace embroidered the eyes, nose, and mouth
	Goldilocks	Ruth	Dec. 10	Dec. 20	Ruth dyed the wool for the hair.
	Chairs	Robert	Dec. 8	Dec. 21	Robert made cushions for his chair.
	Beds	John and Everett.	Dec. 8	Dec. 21	The boys made their own bedclothes.
	Table	Ed	Dec. 14	Dec. 21	Helen showed Ed how to make the tablecloth
	Bowls	Joe and Mary.	Dec. 18	Dec 21	Joe made the bowls; Mary painted them.
Chicken Little, etc.	Hen Pen, etc.	Harry, etc.	Dec. 11	Dec. 18	Harry used real feathers for the tail.

CARRYING OUT PLANS

The toys were made of materials furnished by the practical arts department. A surprising amount of ingenuity and initiative was called forth in making the articles planned. Each child kept a simple record of directions to use if he cared to repeat the process at home. For three weeks the classroom was a busy workshop; a spirit of cooperation and unselfish effort gradually replaced the thoughtlessness which formerly characterized the group. Many of the workers were clumsy and unskilled in the use of tools, so a high degree of perfection was not sought, but some toys were quite well made, and all were bright and attractive enough to please the little guests. During the process of making, the stories were read and reread to check certain details in the appearance of each character or article. Directions in various books on toymaking were read over and over to gain a clearer understanding of some difficult part of the process. Books proved their value to these interested toymakers in attaining their desired goals.

When the actual work of construction was well under way, we turned our attention to the plans for the Christmas party. Since entertaining a group of little guests was a new experience to the class, it called forth such puzzling questions as the following:

1. How shall we invite them?
2. Where shall the party be?
3. What shall we do to give them a good time?

Again the need for careful planning arose. These children who a month ago considered it fun to tease a small child on the playground now busied themselves with such plans as:

1. How to write the invitations.
2. How to plan our entertainment (tree, gifts, stories).
3. How to receive guests.
4. Introducing matrons and guests to our principal.
5. Responsibilities of each member of class for the comfort and enjoyment of one small visitor.
6. Bidding guests goodbye.

As their interest in the ordinary courtesies of life increased, their attitudes toward one another changed, until by the time the work of planning was over it was difficult to believe that this was the same group that had been so unsocial. A written chart of all courtesies heard in the room was kept from day to day. Children unconsciously vied with one another to see which could become the most hospitable host to his small guests.

The party was arranged for Thursday. By Tuesday everything was ready—the toys finished, the tree decorated with simple, home-made decorations, tiny popcorn men ready for each child, plans for the welcoming and entertaining of the visitors completed. Wednesday was spent in discussing last-moment details to be sure no misunderstandings would mar the pleasure of the event. At this time we checked our plans item by item to see if everything had been carefully carried out. A feeling of satisfaction and anticipation was apparent when one plan after another was checked as completed.

The afternoon for the party found all in readiness, eager to share the fun of the day with the children from the nursery. All arrived dressed in their holiday apparel. The party was a real success, the hosts showing great pride in their handiwork

and in their ability to entertain the little tots from the Home. The little guests were pleased with their toys around which the respective stories had been woven by the best story tellers of the group as Mr and Mrs. Santa Claus presented them. As the nursery tots departed with their toys and popcorn men at the end of a happy hour, I am sure that the senior special class was by far the happier group of the two. Their faces fairly beamed with pride and satisfaction at the success of their undertaking.

It was unneccessary for the teacher to ask for any formal judging of their attempts. They freely discussed the pleasure of the little ones, commenting on all phases of their first school party. Such remarks as "Did you see Billy's eyes shine when Santa gave him the Papa Bear?" or "Helen says she's going to take Chicken Little to bed every night!" were evidence enough that these problem children were impressionable material if one had patience enough to find their interests and to develop them on the needed level of ability no matter how low in the academic scale that might be.

A few weeks after Christmas plans for Valentine's Day were suggested. Only one idea seemed to prevail—to give a Valentine party for little children, this time for those in grade 1. This brought about a more definite judgment of our Christmas party. In order to impress on these children the growths they had made we listed the following items on charts which they themselves could now read, understand, and appreciate:

Growths in our class during December

GROWTHS IN OUR BEHAVIOR

1. We became more polite.
2. We became more thoughtful of younger children.
3. We learned what good care the Home gives our little brothers and sisters and ourselves.
4. We learned to work together nicely.
5. We learned to be pleasant hosts.
6. We learned to plan carefully.
7. We learned to follow directions.
8. We know we can do things well if we try.
9. We want to give another party soon.

GROWTHS IN READING

1. We improved in oral reading.
2. We can find information more quickly.
3. We understand many new words.
4. We can understand directions better.
5. We like to use books to help us carry out our plans.
6. We must read correctly if our work is to be right.
7. We learned to tell the stories we read.
8. We know how to find the characters in a story.
9. We know how to find what happened to them.

GROWTHS IN ENGLISH

1. We can give our ideas more easily now.
2. We like to talk about our plans.
3. We learned polite ways to do things.
4. We know many polite ways to say things.
5. We can tell stories well.
6. We can write invitations.
7. We can write sentences telling directions for making toys.
8. We want to write our own verses for our valentines.

There were other growths in art, music, arithmetic, and in the use of tools; but to me, their teacher, the growth in appreciations and attitudes far outweighed all other results of this activity, as they were so apparent through the rest of the year. A careless, unsocial group started on its way to become a courteous, thoughtful class, anxious to achieve and interested in the welfare of other members of their school and home.

VI. A PROJECT IN MANICURING

By Florence Meabrod, *Detroit, Mich.*

[Note —To interest a girl in her personal appearance is not difficult. Here is one way of using this interest as a means for developing certain academic skills as well as for introducing possibilities of trade training.]

In an effort to give practical experience to a class of special B girls and to present a situation which might interest them, it seemed feasible to use a manicuring project.

Type of group: Seventy-five special B girls whose I.Q.'s ranged from 60 to 70, with chronological ages between 13 and 16 years.

Type of school: Regular elementary school.

Type of environment: Homes range from poor to fair.

Objectives:

1. Immediate:
   - (*a*) To motivate a pride in well-kept nails.
   - (*b*) To check nail biting.
   - (*c*) To correlate work with arithmetic, English, and science.
2. Ultimate:
   - (*a*) To introduce a practical trade within limits of special B girls.
   - (*b*) To give a general knowledge of the sources and uses of various products.

Time:

1. One month of consecutive work, 1 hour per day.
2. Then once a week.
3. As a special favor—on request.

General procedure: For a time during the "health-inspection" period, care of the finger nails was stressed. "Helen's were well kept." "How did she do it?" "An older sister gave manicures." "Would you like to give one another manicures?" Of course, they would. We were on the right track. The cooperation of a manicurist was secured. She

came to the school for a part of one day. We made a visit to a beauty parlor for further information.

After some inspection, two girls who were anxious to have manicures were chosen. Before the final choice was made, however, 1 or 2 possible candidates were told that their nails were too short due to nail-biting. The manicurist impressed upon them that until their nails grew, no manicuring could be done. The girls were intensely interested and paid close attention to the procedure, which was as follows:

1. File finger nails on the right hand—file in one direction.
2. Soak the right hand in warm soapy water.
3. File nails on the left hand.
4. Scrub the nails on right hand.
5. Soak the left hand.
6. Push back the cuticle of nails of right hand with an orange stick so half moons will show.
7. Scrub the left hand.
8. Push back the cuticle of nails of left hand.
9. Wash and rinse.
10. Emery.
11. Polish.
12. Use lotion to soften hands.

Materials needed:

Small nail brushes.
Finger-nail files.
Emery.
Soap.
Pumice stone.
Nail polish.
Towels (made by girls in sewing class).
Bowls and water (borrowed from kitchen).
Poster showing correct procedure.

Telephone: Through the courtesy of the telephone company, a large dial card and telephone to teach use of dial phone were secured. Directions for use of the telephone and booklets on "Story of Telephone" were also used.

Appointment book.
Toy money.

Detailed procedure: The first requisite was a manager whose duty was to hire and discharge girls and to inspect the work of the manicurists. A desk girl was appointed. Her duties, after discussion, were found to be multiple. She kept an appointment book, answered phone calls, greeted customers, introduced them to operators and helped them with wraps.

Customers made appointments by telephone and in person, conversed with operators and paid the cashier. Operators applied for work and gave manicures, following the manicure procedure. The cashier received the money and kept an account for each girl. The supply girls took care of materials.

Correlated subjects:

1. Spelling.—One of the girls kept a list of all new words. These were included in their spelling lessons. Following are some of the words learned:

manicure	telephone	soap
cuticle	nail	towels
file	polish	day of week
emery	brushes	proper names
orange stick		

2. Arithmetic.—Keeping appointment book, making change, using toy money, telling time. The girls took turns acting as desk girl, operators, supply girls, and customers.

3. English.—Much conversation took place concerning the following topics:

(*a*) Correct telephone habits: Courtesy, brevity, promptness, efficient service.

(*b*) How to use the dial telephone.

(*c*) Pleasant greeting to customers and courtesies extended.

A letter was written to the telephone company asking them to lend a telephone and other helpful material. Upon receipt of these a letter of thanks was written to the telephone company.

4 Science.—While not immediately connected with the project, our class work in science took its origin from a study of the mechanism and use of the telephone. Brief consideration was given to the chief sources and uses of each of the following: Copper, cotton, silk, gold, silver, rubber, lead, paper, tin, nickel, iron, zinc, coal, aluminum, mica, asphalt, and wool. This study was carried on in the following manner: The girls appointed a chairman, groups were formed, and oral and written reports were given. In some cases, groups prepared booklets about their subject, others prepared product maps. Two girls volunteered to go to the public library which was near their home and bring reference books for the various groups. The class had access to the

school library where frequent conferences were held. At the close of the study a series of questions was formulated by the group, which served as a test on the actual facts they felt they should have learned.

It was gratifying to note the number (18) of nail biters who had overcome the habit during this activity. There was a noticeable improvement in general personal appearance among the entire group. The girls gained in self-confidence and self-respect. As one girl expressed it, "I feel just like I'm grown up now. I always wanted to know how to use the telephone and do things like grown people. I don't believe I'd be afraid to go and ask for a job now."

VII. BEAUTIFYING THE SCHOOLROOM

By THELMA LANGDON WELLER, *Niagara Falls, N.Y.*

[NOTE.—The teacher who finds herself assigned to a classroom that is bare and unattractive will find in this account some suggestions for improving its appearance and at the same time for developing in the children desirable attitudes toward their own homes.]

I have 20 children in my class, 7 boys and 13 girls. The chronological ages range from 9–4 to 13–2, the mental ages from 4–8 to 9–0, and the I.Q. range is from 58 to 79. The group is made up of children of foreign parentage, including 8 Poles, 7 Italians, 3 Canadians, and 1 Croatian. There is also 1 Negro in the class. The homes from which these children come are very ordinary and even very poor. Three families are receiving aid from the city, and 8 have little or no income. Five homes boast a radio, 3 an automobile, 2 a telephone, 10 a bathroom, and 5 families either own or are buying a home. An interesting fact about the class is that there are 8 children who now have, or have had, a brother or sister in the special class.

NIAGARA STREET SCHOOL

The school in which this class is located is in the foreign section of the city. There are approximately 1,300 children and 48 teachers, including the principal and vice principal. There are 3 special classes in the building. The other two classes are made up of older children, who are chronologically 13 years old and over, with the boys in one class and the girls in the other. All our special-class children enjoy equal privileges with the other children in school. Each week the children have time allotted for swimming, gymnasium, manual training, domestic science, and drawing. A half hour a week is given to the library. Each child selects a book, under supervision, and enjoys it in his own way. There is a nurse

in attendance 4 days a week. She inspects the children in each room monthly. The dental hygienist cleans the children's teeth once a year and gives two instructive talks.

While the class of which I write was being organized and adjustment was being made, we had very little with which to work. During this period our aim was to create a homelike atmosphere in school and to give the children training which would fit them for the needs of life.

DRESSING UP THE WINDOWS

Our first activity was to dress up the windows. We made curtains from unbleached muslin which cost 10 cents a yard. In a sewing lesson, the girls cut and hemmed them by hand. We included the boys in the cutting and measuring of the curtains. We learned the inch, foot, and yard in the arithmetic class and made oaktag rules with the 12 inches marked. After the curtains were properly made, a nursery rhyme character was stenciled at the bottom of each one. At the top the children drew circles to represent balloons. We spent some time discussing the color combinations to use and finally decided to use all shades in some way. The pictures were crayoned with school crayolas. Each child took part in the activity. After the curtains were colored, the girls pressed them on the wrong side with a hot iron. The boys made the rods for the curtains to hang upon. We have had several lessons in laundering and after 10 washings the curtains still retain their gay, original colors.

As supplementary work during this project we learned nursery rhymes and songs for memory work, rhythm, and music. In manual training we cut out articles and used them in several ways. Among some of the articles made were doorstops, jointed characters of nursery-rhyme fame, book ends, and shade pulls. These articles were used as gifts for the homes and decorative purposes in school. For free expression in form and color, we made scrapbooks of drawings. These were all original and depicted the rhymes in various ways. For seatwork, the children made puzzles by cutting up pictures pasted on oaktag.

DECORATING TABLES AND CUPBOARDS

Our second project in beautifying our schoolroom was to make our tables and cupboards more attractive. We cut pieces of brown burlap for our two tables. Each end was fringed by the older girls. Then, in a drawing lesson, we drew a border of flowers on each end. These were colored with bright crayons and outlined in black. From this we became interested in flowers and had several lessons on the different kinds of flowers, their life, growth, and use. Immediately the children brought plants and slips from home. We have a geranium, a strawberry plant, a foliage plant, a cactus, babytears, and several vines. Some of them were rooted in school. Our crocks and jars now needed decorating, so we spent some time discussing color combinations. Several jars we painted white and then dipped them into mixed enamel colors floating on water. Other jars were painted in one color with gold or silver sapolin blown on while the jar was wet. Still other jars were covered with gay linings from envelopes. The crocks were enameled a neutral color. Since the children had brought so many plants, I brought two goldfish for them. Each month some child takes over the entire care of the plants and fish. The children enjoy this responsibility and learn to care for plant life and also to protect it. We have many discussions about the goldfish and know their habits and mode of living.

MAKING NEW CUPBOARDS

We soon decided that we needed more cupboards. The boys brought two orange crates which we nailed together, one end to the other, to resemble a pier cabinet. It was stained brown and trimmed with orange. One of the girls wove a bright-colored yarn scarf on a tyndall loom for the top. A boy made a bowl-shaped basket which we try to keep filled with flowers. The cabinet is within easy reach of every child and makes a fine place for games, puzzles, picture books, and logs for building. This project gave us an excellent opportunity to study the orange industry. We took up growth and cost of the fruit and its benefits to mankind. When the pier cabinet was finished, one of the boys made a small corner cupboard for the opposite corner. It is painted orange and displays two fine clay pieces made by the children.

DECORATING THE WALLS

Some one soon suggested that the walls and bulletin board needed decorating. We planned to use the bulletin board for colored pictures whose scenes depicted certain months. For instance, during March, we used Dutch pictures. Each month the pictures are mounted alike on colored construction paper. Two children take charge of the bulletin board every month. In one corner of the board we keep a calender which is marked daily according to the weather. We also note birthdays on it. In manual training the boys cut pieces of basswood 8 inches long and 5 inches wide. These were painted black or brown. The girls then cut and pasted green grass and stems on the board. Colored surprise cuts made gay flowers for the stems. Leaves of green were added last. A coat of shellac kept the paper clean and made a lovely wall placque for some places between the windows.

FITTING UP A BEDROOM

The last project was a doll's bedroom made by the whole class at very little expense. This activity was very closely related to home life. A doll's high chair and a doll were donated by one of the children. Soon after that one of the boys said he could make a doll bed. We made a pattern from paper first, and then cut it from wood with a coping saw. A small doll's cradle was made from the wood left from the bed. The highchair, bed, and cradle were enameled white and decorated with colored flowers. We made a dressing table by nailing two chalk boxes together, side by side. A piece of flowered cloth was ruffled and tacked over the box. A bench, similarly covered, was made of the box covers. I bought a small mirror to hang over the dressing table. The girls had many lessons in sewing, making mattresses, pillows, cases, sheets, blankets, and spreads. The boys made yarn rugs from spool knitting and on tyndall looms. The girls enjoy putting the dolls to bed every afternoon and dressing them in the morning. Through this activity we also have training in laundering, cleanliness, and health.

RESULTS

The results of this work are very gratifying. When I call at the children's homes, they are proud to show the cupboards they have made, the jars decorated, and the pictures they have constructed. One girl, with the help of her parents, made a dressing table for her room. The children have taken gifts home at various times, which the parents seem proud to display. Among these gifts are flower-pot mats made from inner tubes, stuffed animals made also of inner tubes, pot holders, enameled jars, and boxes. Furthermore, I notice the child's great hesitancy when the rooms are disorderly and the family unkempt. They all make apologies as do some parents, when things are not clean and neat.

VIII. TOY TELEPHONES

By Annie Dolman Inskeep, *Berkeley, Calif.*

[Note —"What's the use of learning the alphabet?" is a query that every teacher needs to answer for herself and for her children. To the mentally retarded child the use of rote memory is of greater importance than to children of normal reasoning ability. But to none of them does the alphabet stand for anything except as it is used in practical everyday situations. In the activity here described the telephone is introduced as a means of lending interest to the tasks that confront the child in these daily problems.]

"What's the use of learning the alphabet?" droned John.

"It's too hard anyway", piped up Mary.

The hand-waver in the backseat declared he could say his letters in 1 minute and confided to the room that Granddad had licked him every day until he could.

So it is in many a special class when the teacher attempts to enlarge and make more accurate language concepts by having a word looked up in the dictionary. This one, by courtesy called an adjustment class, consisted of 18 boys and girls whose I.Q.'s ranged from 61 to 105. (This last one was there temporarily because he had an almost complete reading disability.) The majority tested between 65 and 75 and their chronological ages ranged from 11 to 13 years. It was the senior class of its type in an elementary school of some 600 pupils and attempted to cover the minimum essentials of the fourth, fifth, and sixth grades. Often, though, it seemed as if the emphasis turned out to be on the minimum rather than on the essentials.

The day on which the alphabet fell by the wayside the teacher went home and carefully thought over the values arising out of knowing the alphabet. Then suddenly the activity that would not only fix the alphabet but would also help the children to learn to spell, to copy accurately, and would give them almost unlimited oral language work in socialized situations sprang forth full grown like Athene from the brain of Zeus.

The children of this adjustment class, though some of them came from distant parts of the city, were practically

all from very modest homes or low-rent apartment houses. Their fathers, when employed, were carpenters, plasterers, truck drivers, small store clerks, etc. The mothers, when the families were not too large, often worked part of the day. In the majority of the homes there were telephones or use could be made of that of a neighbor. So why not have a telephone activity?

The next morning the teacher had a telephone directory and a copy of the simplified dictionary used in the fifth and sixth grades placed on the table devoted to "something new each day." Someone discovered that the names in the directory were in the same order as in the dictionary. Soon various children wanted to look up their own or a friend's name in the telephone book. It developed, as will often be found, that these children by themselves seldom if ever complete the whole process of telephoning. Perhaps they could not find the number. Often, if it were given to them, they were so inhibited by fears or complexes that they did not know how to address central, or what to say on getting the party called for.

Would they like to learn how to telephone? Much enthusiasm and the attitude that makes a real learning situation appeared on every side. Two things to start with were necessary: telephone directories and toy telephones. Children offered to get discarded books from home, to ask neighbors for them, and one boy, whose father worked for the telephone company, secured several.

About 12 of the 18 children in the group participated in securing enough telephone directories so that each child had one. The whole group took part in discussions about why new telephone directories were issued, what became of old ones, the hygiene of clean books, etc. These questions arose for the most part in the weekly "free question period." The teacher and the children together read the "General Information for the Guidance of Telephone Users."

Toy telephones were made by the boys of the class during their shop-work periods. A wooden wheel of about 4 inches in diameter, such as was supplied for little wagons, formed the base of the stand telephone.[1] A 10-inch piece of three quarter-inch dowel was fastened to the center of the wheel.

[1] Where the dial system is used the dialing numbers can be pasted on the wheel.

A 2-inch piece of the same kind of dowel was fastened at the top of the first piece so as to form a right angle. On this was placed as a mouthpiece a wooden core such as comes in large rolls of wrapping paper. Another core, as a receiver, was hung by a cord and screw-eye to the side of the upright dowel.[2] The telephones were painted black When finished every child had his own (for sanitary reasons), and there was an extra one, with a paper cover over the mouthpiece, for "central."

While the telephones were being made, the class looked up in the telephone directories names of their own choosing and wrote the names, addresses, and telephone numbers in their language blank books. Sometimes at their own request this was done under time pressure. This work became an immediate incentive to know the alphabet in a more usable form; to know what letter came before or after a certain letter, how to judge about where to open the telephone directory or dictionary so as to be as near as possible to the letter wanted and not waste time in fumbling. The children were led to consider why certain names in the directory and certain words in the dictionary were at the top of each page. A game was made of finding out who could open either the telephone book or the dictionary nearest to, for example, the t's. Their efforts in looking up some well-known store or other agency were timed by a stop watch and the results noted on their graph cards. Each one was encouraged to improve his own record.

Then arose some wonderfully fine motivated situations. One child would act as "central", someone else would be the telephone girl in the health center. Other children in the class would telephone for information concerning such appointments as they frequently really had with the dentist or nurse at the center. Sometimes the lesson setting took the form of a large department store, children acting as "central", the store exchange operator, and the special department clerk. The members of the class began voluntarily to study prices in window displays, to ask at home about the cost of food so as to be able to order the correct

[2] Each child in the class had written a letter to a large neighborhood laundry asking for the wooden cores. The children asked if they might choose the best letter by secret ballot. They also chose a boy who knew one of the employees of the laundry to deliver the letter which received the most votes.

amount of what the family really used. As Christmas approached it was surprising how much knowledge these children displayed of current prices when inquiring about or ordering holiday goods over their toy telephones.

At other times some child called up each member of the class inviting the playmate to a party he was going to give. Again the local movie was called up to find out what show was on. The railroad depot was asked when a certain train bearing friends was expected in. Police were called, fire alarms were sent in correctly via toyland phones. Telegrams were sent by telephone. The children enjoyed making 10 spaces on paper and writing in 10 or fewer words a situation they imagined which made it necessary to send a telegram. Long-distance conversations were carried on. These were carefully timed and the cost computed.

Throughout these and other socialized situations correct telephone procedures were always insisted upon by the children themselves. Central said "Number, please", the child telephoning talked distinctly, repeated without show of feeling when requested to or when a wrong number was obtained. In ordering from a store the child learned not to say first thing, "I want", but "this is Mrs. - - , - - Street" (his mother's name and address), and then to give his order. Children who were at first afraid to talk into a telephone became oriented to terse, polite, accurate telephone procedures. Of course looking up words in the dictionary or topics in the children's encyclopedias became a fascinating game rather than haphazard drudgery.

Probably all teachers of special classes will agree that oral language is of paramount importance to special-class children. If they can explain their needs, ask for their wants, express themselves concisely and accurately, they are traveling one of the roads to economic success.

This activity utilizes situations that will arise in the lives of most children and includes among its probable outcomes: Adjustment to social and business situations, some oral and written language facility; accurate copying of names, number, and other material; some interest in prices of common commodities; and such valuable attitudes as attention, patience, and poise.

IX. HOW WE SEND AND RECEIVE MESSAGES

By Gladys Norziger Fager, *Pasadena, Calif.*

[Note.—A study of communication is exceedingly rich in possibilities for developing social concepts. Mentally retarded children need every possible experience which will help to put them in touch with the lives of other people. The account here given tells how this was done in one particular situation.]

The study on communication was chosen by a special study group in a Pasadena elementary school. There were 15 boys and 3 girls in the class, ranging in ages from 10 to 15 with I.Q's between 65 and 80. The school had an enrollment of approximately 800 and included all grades from kindergarten through the sixth. There were 2 special study rooms—a primary class for children below 10 years of age and an elementary group for the older children.

The community is composed of homes of the lower middle class. The pupils in this special group were generally from poor homes. In most cases the father and mother were both employed and there was little time to visit school, but they had a friendly, cooperative attitude toward the work.

With the support of the principal, the special-class supervisor, and the teachers in the building, no discrimination was made between the children of the special class and others enrolled in the school. They took part in the school activities—athletics, dramatics, and student government. They visited other special classes in the city where experimental work was being done with normal and with gifted children and they felt as though they were a part of an interesting experiment.

An activity period in this classroom was a busy scene with children moving about freely, each intent on his task. The following episodes are typical:

John stood perched on a box at a window where he had been inspecting a wire.

"Well, it's not the aerial!"

"I can't understand why we couldn't even get a squeal this morning. The radio had been working so much better since we lengthened the aerial."

The door to the outside corridor was flung open and Louis entered exclaiming, "I found it. Someone swiped our ground again but I attached a new wire to a faucet hidden by some shrubs. They won't find it now. Come on; let's try the radio."

In one corner of the room a colored boy and two white children were preparing a little play about Samuel Morse. A rather heated debate was ensuing.

"No; that's not right."

One boy produced a book. "See; the message he sent was, 'A patient waiter is no loser.'" The argument was settled and the youthful Samuel Morse was intently clicking the message on a telegraph set of his own making.

At a small sewing machine a girl sat repairing the strap to her work apron. Another girl was seeking help from the teacher on a puzzling arithmetic problem. Some of the children sat in groups at large tables while others preferred small individual tables. The room was informally furnished with movable tables, chairs, and work benches. Here teacher and pupils worked together as copartners.

We practically stumbled on the subject for study during the first morning of the new term. The children were gathered in a group recalling experiences of the year before in the study of transportation. They were discussing automobiles.

"Say, I saw a police car yesterday that had a radio in it and the policeman was listening to a message as he drove along."

"Why, just the other day there was a bank hold-up on Broad Street. They broadcast a description of the men and car to the police cars, and they caught the robbers before they had driven four blocks."

"The police cars in all the big cities are going to have radios now so that they can get messages from police headquarters quickly."

TEACHER.—"Would you like to find out about the different ways we have of sending messages?"

This met with an enthusiastic reception and such exclamations as these were heard:

"Then we'll learn about telegraphs!"

"I know a fellow who has a telegraph set at home."

"My father works for the telephone company. We could go there and see lots of things."

THE OUTLINE OF WORK

The following is a brief outline of the subject matter as it developed during the year's work:

PART I.—How do we send and receive messages today?

1. Four systems using electricity:
   - (*a*) Telegraph.
   - (*b*) Submarine cable.
   - (*c*) Telephone.
   - (*d*) Radio (wireless).
2. The postal system—sending mail by train, boat, and airplane.
3. Signals:
   - (*a*) Semaphore system.
   - (*b*) Code flags.
   - (*c*) Wigwagging.
   - (*d*) Heliographs.
   - (*e*) Submarine signals.
   - (*f*) Bells and whistles.

PART II.—How were messages sent and received in the past?

1. Beacon lights and signal fires.
2. The runner.
3. African drum.
4. Homing pigeon
5. Stage coach.
6. Pony express.
7. Famous rides.

Throughout the study the teacher kept the following objectives in mind:

1. HEALTH:
   - (*a*) Physical and mental freedom promoted by informal work and room arrangement and by a friendly spirit as teacher and pupil worked together.
   - (*b*) Good mental health encouraged by setting noncompetitive individual standards.
   - (*c*) Better muscular coordination developed through manual activities.
   - (*d*) Opportunity for complete relaxation given in a daily rest period.

2. Character Building or Training for Citizenship:
   (*a*) Responsibility, dependability, and initiative stimulated by greater mental and physical freedom.
   (*b*) Personal satisfaction attained in accomplishing tasks which met individual interests and abilities.
   (*c*) Perseverance inspired by reading of the struggles and discouragements of successful inventors.
   (*d*) Increased interest aroused in other nations and peoples.
   (*e*) Right attitudes toward public services formed by building up a social consciousness.
3. Knowledge and Appreciation of Subject Matter:
   (*a*) Importance of inventions in modern life.
   (*b*) Realization of the smallness of the world as a result of modern methods of communication.
   (*c*) Pleasure derived from the stories of the romance of communication.
   (*d*) Improvement in tool subjects—mechanics of reading, English, spelling, arithmetic, and writing.

ELECTRICITY AND MAGNETS

Each morning the class met in a group to discuss problems, to outline plans of work, and to give reports on research work (elementary, of course). They decided in one of their discussion groups that they would first take up the study of messages sent by electricity. The teacher wrote on the blackboard some experiments dealing with electricity. The children eagerly tried these and added others.

Someone said, "Why, electricity works like a magnet, doesn't it?"

"I can bring a magnet from home."

For the next few days excitement was keen as they worked simple experiments with magnets and electricity.

They kept written accounts of their experiments and research work in individual record books. Later they compiled a class yearbook from these articles.

A 10-year-old, I.Q. 69, wrote:

"We tried to see if the magnet would pick up nails. It worked O.K. We tried to pick up other things. We weighed the things. They weighed a half pound. We like to play with magnets."

Edward, 11 years old with an I.Q. of 74, wrote on How to Make an Electromagnet, as follows:

"We got a spike and wrapped the wire around the spike. We attached one end of the wire to the center terminal of

the battery and the other end to the outside terminal. The spike picked up a big pile of nails. We took the wire off of the battery and all the nails dropped. The spike was a magnet when it was attached to the battery."

TELEGRAPHS AND CABLES

The children constructed simple telegraph sets. Wires were stretched in all directions connecting sending and receiving instruments. Efforts were made to send the Morse code, and some in the group worked out simple codes of their own. When sets became quite numerous, it was decided that a committee should regulate communication and determine the best hours for sending messages, so that lines should be closed part of the time.

Billy writes about an important event, "A Real Telegram":

"We received a telegram. It was from Miss Brown. We were going out for physical education and a messenger boy was coming up the stairs. When we came in the room we found we had a telegram. It was the first one we had ever received. We knew it had come through the new kind of a telegraph machine because the message was pasted on."

Louis visited the telegraph office and brought back a sectional model of a submarine cable. Questions like the following were raised:

What are the materials used in the cable?
From where do they come?
What is the purpose of each layer of material?
Where are cables laid?
How are cables laid and repaired?

The class wrote a play about the laying of the Atlantic cable. This included many details about the struggles and ultimate success of Cyrus Field. A large picture map was made showing the sections of the cable, materials used, countries and people involved. There was much letter-writing to secure the information.

THE TELEPHONE

One day one of the boys announced that his father would make arrangements for the class to visit the branch telephone office if they wanted to go. The class came back from the trip eager to talk about what they had seen.

"I liked to watch the operators at the long-distance switchboard. I saw little green lights. Someone was making a telephone call. When the lights went on, the operator pushed a little plug into the switchboard to connect the person calling with the one he wanted to speak to."

"Can an operator listen to your conversation?"

"They should not. There is a fine for doing it."

"It isn't right for us to listen in when another person is on our line."

"No; and people shouldn't talk so long over the telephone when it isn't necessary. Some one might need the line badly."

The class thought it desirable to know the telephone number of the police and fire departments. Several days later one of the boys had a chance to make his knowledge practical. He reported: "Last night I was making a kite. A large fire was in back of my house. I ran to the telephone and called the fire department. They came and put out the fire."

"Why can't we make a still film about the telephone like the one we made last year on transportation?"

The children had been saving from the newspapers colored historical pictures about the telephone. Some insisted that the colored pictures could be transferred to the roll of paper for the film. They brought wax and for several days tried to transfer them by rubbing wax on the reverse side. The children were not satisfied with the results and finally one of the girls said, "Let's draw our own pictures." When the film was finished on architect's vellum, the children never tired of seeing it projected.

A moving-picture film on Communication loaned by the General Electric Co. was greatly enjoyed, although parts of the film were too technical for the group.

THE RADIO

John, our radio fan, entered the room one morning carrying a "C" battery and several "B" batteries. "These are for our radio", he announced. The next day a loud speaker was brought by another member. Parts of an old set were donated by the teacher. Several children brought tubes to try out. One boy brought a very good crystal detector. The boys admired it but explained that crystals were not used in sets of this kind. They decided then that they would make a crystal set later.

Imagine the joy when the radio first operated!

"May we ask Miss Martin's room in to hear it?"

"I'm going to ask Mr. Smith to come in for the Standard Symphony Hour."

"Let's write to Miss Brown and tell her about it. Maybe she would like to hear it."

"I've brought the radio news. We can look it over so we don't miss anything that's good."

The radio was one of the most interesting activities of the year. After a visit to the local broadcasting station, one corner of the classroom was transformed into a studio with an imitation microphone. Groups of the children broadcast weekly programs which took the nature of a review of the subject matter they had covered during the week.

THE POSTAL SYSTEM

Many activities grew out of the study of the postal system, some of which were:

1. Visiting the post office, where the postmaster showed how the letters were sorted into pigeonholes.
2. Collecting stamps.
3. Writing and addressing letters correctly.
4. Sending money orders.
5. Shop work—making models of airplanes, trains, and boats.
6. Mapping air-mail routes.
7. Weighing and figuring costs in sending packages to different places.
8. Comparing length of time required in using different methods of sending mail.

When the Western Air Express opened its first transcontinental air-mail route one of the boys remarked, "I wish I could have one of the stamps from this trip for my collection."

"Let's send a letter to ourselves and see what happens."

The letter was sent and later the class received an envelope addressed in a familiar handwriting. They were jubilant when they saw the large seal the letter bore. It was treasured and safely preserved in one of the stamp collections.

SOME COMPOSITIONS

Several articles written for the class yearbook are given below to show how this unit brought out an appreciation of the usefulness of the inventions in ordinary life.

HOW AN OCEAN CABLE IS IMPORTANT

"If you never send a message or receive one, they are still important because you get all the news. An ocean cable is important. If you were to get the news by boat it would be over a week old, and the news would not be any good. So you see it would be hard to get along without a cable."—Written by J. B.; C.A. 15; I.Q. 70.

THE TELEPHONE IS OUR BEST SERVANT

"The telephone can be used in case of fire. If you do not know the number of the Fire Department call an operator and say 'Fire Department, please.' If there is someone hurt in an automobile accident, you can call operator and say 'Emergency' and the ambulance will be there in a minute."—Written by J. L.; C.A. 12; I.Q. 80.

WHY WIRELESS IS SO IMPORTANT

"A long time ago during the World War, the enemy destroyed the cables used in sending messages. Marconi had invented the wireless and since the enemy could not destroy it, the wireless came into use more than ever."—Written by L. C.; C.A. 13; I.Q. 75.

INDIVIDUAL PROGRESS

Some significant values of this unit may be indicated through the progress made by the different individuals.

L. C. was a poor reader, yet because of his interest in the subject matter involved in this study he would work untiringly to prepare reports for the class. Whereas previously he had been lacking in dependability, this became one of his stronger traits as he realized the group was depending on him when he volunteered to work on a subject.

J. B. found spelling very difficult; consequently he seldom expressed himself in writing. It was a task to write even a few lines. By the end of the term he was writing letters for information and answering advertisements not only for the benefit of the class study but on other subjects which he found of interest. He was intensely interested in radio, telegraphy, experiments with electricity, and woodwork. He had some special ability along these lines and his initiative

was developed as he took the lead in gathering information from outside sources. His knowledge of arithmetic was scant, he could not retain the multiplication tables, yet he learned to use them. He made drawings to scale and was very accurate and precise in his woodwork.

When G. S. entered the room from another school, he was so self-conscious that he never ventured to express himself before a group. Due to the informality of the room and the freedom allowed in pursuing work, he gradually overcame much of this. He learned to enjoy a group discussion. He surprised the class one morning by jumping up as the group was disbanding and saying, "Wait a minute. I haven't had my turn." A feeling of confidence in himself grew, and he was able to accept responsibility for tasks that were increasingly difficult.

D. K. had never liked school. When the children found that she could print unusually well and could easily manipulate the hand-powered sewing machine, she was constantly in demand for certain tasks. Her entire attitude toward school changed.

The twins, A. W. and L. W., had been described by their previous teacher in a regular class as "silent partners." She had never heard their voices, and neither she nor the other children knew them apart. After entering the special class, they were asked to dress differently, a plan which they readily agreed to. They soon had their mother interested and helping out. Their lost identity was regained. When they were allowed to pursue work in which they were interested, they chose very different activities and were both very talkative about the things they were doing. They had been afraid of competition, and when this strain was relieved they began to function normally.

J. L.'s writing was an index to his personality. It was a nervous, jiggly, cramped scrawl. He was so slow that he never got anything written. He responded, though rather slowly, to the informality of the room. With a feeling of ease and relaxation came an ease in writing. His handwriting became large and free. Both his written and oral accounts of activities and experiments became unusually clear and interesting. They were given in great detail.

SOCIAL EXPRESSION

The class was entertained by an experimental group (normal children) in another school. They, in turn, had this experimental group as their guests for one morning. They worked their experiments for the visitors and showed the things they were making. The preparation for this event afforded an opportunity carefully to summarize and evaluate their work. A short play period with organized games followed this program. These experiences helped greatly to strengthen their self-confidence and to eradicate any stigma which is so easily attached to such a class.

The class also demonstrated their work to a group of special class teachers from the city. Other smaller groups were similarly entertained during the term.

When the work of the year was finished, the query "What shall we study about next year?" was frequently heard, an indication that the satisfaction created by this activity was a vital force which would carry forward and mold the attitudes of the children toward the work of the coming year.

X. UNITED STATES MONEY

By Curriculum Committee of the Auxiliary Department,
Kalamazoo, Mich.

[Note.—The knowledge of the value and the use of money constitutes a very practical necessity in the life of every child, be he normal or retarded in his mentality. There is no better way to secure his interest in the subject than through a class activity that will give him the opportunity actually to handle money himself as well as to hear and read about its place in the life of the people.]

The study of United States money is one of particular value to the retarded child, as he gets from it a knowledge which he is not in a position to get incidentally and which functions in life situations. The unit is strong in language and in arithmetic.

Objective.—To learn the value of the various kinds of United States money and the methods used in making it.

Type of group.—This activity was worked out with 18 mentally retarded children ranging in chronological age from 9 to 16, and in I.Q. from 50 to 70. They were divided into three groups as follows:

5 in the upper group (D).
8 in the intermediate group (B-C).
5 in the lower group (A).

Time devoted to the activity.—Three weeks.

Procedure.—Several days had passed since the pupils had completed a unit. There had been several suggestions for new ones, but none which the entire class was willing to accept. We were about to put the matter to a vote when one of the pupils in a group who were reading "The Story of Wampum" said "Why don't we study about money? There's some sense in that." This idea met with the approval of all and was acted upon at once.

Outline.—The following topics were considered:

I. Early mediums of exchange:
   A. Wampum.
   B. Skins.
   C. Birds' scalps.
   D. Fishhooks.
   E. Cattle.
   F. Grains.

II. Metal coins:
   A. Government assay offices.
   B. Government mints.

III. Other currency:
   A. Checks: Personal checks and bank checks.
   B. Drafts.

IV. Sending money by telegram or cable.

Materials used.—The first thing we discovered in this activity was the scarcity of pictures to illustrate our subject. We wrote to the Department of the Treasury at Washington and found that it is no longer permissible to take pictures illustrating the processes by which United States money is made. However, some interesting and helpful publications were sent us from this source and are listed in the bibliography. Other materials collected included coins of the United States and of other countries; paper money of the United States and of other countries; shells used for wampum; small loom for weaving wampum belts. All materials were placed on a table for display. The coins and paper money were arranged in frames under glass and were locked up each night. The coins were also used in games designed to develop sense training.

SUBJECT ACTIVITIES

1. *Spelling.*—From the outset words entirely new to the pupils were introduced. Since they wished to understand them, we started a vocabulary list, to which words were added from time to time. These, together with words frequently misspelled and those with which help was requested, made the basis of our dictation lessons. The following lists show the words used with each group of children, together with the Thorndike frequency index (F.I.) for each word:[1]

[1] According to the frequency ratings given by Thorndike in his "Teacher's Word Book", the figure 1 appearing after a word indicates that with reference to frequency it is included among the *first* thousand words used in life; the figure 2 indicates that the word is included in the *second* thousand words; etc.

Group D

	F.I.		F.I.
Shilling	7	Readily	4
Fortune	2	Difficult	3
Fifty	--	Common	1
Hundred	1	Office	1
Thousand	1	Officer	1
Million	2	Permit	2

Bank	1	Good	1
Dime	4	Funny	3
Penny	2	Face	1
Quarter	1	Nose	1
Hand	1	Eyes	1
Land	1	Mouth	1
Jump	1	Have	1

2. *Reading.* While hunting for material pertinent to our subject, the children of group D found the story of "Jason and the Golden Fleece" and asked to study that. The remainder of their reading was taken from "Lessons in Community and National Life." "Uncle Sam's Secrets" was found to be so full of interesting and worthwhile information that those parts which deal particularly with the coinage of money were rewritten and given to groups D and B-C for informational reading. Group B-C also read the "Golden River." Group A used the Bolenius Primer which contained nearly enough material for the duration of the unit. Short stories composed by the children were placed on the board. This furnished language practice as well as reading. The following is an example of this work.

I made a bank.
Fred and Ruddy made a bank, too.
My bank has a head.
My bank has a nose.
My bank has two eyes.
My bank has a funny face.

3. *Language.*—The work in group D consisted of oral discussions and reproduction of "Uncle Sam's Secrets." Stories were written on the following subjects: "A Visit to a United States Mint"; "A Story of Ancient Times"; "Studying about Money"; and "Substitute for Money."

Group B-C wrote two stories, "The Life of a Penny" and "How I Made My Bank", both written in the first person. In addition to these they composed original rhymes. Each child wrote three or more. Examples are:

If you can tell the time,
I will give you a dime.

I asked my father for a dollar,
To buy myself a nice new collar.

Smokey is a very funny man,
He drives the fire truck with one hand.
He puts his money in the bank
And hears it go, "clink, clank, clank."

Group A made up oral stories which were written on the board and read. Later they were copied by the children.

4. *Arithmetic.*—There is such an abundance of material for this subject that little need be said about it. Since every business transaction involves currency, it only remains to fit the work to individual needs of the pupil. Group D, in addition to those problems in which cost and change were computed, learned to write receipts and checks and to endorse checks. They discussed the various ways by which money could be sent from place to place.

Group B-C received practice in fundamentals, using the dollar and cent signs in each. Group A learned to indicate cents, using the zero and decimal point, and they continued their work with the multiplication tables.

5. *Social science.*—The history of money and the necessity for constant improvement in the monetary systems of this and other countries furnished topics for interesting discussions. Maps were used to locate the assay offices, the mints, and the Bureau of Engraving and Printing. A map of mineral products was used to locate the gold and silver sections of the country. The routes from mines to assay offices and to mints were traced on the political map.

6. *Handwork.*—This unit furnishes little handwork. However, all the children made banks. They received their inspiration for these from the story which group A was reading in the Bolenius Primer, "Riddle, Riddle, Rantum." Powder boxes painted to represent a darky's head were mounted on wooden shoulders attached to a wooden base. A brightly colored shirt and tie added to the effect. A slit in the back completed the bank. Some of the children made dime savers from small boxes, and one boy made a bank in imitation of a grandfather's clock.

7. *Visual education.*—A political map and a relief map of the United States, accompanied by pictures, helped the children to visualize that part of the country in which mines are found and to see the advantage of placing the assay offices in existing locations.

A loom with a bit of wampum weaving set up in it, also some shells similar to those used by the Indians as wampum, were a source of interest and instruction.

Coins, paper money, blank checks, and drafts helped to maintain interest and acquaint the pupil with various forms of currency.

8. *Special activities.*—Coins of different countries were placed on a table and the pupils given ample opportunity to observe and feel them. One of their number was then blindfolded and a coin placed in his hand for identification.

Another sense-training game was played by placing the coins as before, giving the pupils a chance to observe them, then removing one or more of the coins. The child who could name the missing coin was allowed to arrange the coins the next time.

The unit closed with an assembly in the room. The children read aloud the stories and rhymes they had composed and played sense games with the coins.

ATTITUDES ACHIEVED

1. A renewed interest in thrift was shown by an increase in the number of children banking in the school bank.
2. Children made a greater effort to conserve school materials, such as paper toweling, crayons, etc.

TEST USED AT THE CONCLUSION OF THE ACTIVITY

1. Name three ways of mining gold ———, ———, ———.
2. When metal is taken from the mine it is called ———.
3. The place where coins are made is called a ———.
4. The Bureau of Printing and Engraving is a ———.
5. Give an example of bartering in modern times ———.
6. A Canadian dime is worth 10 cents in Michigan, Wisconsin, or Minnesota, but it passes for only 8 cents in St. Louis, Mo. Can you explain why? ———.
7. What coin is called an eagle? ———.
8. What is a half eagle? ———.
9. What is a double eagle? ———.
10. How many eagles in $100? ———.
11. Whose portrait is on our newest penny? ———.
12. Name six United States coins ———, ———, ———, ———, ———, ———.
13. A goldsmith is one who ———.

Fill in the blanks with the true words

1. When gold and silver are taken from the mine they are called ———.
2. The place where gold and silver are coined is a
3. The word that means to mix metals is
4. Gold was discovered in California in the year
5. Three fourths of a dollar are ——— .
6. A shilling is worth ———.
7. Pence means ———.
8. United States mints are located at ——— , —
9. Three ways of mining gold are ———, — —
10. The man who went after the golden fleece was
11. People prefer using paper money rather than gold because gold is ———.
12. Two ways of sending money to foreign countries are by ———.
13. A person who makes false money is a ———.
14. A penny is 95 percent copper. What percent is alloy?
15. United States assay offices are located at ———
16. A rim is stamped on a coin to ———.
17. To separate the ore into its parts and examine the parts is the business of the ———.
18. You may send money anywhere in the United States by ———.
19. When a coin is badly worn it is ———.
20. The first weights used in weighing small objects were ———.

XI. A NATURAL HISTORY MUSEUM

By JULE B. DAVIS, *Battle Creek, Mich.*

[NOTE.—Nature is a living challenge to the interest of the retarded child if the introduction is made in the right way. Abstractions or generalizations from afar do not appeal, but close contact—seeing and handling the objects themselves—is a concrete means of approach that rarely fails to arouse interest in the life about him.]

My special room for mentally retarded children has an enrollment of 19, 7 of them Negroes. They range in chronological age from 6 to 11 years, and in mental age from serious defectives to those with intelligence quotients as high as 85. However, most of them have intelligence quotients between 60 and 70. There are 12 boys and only 7 girls.

The school as a whole consists of a kindergarten and grades 1 to 6, inclusive, with a total enrollment of 330. The teaching staff includes the principal and 11 teachers. The school system is very progressive and tolerant, giving each teacher enough latitude to solve her own problems. The location of the school is such that it draws children from the poorest homes in town, and my children come from the least desirable of these poor homes. Little, if any, attempt is made to teach them honesty, truthfulness, fair play, or cooperation. Of course, initiative in school is totally lacking, since in other rooms brighter children always took the lead. This lack of initiative, coupled with the fact that there was little or no reading ability apparent, necessitated a great deal of guidance and help.

In guiding the children toward a project one very significant fact influenced me. Before this year, this school had no special room for the lower grades, hence all of my children came to me from regular rooms, where they had either failed continually or had been promoted because of their age. The children having experienced nothing but failure, I felt that the most important point was to have an activity that would be familiar to the children, that would be easy for them to comprehend, and thus would lead to success. I hoped that success in one activity would breed a healthy attitude toward work, and that it would be a beginning in securing a better

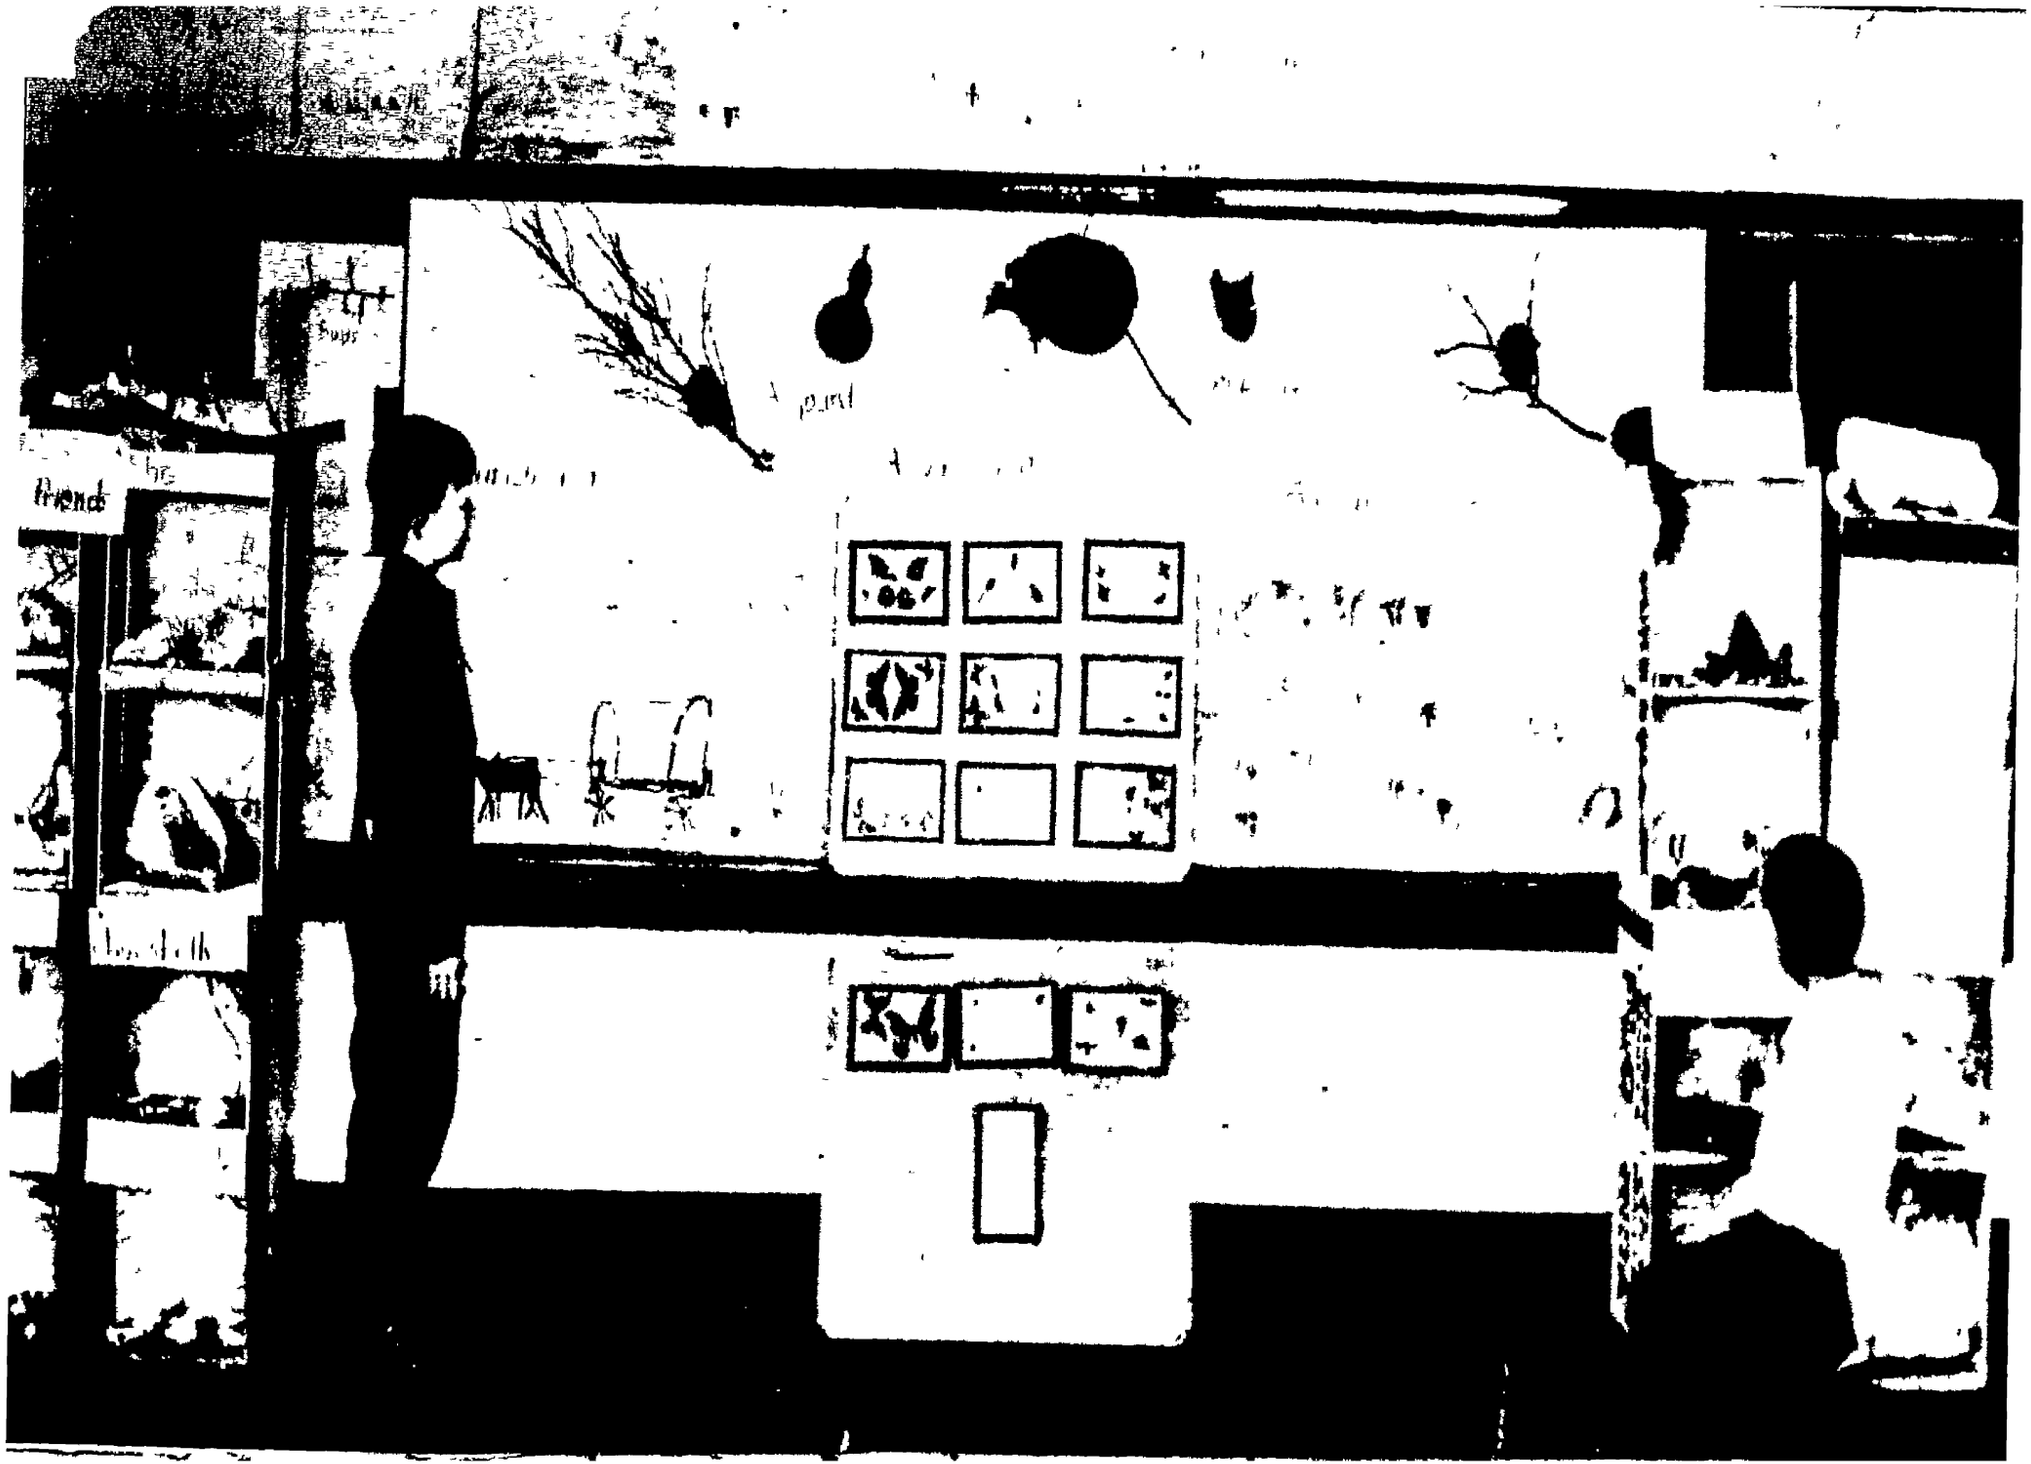
attitude toward all desirable habits. I hoped also to stimulate an interest in the skills, especially in reading.

I tried through the usual methods to find out where the real interests of the children were centered, watching their reactions to pictures which I showed them, to stories which I told or read to them, and to various articles which I placed around the room, such as dolls, doll dishes, lumber, paint, etc. They were rather bored with these things, however. They had similar activities in other rooms; it all spelled inferiority and failure for them. Any trip out of their own immediate environment seemed to bewilder them with its complexity, making them want to come back to school.

The children themselves, as might be expected, solved the problem for me. They began bringing in fall leaves. I had been encouraging them to keep our room attractive. Then, sensing my interest in their contributions, they began bringing everything they could find. They brought things from the river and river banks, from woods, from vacant lots, from any place and every place. Finally, one boy brought a fossil of a bee-hive. The children seemed quite interested, so I explained in simple words and with the aid of pictures how fossils are made. Because this was close enough to their own daily life to be familiar and yet had a novel slant, the interest of the whole room was aroused. Here was my unit of work.

My first step was to pay a visit to our very excellent city museum, where I made notes on the things which were common enough to be fairly familiar to the children. Then, after gathering suitable pictures from every available source, I began to tell the children about the interesting things one could see in our museum, leading them very slowly from the known and extremely familiar items to the unknown and interestingly new things to be seen. All encouragement was given them to bring in any of the things we had talked about or, better still, articles that had not been mentioned or items of information.

Soon my work was rewarded by hearing one child express a desire to visit the museum, then by hearing all the other children expressing a like desire. Of course I lost no time in taking them on the trip, hoping they would find the museum interesting and provocative, but not so new as to bewilder them. Much to my delight, the children could



hardly be torn away from the place when our time was up. They were enraptured with everything they saw, from the cases of butterflies to the strange stuffed animals and various skeletons. The exhibition of eggs brought out many exclamations about the contrasting sizes—from eggs that were as small as a bean to the huge ostrich eggs interesting to them because they had the familiar bird and hen eggs to use as a yardstick. Even my little introverts were talking volubly, asking questions, and, most encouraging of all, volunteering a few bits of information.

On our return to school, I found the children overflowing not only with enthusiasm but with constructive suggestions. They wanted to have a museum of their own, so the project started immediately. We had quite a small collection already, but now they brought in new things with a keener and more discriminating taste. We had a varied collection: Birds' eggs and nests, living crayfish and skeleton crayfishes, caterpillars, cocoons, bee hives and the fossil bee hive, an interesting collection of stones, and many other articles. Soon I found the children making simple pictures of various things they had seen in the museum, and these pictures became as much a part of our museum as the real objects.

As the need arose, the children decided to erect a building in which to house our relics. Even though crudely planned and poorly executed, it was initiated and built by the children themselves. Always before they had been relegated to the background by brighter and more aggressive children and the act of really creating gave them infinite satisfaction.

Checking up on the activity, I felt the results had been very beneficial and far reaching. In the matter of skills, the activity brought a marked improvement. Because the children had an inner desire to work, they had exerted themselves to their utmost limit. Several little artists who were naturally clever with their hands were discovered and the constructive ability of all was increased. An interest in reading developed. The usual method of teaching children to read by presenting sentences, then phrases, and then words was utterly impossible for my children. However, single words with a real meaning were presented to them by labeling the different articles as they were brought in, together with the name of the donor. Since they were vitally

OUR MUSEUM

Friends

interested, the words made a lasting impression. Later on we were able to make up very simple stories about our museum. The activity was rich in language content, since the children had something to talk about that they were interested in and could talk about.

The activity opened up a field of associative learnings for future use. Nature study and animal study were, naturally, the foremost suggestions. An interest in other localities was created by telling the children of the museums I had seen in Washington, D.C., New York, Chicago, and St. Louis. Astronomy in a very simplified form, travel, and various other fields were opened for future exploration.

The children had started with a hopeless feeling that they were incapable of doing any constructive work. While this attitude could not be changed entirely in one activity or even in one year, still the change seemed almost miraculous. As one boy said, "Yes, I'm lazy. My daddy is lazy and I'm going to grow up just like him." But under the contagion of the group spirit, how could he be anything but busily helpful? Here was something familiar enough to insure success, yet new enough to be fascinating. The cooperative spirit improved, bickering lessened, and, most important as an opening wedge, school was not a place of dread, but a place of enjoyment.

The children who had formerly been dull and apathetic, not caring to try to do anything for fear of failure, were now sitting on the edge of their chairs, eyes bright and showing real enjoyment in their work. The next problem they attacked was solved much more readily through the judgment and initiative developed in this project. While their span of interest continued extremely short and variable, tempers hot and habits bad, and a very great deal still to be accomplished, my main purpose had been achieved. *My children were now willing to try!*

XII. A STUDY OF COTTON

By ZENOBIA LYLES, ST. LOUIS, MO.

[NOTE.—Informational as well as practical this study of cotton proved to be. It provided the means for both appreciation and expression. Creative activities are quite as essential for the retarded child as for the normal or gifted.]

The activity here described was carried out with a mixed group of 15 mentally retarded colored children assigned to special schools for individual instruction. The children had intelligence quotients ranging from 41 to 67 and chronological ages ranging from 9 to 15 years.

Twelve of the children in the group came from the average homes to be found in the colored districts located in the industrial centers of the city. Three children were living in homes which were undesirable places for good living conditions.

THE PREVIEW OF THE ACTIVITY

In planning this activity for the group, I had in mind two important questions:

1. What are the opportunities which it offers for individual growth in social living, health, habits of work and play, ability to use the tool subjects, ability to acquire resourcefulness, appreciation of the work of others, and efficiency in the use of leisure time?
2. What helps does my teaching environment offer?

(*a*) Public-school museum.
  (1) A complete cotton exhibit.
  (2) A film on the growing of cotton.
(*b*) Public library.
  (1) Books on cotton.
  (2) Pictures for room use.
(*c*) Art museum.
  (1) Woven textiles.
  (2) Looms
(*d*) Dress and shirt factories, making garments on a large scale.
(*e*) Laundries, washing and ironing clothes on a large scale.
(*f*) Experiences of parents who have moved from the States where much cotton is grown.

HOW THE ACTIVITY WAS STARTED

The girls in the class wanted to make wash dresses. When two of the girls decided to make ensembles, a younger girl not knowing the meaning of the expression wanted to know what they called an "ensemble dress." The reply which was given in answering her question was not adequate, and she asked to be shown a picture of one. A real interest in the collection of a few magazines with the pictures of dresses was aroused. The girls cut out pictures of the dresses which they liked best, collected samples of wash materials, and placed them on a large table for inspection.

The actual experience of collecting samples, selecting patterns and materials, finding out the amount of cloth needed, looking for sale prices, cutting and making the dresses, called forth a real desire on the part of the girls to know more about their clothes.

When studying and judging the desirability of each girl's choice, a number of questions came up for discussion. They were listed on the board. The following questions which are stated in the exact words of a boy in the class aroused the interest of the boys as well as that of the girls:

"Why does the storekeeper down our way charge 98 cents for a cotton dress and want you to pay $9.98 for a woolen dress? Why is cotton material cheaper than woolen material?" The answering of this question was a direct lead to the study of the production of cotton from which was developed our unit of work.

THE DEVELOPMENT OF THE ACTIVITY

Two of the boys in the class had some interesting and realistic experiences in the cotton fields of their former homes in the Southern States. They were in a simple and understanding way able to give considerable information concerning the production of cotton. Many were interested in collecting pictures of cotton fields and placing them in a large record book in which all information concerning the study of cotton was kept. The best readers cut a few articles from the newspapers and magazines. The group composed a letter to a farmer in McKenzie, Tenn., and asked him to bring some cotton bolls when he made his visit to the city. The cotton

was sent by mail, and a card arrived a few days after ___ bolls. The children sent a simple letter of appreciation to the man Many new words were called for before the letter met the approval of all in the class.

A sand-table representation of plantation life was carried out by the children having very low mental ages, while the older boys made a simple map study of the cotton-growing States. Drawings showing city life and plantation life were made and a short description was written under each picture.

After the cotton had been examined in the bolls, the group separated the cotton seeds from the fiber. A simple study of the cotton gin as a labor-saving device was brought in with the study of Eli Whitney's gin, invented in 1793. Two hand cards were borrowed for the carding of the cotton into "slivers."

Samples of all the available things made of cotton and its byproducts were collected. Each child with some guidance and help made a contribution to this exhibit of thread, garments, bandages, bedding, soap, and rubberized cotton fabrics. Discussing the use of each gave a chance for much free expression. Having this material on hand, the class decided to have a store. Shelves were made, prices printed, and all the materials properly labeled and arranged in the store.

After gaining an acquaintance with the source of cotton, the children wanted to know how the cotton was made into cloth. Simple hand spindles were made of rods of the size of a pencil and sharpened at both ends with a weight near the lower end. After the pupils had spun cotton threads, they became interested in pictures of old colonial spinning wheels, and made a careful inspection of one found in an old furniture dealer's store. Home weaving and factory weaving were compared in many ways. Looms of various types were made—frame looms for weaving rugs, cardboard looms for weaving hat bands and bags, and box looms for rugs and scarfs.

The children made notes on the use of cotton materials in their homes. The following "Notes on Cheesecloth" are typical:

Cheesecloth is a loosely woven cotton material. Because it was used for wrapping cheese, it received the name of cheesecloth.

Uses—We use gauze to make simple bandages.
We use cheesecloth for curtains.
We use it for pressing cloths.
We use it for dust cloths.

Similar notes were written under samples of muslin, gingham, and oilcloth.

Discussion of the parents' work in providing children with clothes led to talks on the care of clothes. The girls had actual experience in washing stockings, handkerchiefs, and towels. A few of the younger children cut out, mounted, and labeled the articles washed and the equipment used. The boys made wash benches and small ironing boards. Clothes bags were also made.

Simple textile tests were made in order that the pupils might be able to identify cotton fibers in materials. They found that cotton burns with a flash leaving no deposits, and that wool burns more slowly, forming beads at the end and giving off an odor like burning hair or feathers. These tests were made when a boy brought in an old sweater sleeve and asked if it were made of wool or cotton.

Cretonnes, chintzes, percales, and the very much in vogue printed ginghams came up for discussion when the group wanted to know if the designs were painted on the cloth. When learning about the dyeing of cloth the girls made stencils for curtains and painted oilcloth luncheon sets. The boys cut designs out of linoleum blocks and printed designs on their ties. Plain white handkerchiefs were tied and dyed.

A special study was made of Indian dyes, vegetable dyes, and commercial dyes. The dyeing experiences were organized by the children and placed on the bulletin board. A new reading vocabulary developed.

SUMMARY OF ACTIVITIES

1. Making dresses (seven girls made dresses).
2. Making cotton thread.
3. Seeding cotton.
4. Carding cotton.
5. Making a spindle.

6. Making looms.
7. Weaving rugs, bags, and bands.
8. Learning to do spool knitting.
9. Making a large cotton book.
10. Studying the designs on cotton materials.
11. Knowing cretonnes, percales, ginghams.
12. Making curtains.
13. Making charts.
14. Making tests for cotton.
15. Making dyes for cloth to be dyed.
16. Trying out vegetable and fruit dyes.
17. Making designs.
18. Studying the effect of cleaning on fabric.
19. Making stencils for scarfs.
20. Making oilcloth sets.
21. Cutting a block printer.
22. Tie-dyeing handkerchiefs.
23. Making a batik scarf.
24. Making stands and posters for the exhibit.

HOW THE ACTIVITY CLOSED

The children wanted to share their experiences with others and decided to ask their mothers to come out to see the things that were made in class. An older girl suggested that a program be given if the parents were to be invited.

It proved profitable to close the unit of work with an exhibit representing the complete unit. The children made plans for the exhibit. A program was arranged. Invitations were written and sent to the parents. When the children were arranging the different articles into groups to be placed in an assigned space or on a table, there was much evidence of worth-while living and planning together. They put up the exhibit and were able to explain it to the parents and visitors. The program included many features, such as the following:

The boys made up a drill called "Picking Cotton."

"Old Black Joe" was dramatized.

The girls exhibited the dresses which they had made.

One girl read a selection which told about the different ways to remove ink and paint stains.

Each group explained a part of the exhibit.

OUTCOMES OF THE ACTIVITY IN TERMS OF INDIVIDUAL AND GROUP GROWTH

1. *General habits and attitudes.*
   - Each child accomplished something that was considered worth while.
   - They were happy to know when they had made a worthwhile contribution, and had more confidence in their ability to carry out other activities.
   - Each child learned to share in group plans and responsibilities.
   - A desirable interest, that added to their appreciation of the work of others, was aroused.
   - The children set up standards of work.
   - Many were so busy with the carrying out of the plans that they got out of the habit of not cooperating.
2. *English.*
   - The unit of work presented many situations in which expression, oral and written, was necessary.
   - There was a very noticeable change in the ability of the group to give simple reports and information, to talk clearly and to the point, to read directions and follow directions, to read advertisements and descriptive materials.
   - The speaking vocabulary of each child was enlarged.
   - The poorer readers began to learn the meaning of symbols in concrete associations.
   - An interest in library books was developed.
   - Much of their leisure time was spent in reading.
3. *Social studies.*
   - All the children had some knowledge of the importance of the cotton industry to the comfort and well being of people.
   - They became interested in life in the South.
4. *Science.*
   - An idea of the nature of the cycle from seed to plant, of the different seasons and of the enemies of the cotton plant was gained.

5. *Arithmetic.*

The children gained some knowledge of the cost of materials.

There was much growth in the ability to work out practical problems concerning the buying, selling, and measuring of materials.

They began to read advertisements and to make a comparison of prices.

6. *Health.*

All the children became more interested in keeping their clothes clean and in wanting to be clean in the home as well as in public.

They were able to apply their knowledge of a few of the first-aid principles, and the use of cotton when necessary.

A real interest in personal appearance was evident.

XIII. A STUDY OF TREES

By MYRTLE ARBUCKLE, *Kansas City, Mo.*

[NOTE —Here is another visit with nature—this time limited to the specialized realm of trees. We find that the study offers abundant material for tying together all subjects of the curriculum through a common center of interest and coordinated activities.]

The community in which this activity was carried on is a home-owning district, with parents willing to cooperate with the school in the making of good citizens. It is composed of a few professional people, several merchants, and many tradespeople and laborers. The community activities center about the school and about the three neighborhood churches. There is much open space, an interest in gardening, and a pride in the appearance of homes.

The activity was carried on with an ungraded class representing fifth- and sixth-grade levels. There were 30 children in the group with IQ's ranging from 70 to 80. Their ages range from 10 to 15 years.

THE SITUATION

The project was initiated by 3 boys who brought some acorns to school. They asked the teacher if all were acorns since they were unlike in appearance and taste. The teacher had them ask other children in the room. Only 3 boys knew that they came from oak trees. The boys said they would bring some leaves from the trees to school. From the study of those leaves the tree project started.

GENERAL OBJECTIVES

1. To learn the common trees of the vicinity and gain an appreciation of their values.
2. To realize the value and necessity of conserving the national forests.
3. To give pleasure to the individual pupils.
4. To give pupils a greater interest in geography.

SPECIFIC AIMS

1. To learn how to identify trees by their leaves,[1] bark, blossoms, fruit, and shape.
2. To learn to know the parts of a tree, such as roots, trunk, branches, leaves, flowers, and fruit.
3. To learn a few of the common tree families, such as the maple, oak, rose, willow, etc.
4. To learn something about the way trees breathe in carbon dioxide and give out oxygen.
5. To learn some facts about how forests enrich and retain soil.
6. To learn some uses of trees, such as building houses, bridges, furniture, etc.
7. To learn how trees produce rosin, maple sugar, and foods of various kinds.
8. To learn how our forests are preserved for economic and aesthetic needs by forest service work and national reserves.

PROCEDURE

A. Activities Carried on

1. Leaf collections were made by the class.
2. Field trips were taken to Swope Park and woods.
3. Booklets on trees were made.
4 Magazine clippings and pictures were collected.
5 Samples of wood from lumber yards were collected.
6 Seeds and fruits were collected.
7. Original poems were written.
8. Booklets and pamphlets from lumber manufacturing companies were collected.
9. Lantern slides and motion-picture films were used (from Visual Education Department).
10. A kraft paper reel showing trees and information about them was made for the Little Theater.
11. A lumber mill and forest were designed in the sand table.

B. Methods of Work

1. Each child selected one tree seen on a field trip and drew tree and leaf.
2. Each child found material giving all the uses of trees.
3. The class located the forests in each group of States in the United States.
4. Pupils gave reports to the class on various phases of the life and use of trees.
5. Each child brought a leaf which he inked with green ink, and pressed with a blotter on drawing paper to make the outline. He then filled in the outline with a brush. These sheets made the class booklet.

[1] Identification by leaves was the easiest method and was used almost entirely

6. Each child drew a tree for the Little Theater reel. The best were selected. Every tree in the reel was made by a different child.
7. Several children were appointed to give special attention to printing on the reel.
8 The pupils who were not so skillful in drawing produced a lumber scene in the sand table.
9. Pupils gave reports to the class relative to marks of similarity of trees in the same family; compared early waste of trees with the practice of conservation.
10. The tree study was correlated with reading, geography, arithmetic, English, and art.
11. Drills and checks were used when needed.

CORRELATED SUBJECT MATTER

1. Geography:
   (*a*) Each group of States in the United States was studied to find what trees grow there and why.
   (*b*) National-forest reservations were located.
   (*c*) It was determined what group of States produce lumber, naval stores, maple sugar, etc.
   (*d*) The countries producing rubber and dyes were located.
2. Reading:
   (*a*) Extensive reading for facts and general information about trees.
   (*b*) Intensive reading to secure facts for oral reports.
3. Arithmetic (original problems were made about the following subjects):
   (*a*) Number of men employed in lumbering and in the manufacturing of products from trees.
   (*b*) Comparison of areas now covered with forests with those of former days.
   (*c*) Values of lumbering industries.
4. English:
   (*a*) Oral and written reports on trees were given.
   (*b*) Original poems were written.
5. Spelling: Meaning and spelling of new words in the tree vocabulary were learned.
6. Art:
   (*a*) Posters were drawn.
   (*b*) Leaf books showing types of trees were made.
   (*c*) Reel for Little Theater was made.
   (*d*) Leaf for each tree seen on field trip was mounted.
7. Nature study:
   (*a*) Names of common trees and tree families were learned.
   (*b*) Parts of tree were learned.
   (*c*) Uses of trees were studied.
   (*d*) Means of nourishment and life for trees were studied.

8. Citizenship:
   (*a*) Spirit of cooperation was increased.
   (*b*) Satisfaction and pleasure in pleasant talk about trees were developed
   (*c*) An appreciation, a knowledge, and a love of trees were developed.

BIBLIOGRAPHY

Much of our most helpful information came from pamphlets, posters, pictures, etc., sent us as advertising material by lumber companies from many different parts of the United States. The following books, however, also proved helpful:

XIV. THE TOY ORCHESTRA

By Georgia F. Isaac, *Los Angeles, Calif.*

[Note.—There is no field that gives greater opportunity for creative activity than music. This account shows how the pupils in one special class were led to an appreciation and expression of musical interests that brought delight not only to themselves but to others who listened to their performance.]

The activities included in this account are merely suggestive. No teacher will wish to follow them exactly. Since any one who is interested can find a wealth of material on toy orchestras from books suggested in the bibliography, I have omitted numerous details. For many helpful suggestions concerning the activity, grateful acknowledgment is due to Mrs. Nelle C. Taylor, principal of Echandia Street School.

THE SCHOOL

Echandia Street School is a development center, the enrollment consisting of 150 subnormal children divided into groups according to their chronological ages and ability to adjust socially. The school is located in a neighborhood that consists largely of Italians, Russians, and Mexicans. Nearly all of the pupils come from very poor Mexican homes where the parents cannot speak English. Besides the Mexican children there are several Russian, Armenian, and Jewish children in the school.

The chronological ages of the boys who took part in the activity ranged from 9 years 10 months to 11 years 5 months. Their I.Q.'s ranged from 44 to 78. The entire group of 28 intermediate boys took some part in the activity, although all of them did not have a permanent place in the orchestra.

OBJECTIVES

1. To endeavor, through actual happy experience, to bring the children to a better understanding of rhythm and melody.
2. To help to make the children better American citizens by giving them practice in cooperative teamwork and by

trying to develop within them the qualities of courtesy and helpfulness to one's fellow-workers in everyday living; to help the boys to adjust socially.

3. To endeavor to instill within them a permanent interest in and love for music.

ACTIVITIES

A. Making Toy Instruments:

I. Bass drum:

1. Materials used:

(a) Nail keg.
(b) End of wooden orange crate (for stand).
(c) Old leather pillow top.
(d) One half pint red paint.
(e) Sandpaper.
(f) Thumb tacks.
(g) Small amount of green, blue, and yellow calcimine.
(h) Paint brush
(i) Hammer, saw, scissors, pencil, wrapping paper, chalk.
(j) Piece of doweling and spool for drumstick.

2. Procedure:

(a) Make stand for drum to rest on out of two pieces of one-half inch wood.
(b) Nail keg to stand.
(c) Sandpaper keg.
(d) Paint keg and stand; allow to dry.
(e) Plan design for drum on wrapping paper.
(f) Draw design on drum with chalk. (Chalk marks are erased easily if mistakes are made.)
(g) Color design with calcimine, allow to dry and shellac.
(h) Put a keg on end over a piece of wrapping paper and trace around it. Cut two inches on the outside of the line to make pattern for the drumhead. Fit the pattern over the keg ends to make sure it is the right size.
(i) Cut two leather drumheads the size of the pattern.
(j) Soak the drumheads in water.
(k) Squeeze as dry as possible by hand.

MAKING TOY INSTRUMENTS—Continued.

I. Bass drum—Continued.

2. Procedure—Continued.

(*l*) Stretch firmly over the keg ends and tack in place. (Our boys turned in the edges of the leather to make a stronger finish.) As the leather dries it shrinks and gets tighter. It should be watched so that the tacks may be removed if the leather begins to tear.

(*m*) Smooth a whittled stick or piece of half inch doweling and fasten a spool to the end of it for a drumstick. Pad the spool with cloth or leather so that your drum will have a softer sound.

II. Horn:

1. Materials used:

(*a*) Kazoo.
(*b*) Funnel.
(*c*) Cardboard spool such as those on which string or jute is wound.
(*d*) Glue.
(*e*) Paint and paint brush.
(*f*) Gummed tape.
(*g*) Colored string, scissors.

2. Procedure:

(*a*) Wrap end of funnel with narrow strip of gummed tape.
(*b*) Glue funnel into one end of cardboard spool.
(*c*) Glue kazoo into other end of cardboard spool.
(*d*) Allow glue to dry thoroughly.
(*e*) Paint horn any color.
(*f*) Make a tassel of string to decorate it, if desired.

III. Clapper:

1. Materials used:

(*a*) Two tin bottle tops.
(*b*) Thin piece of wood.
(*c*) Sandpaper.
(*d*) Paint and paint brush.
(*e*) Saw, hammer, nails.
(*f*) Pencil, paper, scissors.
(*g*) A few small pebbles.

A. Making Toy Instruments—Continued.

III. Clapper—Continued.

2. Procedure:

(a) Fold paper and cut pattern for clapper.
(b) Trace pattern to wood.
(c) Saw out clapper.
(d) Sandpaper smooth.
(e) Put pebbles into bottle tops, fitting the insides of the tops carefully together.
(f) Nail securely to round part of wood.
(g) Paint any color.

IV. Lute:

1. Materials used:

(a) Cigar box.
(b) Long piece of wood for neck.
(c) Strings from guitar.
(d) Strip of wood for keys.
(e) Tools: Hammer, saw, auger, paint brush, knife.
(f) Paint.
(g) Glue.
(h) Sandpaper, nails.

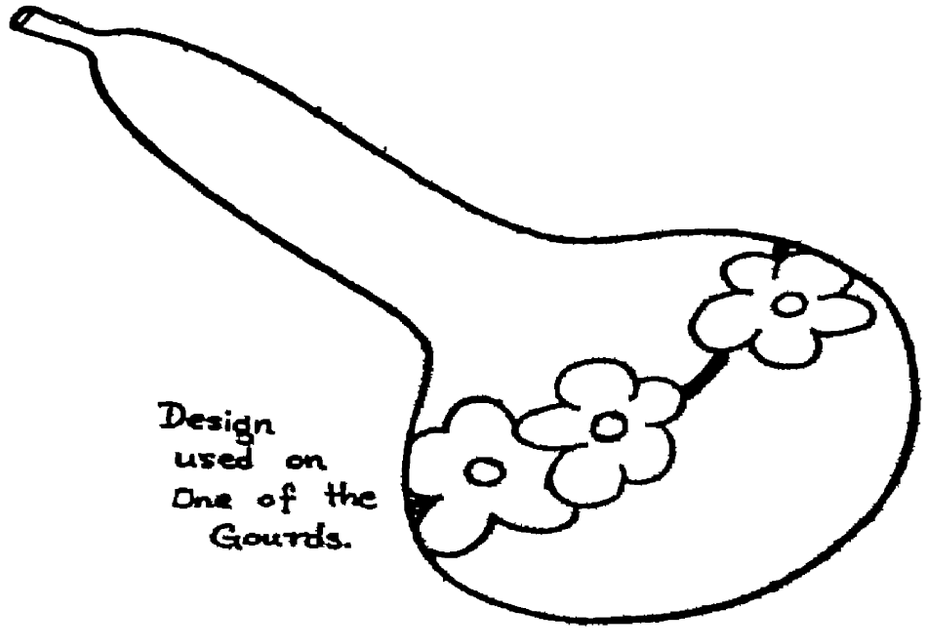
2. Procedure:

(a) Saw triangular hole in top of box.
(b) Shape neck of lute and bore holes for tuning keys.
(c) Cut out tuning keys, sandpaper them and fit them into holes.
(d) Nail box shut.
(e) Slit small piece of wood to hold strings and nail it over end of box.
(f) Attach strings to lute.
(g) Tune to piano.

V. Tambourine:

1. Materials used:

(a) Two heavy paper plates.
(b) Red paint and paint brush.
(c) Pencil, ruler, and paper punch.
(d) Heavy red string.
(e) Small brass bells.



2. Procedure:

(a) Put pencil dots two inches apart and one-half inch from edge all around each plate.
(b) Punch holes on pencil marks.
(c) Paint border to represent rim of tambourine.
(d) Lace plates together, putting a bell at each hole.

A. Making Toy Instruments—Continued.

VI. Gourd:

1. Materials used:
   - (*a*) Gourd.
   - (*b*) Sandpaper.
   - (*c*) Chalk
   - (*d*) Calcimine.
   - (*e*) Paint brush.
   - (*f*) Shellac.
2. Procedure:
   - (*a*) Clean gourd thoroughly with sandpaper.
   - (*b*) Draw design on gourd with chalk. If the first attempt is not successful, it may be erased with a damp cloth.
   - (*c*) Paint design with calcimine.
   - (*d*) Give the gourd a thin coat of shellac to protect the design.

Design used on One of the Gourds.

VII. Pipes of Pan:

1. Materials used:
   - (*a*) Hollow reeds or small tubes.
   - (*b*) Stout string, thumb tacks, and strip of wood.
   - (*c*) Sand
2. Hints on making:
   - (*a*) Placing sand in the reed raises its tone.
   - (*b*) When shortening reed to raise the tone it is better to use sandpaper than a knife because less can be removed with sandpaper.
   -) Reeds may be fastened together with cord, wood, and thumb tacks.

A. Making Toy Instruments—Continued.

VIII. Can of shelled pop corn (decorated with paint). (Th makes a rather pleasant sound with which to bring : effects of rhythm)

IX. Castanets:

1. Materials used:
   (*a*) Tin lids from jars.
   (*b*) Strip of wood.
   (*c*) Tools (same as those used in making clapper).
2. Hints on making:
   The castanet is made in the same way as the clapper with the exception that the bottle lids are attached loosely so that they will clap together when played. The pebbles are omitted.

X. Painted small tin kettle lids for cymbals.

XI. Baton (made of dowel painted black).

XII. Rattler (made of oatmeal box with chips of wood inside).

XIII. Triangle (made of metal rod).

XIV. Snare drum (made of old drum frame covered with heavy cloth to which a coat of shellac was applied).

B. Making Other Equipment:

I. Instrument rack.

II. Serapes for uniforms.

III. Spanish shawls for decorating piano and walls:

1. Hemmed square of unbleached muslin.
2. Large square of paper—to plan design.
3. Pencil, carbon paper, pins.
4. Crayolas.
5. Hot iron to set colors.
6. Colored string for fringe.

IV. Slides of activity:

1. Writing brief stories for slides.
2. Making pictures on glass slides with small pen and India ink.

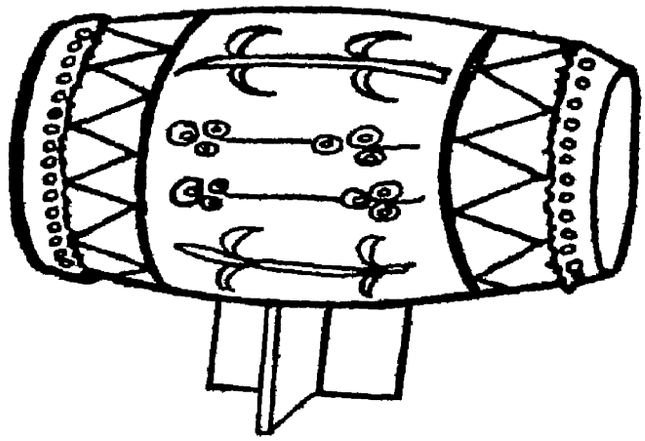
   (The stories may be typed on small sheets of transparent cellophane by putting a piece of carbon paper over the cellophane and releasing the typewriter ribbon before typing. These sheets may be placed between glass slides for showing)

V. Invitations written for "picture show."

C. Other Classroom Activities:

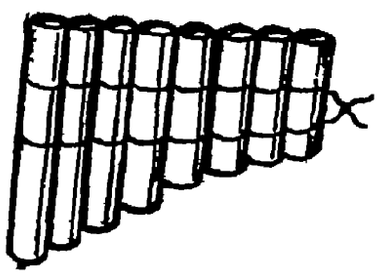
I. Making booklets for records:

1. Writing stories of work done.
   (This was a class activity.)
2. Copying the stories into the booklets.
3. Drawing pictures of instruments.



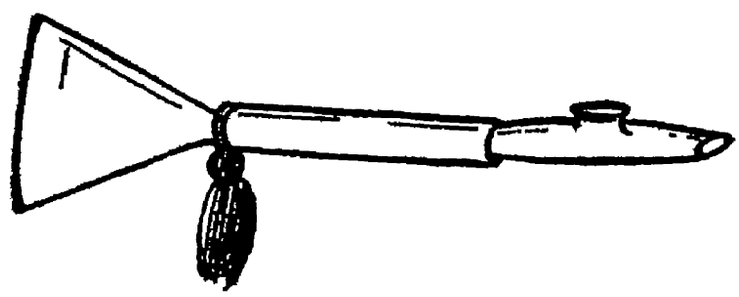
C. Other Classroom Activities—Continued.

II. Writing letters to music companies for literature on musical instruments.
III. Playing games with flash cards of new words learned.
IV Making holders from cheese boxes for word cards to be filed alphabetically.
V. Computing costs of materials used in activity.
VI. Reading from the music appreciation reader, Storyland, by Hazel Kinscella. This book was obtained in sets from the Los Angeles City School Library.
VII. Listening to phonograph records and instrumental music suggested by the lessons in Storyland.
VIII. Listening to musical poems.
IX Listening to musicians at Spanish Club.
X. Looking at pictures representing the love for music:
1. Song of the Lark.
2 Pipes of Pan.
XI. Operating slide machine and entertaining at "picture show".
XII Playing instruments for girls to dance.
XIII. Playing at the annual fiesta of the school.
XIV. Playing at the benefit entertainment of the Spanish Club.
XV. Playing at carnival of Wilshire Crest School.

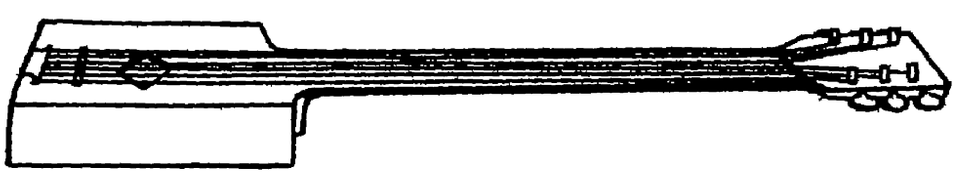


BRIEF ACCOUNT OF THE ACTIVITY

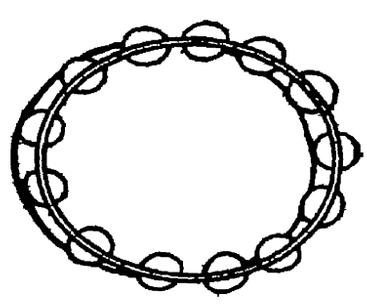
The activity at Echandia Street School was pupil-motivated. Just before Halloween, Raoul, one of the boys of the class, brought a kazoo to which he had fastened a wooden spring to represent a slide trombone. It was a very amusing affair and he wanted to play it at the Halloween party that the children were having that afternoon. We had 2 boys in the room who could play harmonicas, and they asked to play with him. The 2 harmonicas, the piano, and the ridiculous slide trombone produced a couple of numbers at the Halloween party that were highly entertaining to the children of the whole group. The boys were so enthusiastic over the music that they wanted to hear it over and over again.



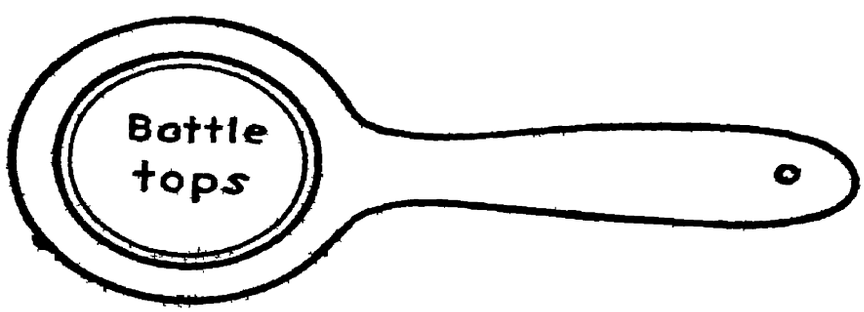
The following week the boys began to bring to school all sorts of things that made noise. Whistles, tin drums, tin horns, Halloween click-clacks, and kazoos were brought in. They all wanted to try to play. "Let's have a band and all play together", suggested one of the boys. "If I bring something, may I play, too?"



Drum



Pipes of Pan



Horn

Lute

Tambourine

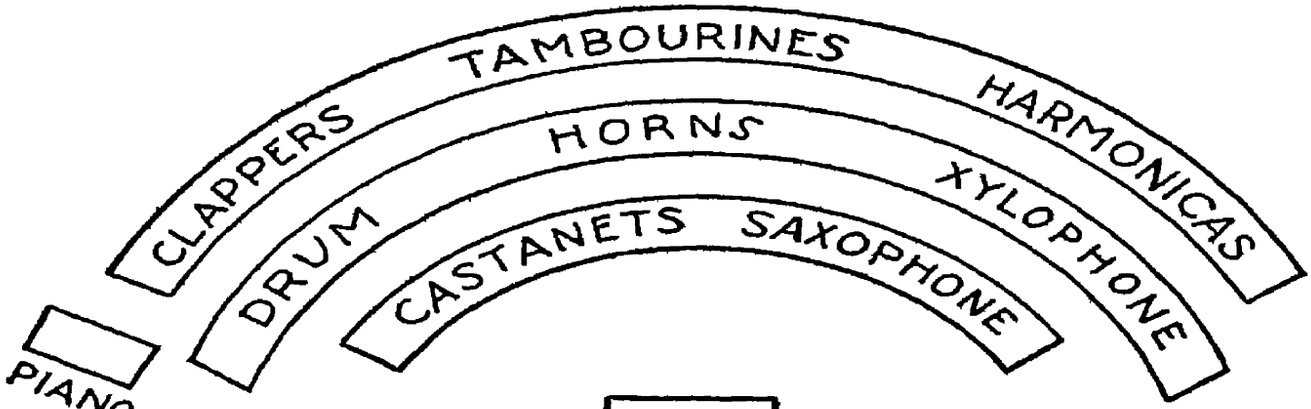
Clapper

Many things were brought in that could not be used. Halloween tin tambourines, automobile horns, an old phonograph horn, and all kinds of old sheet music. The children had the opportunity of trying their new finds and then of deciding in the case of each one whether it would improve the music of the original trio. In almost every case the group decided that something better was needed. The horns and whistles could not be used because they each had but one tone. The tin drums and tin tambourines had loud harsh tones when played. Then came the question, "What are real drums and tambourines made of? They don't sound like these." One of the boys said that real drums had leather stretched over them. He believed that the class could make one if they had some leather.

On the following Monday we secured two books containing pictures of home-made instruments, *Creative Music for Children*, and *The Drum Book*, by Satis N. Coleman. The Drum Book gives suggestions for making drums of all descriptions. The boys looked at the pictures and listened to passages read from the books. They finally decided that they would like to make a large drum out of a pickle or nail keg.

Then began the search for a keg. The boys looked for more than a week before one of them was able to acquire a nail keg from a carpenter. Someone gave Robert an old leather pillow top to use for a drum head.

Two boys began work on the bass drum. First they made a stand out of some rather heavy box lumber. They nailed this securely to the side of the keg and sandpapered the entire exterior. Then they painted the drum and stand red and set it away to dry.



Several other boys tried to draw designs to put on the drum. They worked on wrapping paper of the width of the drum and made a border to allow for the fastening of the leather drum head. After they had made a design that they liked, they copied it on the drum with white chalk. The design was then painted with calcimine, allowed to dry, and shellacked.

In the meantime we borrowed books containing pictures and stories of real instruments, and some of the other children became interested in making small drums, horns, and clappers. Scarcely a morning passed without contributions of old fun-

nels for horns, cigar boxes for guitars, or pieces of broken discarded instruments that the children had found; and it was not long before nearly every child in the class was making something for the orchestra.

As soon as several of the instruments were finished we began to practice playing them together. Because our harmonicas were in the key of C, we chose simple familiar songs written in this key. It was necessary to stress rhythm at the beginning, so that every child would feel the importance of keeping time, and we began to feel the need of a good child leader.

Alfonso made a baton of wood and painted it black. Each took turns at directing while the rest of the boys tried to follow. It was very difficult for the leader to get them all to begin at once and all to stop at the same time. In order to make it easier for the director, we decided to group the children who played the same instruments and to put the boys who played the drum, clappers, and tambourines, closer to the piano where they could get the time from the bass of the piano accompaniment. We finally worked out a seating plan like this:

As soon as the band began to keep better time we added more instruments to carry the melody, namely, some new harmonicas, a toy xylophone, a toy saxophone, and some horns made of kazoos and funnels.

The boys who played the xylophone learned the tunes at first by following the names of the notes. The notes on the xylophone were lettered and they felt that they were accomplishing a difficult feat when they followed this "score" of "Cielito Lindo": g c c a b g c c a b g c c a b g f d b b b a g f e d e f g g g b d e c.

Since we had but one small instrument of this type, the youngsters considered it a privilege to be able to play it, and they came in before school in the morning and at recesses to practice their songs.

The children learned to play the other "toys" by ear, however; and since we tried to choose those that did not offend too much if a mistake was made, the children were well pleased with results.

In order to facilitate order in getting ready to play and in putting the instruments away after use, the children thought that they needed a place to keep the things and a manager to see that the chairs and instruments were in their places. The boys chose a manager and monitors for chairs and harmonicas. Three of the pupils made a rack on which to hang the instruments when they were not in use.

It was suggested to the children that they might write stories of their band. They readily accepted the suggestion and made some booklets with cardboard covers for their records. In these they wrote short simple records of their activity.

From the library books that were used, the children learned that nearly all bands have uniforms of some kind. The boys thought it would be nice to have some serapes to wear when they played. After looking at pictures of serapes and a real serape that came from Mexico, the boys drew designs on unbleached muslin and colored them with crayolas to represent serapes. They put a fringe of red cotton string on each end. The principal allowed money from the school fund to purchase white trousers for the group. With shirts and sombreros that the school already owned, the boys were quite presentable in their uniforms. They were especially proud of their white trousers.

The culmination of the activity came when the school had its annual "El Mercado de Los Niñas" or Little Market of the Children. The market was open 4 days and the band had a part in the program.

PRACTICE

The boys began their practice with a selection with which they were already familiar. They had tried to sing "La Paloma" during their music period, and they were familiar

with the melody of this Mexican song, so we decided to learn to play it

After the chairs were arranged, the instruments were distributed and the boys were in their places. The children listened to the first part of the song while it was played on the piano. Then the group with kazoos played the first 10 measures with the piano. Some of the children had to be shown again the best way to play the kazoos. The drum player, the groups with the clappers, tambourines, and harmonicas each had a turn at playing part of the selection before they tried playing together.

When they were questioned, the boys said it would sound better to have the piano, the drum, and the tambourines play the first four measures of the selection, and have the harmonicas and kazoos begin on the fifth measure. We tried practicing the first part according to this suggestion and found that the variety of effect was more pleasing.

It was necessary to stop at different intervals to give special help to an individual player or group of players who did not play in time or in tune. The boys were insistent upon having the members who were off tune practice with only the piano until they improved.

Our practice periods lasted from 30 to 45 minutes about twice a week. By having a rather short time for practice the children did not tire of it and were always anxious to "play."

As soon as the boys had learned to handle their instruments properly and had acquired the habits of listening more attentively and responding more quickly to the leader, they began to learn new selections.

With the exception of the xylophone player, all of the children tried to play by ear. We used the following method:

1. The children listened to the composition to get the rhythm and melody.
2. The children listened while it was played a second time, to decide where the different instruments should be played.
3. Members made suggestions and showed how they would bring in their particular instruments.
4. Class decided what ideas were best for that selection.
5. Groups practiced parts separately.

6. Entire selection was tried, the groups coming in at different parts of the song.

Only very simple "orchestrations" and short compositions were selected for this work. We also tried to choose music with marked rhythm and lively tempo. since those qualities appealed to this group of boys.

There were several monotones in the class and these children had never been interested in singing. After the orchestra had been organized and could play a few selections fairly well, there came a suggestion that the boys sing certain parts of the songs they played. Many of the popular orchestras heard over the radio and on our phonograph records interpolated their playing with singing. The children had heard these orchestras and were anxious to try singing parts of some of the songs. I believe that this practice did more for the children than did our former singing lessons, since they had learned to listen more attentively and since they were vitally interested in the work of "their orchestra."

Some of the boys in the orchestra and the girls in another group learned a few of the Mexican folk dances and practiced dancing to the music of the toys.

CONTROL

The one problem of control in this activity involved the playing of instruments before the leader gave orders. The boys were impatient to begin playing, and their natural impulse was to toot their horns the minute they came into possession of them. To overcome this confusion we discussed the ways that a real band or orchestra takes its place—how the members are quiet with the exception of those who must tune their instruments. Our instruments needed no tuning, so any sound from them before the leader gave the signal was unnecessary noise. After the discussion we tried playing a selection without having any needless commotion. The boys, of course, were favorably impressed with the difference. They decided they would have no more confusion in their band. Occasionally after that a member would obey the impulse to blow his horn out of turn. When this happened the rest of the boys were disgusted.

"Let's put him out, Miss", they would suggest.

"He'll spoil the band."

None of the children wished to be ostracized, so we h very little trouble.

OUTCOMES

Specific outcomes of the activity in terms of:

A. Knowledge:
   1. Recognition of differences between marches, waltzes, and jarabes (Mexican folk dances).
      (*a*) Accent sensed.
      (*b*) Basis for time recognition acquired.
   2. Names of various instruments.
      (*a*) Tambourine.
      (*b*) Castanet.
      (*c*) Guitar, etc.
   3. How instruments are made.
   4. How to plan work before the material is altered.
      (*a*) Drawing of drum to be made.
      (*b*) Design of decoration for drum drawn on paper.
      (*c*) Pattern for drum heads, etc.
   5. How a booklet is made.
   6. How a simple record is written.
      (*a*) Margins.
      (*b*) Capital letters.
      (*c*) Punctuation marks.
   7. Method of applying crayons to cloth in making Spanish shawls and serapes for decoration.
      (*a*) Applying crayola firmly and evenly to cloth.
      (*b*) Pressing with hot iron under damp cloth to set colors.
   8. Method of putting fringe on serapes.
   9. Ways of directing an orchestra or band and meanings of different signals.
   10. Ways of making slides and operating slide machine.
   11. Improvement in technique of reading, writing, and arithmetic as applied to the activity.

B. Habits. Children improved in habits of:
   1. Courtesy.
   2. Promptness.
   3. Attention.
   4. Order.
   5. Responsibility.
      (The boys were especially careful of their instruments and uniforms.)
   6. Concentration.
   7. Worthy use of leisure time.

C. Attitudes
   1. Interest in and appreciation of music.
   2. Spirit of whole-hearted cooperation.
   3. Pride in work and in school.

BIBLIOGRAPHY

COLEMAN, SATIS N. Creative music for children. New York, G. P. Putnam's Sons, 1922.

An excellent book for both teacher and pupils In it are many suggestions for making various instruments and numerous illustrations that inspire the children to action.

——— The drum book. New York, The John Day Co , 1931.

A helpful book which describes the drums of many countries. It gives, also, methods of constructing toy drums and ways of playing them. There are many illustrations in this book

HAGUE, ELEANOR. *and* LEFFINGWELL, MARION, *Tr.* Music in Ancient Arabia and Spain. Stanford university, California, Stanford university press, 1929.

Helpful to the teacher in the preparation of appreciation lessons.

INSKEEP, ANNIE DOLMAN. Teaching dull and retarded children. New York, The Macmillan Co., 1926.

Chapter XII deals with the teaching of music.

KRAMER, GEORGE N. Origin of musical instruments. Chicago, The Nutshell Publishing Co., 1925.

Good for its many diagrams and brief histories of various instruments.

MASON, DANIEL G. The orchestral instruments and what they do. New York, The H. W. Gray Co., 1909.

An illustrated book which assists in the recognition of the orchestral instruments.

RESLER, AMY T. Making musical instruments. A monograph which describes the toy instruments that were made in a sixth-grade class of a Los Angeles school. Los Angeles, Calif., Thirty-sixth street school, 1930.

ST. QUENTIN, IRENE. Toy symphony orchestras and how they may be developed. New York, Oliver Ditson Co., 1928.

A booklet suggesting how to organize a toy orchestra.

TIPPETT, JAMES S., *and others.* Curriculum making in an elementary school. Boston, Ginn and Co., 1927.

A brief description of the "Creative-Music Experiment" of the Lincoln School at Columbia University is given in this book.

VANDEVERE, J. LILIAN. The toy symphony orchestra. Boston, C. C. Birchard & Co., 1927.

A booklet containing suggestions on organizing a toy orchestra. Very similar to the work of Irene St. Quentin.

YORK, FRANCIS L. Harmony simplified. Boston, Oliver Ditson Co., 1909.

A small volume suggesting simple arrangements of music. For the teacher's use.

Magazine articles from:

The Staff, 1931–32.
The Musical Observer, September 1917.
Industrial Arts Magazine, March 1930.
Junior Red Cross Magazine, November 1929.
The New Era, January 1927.
Progressive Education, January 1927.

Books for the Children [1]

BENDER, MILLICENT S Great opera stories. New York, The Macmillan Co , 1924.

Stories· "Children of the Kings", "Hansel and Gretel", "The Master Singers", "Lohengrin, the Knight of the Swan", "The Flying Dutchman", "Tannhauser, the Minstrel Knight."

COLEMAN, SATIS N. Bells. New York, Rand McNally & Co., 1928.

COMMINS, DOROTHY BERLINER. Making an orchestra. New York, The Macmillan Co., 1931.

Descriptions of all instruments by families Chart with cut-outs, to set up small orchestra on paper

CRANE, WALTER. The baby's opera. New York, Frederick Warne & Co., Ltd. (No date given.)

Very easy; colorful, interests only the younger members of the class.

FORESMAN, ROBERT. A child's book of songs. New York, American Book Co., 1928.

HULLAH, ANNETTE. A little history of music. New York, Longmans, Green and Co., 1911.

KINSCELLA, HAZEL GERTRUDE. Storyland New York, The University Publishing Co., 1930. (The Kinscella readers, Bk. I)

A simple little book of music stories and poems with notes suggesting selections for music appreciation suitable for each lesson. An excellent reader to use in connection with this activity.

[1] Some of these books are too difficult for the children to read, but they enjoy the illustrations.

XV. BOOKS AND BOOKMAKING

By MARTHA MACDONALD, *Pittsburgh, Pa.*[1]

[NOTE.—To bring into the children's experiences a feeling of close comradeship with books and with some of the simpler gems of literature is one of the major objectives of this activity. It shows how actual construction work and the development of reading ability can proceed hand in hand as component parts of the same project.]

The activity suggested by the caption above was carried on with a group of 16 children, ranging in chronological age from 10 to 15 years, and in mental age from 6 to 12 years. The project seemed to be worth while for the following reasons:

1. Every child loves an attractive book. To handle it and to look into its pages affords pleasure, whether the child can read or not. In this the special-class child is not unlike other children.
2. The access to many books in the schoolroom has stimulated interest and extended the child's horizon to include many fields of information.
3. The frequent use of moving pictures and the reading of current topics in the Weekly Reader have brought the child in touch with "world interests."
4. The making of booklets simple in construction has furnished a pleasurable activity, developed skills, and helped in forming desirable habits.
5. The opportunity seemed at hand whereby the child's knowledge, interests, and skills could be organized into a unit of work which would add to his knowledge, multiply his interests, develop new skills, and prepare for a more intelligent appreciation and a wider use of books.

I. OBJECTIVES

A. To increase the child's knowledge through an awakened interest in books.
B. To help the child to make a wider use of books.
C. To train the child in the care of books.
D. To teach the rudiments of a phase of industrial life: Bookbinding.

[1] We are indebted to Miss MacDonald for the silhouettes appearing in this activity and on the cover of this bulletin. They represent actual children in her classroom.

II. Procedure

A. Sense games and stories, pictures, and specimens were used to direct the child's attention toward the field of information touching his life close at hand, about which he should know and about which he can learn much through a quickened functioning of his bodily senses.

B. Also by the means used under "A" above, fields of information, expanding and remote, were brought to the child's attention.

C. By the use of stories illustrated with posters it was shown that remote fields of information have become tangible through observation and the use of the various means by which one may travel over the earth and sea and through the air

D. Also by means used under "C" above, the child's attention was centered on the multiplicity of aids developed and developing to bring the world's information to all our children.

E A book is the best-known device from which to obtain and in which to store information, and the evolution of the book made an interesting story and study.

F. A book was explored as to construction, covering materials, tools, and steps in the making; this was a class lesson and was followed by a dramatization.

G. A book, through use or misuse, may be in need of repair, and the class repairs it.

H. An honor chart or graph may be used to stimulate interest and to reward for effort the children who have done independent work in the reading of stories or books.

III. Activities

A. Seat work:
   1. Simple booklets for use under points 2 and 3 following.
   2. Cutting, pasting, folding, coloring.
   3. Scrapbook work.

B. Class work·
   1. Reading:
      (*a*) Oral:
         1 Books based on the activity.
         2. Stories about books, found in standard readers.
         3 My Weekly Reader, edition no. 1.
      (*b*) Audience (reading by teacher):
         1 Supplementary books and stories related to the subject.
         2. Book of knowledge, vol. 3, pp. 887–898.
      (*c*) Work type:
         1. True and false tests.
         2. Multiple choice tests.
         3. Completion tests.
   2. Spelling: Words based on the activity.

3. Language:
    (*a*) Oral:
        1. Dramatization.
        2. Brief poems found in library books and readers emphasizing aims in the activity.
    (*b*) Written:
        1. Stories on unit of work.
        2. Stories about authors:
            (*a*) Longfellow.
            (*b*) Stevenson.
        3. Book maxims.
4. Numbers: Problems based on the activity.
5. Art:
    (*a*) Book covers.
    (*b*) Book cover designs.
    (*c*) Book markers.
    (*d*) Book posters.
    (*e*) Book plates.
    (*f*) Printing and lettering.
6. Excursions:
    (*a*) To local branch of Carnegie Library.
    (*b*) To Carnegie Central Library and room in Carnegie Museum containing "old and rare books."
    (*c*) To the bindery at Carnegie Central Library Building.
    (*d*) To a printing establishment and bindery in our own school district where books are printed and bound.
7. Construction:
    (*a*) A "library corner" in our classroom.
    (*b*) Book shelves in classroom.
    (*c*) Book ends.
    (*d*) A class book—being a composite of the children's work.

EXPLANATORY NOTE

The pages which follow have reference to a series of reading lessons worked out during the activity. First is given the "teacher's page", containing the aim and a possible procedure for each lesson development. Then comes the "pupil's page." This is to be "dittoed" and given to the children as the time for it arrives. Each of these pupils' pages contains a lesson "to read" and a task "to do." These pages, together with blank ones called "work pages" needed in the working out of the task assignments, will make up the pupil's book entitled "Read and Do."

182068°—23——9

Poster work is introduced with lesson no. 11. There are 14 posters in the series, uniform in size. Pictures will be required from time to time for the posters and for the children's books, Read and Do. The teacher should begin to gather magazines, papers, and catalogs from which appropriate pictures can be cut by the teacher or by the children when required. Appropriate and inexpensive pictures can also be obtained from several commercial houses and their catalogs should be kept for easy reference at all times. The teacher should send for the same now.[2]

For the entire book a suitable cover is made and decorated and some method devised and followed for fastening in the pages.

[2] See page 146 under "Selected References and Materials."

(TEACHER)

The teacher will help the child to make the cover for his book. This should be simple in construction and for temporary use. To the cover should be added the title—

READ AND DO

in bold, large, cut-out or printed letters.

Later on, when the construction lessons in bookbinding have been developed under the unit of work, a permanent cover may be made.

The child receives the first page for his book, reads it, writes his name in the proper place, and fastens it into the cover.

LESSON 1

Aim of this lesson

To give to all the children an opportunity for free and informal expression.

To engage the children in conversation about the activities and experiences of the vacation season.

The opening day of school marks the end of the summer vacation and the beginning of schoolroom routine.

It seems to be an opportune time to let the children engage in a free and informal conversation about the activities and experiences of vacation. Develop the word "vacation."

"What we DID in vacation."
"What we SAW in vacation."
"Where we WENT in vacation."

The above captions could be used for oral or written English, word building, and illustrative work involving the child's interest and the child's ability.

Give the children a page with the poem "September" written on it.

(First Page for the Pupil's Book)

READ AND DO

Today you begin to make a book.
It will be Your Book.
In your book you will find lessons to Read.
In your book you will have things to Do.
Write your name in your book:
Name _____

Lesson 1

READ

1. Vacation is ended.
2. School has begun.
3. Vacation days are happy days.
4. July and August are vacation months
5. We played in vacation.
6. We worked in vacation.
7. Some boys and girls went away.
8. Miss MacDonald went away to summer school.
9. Mr. Fruit lived on his farm in the country.
10. Today is Tuesday, September 1, 1931.

DO

Make a picture and Paste it here:

_____

Vacation days are happy days.

READ

SEPTEMBER

The hills are gold, the nights are cool,
The apple wears a rosy look;
And now 'tis time to go to school
And learn how pleasant is a book.

We've played beside the buttercup
And rested near the friendly fern;
But now we take our pencils up
For there are happy things to learn.

And soon the birds will leave the wood
And ice will still the singing brook,
Then we shall find it very good
To stay indoors and read a book.
—*Vivian Yeiser Laramore.*

DO

Place this page in your book.

(TEACHER)

LESSON 2

Aim of this lesson

To utilize the child's interest in the varied activities attendant upon the opening day of school and particularly the enrollment of the little children just beginning their school careers.

Discuss the activities of the opening day of school, the need of enrolling early, and the age of children just entering. Talk of ways in which special class children can help the school, the home, and the beginners just entering school.

Special attention may be directed toward the beginner—how his environment has changed, what it includes, and how differently different children react to the new and strange environment.

The children then read the story of the little boy who refused to participate in anything on the first day of school, but repeated efforts to solve the difficulty finally ended when the teacher took the child unawares with a gentle love pat and said, "You'll do this for me, won't you?" to which the child replied, "Yes, but I won't read for you."

After the child has read the story, it should be placed in his book and fastened into it. Help him to understand clearly the work he is to do, so that independent work can be done on the succeeding lessons.

[NOTE —A work page is given with this lesson.]

(PUPIL'S PAGE)

LESSON 2

READ

Billy Goes to School

It was the first day of school at the Luckey School. A boy brought his little brother Billy to school.

Things looked very strange to Billy and he was frightened. He sat still. He would not talk. He would not do anything.

At last the teacher found out what was the trouble with Billy.

He had heard that boys and girls had to read at school. He could not read. He was frightened. He did not know that he had to LEARN to read.

Children learn many things before they learn to read.

DO

1. On the work page draw a schoolhouse.
2. Find the picture of a little child who has just started to school. PASTE the picture near the school. Give the child a name and write the name below the picture.

[NOTE.—A work page follows this]

(TEACHER)

LESSON 3

Aim of this lesson

To acquaint the child with some school facts which he should know.

Refer to the story of Billy and his great fear that he would have to read upon going to school. One child may tell the story and one may reread it.

Emphasize the fact that Billy had much to learn before he would learn to read. Let the children tell of the things he will be learning.

The children then read lesson 3, containing some school facts which are of special interest to them.

(PUPIL'S PAGE)

LESSON 3

READ

Things We Have Learned and Can Read

1. We are in school today.
2. Today is ———, September ———, 1931.

3. Our school is the Luckey School.
4. Our school is on Wabash Avenue, West End, Pittsburgh, Pa.
5. There are ——— girls and ——— boys in our school.
6. I am in the special class.
7. Miss MacDonald is my teacher.
8. Mr. Fruit is my principal.
9. ——— little children started to our school this week.
10. These little children can not read.

DO

Color the words below:

CHILDREN LEARN TO READ AT SCHOOL.

(TEACHER)

LESSON 4

Aim of this lesson

To familiarize the child with other facts which he should know.

Help the child to fill in the blanks in his lesson page correctly. Let each child read aloud his own lesson.

The facts in this lesson need further emphasis, so refer to this lesson as often as is needful.

(Pupil's Page)

Lesson 4

READ

1. My name is _____.

2. My address is _____ Street.

   _____ P.O.

   _____, _____.

3 I was born _____ _____ _____.
   month day year

4. I am _____ and _____ tall.
   feet inche

5. I weigh _____and _____.
   pounds ounces

6. I have _____ hair.
   color

7. I have _____ eyes.
   color

8. My favorite game is _____.

9. My best friend is _____.

10. I would like to be, when I grow up, a _____.

DO

Address this envelope to yourself:

_____

_____ Street.

_____ P.O.

_____, _____

(TEACHER)

LESSON 5

Aim of this lesson

To familiarize the child with other facts which relate directly to his school life, and about which he should know.

In our school the name of the teacher and the number of her grade appear on the outside of her schoolroom door; on the office door is the name of the principal and his official title.

The children, even when they know the office and the rooms by location only, stop and seem to enjoy reading the names on the doors.

The words on the work page are to be cut up by the children and pasted where they belong on the lesson page.

[NOTE.—A work page is given with this lesson.]

(PUPIL'S PAGE)

LESSON 5

READ

Read these names:

1. Mr. Fruit. ----------
2. Mrs. Ringle. ----------
3. Miss Egbert. ----------
4. Miss Brady ----------
5. Miss Will. ----------
6. Miss Curran. ----------
7. Miss MacDonald. ----------
8. Mr. Stein. ----------

DO

On the work page you will see:

1B–1A	5B–5A–6B
2B–2A	Office of principal
3B–3A	Special class and head teacher
4B–4A	Custodian

Cut on the lines from the work page and then paste the words in the right places on this page.

[NOTE.—Work page follows this.]

(TEACHER)

LESSON 6

Aim of this lesson

To familiarize the child with other facts which relate directly to his school life and about which he should know.

The children should be able to recognize the printed or written names of their classmates.

Children find it a happy experience to distribute papers to their owners, and this lesson should help them to learn to do this service and experience this happiness.

Have the names of all classmates printed on a separate paper. Let the children talk about these, and then have them cut the names apart and place the same in the positions the children occupy in the room.

[NOTE.—A work page is given with this lesson.]

(PUPIL'S PAGE)

LESSON 6

READ

Read the names of the boys and girls in the special class:

Philip Pass	Ruth Smoot
Henry Sawyer	James Moyer
Marie Hinston	Raymond Frey
Claude Fish	William Nels
Frank Fordson	Sylvester McGowan
John Binney	Thomas Brown
James Doll	Robert Allenson
Jane Passaro	Dominic Martino

DO

1. Here is a PLAN of the special classroom. See if you can tell where the boys and girls sit.
2. Cut the names from the work page and place them where they should go on this plan.

(*Plan of the classroom is blocked out in this space.*)

[NOTE.—Work page follows, with names of children blocked for cutting.]

(TEACHER)

LESSON 7

Aim of this lesson

To direct the child's attention toward the field of information close at hand and about which he can learn much through the sense of sight.

1. Eyes: Number, color, use, care of; precautions at play.
2. Keen eyes, defective eyes, sightless eyes.
3. Blind children, blind school, Braille system.
4. Sentences blind children will not read:
"I see you, Mother. I see you, Father."

5. Things blind children cannot comprehend: The landscapes and the skies.

6. Things we can see and know about with our eyes.

7. Sense games, involving sight.

8. How blind people find their way: Stick, friend, kindly stranger, dog.

9. How we may help the blind.

Pictures or plates of BRAILLE READER would add interest to this lesson.

(PUPIL'S PAGE)

LESSON 7

READ

1. The sky is blue today. (Yes—No.)
2. The sun is shining. (Yes—No.)
3 The lights are lit in our room. (Yes—No.)
4. Philip is in school today. (Yes—No.)
5. Jane is not in school. (Yes—No.)
6. There are 16 children in our room today. (Yes—No.)
7. The sink is clean. (Yes—No.)
8. This is September. (Yes—No.)
9. The trees are bare. (Yes—No.)
10. It is 12 o'clock. (Yes—No.)

DO

1. See with your eyes if the above things are TRUE, then CROSS OUT the wrong word.

2. READ for honor work these stories found in books in library corner:

(*a*) Eyes and No Eyes.

(*b*) Little One-Eye, Little Two-Eyes, and Little Three-Eyes.

(*c*) Who Hath Seen the Wind?

(TEACHER)

LESSON 8

Aim of this lesson

To direct the child's attention toward the field of information close at hand, and about which he can learn much through the sense of hearing

1. Ears: number, position, use, care of; precautions at play.
2. Keen ears, defective ears, deaf ears.
3. Sense games (eyes closed) to detect sounds in room.
4. Call attention to intensified sense of hearing in blind people.
5. Sounds we can hear: Voices, nature, music, etc.
6. How deaf people learn to read:
   (*a*) By sign language.
   (*b*) By lip reading.
7. Make clear pronunciations of words (and maybe sentences) without audible voice to emphasize the possibilities of lip reading.
8. Let the children talk of situations which arise—
   (*a*) Through failure to hear.
   (*b*) Through failure to heed what we hear.

(PUPIL'S PAGE)

LESSON 8

READ

1

How dreary would the meadows be
In the pleasant summer light,
Suppose there wasn't a bird to sing,
And suppose the grass was white!

2

And dreary would the garden be,
With all its flowery trees,
Suppose there were no butterflies,
And suppose there were no bees.

3

And what would all the beauty be,
And what the song that cheers,
Suppose we hadn't any eyes
And suppose we hadn't ears!

4

Ah, think of it, my little friends,
And when some pleasure flies,
Why, let it go, and still be glad
That you have your ears and eyes.

—*Alice Carey.*

DO

You may do one of these things:

1. Read a story.
2. Read to some one.
3. Let some one read to you.

(TEACHER)

LESSON 9

Aim of this lesson

To direct the child's attention toward the field of information close at hand, and about which he can learn much through the senses of feeling, of smelling, and of tasting.

1. Ask the children to keep eyes closed tight.
2. Put into their hands a piece of candy.
3. Ask them:
   To FEEL it.
   To SMELL it.
   To TASTE it.
4. Sense games may be used involving the three senses mentioned above.
5. Play the game, "I know," or "What is it?"
   The children reply:
   I see it; it is a book.
   I hear it; it is a bell.
   I smell it; it is soap.
   I feel it; it is sandpaper.
   I taste it; it is sugar loaf.

[NOTE—A work page is given with this lesson.]

(Pupil's Page)

Lesson 9

READ

All things bright and beautiful,
All creatures, great and small,
All things wise and wonderful,
The Lord God made them all.

Each little flower that opens,
Each little bird that sings,—
He made their glowing colors,
He made their tiny wings.

The purple-headed mountains,
The river running by,
The morning and the sunset
That lighteth up the sky.

The cold wind in the winter,
The pleasant summer sun,
The ripe fruits in the garden,—
He made them every one.

He gave us eyes to see them,
And lips that we might tell
How great is our Heavenly Father
Who hath made all things well.

—*Cecil Francis Alexander.*

DO

On the work page you will find some pictures to color. Write these words under the right pictures:

To SEE
To HEAR
To SMELL
To TASTE
To FEEL
To READ

(Note.—Work page follows with pictures to be colored.)

(Teacher)

Lesson 10

Aim of this lesson

To reemphasize the work done as it has related to the field of information close at hand and about which the child has been centering attention through sense games and exercises.

The teacher chooses something to keep in mind as a secret, and the children try to discover the secret by asking questions of this character:

Can we SEE it?
Can we HEAR it?
Is it LARGE?
Can we EAT it?
Is it in my desk?
Is it alive?
Etc., etc.

By this game, children learn to know, to classify, to localize, and to corral the field of information.

(Pupil's Page)

Lesson 10

READ

For this new morning with its light,
For rest and shelter of the night;
For health and food, for love and friends;
For everything thy goodness sends,
We thank Thee, Heavenly Father.

A Child's Prayer

God, make my life a little light,
Within the world to glow—
A tiny flame that burneth bright
Wherever I may go.

God, make my life a little flower,
That bringeth joy to all,
Content to bloom in native bower
Although its place be small.

God, make my life a little song,
That comforteth the sad,
That helpeth others to be strong,
And makes the singer glad.
—*M. Betham Edwards.*

DO

Find a pretty picture and paste it here:

(TEACHER)

(Following LESSON 10)

EXPLANATORY NOTE.—At this point in the series of reading lessons the poster work is introduced. There will be 14 posters in the series, uniform in size. A number of reading lessons will be worked out with each poster. Pictures will be required from time to time for the posters and for the children's books "Read and Do", and the teacher should by this time have available magazines, papers, and catalogs from which appropriate pictures can be cut by the teacher or by the children when required. For this illustrative work in their books "Read and Do", the children should be given from time to time as many work pages as are necessary. Much material is available and children quickly and joyfully succeed in their quest for pictures. At times it may be necessary to use original drawings, or photostatic copies of plates or cuts obtained at the library. Plan some way to have the posters preserved, and keep them in view of the class.

(TEACHER)

LESSON 11

Aim of this lesson

To extend the child's horizon to include new fields of information—not near but far.

To prepare for that link which makes the remote near—and information tangible, namely, "the book."

Show the globe; let the children handle it. Talk of the shape of the earth; its size, its motions. Let the children

name the great nations and peoples living on the earth; the lands from which the children's parents have come; the lands the children would like to visit and why.

Locate the poles; the great oceans; North America.

It seems best to have poster no. 1, READING AND LEARNING ABOUT THE EARTH, already prepared by the teacher, shown with this lesson, so that the idea of poster work will be more easily understood by the children.

Excellent copies of globes and maps of the world may be found in catalogs.

LESSON 11

READ

READING AND LEARNING ABOUT THE EARTH

The Child's World

Great, wide, beautiful, wonderful world,
With the wonderful water round you curled,
And the wonderful grass upon your breast—
World, you are beautifully drest!

You, friendly earth, how far do you go,
With the wheat fields that nod and the rivers that flow,
With cities and gardens, and cliffs and isles,
And people upon you for thousands of miles?

Ah, you are so great, and I am so small,
I tremble to think of you, world, at all;
And yet, when I said my prayers today,
A whisper within me seemed to say—

"You are more than the earth,
Though you are such a dot;
You can love and think,
And the earth cannot!"

—*Lilliput Levee.*

DO

(TEACHER)

LESSON 12

Aim of this lesson

To extend the child's horizon to include new fields of information—not near but far.

To prepare for that link which makes the remote near—and information tangible, namely, "the book."

Help the children to think about all the various ways by which people have traveled over the earth and sea and through the air to obtain the world's information.

Make a blackboard list of these ways, as the children name them. Then let the children read lesson 12.

The children find pictures for this lesson and the teacher selects and arranges those most suitable for poster no. 2.

The children mount their pictures for this lesson on the work pages "SEEING AND LEARNING BY TRAVELING."

[NOTE.—Work pages are given with this lesson.]

(PUPIL'S PAGE)

LESSON 12

READ

In the long, long ago, people did not know much about the earth.

There were many strange and wonderful lands, but the people in these lands did not know one another. Indeed, it is strange but true that the people in one land did not know there were other lands and other people. You see people did not go far from home then.

But by and by people began to travel far. Then farther and farther they went from home. Then people began to learn about other people. They learned how they lived, what they did, and how they traveled from place to place. They learned about the plants and the animals of other lands. They learned about other kinds of weather.

How glad we are that people have traveled far and learned of so many things. We will try to remember that people have traveled on foot, in canoes, in boats, on horseback, on camels, on elephants, by ox-teams, by dog train, in wagons, by train, by steamships, by electric cars and electric trains, in motor boats, in submarines, by automobiles, and by airplanes.

DO

Find pictures that show how people have traveled over the earth and sea and through the air.

Paste these on your work pages:

"SEEING AND LEARNING BY TRAVELING"

Additional poster lessons for this unit of work, in connection with which "Read and Do" activities were developed by the teacher, are listed below. The details of the work are not reproduced because of economy of space, but they can be planned by any teacher who is interested in developing this activity unit with her group.

Poster no. 3: Wonderful ways of learning about many wonderful things. (Pictures for this poster to show how the world's information is transmitted, e.g., pictures, books, newspapers, magazines; letters, telephone, telegraph, radio; schools, libraries, museums.

Poster no. 4: Learning about everything by reading. (Pictures of children reading.)

Poster no. 5: When there were no books. (Picture of one telling a story to children.)

Poster no. 6: A. Old ways to tell old stories without words. (*a*) A notched stick. (*b*) A Peruvian Quipi (knotted string).

B. New ways to tell new stories without words. (*a*) Traffic light—red. (*b*) Traffic light—green.

Poster no. 7: Early picture-stories. (Picture, Pictured History.)

Poster no. 8: Stories on clay, wax, and stone.

Poster no. 9: Stories in hieroglyphics from the land of Egypt. (Pictures of Egyptian hieroglyphics, obelisks, pyramids, other Egyptian relics.)

Poster no. 10: Reading and writing by use of an alphabet. (Pictures of English alaphabet, Braille alphabet, Cree Indian alphabet.)

Poster no. 11: The art of printing. (Pictures illustrative of poster subject, including John Gutenberg; early, later, and latest printing machines, etc.)

Poster no. 12: The evolution of a book. (Pictures of papyrus rolls, scrolls, unbound folded sheets, tied sheets, laced sheets, bookbinding in its various phases.)

Poster no. 13: The world's greatest book. (Pictures of Bibles, open, closed, and in stacks.)

Poster no. 14: Reading good books and learning about everything. (Enlarged kodak pictures of Luckey School Special Class, reading period.)

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D.C., June 1933.

SIR: This manuscript is another fundamental study. It is an effort to find out the social backgrounds of college freshmen in 33 colleges for Negro youth located in 17 States. A carefully prepared questionnaire was sent out to some 95 colleges requesting cooperation. Forty-two presidents expressed their willingness to cooperate. The colleges which did cooperate are listed in table 1 of this study. There were 2,176 examination forms returned.

The tabulations and the explanations of them are given in three parts: Part I is a discussion from a more or less personal angle; part II approached the topic from the schools previously attended; and part III from the point of view of the parents of these children and the educational opportunities enjoyed by their parents, and their brothers and sisters. It was found that "the typical Negro college freshman is 20 years of age, has a mean psychological score of 76; and comes from a family of four children, of which one has already graduated from college. His father and mother have, respectively, 8 and 9 years of schooling. During his high-school career he read 21 books voluntarily; engaged in three hobbies or interests; belonged to three organizations; and held two offices. He comes from a home having a monthly income of $95. The home he comes from contains 5 or 6 rooms and is occupied by 4 or 5 persons. His parents have 96 books in their home and take two magazines."

I am quite sure that this is a most suggestive study on a topic comparatively neglected. I respectfully recommend that it be printed as a bulletin of this Office.

Respectfully submitted.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR.

A BACKGROUND STUDY OF NEGRO COLLEGE STUDENTS

INTRODUCTION

GROWTH OF EDUCATION

In ancient times education was primarily an individual matter and consisted of the simple procedure of passing on to the child the limited number of knowledges and skills necessary for successful participation in primitive adult life. With the development of modern civilization and its consequent multiplicity of things and the increased intricacy of life in general the chasm between childhood and adult life became widened and more difficult to span. As a result of this expansion and growth of civilization education changed in the following five important aspects: (1) It became a necessity for successful living and participation in society; (2) it was desired and demanded by ever increasing numbers; (3) the period for its acquirement became longer; (4) its field of activity became broader and its processes became more intricate; (5) and finally, its organization and administration became unwieldy, rigid, and mechanistic.

Meanwhile, there grew up in many places an erroneous conception of "mass" education and a slavish worship of the "system" with concomitant evils of student mortality, school and social maladjustments, miseducation, vocational misfits, and failures. Fields of knowledge were shut up into "watertight compartments" called subjects, the mastery of which was considered the end of education rather than means for the development of students. The child's education was divided into levels (primary, grammar, high-school, college, graduate, and professional) which were more or less lacking in definite objectives and coordination. In an effort to train the children uniformly and symmetrically sight was lost of the individual and his varying capacities.

The development of experimental psychology furnished the principles and techniques and the coming of the World War set the stage for a thorough reorganization and revamping of educational theory and practice along lines which gave recognition to the fact of individual differences. Out of this reorganization emerged personnel work through which education hopes to lift itself out of the conditions just described.

PERSONNEL WORK

Personnel work is one of the more progressive innovations in American education, and it offers both the remedy and preventive for many of the ailments with which our educational systems are afflicted. Its primary and ultimate aim is to focus all the available knowledge and devices in the various fields of human endeavor and all the factors in the life of an individual on the task of developing a growing, wholesome, and functioning personality, satisfying to itself and useful to society.

PERSONNEL RESEARCH

Characterized by experimentation and the spirit of the scientific method at every stage, personnel work naturally divides itself into two parts, namely, personnel research and personnel administration or service.

The research phase of personnel assumes the task of collecting all possible information about students and other facts which may throw light on the consideration of them, and of presenting them in understandable, usable, and convincing form. Limitations of time, money, techniques, and specialists make it impossible to gather all the information known to be desirable in the consideration of any given personnel problem. However, there are certain data which seem fundamental to effective work in this field and it is to the task of collecting them that practical personnel research has addressed itself. These data consist of facts about the background of individuals; their socio-economic status; school experience; interests; temperaments; extracurriculum activities; community and family relationships; personal habits; physical and mental health; and intelligence.

How few facts are known about students along these lines is manifest to every teacher and administrator. The impor-

tance of knowing them is emphasized by the realization that one's whole personality is called into action in every experience, and that the extent and nature of one's response to any given stimulus is conditioned by his whole life span: his past; his present physical, intellectual, and social environment; and the aspirations and ambitions he has for the future. The more that is known, therefore, of the various phases of one's life the better may he be guided and aided in the furtherance of his rightful purposes.

PERSONNEL SERVICE

Personnel service or administration is that phase of personnel work that puts to use the information received through personnel research. When properly conceived and administered, personnel service, in building up its techniques and devices, utilizes, among other things, both the materials and methods of psychology, ethics, psychiatry, medicine, social sciences, biology, and physical culture and hygiene.

Personnel research supplies the fuel while personnel service furnishes the machinery for the operation of personnel work. Unless the effort expended in gathering information by means of scientific research eventuates in an effectively functioning personnel program, it is futile.

Personnel work has already played a large part in bringing about a fundamental change in our conception of education. Instead of something static, education is now thought of as dynamic; in the place of a vacuum to be filled, the child's mind is an important part of his personality for which the most we can do is to help it habituate itself to change and growth. Accordingly, education becomes a cumulative, growing, expanding, habituating process, beginning at birth and continuing as long as life lasts.

SPHERE OF PERSONNEL WORK

The phases of school and college procedure which come under personnel work are: (1) Induction of students, including their recruiting and selection, admission, registration, classification, and orientation; (2) student counseling, which consists of educational guidance, vocational guidance, counseling about personal problems, scholastic adjustments, and disciplinary matters; (3) health service, comprising physical

examination at entrance, follow-up and corrective service, medical care, and mental hygiene service; (4) extracurriculum activities, having to do with the provision of and student participation in extracurriculum activities, and finding and supervising part-time employment for students; (5) student accounting, embracing the gathering and presenting of an accurate, comprehensive, and cumulative body of important facts necessary for the guidance of students' education; and (6) placement and follow-up of graduates.

PREVIOUS STUDY

It was with a view to making a contribution to the subject of student personnel that an investigation in this field was begun at Fisk University in 1926 and was continued until 1929. The purpose of the study was, on the one hand, to validate the admission, orientation, and advisory procedures at Fisk University, and on the other to improve some of the techniques employed in student personnel research and administration in general, and to show the possible value of a similar investigation on a more comprehensive scale. The special problem consisted of a study of the relations between certain background factors of Negro college students and their subsequent careers in college. The subjects comprised 450 entering students of Fisk during the years 1926, 1927, and 1928. As an aid in the construction and refinement of the background questionnaire, cooperation was received from the presidents of 50 Negro institutions who had the blank filled out by their entering students. In addition, personnel forms of 80 of the leading institutions of the country were studied, and the tentative drafts of the questionnaire were submitted to a number of authorities in the field for their criticisms and suggestions. This study has been published [1] and reference will be made to it frequently throughout the present report.

THE PRESENT STUDY

THE PROBLEM AND PURPOSE

The present study is an extension of the smaller study referred to above. It is essentially a problem in personnel research, and is a national survey of the social, economic,

[1] Caliver, Ambrose. A Personnel Study of Negro College Students. Teachers College, Columbia University, New York City. (Contributions to Education, No. 484) 1931.

cultural, academic, and intellectual background of Negro college students. A description and analysis of these background factors will be made; many of them will be correlated with each other, especially in relation to certain personal characteristics, kind of school attended, and parental occupation; and an interpretation will be made of some of their educational and social implications.

The purpose of this study is to establish criteria and reveal trends with which local schools may compare their own student bodies; and to furnish a body of information which will be helpful in establishing and conducting a personnel program and to serve as one of the guides in further reorganizing educational theory and practice.

THE DATA AND THEIR SOURCES

The data consist of facts concerning background factors and the psychological scores of 1,880 Negro college freshmen. These data were obtained from 33 colleges for Negro youth, located in the following 16 States and the District of Columbia:[2] Alabama, Arkansas, Delaware,[2] Florida, Georgia, Kansas,[2] Kentucky, Louisiana, Maryland,[2] Mississippi, North Carolina, Pennsylvania, Tennessee, Texas, Virginia, and West Virginia. The students represented in the schools come from practically every State in the Union.

THE PROCEDURE

In November 1930 the United States Commissioner of Education wrote to the presidents of 95 Negro colleges explaining the nature of the contemplated study and requesting their cooperation (see appendix I). Forty-two presidents expressed willingness to participate. On the basis of the previous study [3] and with the cooperation of the staff of the Office of Education a personnel questionnaire was constructed (see appendix II) and sent to the Negro colleges the presidents of which had responded to the Commissioner's letter. These 42 colleges had an enrollment of approximately 5,000 freshmen. One form was sent for each student. A letter from the Assistant Commissioner of Education was sent (see appendix III) explaining how to administer the

[2] "Border" States.
[3] Caliver, Ambrose. Op. cit.

questionnaire. The letters and questionnaires were sent directly to the instructors whom the presidents of the colleges delegated to supervise the work.

In addition to the background questionnaire the 1930 edition of the American Council on Education psychological examination for high-school graduates and college freshmen was administered to each student. These examinations were furnished by the American Council on Education and were sent out with the other forms. In addition to the letter of instruction from the Assistant Commissioner, the manual of instructions accompanying the examination was sent to each instructor having charge of the work. Each school was requested to score the examination and a score sheet was included for recording the scores in the five tests of the examination and the gross scores. All schools except one scored the examinations before returning them.

In most cases the person having charge of this study in the colleges was the head of the department of education or the dean. It is believed that these persons were sufficiently familiar with objective testing and modern educational procedures to have administered the tests and questionnaires in a manner to insure reliability. Since each examination was returned, together with the score sheets and the questionnaires, any apparent errors could be checked and corrected, or thrown out.

Hollerith cards were then punched for each student represented and tabulations made by running them through the tabulating machine. These tables were then subjected to statistical treatment and prepared for the report.

The names of the schools and the number of students participating in the study are shown in table 1.

NEED OF THE STUDY

There is in evidence the dawn of a new era in Negro education. With the growing popularization of secondary education, with the consequent increase of applicants to college, and the decrease in available funds, there comes the necessity of a more critical evaluation of education on all levels, and particularly on the collegiate level. This has required greater attention to the wise use of the funds that are available and resulted in a growing realization of the need of more

objective and comparable facts about Negro students—their nature, characteristics, capacities, achievements, interests, and ambitions.

It is the purpose of this study to supply this need to some extent, and to furnish additional information which may be of value not only to college administrators and teachers, but to elementary- and high-school people as well. It should also prove helpful to officials of private- and public-school systems, to social workers, and to parents and students themselves.

[2] Professional schools.

In approaching the psychological and administrative aspects of student personnel in terms of the family and environmental background, it is believed that the sociological implications of the present study will have almost as much significance as its educational bearings.

Although this is a study of a large group of students its main justification is that it will assist in better understanding the individual. The mass is studied in order to identify those students who deviate from the average, either above or below. In both cases they need special treatment, which they usually fail to get because they are engulfed by or buried under the mass.

Persons of superior minds and talents are too rare to be lost, yet hundreds are annually sacrificed through the deadening uniformity and the utter disregard or cruel treatment of some of our school systems. A scientifically and wisely administered personnel program will aid greatly in saving some of these superior intellects who border on genius, but many of whom are "born to blush unseen."

Such a personnel program will also help to salvage and to adjust those individuals who seem to be inferior, and guide them into channels and activities in which they can succeed. Furthermore, it will tend to level upward the whole mass and thus assure a better society.

If colleges and schools could be persuaded to enter into a cooperative personnel program, in which a large span of a child's development would be revealed, and which would show the direction and tendencies of his growth, and reflect periodically the state of his knowledge, skills, appreciations, and ideals in relation to his personality, it would represent a forward step in the direction of a larger and more satisfying education for our youth.

If the present study makes any contribution to the attainment of this goal it will have justified the time and effort expended and will have fulfilled its purpose.

PART I: DESCRIPTIONS OF AND RELATIONSHIPS BETWEEN CERTAIN PERSONAL CHARACTERISTICS AND FACTORS

Part I will concern itself with a description of certain general facts having to do with more or less personal factors and characteristics of students. The topics to be discussed are: A. School and college relations; B. Age and intelligence of students; C. Scholastic and vocational interests and activities; D. Extracurriculum interests and activities; E. Time lost from school; F. Brothers and sisters and their education; and G. Information about parents.

It is of special interest to administrators of Negro colleges to have a general picture of the students who come to them: Where they come from; the kinds of schools they have attended; the proportions who come from various kinds of schools and different parts of the country; what influenced their choice of a college; their average age and intelligence; and the differences in these respects between boys and girls. It is also of value to know what are the scholastic, extrascholastic, and vocational interests of students; and the possible influence of the education of brothers and sisters in conditioning them for education on a college level. These and other similar questions will be answered in this part of the study.

A. SCHOOL AND COLLEGE RELATIONS

KIND OF HIGH SCHOOL ATTENDED

The kind and geographical location of the high schools from which the students of this study graduated are shown in figure 1. This information was secured from 716 men and 1,064 women. Nearly three fourths of the students come from Southern high schools, the percent being 73.

These facts have important implications both for the secondary school and the college. First, they indicate that nearly three fourths of the Negro college students are coming from public schools of the Southern and "Border" States,

which suggests the need of a better understanding and closer cooperation between the college and the public high school. And, secondly, they indicate the direct responsibility which private colleges still have for the high-school preparation of their students. A recent study [1] shows that 69 percent of the Negro public high-school teachers are graduates of private colleges.

If then, the quality of education being received by Negro high-school students is inferior, as is claimed by most colleges,

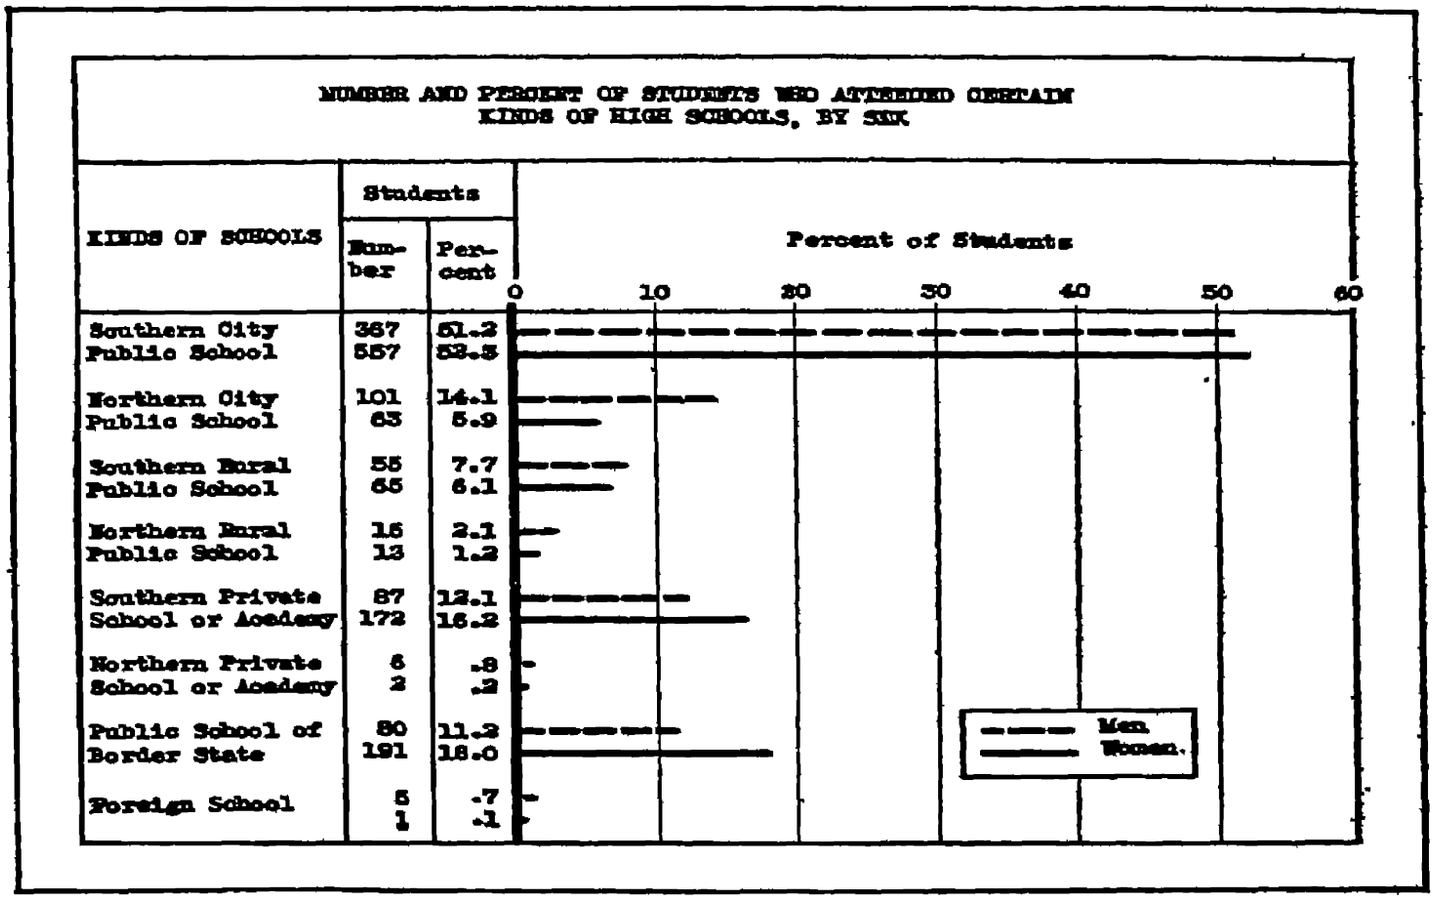

FIGURE 1.—Number and percent of students who attended certain kinds of high schools, by sex.

and especially private colleges, they must share some of the responsibility.

The facts revealed in figure 1 are also of special significance in relation to the scholastic aptitude of the students investigated, which will be discussed later.

It will be noted that the percentages of men and women coming from Southern public schools are practically equal, but in the case of students from Northern public schools the

[1] United States. Office of Education. National Survey of Secondary Education. Washington, Government Printing Office, 1933. (Bulletin, 1932, no. 17. Secondary Education for Negroes. Ambrose Caliver. Monograph no. 7.)

percent of men is almost three times that of women. Women surpass the men in their attendance at Southern private schools and public schools of the "Border" States by 4.1 and 6.8 percents, respectively.

KIND OF COLLEGE ATTENDING

Although private colleges represent 52 percent of the total number participating in the study, they have only 41 percent of the students. Public State colleges and normal schools

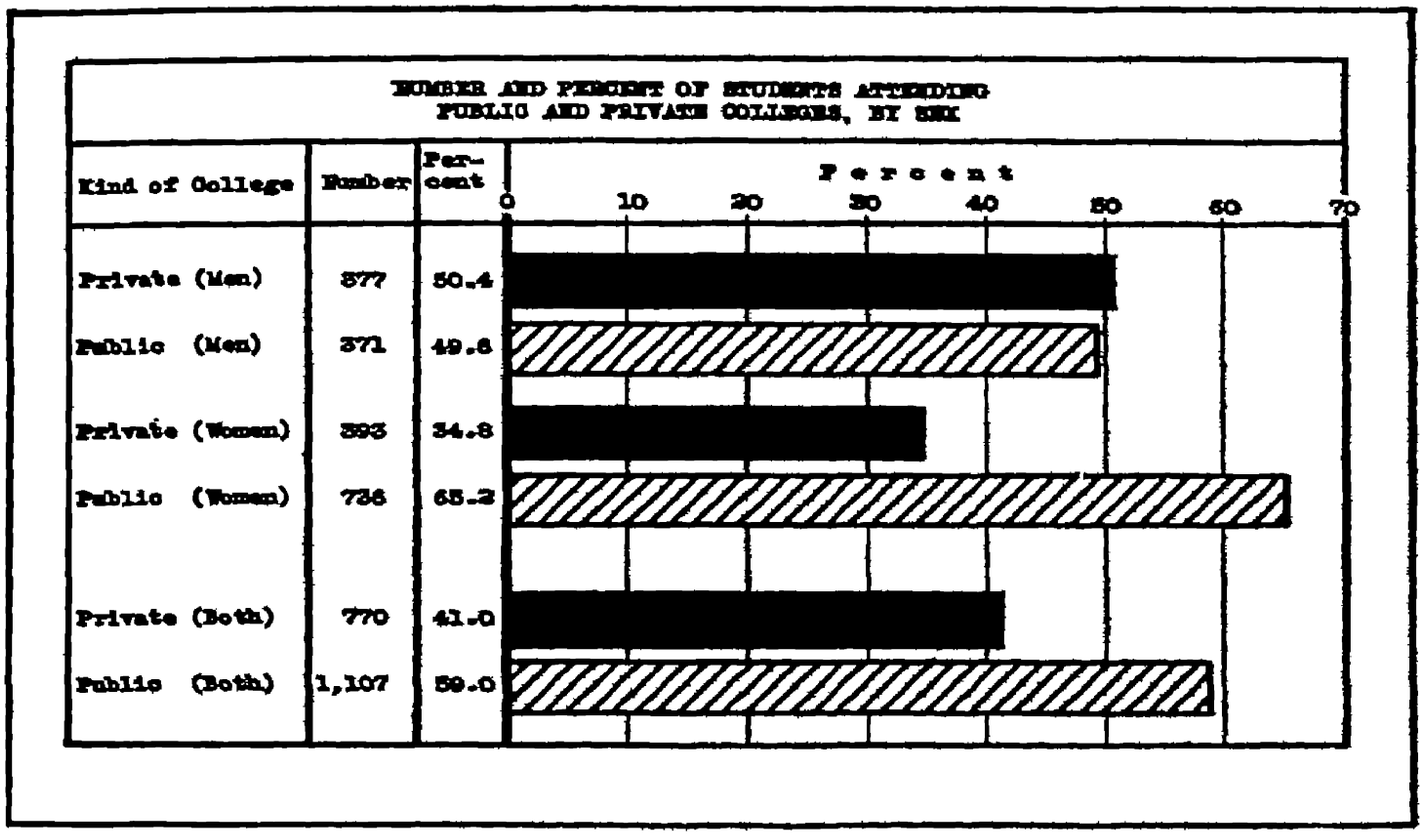

FIGURE 2.—Number and percent of students attending public and private colleges, by sex.

and city colleges and normal schools furnished 59 percent, as shown by figure 2.

Contrary to the findings concerning high-school attendance, a larger percent of the men than the women attend private colleges, their respective percentages being 50 and 35.

With the constant improvement of State colleges for Negroes and the gradual growth of city training schools an even larger proportion of students may be expected to enroll in public schools and colleges than at present. In fact there is evidence that there has been a tremendous change in the proportion of Negro students enrolled in public colleges and teacher-training schools during the past 5 years. In 1927

it was found that 75 percent of the students enrolled in 79 colleges were in private colleges.[2] (Seventy-two percent were private colleges and 28 percent public.) Certainly such a tendency should be a strong argument for an increase in the facilities and improvement in the quality of education offered at these public institutions.

Some idea of the educational task confronting these schools may be gained by reference to the third topic discussed in part II, under Intelligence and Kind of College Attending.

INFLUENCE TO ATTEND COLLEGE

The motivating factors which influence students to attend college should be of special significance to both administrators and teachers. Table 2 gives the number and percent of students who mentioned certain factors as influencing them to attend a certain college. A list of possible factors was given and each student was asked to check the item which most strongly influenced him to come to that particular college in preference to others. It is conceded that there is an element of subjectivity in these data. Because of the subtleness with which such factors operate, one's opinion or memory regarding them may not always be accurate. However, since the individual concerned knows more than anyone else about the matter, his judgment must be accepted for what it is worth.

TABLE 2.—*Number and percent of students who mentioned certain factors as influencing them to choose the particular college, by sex*

Reason	Men		Women		Total	
	Number	Percent	Number	Percent	Number	Per cent
1	2	3	4	5	6	7

[2] United States. Bureau of Education. Survey of Negro Colleges and Universities. Prepared in the division of higher education, Arthur J. Klein, Chief Washington, Government Printing Office, 1929 964 p. (Bulletin, 1928, no. 7.)

It will be noted that "vocational interests" and "superior quality of work" rank highest in percent of students mentioning them, their respective percentages being 25 and 21. It would be of interest to know what relation exists between the percent of students of a given college or special group of colleges who named vocational interests and superior quality of work as the most strongly influencing factors and the vocational offerings and accreditation of those schools. While this information is not reported here, the data given should be of value to colleges in working out the materials and objectives of their programs of studies and in setting and maintaining standards of work.

Another aid which the information contained in this table should give to college executives has to do with their recruiting procedures. Much time and money might be saved by giving more attention to those factors which most greatly influence the student in choosing a college and less to the ones which apparently have a negligible influence.

DRAWING POWER OF COLLEGE

The sphere of influence of colleges has definite relations to the extent of and methods used in recruiting students. Our data show that approximately 30 percent of the students are drawn from sources more than 200 miles from the colleges they attend, while nearly a third come from a radius of 10 miles or less. A fifth of the students come from distances of 100 to 200 miles.

The drawing power of a college as revealed by the percent of its students coming from various distances, among other things, is determined by their background factors and the strength of the appeal which the college makes in terms of these factors. Therefore, a detailed study by each college of its student body for the purpose of ascertaining the relation of its appeal and recruiting procedures to the distances from which students come should yield valuable information.

B. SCHOLASTIC APTITUDE OF STUDENTS

In order to ascertain the scholastic aptitude of the students under investigation, the American Council on Education Psychological Examination was administered. The scores made by students on this test according to age, sex, and kind of college attending are shown in figure 3 and tables 3 and 4.

AGE AND SCHOLASTIC APTITUDE

That the younger students are decidedly superior to the older ones in scholastic aptitude as revealed by the psychological scores is evidenced in figure 3. This figure shows the total group median, the number of students in each age group, their median scores, their ranges, and the percent who received a score above the total group median. Each bar shows the median of the age group it represents and the class interval in which the highest and lowest scores fall.[3]

The mean ages of the men and women are, respectively, 20.21 and 19.34, the difference being slightly more than 11 months. The group of students studied seems to be sufficiently representative to warrant the conclusion that the typical Negro student entering college is about 20 years of age. Gerberich found in his study of 10,000 Iowa seniors the median age of boys to be 18.2 and that for girls, 17.9. For both combined the median age was 18.[4]

TABLE 3.—*Mean psychological scores according to sex*

	Men	Women	Total
Mean and P.E.	80.7±1.55	71.6±1.06	76.01±.86
Number of cases	563	870	1,433

TABLE 4.—*Median scores made by students on different parts of psychological examination, by sex*

Part of examination	Men	Women	Total
1	2	3	4
Completion	17.28	12.02	14.32
Artificial language	16.29	18.17	17.41
Analogies	12.54	11.73	12.03
Arithmetic	14.55	8.80	10 37
Opposites	12.74	10.66	11.50
Number of cases	563	870	1,433

The contrast between the scores of each group with those of the groups which immediately precede and succeed it is in most cases pronounced, and the difference between the scores

[3] Midpoint of class interval used because scores were punched on Hollerith cards in terms of class intervals instead of absolute scores.

[4] Gerberich, J. R. A Personnel Study of 10,000 Iowa High-School Seniors. University of Iowa studies in education. Vol. V, no. 3. University of Iowa, Iowa City, Iowa. 1930.

of students who are younger than the mean age (20) and those who are older is particularly marked.

The first two age groups, 14 and 15, obviously are accelerated students and consequently a higher score is made by them. The fact that they are able to reach the freshman

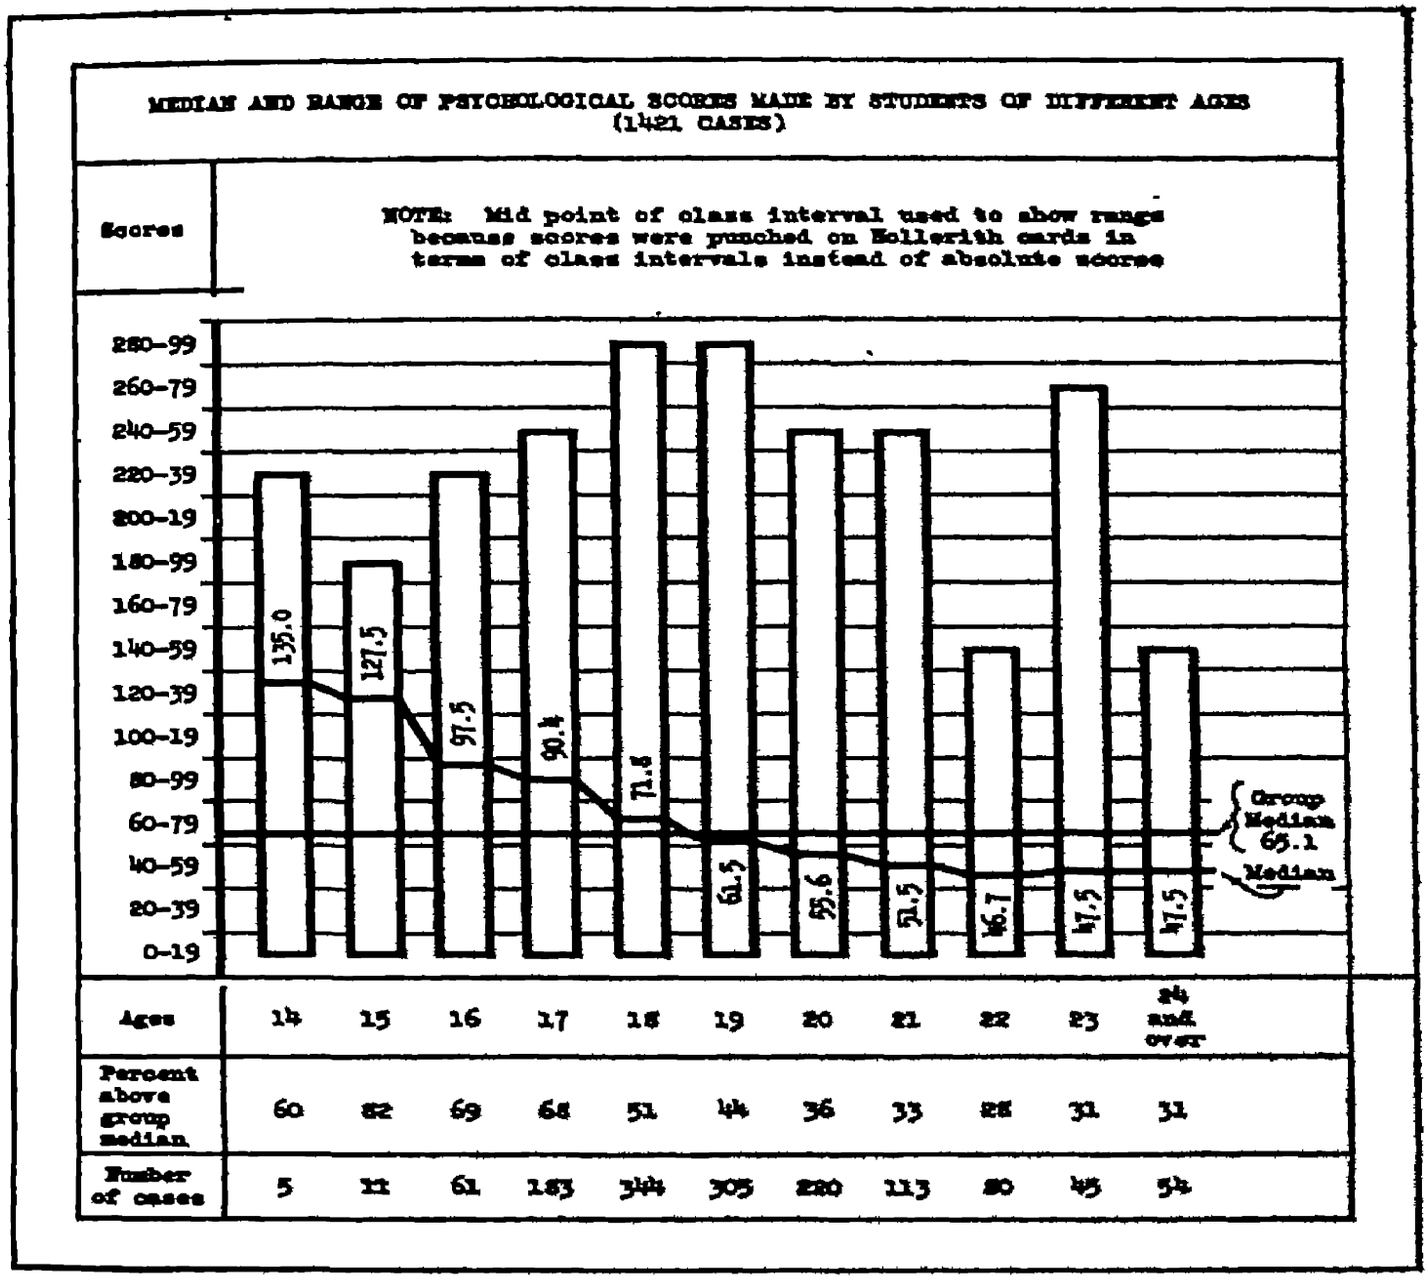

FIGURE 3.—Median and range of psychological scores made by students of different ages (1,421 cases).

NOTE.—Midpoint of class interval used to show range because scores were punched on Hollerith cards in terms of class intervals instead of absolute scores.

year of college at these ages indicates a high degree of scholastic aptitude. On the other hand students above the age of 20 may be said to be considerably retarded, probably for several reasons, the most likely one of which is a low degree of scholastic aptitude. That there are other reasons operating,

however, is evidenced by the fact that approximately a third reached or exceeded the total group median. This is also shown by the fact that the scores of a few students in the 21 and 23 age groups fell in the higher class limits. Seven students in each of the 21 and 23 age groups reached or exceeded the median of the 14 age group, while 5 and 2 students of the 22 and 24 age groups, respectively, reached or exceeded the 14 age median of 135.

Contrariwise, not all of the accelerated students are intellectually bright, for, as the figure reveals, in every case some have scores which fall in the lowest class interval.

While the data presented here are valuable in suggesting to a student of a given age what his chances of exhibiting a certain degree of scholastic aptitude are, the variations noted should induce caution in prescribing for students on the basis of age alone, for allowance should always be made for individual cases. However, it is believed that the evidence in hand is sufficiently conclusive to be of use to college officials.

SEX AND SCHOLASTIC APTITUDE

Do Negro college men show a higher degree of scholastic aptitude than women? If so, how great is the difference and what is its statistical significance? Also, what educational and social implications are involved? The first three questions may be answered by reference to table 3. The discussion in the succeeding section on high-school failures will attempt to throw some light on the question of educational and social implications.

Gross scores.—Table 3 shows the gross psychological scores made by men and women in terms of the means and probable errors. The small probable errors are particularly to be noted, as they indicate a high degree of reliability of the obtained means. If the sample which we have used of the 5,000 freshmen students enrolled in more than 100 Negro colleges in 1930 is random, it shows that the mean of the men would probably not vary more than 4.65; the mean of the women would probably not vary more than 3.18; and that of the group as a whole not more than 2.58.

The difference between the means of men and women is 9.1. Is this a significant difference or is it due merely to chance? In order to answer this question the critical ratio

between the averages of the men and women was found. According to authorities [5] if a critical ratio is three or more the difference between the obtained averages of the two groups under consideration is real and significant. The probable error of the difference of the means of men and women in the present study is 1.87, and the critical ratio is 4.86. The difference is, therefore, significant, and it may tentatively be concluded that Negro college freshman men have a higher degree of scholastic aptitude than women as measured by the American Council on Education psychological examination.

Individual test scores.—To test further our hypothesis concerning this matter, however, the examination was analyzed in order to ascertain the relative standing of men and women in scores made on each component part of the examination. Table 4 gives the results of this analysis. It is seen that in every case except one, the artificial language test, the men surpass the women.

These findings are not in agreement with those of the previous personnel study referred to.[6] In that study the women surpass the men in the psychological scores on the American Council test, the respective means being $88.90 \pm .2$ and $69.96 \pm .3$. There were 76 men and 114 women included in this study. It is believed that that particular group of students was representative of those who enter Fisk University as freshmen, but that students in the present study are more representative of the typical Negro freshman for the country at large.

The findings here reported do not indicate that Negro men in general have a superior intellect to Negro women, but the apparent superiority of the group in question may be explained by the fact that the 563 men are probably a more highly selected group than is true of the 870 women. This theory is borne out by the findings of a previous study.[7]

The hypothesis of greater selectivity of men than of women students is also supported by the Iowa student personnel study.[8]

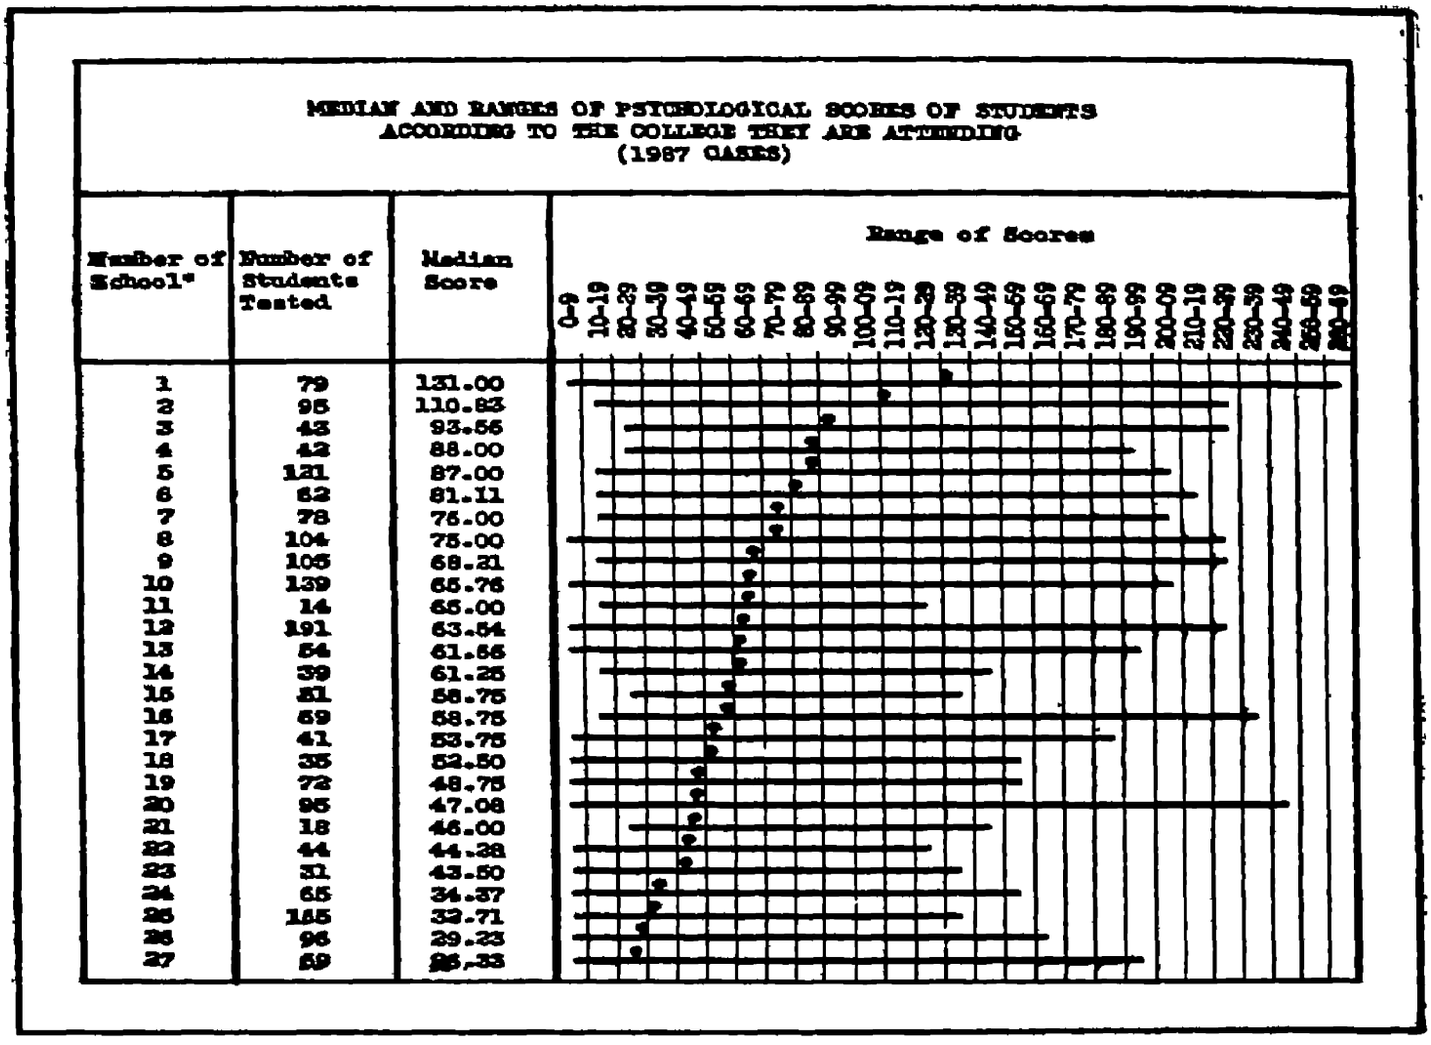
Intelligence of students and kind of college.—For purposes of comparison the scores made by students in the various colleges are shown in figure 4. Since the information furnished by the schools participating in the study was considered confidential, the names of the colleges are not



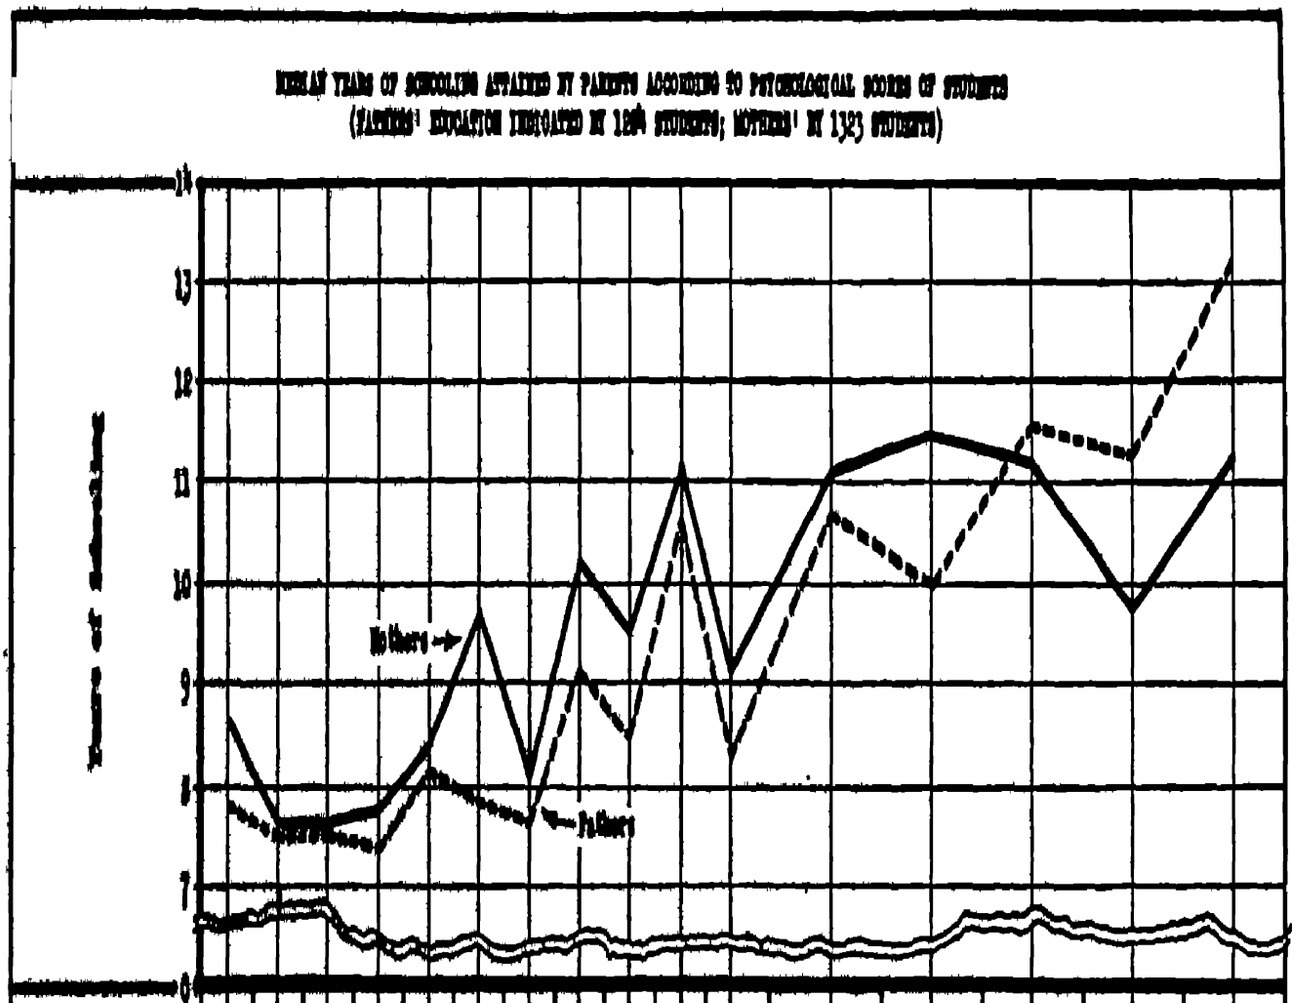


FIGURE 4.—Median and ranges of psychological scores of students according to the college they are attending (1,987 cases).

* Any president desiring the number assigned to his college will be furnished it upon request.

given here, but they are designated by numbers. The horizontal line represents the range of the scores made by students and the dot represents the median. The extreme overlapping of the ranges, despite the constant decrease in medians, is particularly to be noted.

EDUCATION OF PARENTS AND INTELLIGENCE OF STUDENTS

What relation is there between the education of parents and the intelligence of their children as shown by their psychological scores? Do the more intelligent children

FIGURE 4.—Median years of schooling attained by parents according to psychological scores of students. Fathers' education indicated by 1,284 students; mothers' by 1,323 students.

tend to have parents who have attained a higher educational level than those who are less intelligent? Figure 5 attempts to answer these questions. Here are shown the median years of schooling attained by the parents of students who are represented in each intelligence level.

The education of both mothers and fathers fluctuates considerably as the intelligence of their children increases from a lower to a higher level, but a definite upward trend for both is noticeable.

The education of the fathers of children whose scores fall below 100 shows considerable fluctuation. However, it begins a definite upward trend at the 100 mark, the median of each intelligence level exceeding the one just preceding except in the 180 to 199 group, where there is a slight drop of 0.15. The education of mothers also shows great fluctuations until the 100 mark is reached. It will be noted that mothers consistently maintain a higher educational level than the fathers of all children until the intelligence level represented by scores of 160 to 179 is reached, here the education of fathers exceeds that of mothers, as it does for the two succeeding groups.

Another way to determine if the educational level of parents actually increases as the intelligence scores of students increase is by ascertaining the median years of schooling of the parents of students whose psychological scores fell below the group median of 65.08, and the median years of schooling of the parents of students whose psychological scores fell on and above the group median. It was found that the fathers of 579 students whose scores were below the group median had 7.71 median years of schooling; and the mothers of 586 of the corresponding group of students had 7.99 median years of schooling. The fathers of 713 students who reached or exceeded the group median in psychological scores had a median schooling of 9.36 years, and the mothers of 737 students belonging to the same intelligence level had a median schooling of 10.01 years.

Our data seem to show that there is a definite relationship between the amount of schooling possessed by parents and the scholastic aptitude of their children.

C. SCHOLASTIC AND VOCATIONAL INTERESTS AND ACTIVITIES

The influence of college admission requirements is indicated by the facts shown in table 5. The subjects claiming the highest enrollments are, in order of their rank: English, history, algebra, plane geometry, Latin, chemistry, and civics. These subjects are as a general rule required by all the Negro institutions. Although music, physical education, home economics, and industrial arts rank relatively low in the percent of students taking them, their respective ranks being 9, 12, 15, and 23, they rank high in the number of units taken by their registrants. The median number of units taken by students in these subjects are: Physical education, 3.04; music, 2.23; home economics, 1.89; industrial arts, 1.65.

HIGH-SCHOOL FAILURES

How well are our American schools succeeding in accomplishing the task they have set for themselves? What kind of work is done by students in the subjects they take? A partial answer to these questions will be found in figures 6 and 7, which show the extent that men and women students failed in high-school subjects before they finally succeeded in reaching college. Of the 1,880 students under investigation, 507, or 27 percent, failed in some subject during their high-school careers, according to replies given by the students themselves. Thirty-two percent of the men failed as against 24 percent of the women. The greatest relative number of those failing was in mathematics, the percent being 33. The percents of failing students reporting failures in the other subject fields follow in rank order: Languages, 25; English, 18; science, 12; social science, 9; other, 2.

TABLE 5.—*Number and percent of students taking a given amount of work in high-school subjects in terms of medians according to rank*

Failures by sex.—Figure 6 gives the percent of the total group of 1,880 students who failed in given subject fields, by sex, and figure 7 shows the percent of the total number of students who failed according to subject fields.

It is seen from figure 7 that in every case the men have a relatively greater number of failures than the women. This difference is pronounced in English, languages, and mathematics, and is somewhat marked in science. In the percent of failing students who failed in given subjects, figure 6 shows that men again exceed the women in most instances. Although a smaller percent of all the women (1,129) failed in mathematics, science, and social science, than the corresponding percent of men, they lead the men slightly in mathematics when their percentage of failures is computed on the basis of the total women who failed (266), as shown in figure 6. This fact can hardly be explained

on the basis of a difference in the intelligence of these particular failing students, for the difference in intelligence of men and women who failed in mathematics is very slight,

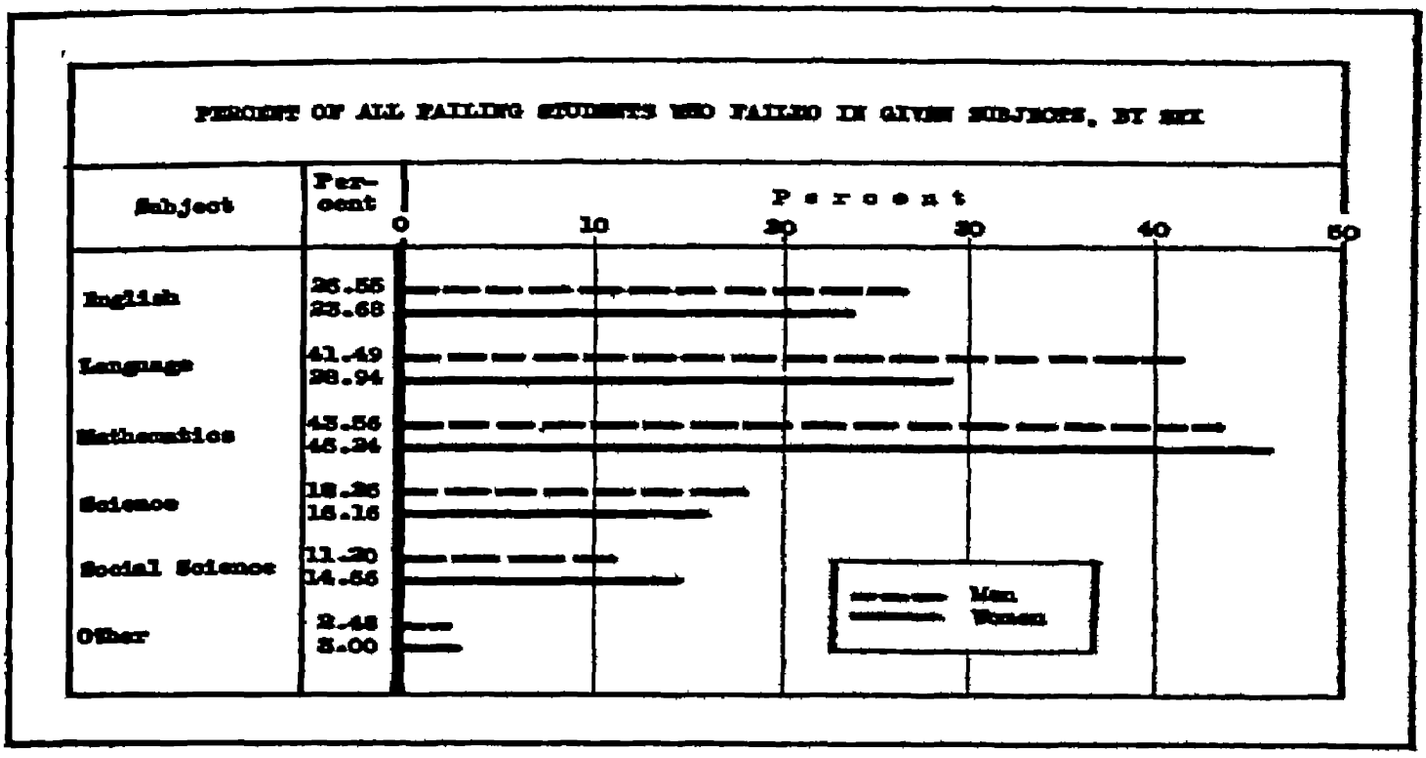

FIGURE 6 —Percent of all failing students who failed in given subjects, by sex.

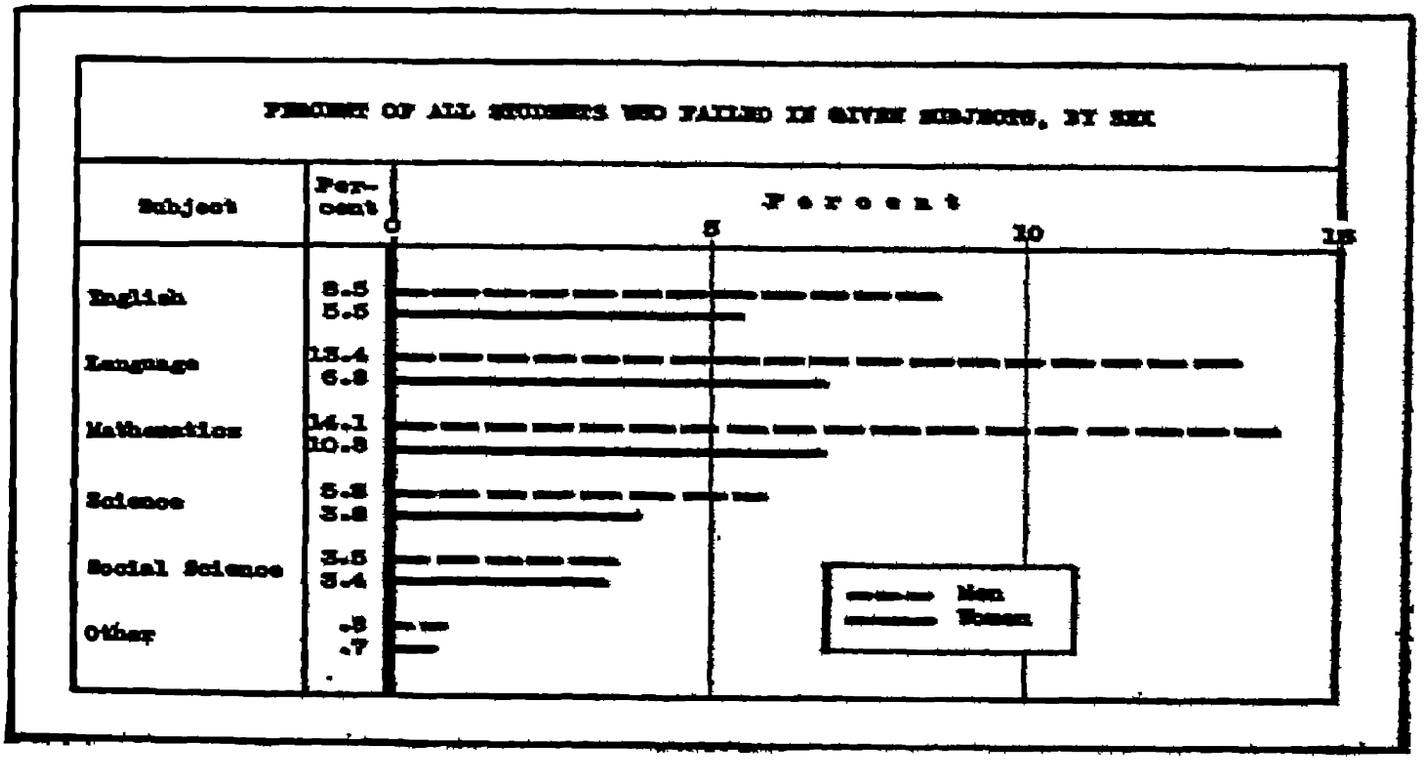

FIGURE 7 —Percent of all students who failed in given subjects, by sex.

the scores being 73 and 69.28, respectively, while the corresponding scores for science are 87.05 and 51. For social

science the scores of the failing men and women are respectively, 65 and 46.25.

Failures in relation to intelligence.—Did a larger percent of students with low intelligence who entered college fail in high-school subjects than was true of those of higher intelligence? Table 6 furnishes data on this question. Contrary to findings concerning high-school failures and the intelligence of students in general, column 18 shows that instead of decreasing the average number of high-school failures of students entering college belonging to the various intelligence levels remains nearly constant as the psychological score increases.[9] Also, by observing columns 2 to 12 it is seen that of those who did fail in the various subjects as large a percentage of the intellectually superior students failed as was true of the supposedly inferior ones. In fact, column 18 indicates that with the exception of students in the lowest psychological group the students who belong to the three highest psychological groups have the greatest average number of failures.

Another way to analyze the situation is to compare the median psychological score of students who failed with the corresponding score of those who did not report failures. By reference to the last two columns in table 7 it is seen that the median score of the failing students is only 7.06 lower than that of the nonfailing students.

The scholastic aptitude of students who failed in the various subjects is shown in table 7. There is a marked difference between the scholastic aptitude of men and women who failed in the various subject fields, the men taking the lead in every case. The amount by which the psychological scores of men who failed in the various subject fields is greater than those of women who failed in the same subject fields is as follows: English, 32.15; languages, 15; mathematics, 3.72; science, 36.50; social science, 18.75; other, 60. The difference between the scores made by all failing men and women is 8.95. All these differences except one are greater than the difference between the median scores made by the total group of men and women, which was 7.62.

[9] Some persons believe this situation is caused by the selective character of the failure students

TABLE 6.—*Number of students who failed and percent of failing students represented by a given subject according to psychological scores* [1]

Total cases	104	133	180	75	49	10	404	1, 029

[1] Too few cases to yield reliable median.

Of the failing students who had a psychological score of 100 or more 59 percent were men, yet the men constituted only 48 percent of the total students who made a score as high as 100.

An important question which arises in the consideration of these facts is, Why do these men with such relatively high scholastic aptitude fail in larger proportion than do the women, whose scholastic aptitude is much lower?

Among the many reasons that may be advanced, the following two stand out prominently: First, there is a lack of adjustment between the school and the interests of boys and young men; second, the school program is better adapted to certain characteristics possessed only by girls.

Another reason which may be advanced is that a larger proportion of the men have to work, which prevents their meeting the full requirements of the courses they take. Also it may be suggested that men devote more time to those extracurriculum activities which require a great amount of time and expenditure of energy than do women, thus, again causing them to neglect their studies. In addition it is probable that many of these failing men belong to the modern group of students who decry high grades, and who would rather be mediocre than be dubbed "grinds." Such students do not deliberately plan to fail, but because of the narrow scholastic margin which they have, the slightest misfortune or handicap changes a low average into a failure. Another explanation which may be offered is that many men are intellectually lazy and indifferent about their intellectual advancement.

The general problem of failure is one which should challenge the attention of school and college administrators and teachers, as well as parents and students themselves. Because of factors which cannot be controlled some failures are inevitable. But that so large a percentage of pupils fail indicates a maladjustment which should be given more serious consideration than it is receiving.

Many of the students reporting here are to be commended because of their fortitude in spite of the frequent ill effects of failure. Failure, like success, is cumulative. Constant failure produces the opposite of success—shattered morale, unsocial attitudes, introverted personality. It is likely to plant the seeds of discontent and mental and social disorder.

In view of these possibilities, therefore, it behooves school people to look well to their program, and so adjust the means that a larger proportion of the students may attain the ends

A closer relation between the objectives of teachers and pupils should be sought. The successful attainment of the ends of education should be assured to a larger number through self-motivating agencies. Personnel information about students should be placed at the disposal of pupils and teachers so that the task to be performed and the pupil's ability may not be incompatible; so that the stage may be set for success rather than failure.

ANTICIPATED COLLEGE MAJOR

In order to ascertain the academic interest of students they were asked to indicate the subject in which they planned to major. Column 5 of table 8 shows the results of this inquiry. It is seen that the largest percent plan to major in education. The two subjects next following are English and home economics. The rank of all subjects mentioned in the percent of students anticipating majoring in them is shown in column 7.

TABLE 8.—*Number, percent, and median psychological scores of students who anticipate majoring in various college subjects, and rank of subjects*

Subject	Median	Number of cases		Percentage both men and women are of total	Rank of column 2	Rank of column 5
		Men	Women

Academic interest and intelligence.—Column 2 of table 8 gives the median psychological scores of students who an-

ticipate majoring in the various subjects, and column 6 shows the rank of these subjects. Observe that students naming political science rank first with a median of 105. This median is probably not as reliable as the others, as there are only 11 cases. The medians of the students expressing a preference for other majors may be seen in the table. It is significant to note that education, which ranked first in the percent of students naming it as a major is fifteenth in the median psychological score made by students choosing it, the median being only 57.71.

CHOICE OF A CAREER

Because of the close relation which frequently exists between students' vocational and academic interests, their choice of careers and the reasons for such choices will be next considered.

Table 9 reveals the factors mentioned by students as influencing their choice of a career. Contrary to the general belief that our students are dominated by the desire to make money above everything else, the students in the present study named "belief in your own ability" and "desire to serve" as the two factors which most strongly influenced them, the respective percentages mentioning them being 44 and 36. The adage "like father like son" does not hold in reference to this group of students, for only 27, or 2 percent, named their father's or mother's occupation as an influence in their own choice. A comparison of the data in the present study with similar data on the same students in the senior year should yield some valuable information.

In view of our interest here in personnel work, one feature about this table is of particular significance, namely, that only 18, or 1 percent, of the students said that they had chosen their life work because of the aid received from a vocational guidance course or book. The obvious reason for this is that the schools do not provide such help as shown by Bullock in his study of occupational choice of Negro high-school boys.[10] The facts presented here unmistakably point to the need of personnel work, especially as it relates to educational and vocational guidance.

D. EXTRACURRICULUM INTERESTS AND ACTIVITIES

Interests and activities of students outside the classroom as otent educational agencies are rapidly becoming a subject of arious concern on the part of school people. These activities sually fall into three categories: Intellectual, social, and conomic, under which headings this topic will be discussed.

INTELLECTUAL INTERESTS AND ACTIVITIES

The intellectual interests and activities of students outside f classrooms will be shown, their use of the high-school and ublic library, and the books and magazines read.

Use of library and intelligence of students.—Table 10 shows he median psychological scores of students who used the igh-school and public library with a given frequency. he median scores of those who used the school library rise s the frequency of use increases. The greatest difference etween men and women is found in the group who do not se the library at all, the difference between the median cores being 45 in favor of the men. There is a differential of .76 between the men and women who used the library nfrequently, in favor of the women, while for those who used regularly, the men surpass the women with a differential f 9.3.

TABLE 10.—*Median psychological scores of students according to the frequency with which they used the school and public library*

	Not at all			Infrequently			Regularly		
	Men	Women	Both	Men	Women	Both	Men	Women	Both
1	2	3	4	5	6	7	8	9	10
High-school library	75	30	38.3	62	65 76	66.73	73.57	64.27	67 44
Number of cases	9	18	27	116	179	295	394	601	995
Public library	68.33	60	60.5	75	63.33	68.83	73.43	65.43	68.05
Number of cases	58	80	138	153	170	323	269	498	767

Evidence of a probable lack of public-library facilities is seen in table 11, which shows to what extent students use the public libraries. Data not shown here reveal that 71 percent of the students used the high-school library regularly as compared with 62 percent who used the public library regularly. Those who did not use the high-school library at all represented only 2 percent of the group answering, while the corresponding percent for public-library users was 11. It is likely that the percent who use the public library not at all would decrease if library facilities were available and conveniently situated in the neighborhood.

Books read during high-school career.—While access to a library is an important factor its extent and manner of use are of far greater importance. In order to determine the extent of students' literary background and to judge of their interests they were asked to indicate the number of books they voluntarily read outside of their regular course requirements during their high-school careers. Table 12 shows the data from this inquiry. Only 17 percent read 50 or more books during their entire 4 years in high school, while 28 percent read fewer than 10 books. The median for the total group is 21. Again, these low percentages may possibly be attributed to inadequate library facilities.

That the more intelligent students tend to read a larger number of books is indicated by figure 8. While some fluctuation may be noted, the general tendency is for the students who read the greatest number of books to fall in the higher intelligence ranges.

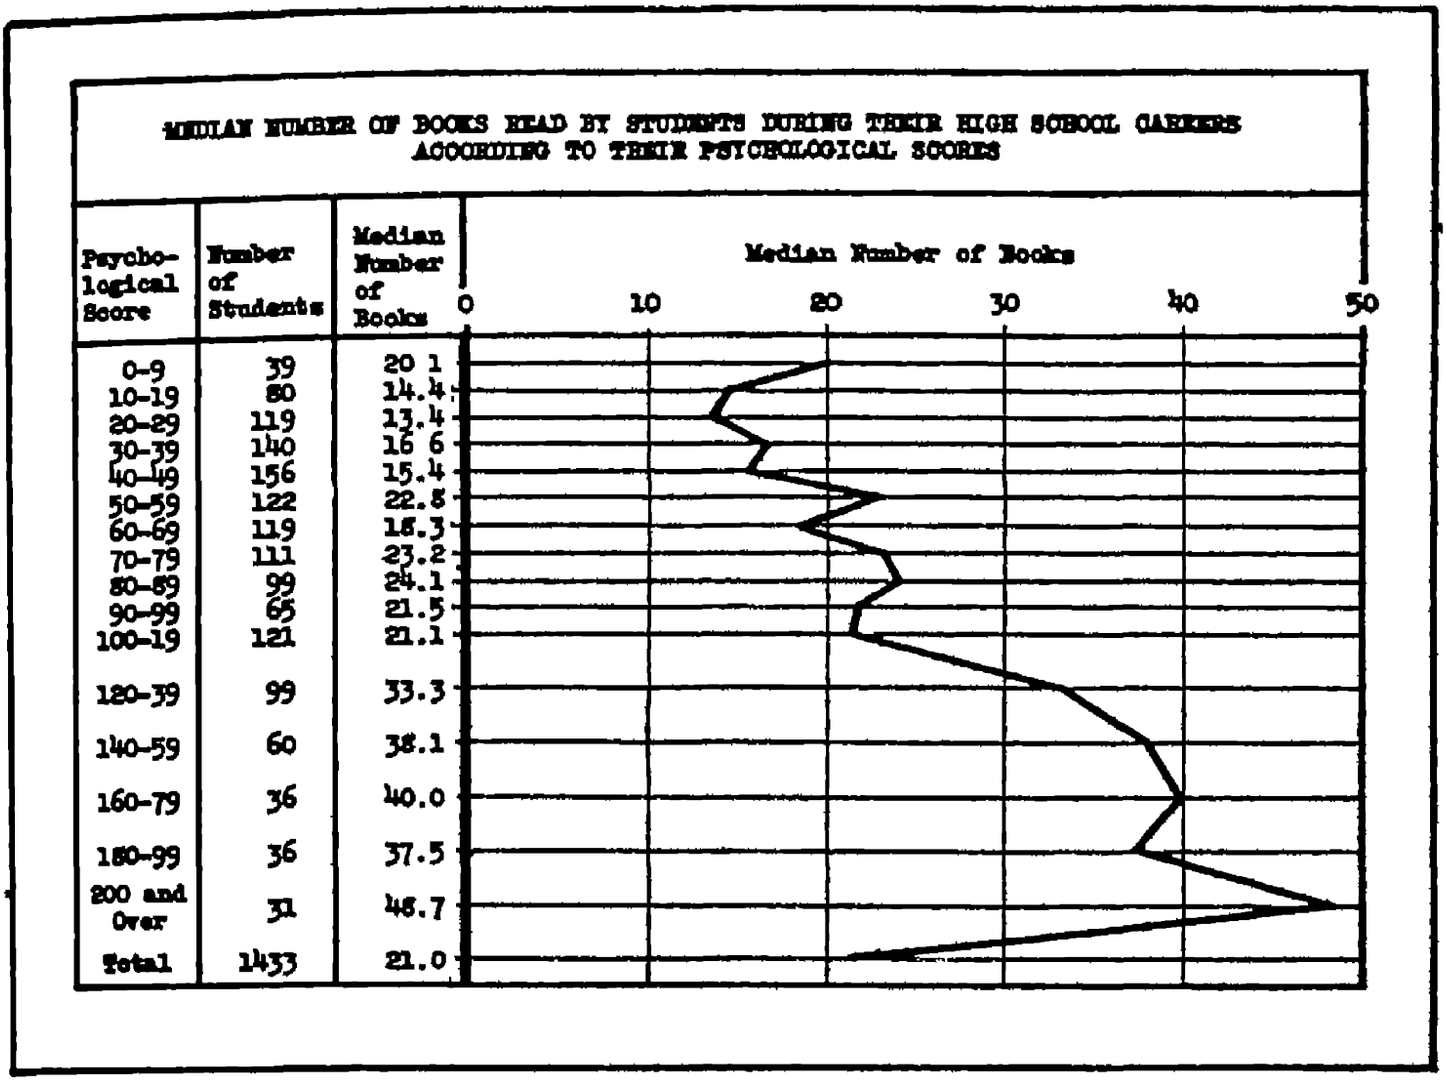

FIGURE 8.—Median number of books read by students during their high-school careers according to their psychological scores.

Read graph thus: Students whose psychological scores fell in the class interval 0–9 read an average of 20 08 books during their high-school careers. Those whose scores fell in the 10–19 class interval read an average of 14.4, while those whose scores reached as high as 200 or more read an average of 48.7 books.

TABLE 11.—*Number and percent of students who used the public library with a given frequency, by sex*

Median		22.79		19 59		21

Magazines read during high-school career.—Another index of the intellectual interests of students is the number and kind of magazines they read. Table 13 shows the number and percent of students who read certain kinds of magazines during their high-school careers. Magazines whose reading matter is largely current events rank first with 74 percent of the students reading them. The Literary Digest has the largest number of frequencies. Others included Time, Pathfinder, etc. The popular and fiction group of journals claimed the next largest number of readers, the percent being 38. In this group are included such magazines as the American, Cosmopolitan, Photoplay, Colliers, and Liberty. Magazines having to do with the home and women's interests came next with 24 percent of the students reading them. Comprising this group were such magazines as Good Housekeeping, Woman's Home Companion, Pictorial Review, and Ladies Home Journal. A miscellaneous group which also included juvenile magazines claimed 21 percent of the readers. The scientific and mechanical group consisting of the National Geographic, Popular Mechanics, Science and Invention, and Scientific Monthly were read by 19 percent of the students. Only 246, or 15 percent of the 1,632 students replying, said they read magazines dealing with Negro life. In this group were such journals as The Crisis, Opportunity, Southern Workman, and Journal of Negro History. Literary magazines and those purporting to deal with public opinion are fourth and third from the bottom,

their respective percentages being 13 and 5. In these two groups are the Atlantic Monthly, Harpers, Scribners, Mentor, Outlook, The Nation, and Forum. Humorous and physical-culture and outdoor journals are at the bottom of the list with 3 and 2 percent, respectively.

TABLE 13.—*Number and percent of students who read certain kinds of magazines during their high-school career, in rank order, by sex*

Magazines read	Men		Women		Total	
	Number	Percent	Number	Percent	Number	Percent
1	2	3	4	5	6	7

Number of cases	647		985		1,632	

It will be of interest to know what influence the college career will have in changing the reading tastes of these students. In view of the increasing importance of a wholesome, progressive, and constructive public opinion in our democratic life, the schools have a vital mission to perform in creating and directing the literary interest of its students. And it is the business of the college to know what those interests have been in elementary and high school and to utilize the information for further education and guidance.

That a larger percent of the more intelligent students tend to read magazines is shown in table 14. The column giving the composite ranks shows that the group of students whose psychological scores reached or exceeded the total group median (65.08), with one exception, ranked highest in the percent who read magazines. Those who made scores of 200 or more, and between 140 and 159 ranked first and second, respectively, while those whose scores fell between 160 and 179, and 180 and 199 ranked third and fourth. In column 3 will be noted the tendency for a larger percent of the students with high scores than is true of those with lower scores to read literary magazines.

SOCIAL INTERESTS AND ACTIVITIES

The four extracurriculum activities which will be discussed here as bearing on the social aspects of the students' lives are: Membership in organizations, offices held, hobby interests, and travel experience.

Organization membership.—Table 15 gives the number and percent of students who were members of certain kinds of organizations during their high-school careers. The kinds of organizations are listed in the order of rank according to the percent of students claiming membership in them.

TABLE 15.—*Number and percent of students who belonged to certain kinds of school and community organizations during their high-school career, in rank order and by sex*

Kind of organization	Men		Women		Total	
	Number	Percent	Number	Percent	Number	Percent
1	2	3	4	5	6	7
Religious and civic	345	58	570	60	915	59
Literary and dramatic	273	46	458	48	731	47
Athletic and outdoor sports	291	49	338	36	629	41
Music and arts	158	26	321	34	479	31
Miscellaneous	113	19	175	19	288	19
Social	89	15	105	11	194	13
Mechanical and scientific	68	11	73	8	141	9
Number of cases	600		945		1,545	

Offices held.—As in the case of magazines read and membership in organizations, the men and women hold offices in relatively the same proportion as shown by table 16. It is significant that so many of the students held one or more offices during their high-school careers. The number is 1,149, or 61 percent, of the total group. This probably is an indication of the recognition of the principle of democracy in the schools, and a desire to give everyone a chance to experience whatever honor may be attached to holding office.

Hobby interests.—That athletic interests are by far the most dominant extraclassroom interest of Negro students is indicated in table 17. The various activities for which students expressed first, second, and third preference are listed. Of the

1,382 students who expressed first preference for some particular hobby, 38 percent named athletics. Of the 1,264 students naming a second choice, 22 percent listed athletics. A third preference for some activity was noted by 1,139 students, 14 percent of these chose athletics.

TABLE 16.—*Number and percent of students who held a given number of offices during their high-school career, by sex*

	Men		Women		Total	
	Number	Percent	Number	Percent	Number	Percent
1	2	3	4	5	6	7

5	13	3	12	2	25	2
6	4	1	7	1	11	1
7	4	1	3	.4	7	1
8	3	1	.....	.....	3	.3
Total	475	41	674	59	1,149	100
Median	2.15	.....	2.05	.....	2.11	.....

Reading is next in order of preference with percentages of 22, 18, and 11 listing it as first, second, and third choice, respectively.

The invectives of frivolity and capriciousness which are frequently hurled at modern youth are not borne out by data in this table. In general, those hobbies of a more serious and purposive nature have the largest percent of students giving them as first choice—note, for example, the small percent expressing first preference for movies and dancing. It is also interesting to note, in this connection, that scientific and mechanical construction ranked third in the first preferences of the men.

TABLE 17.—*Number and percent of students who claimed interest in certain kinds of hobbies while in high school, by sex*

Explanation 38 percent of the 1,382 students naming a first preference designated athletics; 53 percent of all men mentioning a first preference named athletics as against 28 percent for the corresponding number of women

The data presented in the section just preceding have important implications. First, although extraclassroom interests are rapidly finding a place in the enriched curriculums and programs of our modern schools, an analysis of the detailed data here reveals the inadequacy of extracurriculum activities provided by Negro schools. Probably a more even distribution of interests would be expressed if there were a wider variety of activities from which to choose.

This hypothesis is substantiated by findings in a previous study.[11]

Secondly, these data, together with those presented in part II concerning this matter, point unmistakably to the value of larger schools in providing more varied and enriched offerings.

Travel experience.—The students comprising the present study have had rather wide travel experience according to the data at hand. Seventy-one percent have visited large cities for a period of 1 week to 3 months, while 77 percent have visited rural towns, villages, and farms. Ninety students, or 5 percent, said they had visited one or more foreign countries.

Travel is generally considered to be an important factor in one's educational development and in the prevention or eradication of provincialism. According to the evidence here presented these students should have advanced far along the road of cultural growth.

WORK FOR SELF-SUPPORT

The problem of part-time employment of students has been a matter of great concern to many colleges for some time. The constant rise in the cost of education with a corresponding increase in the share of this cost which students are expected to bear, and the changes in our economic life have caused the problem of the working student to take on serious proportions. The problem is particularly accentuated in Negro colleges.

Self-support in high school.—Figure 9 and table 18 furnish information on this matter as it relates to the group under consideration. More than half of the students said they earned part of or all their support while in high school, the percent being 52. One third of the girls worked as against three fourths of the boys, their respective percentages being 36 and 76. Figure 9 shows the percent of girls and boys who earned a given amount of their support. Note the degree to which the percent of women who did not earn any of their support exceeds the corresponding percent of men. The percent of men exceeds that of women markedly in each of the other items.

In order to ascertain what kind of vocational experiences the students had they were asked to designate the kind of

[11] Calliver, Ambrose. Secondary education for Negroes. Op. cit.

work they did for self-support while in high school. The answers shown in table 18 indicate that 64 percent performed

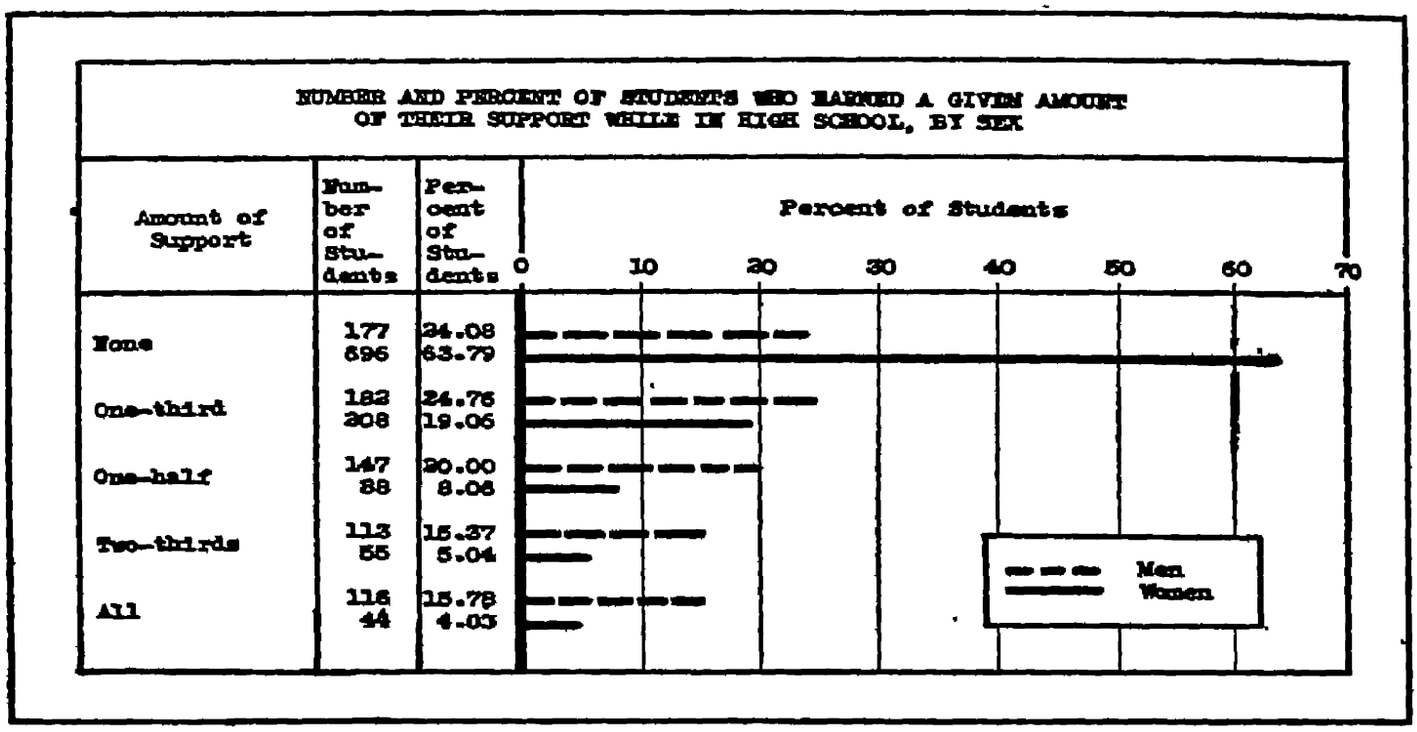

FIGURE 9.—Number and percent of students who earned a given amount of their support while in high school, by sex.

personal and domestic service and 33 percent worked at unskilled jobs.

TABLE 18.—*Number and percent of students who did certain kinds of work for their support while in high school and during their freshman year in college*

Self-support in college.—Sixty percent of the students expect to earn part of or all their support while in college as against 52 percent who earned part of or all their support in high school. Figure 10 is an analysis of the details concerning this group of students.

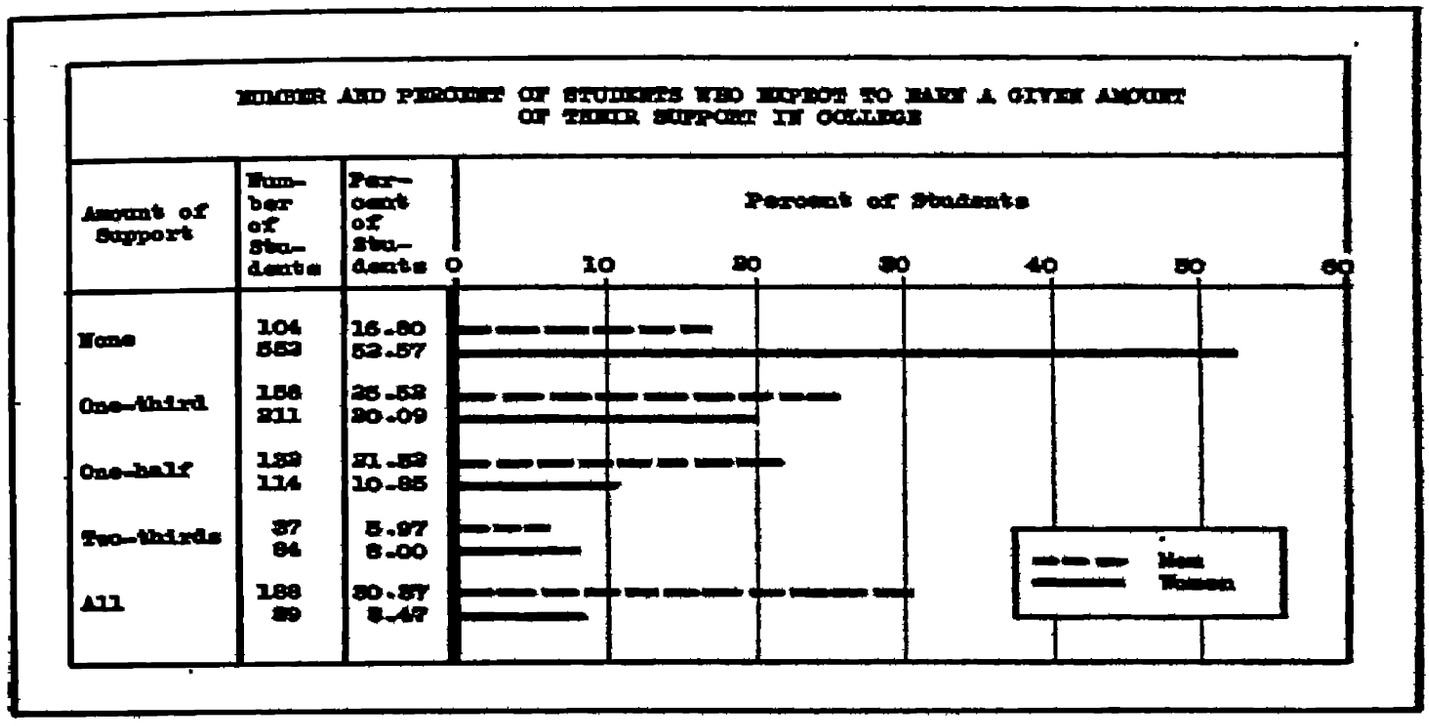

FIGURE 10.—Number and percent of students who expect to earn a given amount of their support in college.

Seven hundred and fifty-three, or 45 percent, of the students were working at the time the study was made. The percent who were working a given amount of time are: 1 to 12 hours a week, 54; 13 to 19 hours a week, 13; and 20 hours or more, 32. The median number of hours per week which all students worked for their support is 11.

The kind of work performed by these students was predominantly personal and domestic service, the percent being 61. The unskilled and miscellaneous group of occupations claimed the next largest number, the percent being 22. Skilled, clerical, and business occupations follow with the respective percentages: 7, 6, and 3.

Assuming that the majority of students who earn part of or all their support while in college do so from necessity, the implications which the foregoing data have for a program of personnel research and service are unequivocal. They suggest, first of all, a need of larger funds for the aid of

worthy students who are not able to support themselves. Potentially superior students frequently are handicapped and are unable to develop to their maximum possibilities because of the necessity of working for their self-support. In consequence, society suffers a great loss. The problem is particularly acute among the men. The extent to which they failed in their high-school careers may partially be attributable to the heavy schedule of manual work which they carried.

The second thing suggested by these facts is the need of a wider field from which to select occupations at which students may earn their support. At present their opportunities are largely restricted to personal and domestic service and unskilled occupations. A broadening of this base of occupational experience will contribute much toward the later vocational guidance and adjustment of students.

E TIME LOST FROM SCHOOL

It is believed that uninterrupted attendance upon school is one of the essentials for academic success. The extent to which students were able to meet this criterion is shown in table 19. The students who lost one month or more from school constituted 40 percent of the total replying. Doubtless many of these students incurred deficiencies during these absences which may later be the causes of serious maladjustments. An analysis, therefore, should be made of the causes of absences and the phases of the given body of knowledge to which the student failed to be exposed under the guidance of the teacher.

TABLE 19.—*Number and percent of students who lost a given amount of time from school during their high-school career, by sex*

F. BROTHERS AND SISTERS AND THEIR EDUCATION

College graduation of brothers and sisters and scholastic aptitude of students.—Is there a tendency for high scholastic aptitude of students to be associated with college graduation of their brothers and sisters? Our data seem to answer this question in the affirmative. Assuming that those who did not answer the question very probably had no brothers or sisters who had graduated from college, the following are the average scores made by the various groups: Those not answering, 63.21; none, 66.78; one, 79.58; three, 74.16. If those having no brothers or sisters who graduated from college are compared with the total group of those who had one or more brothers or sisters who are college graduates, the respective scores are 66.78 and 75.55, a difference of 8.77 in favor of those with brothers and sisters who were college graduates.

There are two possible explanations for this difference: First, the brothers and sisters with college graduation—who are probably older—have exerted an intellectual influence on their younger brothers and sisters, which resulted in greater familiarity with scholastic matters, and, hence, a higher score on the psychological examination. The second inference that may be drawn is that the college graduation of brothers and sisters indicates a high intelligence of the parents, which is transmitted to the children. Whatever the cause, the evidence seems to be conclusive that college graduation of brothers and sisters and high scholastic aptitude of students are closely associated.

G. INFORMATION ABOUT PARENTS

The relationship of students to parents is a vital factor in their school and post-school success. In order to ascertain facts concerning the domestic relations in the home and to see to what extent they varied from the normal relations, students were asked to indicate whether or not they had a stepfather, stepmother, foster parents, or parents who were separated.

Relation of parents to students.—Table 20 furnishes data on these questions. There were 445 of the students who replied in the affirmative to this inquiry. That is, 24 percent had some parental relation other than the normal. It is

significant to note that of the 445 belonging to this group 33 percent said their parents were separated, which is 8 percent of the total 1,880 students.

Important facts such as these should not be overlooked in an attempt to administer personnel service to a student body. Also their sociological bearing in relation to the responsibility of society to assure to itself a balanced proportion of members who have the benefit of a normal family background is of importance alike to educators, social workers, and statesmen.

Parents who are deceased.—Some of the difficulties encountered by Negro students pursuing a college education are indicated by the fact that the fathers of 27 percent of the students interrogated are deceased. Students whose mothers are deceased constitute 16 percent of the group.

TABLE 20.—*Number and percent of students who have stepparents, foster parents, and whose parents are separated*

PART II: RELATIONSHIP BETWEEN KIND OF SCHOOL ATTENDED AND CERTAIN OTHER FACTORS, INTERESTS, AND ACTIVITIES

Next to the home the school is probably the most important factor in shaping the life of an individual. The kinds of schools one attends are a great determinant of character and subsequent success in life. The kinds of teachers one has, the nature and scope of the curriculum, the general organization and administration of the school, and the methods, devices, and points of view used in teaching furnish much of the material as well as supply the mold by which personalities are made. And these materials and molds are frequently predetermined by the location of the school.

To ascertain the relationship between the kinds and location of schools attended and certain other background factors, interests, and activities will be the concern of this part of the report. Some of the topics to be treated are: number and percent of students attending the different kinds of schools and colleges, intelligence of students, scholastic and vocational interests and activities, and extracurriculum interests and activities.

A. COLLEGE AND SCHOOL ATTENDANCE

COLLEGE ATTENDANCE

Table 21 shows the percent of students who are attending private and public colleges, according to the kind of high school from which they were graduated. A total of 41 percent are attending private institutions and 59 percent are attending public institutions. The percentages of students graduating from each kind of high school who are attending private and public colleges, respectively, are shown in columns 2 and 3. In the percent of students who go to private colleges, the northern private schools lead with 62 percent. The lowest ranking schools in the relative number of their

graduates who go to private colleges are those in the southern rural areas, with a percent of 14.

The rank order changes in the percent of the graduates of different kinds of high schools who attend public colleges as seen from column 3. In this matter the southern rural schools are first. The rank order of the others are: public schools of "Border" States, southern city public schools, northern city public schools, southern private schools, northern rural schools, and northern private schools.

TABLE 21.—*Percent of students attending public and private colleges and who named certain factors which influenced them to attend college, according to kind of high school attended*

Total	41	59	1,877	10	6	8	15	5	2	21	25	4	3	1	1,743

INFLUENCES TO ATTEND COLLEGE

Columns 5 to 15 in table 21 show the percent of students from the different kinds of colleges who named certain factors which influenced them to attend a particular college. If the northern private and the foreign schools which have only 7 and 6 cases, respectively, are disregarded in this connection it is observed that the southern city and southern rural schools lead in the percent of students who named convenience to home as the factor most strongly influencing them to attend the college in which they were enrolled. The matter of expense is of most concern to students from public schools of the "Border" States, northern private, and northern city public schools according to our data. The influence of the high-school teacher and visits from college representatives seem to be negligible factors in each of the groups of schools.

The southern private, northern rural, and southern city public are the three highest ranking groups of schools in the percent of students who named superior quality of work offered as the factor most influencing them to attend a certain college. In the percent of students naming vocational and professional influences, the southern rural schools, schools of the "Border" States, and southern city public schools are the three highest.

ELEMENTARY- AND HIGH-SCHOOL ATTENDANCE

The kinds of elementary and high schools attended by the students under investigation are shown in table 22. Column 4 and the extreme bottom line give a comparison of the percents of the total group who attended the various kinds of elementary and high schools. Note the close agreement in practically every case except two, namely, southern rural public and southern private schools.

High school attended according to elementary school attended.—Table 22 also shows the extent to which students who attended a certain kind of elementary school attended the same kind of high school or one of a different kind. Although there is indicated a general tendency for students to attend the same kind of high school as the elementary school attended, certain sections of the table show a definite shift in several instances.

A special feature of this table to be noted is the type of change made from elementary to high school. Some outstanding shifts are: 11 percent of the students who attended southern city public elementary schools changed to southern private high schools; students who changed from northern city public elementary schools to southern city public high schools represented 12 percent; southern rural public elementary schools sent 33 percent of their students to southern city public high schools and 23 percent to southern private high schools. This is the most marked change taking place in any of the groups, and probably indicates a lack of availability of public high-school facilities in the southern rural areas and a desire on the part of pupils and parents to secure better educational opportunities.

TABLE 22.—*Number and percent of students who attended certain kinds of elementary schools, by sex, and number and percent of pupils attending a certain kind of high school according to kind of elementary school attended*

NOTE: Table may be read as follows. Of the total students who attended southern city public elementary schools and continued into high school, 84 percent attended southern city public high schools; 2 percent northern city public high schools; 1 percent southern rural public high schools; and so on through column 12 A diagonal line drawn fom the top of column 5 to the bottom of column 12 will pass through the percentages representing the students who attended the same kind of elementary and high schools.

Other notable changes are found among pupils of the northern elementary school; the southern private elementary school; and the northern private elementary school. There

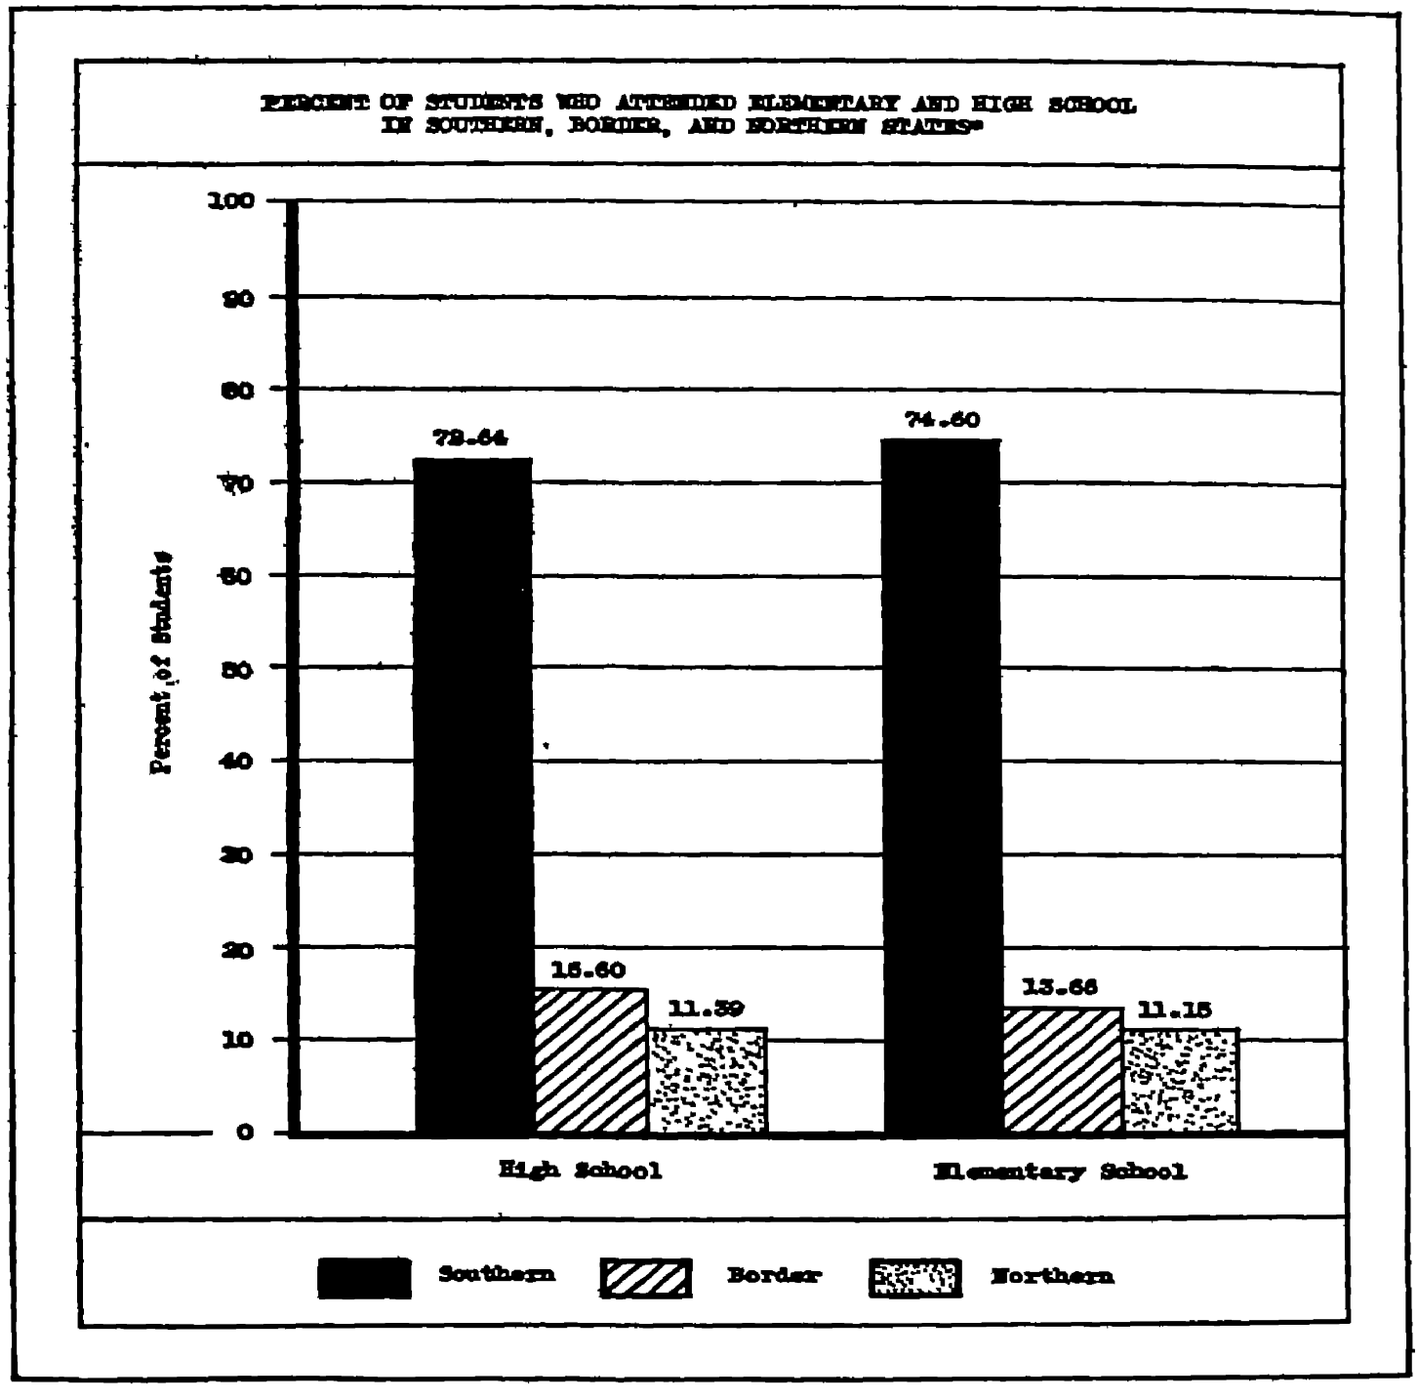

FIGURE 11.—Percent of students who attended elementary and high school in the Southern, Border, and Northern States.

*Percent of students attending foreign schools not included.

are very few changes made by the students in the "Border" States.

Figure 11 shows the relative percentages of students who come from Southern, Northern, and "Border" States, and

figure 12 indicates the trend of students who come from public and private schools and colleges. As they progress from elementary school to college those attending private institutions increase and those attending public institutions decrease.

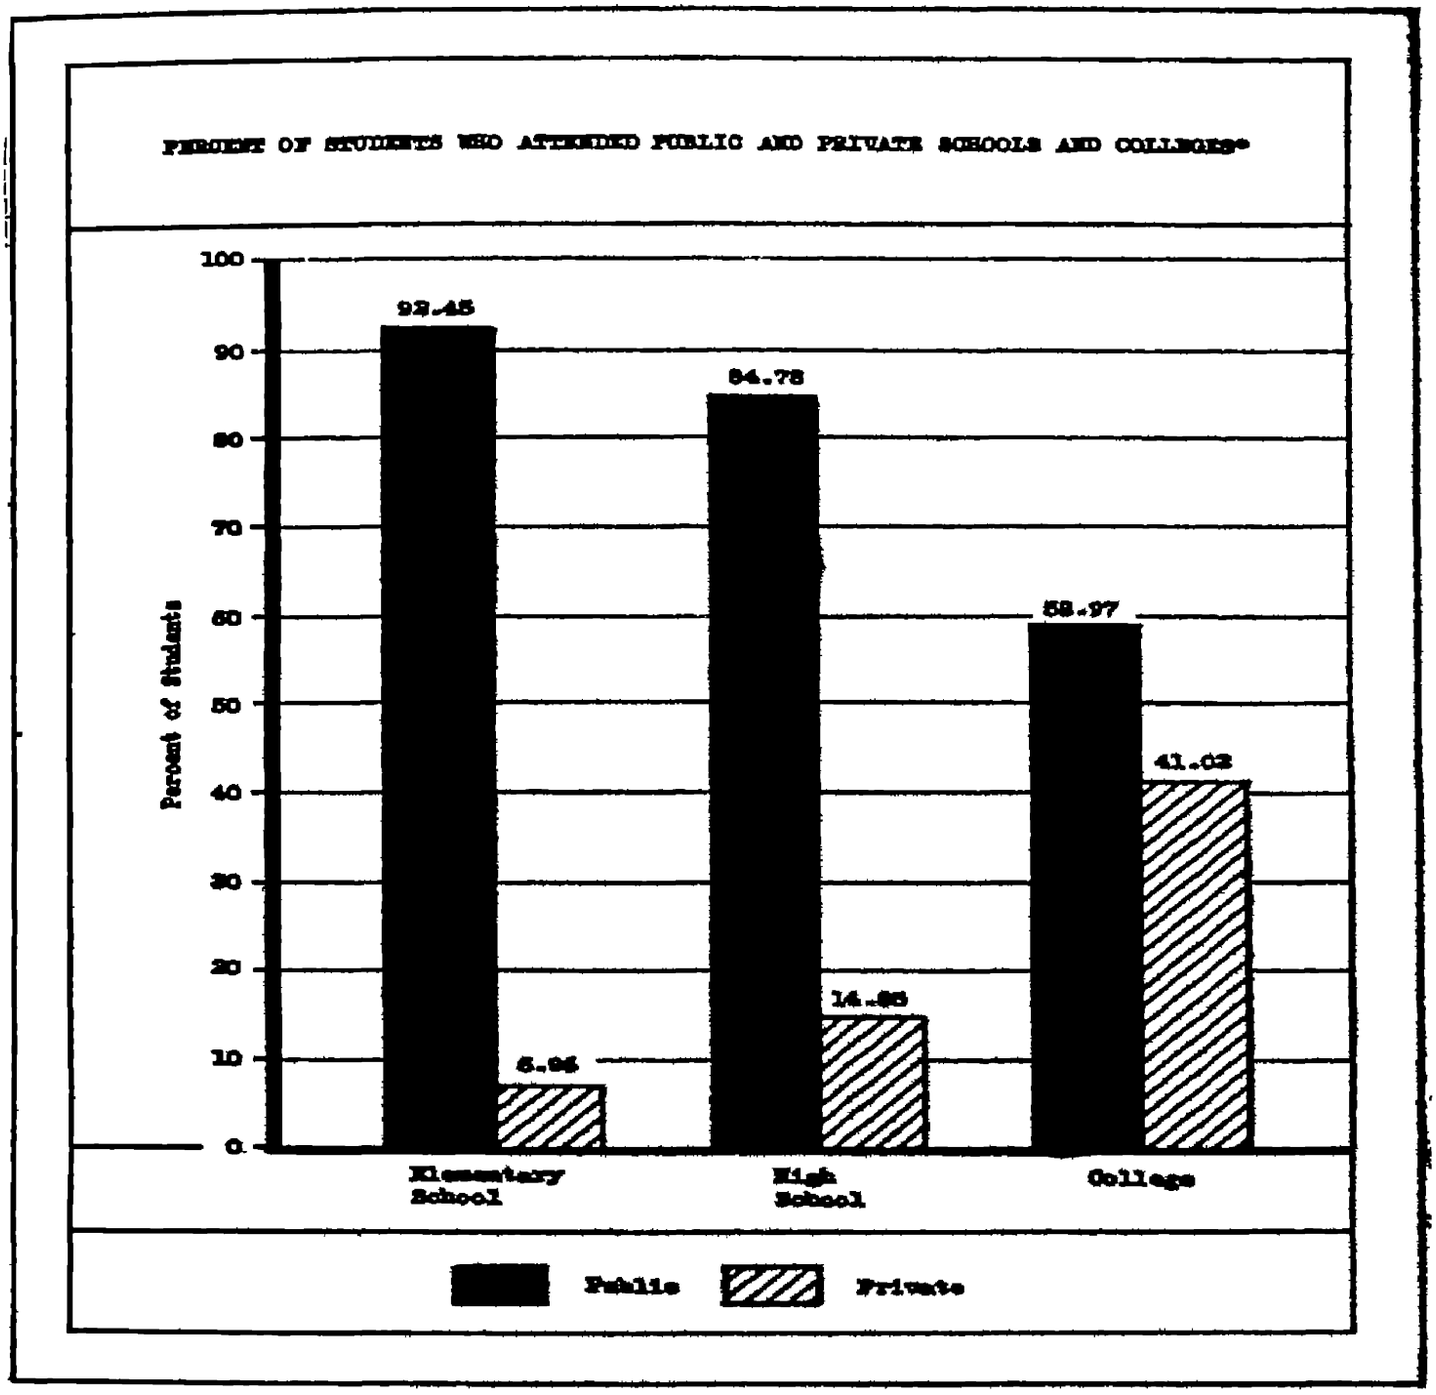

FIGURE 12.—Percent of students who attended public and private schools and colleges.

*Percent of students attending foreign schools not included.

Number of schools attended.—In the section just preceding mention was made of the changes from one kind of elementary school to another kind of high school. Of equal importance

are the changes within a given educational level. It is generally believed that students are frequently handicapped by having to change schools a number of times. Table 23 gives the data concerning the number of elementary schools attended by the subjects of this study. Of the 1,670 who replied to this question, more than half had attended more than one elementary school. Nearly 7 percent had attended four or more. Two students each claimed to have attended eight and nine schools, respectively.

Of the 1,816 students who replied to the question concerning the number of high schools attended 28 percent had attended more than one. Those who attended two amounted to 24 percent; the percent of those who attended three or more was 4.

B. SCHOLASTIC APTITUDE OF STUDENTS

What influence has environment on the degree of intelligence one exhibits? What relation have the background factors of a student to the scores made on psychological examinations? And what variations do we find in responses on psychological tests of students who come from different kinds of schools?

Figure 13 furnishes data which throw some light on these questions. The kinds of schools are ranked according to the psychological scores made by the students attending them. It will be observed that each kind of school maintains its same relative position for both elementary and high schools.

Although the median scores tend downward in proceeding from the northern city public schools across the graph to southern rural public schools, the range in each case is rather wide and the overlapping is considerable. In each of the other groups the scores of a certain percent of the students exceed the median of the students from the northern city public schools. These individuals should be identified and subjected to special treatment in order that they may not be relegated to the dead level of mediocrity typified by many student bodies.

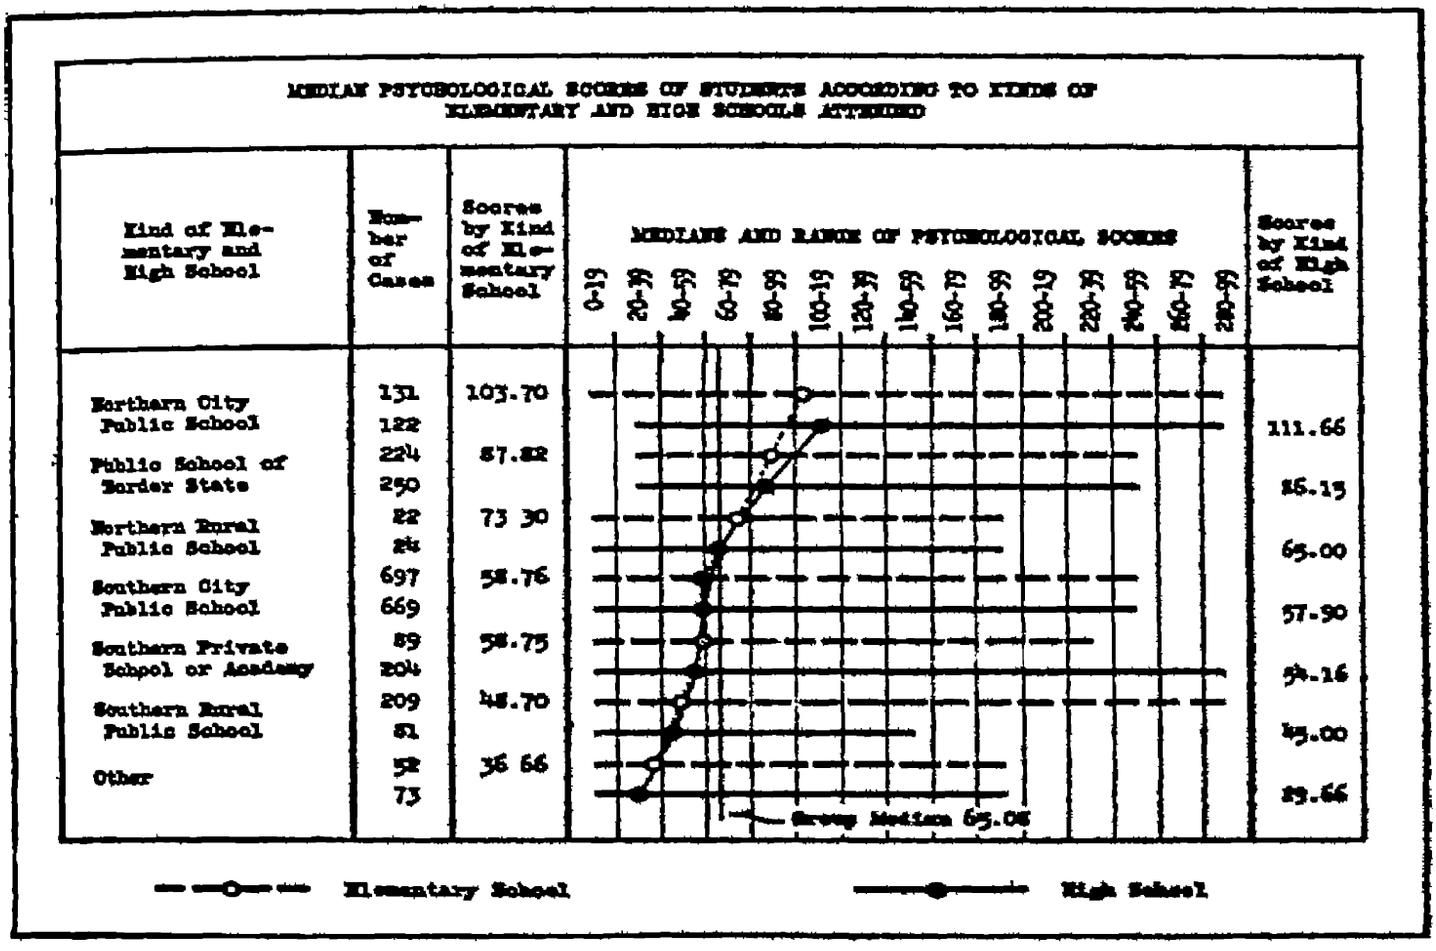

FIGURE 13.—Median psychological scores of students according to kind of elementary and high schools attended.

Another way to analyze the situation is to compare the kinds of schools in terms of the scores made by students on the various parts of the psychological examination. Table 24 shows the results of this analysis. Observe that the rank of kinds of schools changes only slightly from what it was for the gross psychological scores shown in figure 13. The composite rank of the kinds of schools is as follows: Northern city

public school, 1; "Border" State public school, 2; northern rural public school, 3; southern private school, 4; northern private school, 5; southern city public school, 6; and southern rural public school, 7.

The one outstanding fact revealed by these data is the increase in the median scores made by students observed in proceeding from the unimproved schools of the southern rural areas to the city schools of the North.

A recent study [1] showed that there were marked differences between secondary schools for Negroes in the various States. In most criteria applied it was found that the schools in the urban centers surpassed those in the rural areas, and that those in the "Border" States surpassed those in the South. Other studies present data which are conclusive and unequivocal in their proof of fundamental differences between groups of students from different schools and locations. [2]

TABLE 24.—*Median scores made on various parts of psychological examination according to kind of high school attended*

Kind of school	Tests					Total number of cases
	Completion	Artificial language	Analogies	Arithmetic	Opposites	
1	2	3	4	5	6	7
Southern city public school	12.52	16.24	10.26	9 61	9.36	669
Northern city public school	27.24	36.90	17.11	18 97	25 83	122
Southern rural public school	8.43	10 20	8 26	8.61	7 50	81
Northern rural public school	13 33	18.57	13 63	9.95	14.00	24
Southern private school or academy	10 39	17 94	11 28	10 52	11.95	204
Northern private school or academy	17 50	21 66	7.00	7.00	15 00	7
Public school of "Border State"	20 83	21 79	16 86	11.03	20 58	250
Other	7 60	7 44	7 44	7 44	7 91	3
Total	14 05	17 41	12.03	10 34	11 50	1,433

The scores made by students according to the colleges they are attending, discussed in part I, also attest to the possible relationship between the kinds and location of pre-

[1] Caliver, Ambrose. Secondary Education for Negroes Op. cit.

[2] Book, W F The Intelligence of High-School Seniors. Ch. XII. New York, The Macmillan Co , 1922.

paratory schools attended and other background factors and the scholastic aptitude of students.

That there are decided differences between the abilities of groups of students coming from different kinds of schools and different sections of the country—or even different parts of a State—is gradually beginning to be recognized and given consideration in the formulation of educational policies and educational practices.

These data suggest the lack of wisdom in having a rigidly uniform system of college admissions whose major criterion is the accumulation of a given number of high-school units in certain subjects. A more logical and educationally fruitful procedure, according to the present, as well as other studies, would be to give considerable weight to other factors, such as the background of students and their demonstrated scholastic aptitude as evidenced by psychological tests.

C. SCHOLASTIC AND VOCATIONAL INTERESTS AND ACTIVITIES

AMOUNT OF HIGH-SCHOOL WORK TAKEN

That college entrance requirements in the colleges studied are rather uniform is evidenced by data shown in table 25. There is close agreement in most cases between the different kinds of schools in the number of units of various subjects offered by their students for college entrance. The differences are seldom more than one half unit, and in many cases the variations do not exceed one tenth of a unit.

Attention was called, in the section just preceding, to the necessity for colleges to give consideration to factors other than acquirement of high-school units for college entrance. For, as it was shown there, uniformity in unit requirement is not a guaranty of uniformity in scholastic aptitude of students.

NOTE.—Medians in *italic* considered unreliable on account of small number of cases involved.

INFLUENCES IN CHOICE OF CAREER

The factors which influenced students in their choice of a career represented by the kind of high school attended are shown in table 26. In factors number 1, 2, 3, and 4, namely, desire to make money, success of friends, advice of friends or relatives, and teachers, the northern rural public schools lead with the largest percent of their students naming them. In factor number 5, desire to serve, there is seen the definite influence of the kind of school attended. Students from southern private and northern private schools stood highest in the percent of their students naming it, their respective percentages being 47 and 50. It is interesting to note that

in the northern city public schools, where perhaps less stress is placed on service, a relatively small number of the students named it as an influencing factor, the percent being 28.

"Belief in your ability" was named by 55 percent of the students from the northern city public schools, giving it first ranking place. Public schools of the "Border" States are second in the number of their students mentioning this influence, and city public schools of the Southern States are third. This gives city public schools of all sections a distinct lead in the percent of students naming this important factor as an influence in their choice of a career.

TABLE 26.—*Number and percent of students who named certain factors which influenced their choice of occupation, according to kind of high school attended*

In view of the modern practices in educational and vocational guidance found in northern city schools it is surprising to find no students from these schools mentioning factor 9. This situation deserves further study.

D. EXTRACURRICULUM INTERESTS AND ACTIVITIES

INTELLECTUAL INTERESTS

The relationship between students' extracurriculum interests and activities as represented by the kinds and location of schools attended will be the concern of this section of the study. The topics to be treated are: Intellectual interests, including use of high school and public libraries, and number of books read; and social interests and activities, comprising membership in organizations, offices held, hobbies engaged in, prizes and honors won, and cultural experiences.

Use of libraries.—That students of northern private, foreign, and northern city public schools lead all others in the use of the public library is evidenced by the data shown in figure 14. It is also shown that students of foreign and northern private schools or academies lead in the percent of students who use the school library.

These data on the use of the public library support the inference drawn in part I that the large percent of pupils reporting infrequent and no use of the public library indicated a probable lack of public-library facilities.

The fact that southern rural and northern rural and southern urban communities are lacking in public-library facilities needs no proof to those who are at all familiar with the situation. And the fact that the use of the public library by students increases with the increase in facilities indicates that availability and use are closely associated.

With the changing philosophy and practice in modern education and the growing emphasis being placed upon collateral and independent reading by students, it becomes increasingly necessary that schools and communities be provided with up-to-date library facilities.

Books read during high-school career.—In order to ascertain the differences between schools in the extent to which students actually showed intellectual activity, students who claimed to have read a given number of books were classified according to the kind of high school they attended.

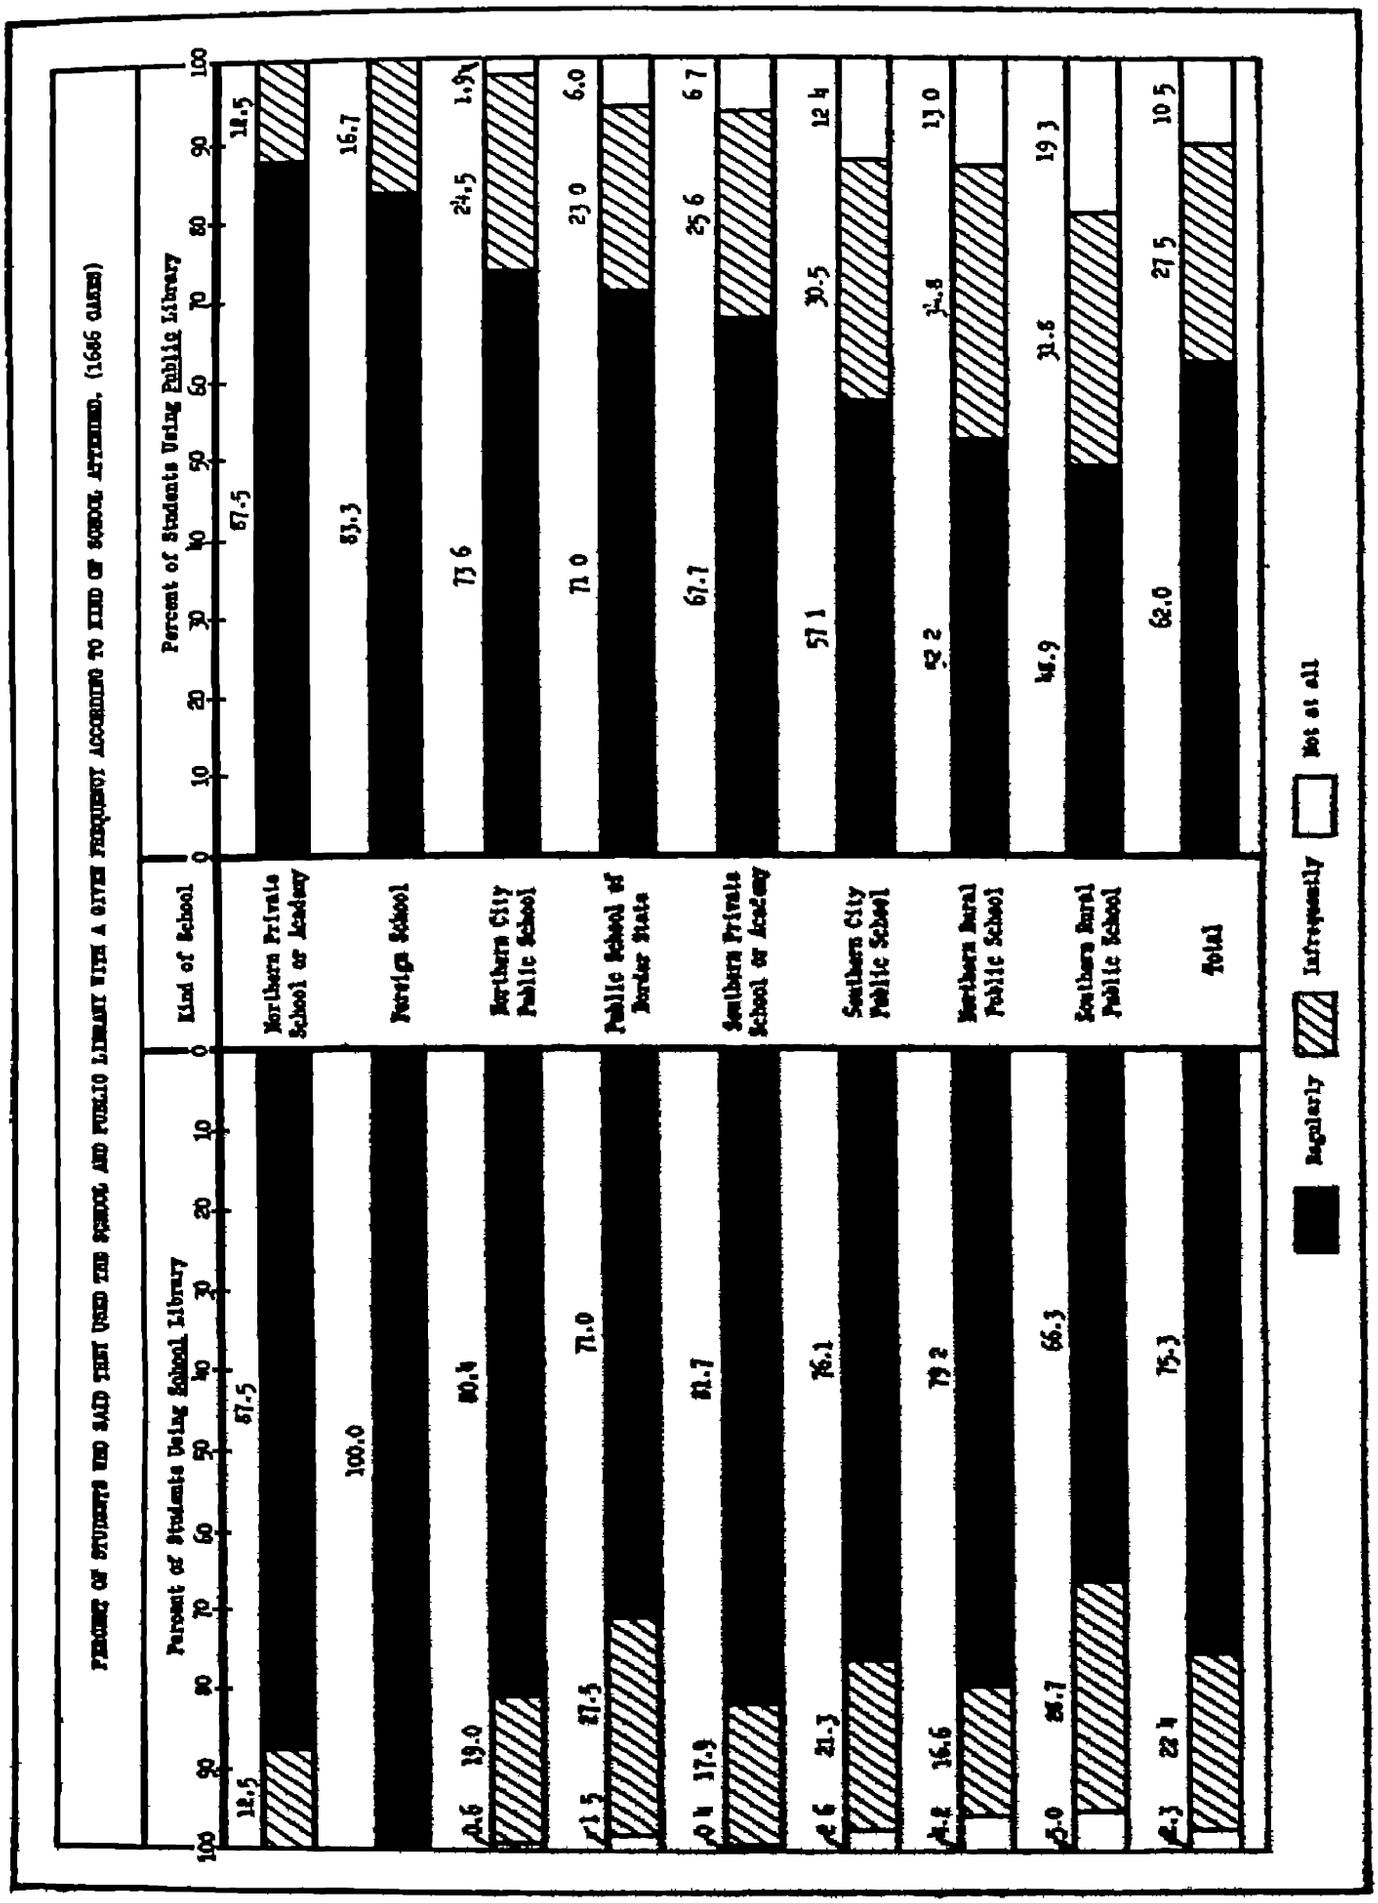

FIGURE 14.—Percent of students who said they used the school and public libraries with a given frequency, according to kind of school attended (1,686 cases).

Table 27 shows the median number of books read by students according to this classification.

It will be observed that the groups of schools do not maintain the same relative rank which they held in the percent of students who used the libraries, except in the case of foreign schools. In number of books read, students from foreign schools rank first.

Nearly 50 percent of the total group of 1,573 students replying voluntarily read fewer than 20 books during their entire high-school career, while only 17 percent voluntarily read as many as 50 or more.

SOCIAL INTERESTS AND ACTIVITIES

The extent to which students from the various kinds of high schools participated in certain types of extracurriculum activities is given in tables 28 and 29.

TABLE 27.—*Number and percent of students who read a given median number of books according to kind of high school attended*

Kind of high school attended	Number	Percent	Median number of books
1	2	3	4
Southern city public school	748	48	19.44

Foreign school	4	.3	39 95
Other school	74	5	13.84
Total	1,573	----------	20.91

Membership and offices held in organizations.—Table 28 shows that the public city schools of the North and those of the "Border" States rank first and second in the median number of organizations of which their students are members. They also lead, in reverse order, in the median number of offices held by their students.

These data concerning the northern schools in particular indicate that they probably have a more extensive extracurriculum program, or, that participation of Negro students in such activities is not restricted as has been generally believed.

TABLE 28.—*Median number of organizations of which students were members and median number of offices held while in high school*

Total	3.38	1,673	6.7	1,785

Hobbies engaged in and other cultural experiences.—The median number of hobbies in which students engaged during their high-school careers as represented by the kind of school attended is shown in table 29. The differences between the various kinds of schools in this matter are negligible.

In order to get a measure of the types of things with which students had come into contact that might have some cultural influence they were asked to check certain things which they had seen, heard, or experienced. The check list in-

cluded the following 18 items: Symphony orchestra, oratorio, grand opera, ocean, art museum, historical or natural museum, zoo, building of skyscraper, mining operations, operation of steel mill, shipyard, stockyard, cotton field, railroad shops, large commercial office, extensive orchard cultivation, Yellowstone National Park, others.

No attempt was made to evaluate these items. But in order to obtain some measure of the extensiveness of their experiences the number of items checked by each student was computed, and the median number of experiences had by the entire group of students coming from each kind of school was found. Table 29 shows the results of this inquiry. Students from the northern private schools rank first and are followed by those from the northern public city schools, their respective medians being 11.25 and 9. Students from schools in the "Border States" are third, with a median of 7.51.

Prizes and honors won.—Prizes and honors won by individuals are frequently the beginning of self-confidence and are the factors which often give motive power and direction to one's life. It is of interest, therefore, to inquire into the possible influence of the kind of school attended in making such accomplishments possible for its students. Table 30 is an approach to this question. It shows the percent of students coming from each kind of school who won certain kinds of prizes and honors.

TABLE 30.—*Percent of students who won certain prizes and honors in high school, according to kind of school attended*

Kind of school attended	Sports		Music and arts		Literary and dramatic		Religious and civic		Scientific and mechanical		Number of—	
	Percent	Rank	Percent	Rank	Percent	Rank	Percent	Rank	Percent	Rank	Cases	Rank

Total	26	----	9	----	71	----	22	----	5	----	892	----

Students were asked to list the prizes or honors won during their high-school careers. These replies were classified into the various fields of activity in which they naturally fell. As a result of this classification five groups of prizes and honors were listed as follows: Sports, music and art, literary and dramatic, religious and civic, and scientific and mechanical.

Of the 898 students replying to this inquiry, 71 percent received prizes and honors as a result of literary and dramatic achievement; 25 percent in sports; 22 percent in religious and civic activity; 8 percent in music and art; and 5 percent in science and mechanics.

Observation of the details of the table shows considerable variation between the kinds of schools in the percent of their students receiving types of prizes and honors. In the field of sports students from the northern city public schools lead with a percentage of 48 and are followed by northern rural students, whose percentage is 36. In music and art the same students lead, but their rank order is reversed.

In literary and dramatic contests students from the southern city public schools lead. Further details may be observed by reference to the table.

The composite rank of the different kinds of schools in terms of the percent of their students who won prizes and honors in the various fields of activity are: Southern city public, 1; northern rural public, 2; southern rural public, 3; southern private, 4; northern city public, and unknown, 5.5; "Border" States public, 7.

PART III: RELATIONSHIP BETWEEN PARENTAL OCCUPATIONS AND CERTAIN OTHER INTERESTS, ACTIVITIES, AND FACTORS

Occupational status is generally conceded to be one of the strongest factors in determining the social, economic, and cultural level of a people. Also many occupational studies show that occupational classes represent significant differences in intelligence or native ability.[1]

Although there are many elements at work tending to prevent as strong a cleavage in certain instances between the occupational levels of Negroes as is true of the white race in America, nevertheless many differences may be found among Negroes engaged in different occupations. While differences in intelligence are found, they are not always in favor of the same occupational group, however, as is the case among whites. For example, according to a recent investigation [2] as well as the present study, it was found that contrary to the findings among whites, the clerical group [3] surpassed the professional group in the psychological

[2] Caliver, Ambrose. A Personnel Study of Negro College Students Op cit.

[3] The occupational groups were formed by the following combinations: (1) Professional—Dentist, lawyer, minister, musician, physician, school teacher, trained nurse; (2) Clerical—Postman, railway mail clerk, secretary, (3) Skilled—Barber, beauty culturist, carpenter, miner, skilled worker in factory, skilled mechanic; (4) Business—Banker, contractor, insurance agent, insurance executive, merchant, undertaker; (5) Unskilled—Laborers, (6) Personal and domestic service—Butler, chauffeur, cook, laundry worker, maid, porter, (7) Farming; (8) Miscellaneous—Housekeeper (at home), other. In this study the "clerical group" is principally comprised of persons employed in the postal and railway mail service. In explanation of the apparent superiority of this group over other occupational groups, the following observation should be made. A large number of Negroes who have partially or fully prepared themselves for professional occupations, having found difficulty in entering upon or succeeding in their chosen line of work, passed the Civil Service examination and entered the postal or railway mail service. This tends to raise the general educational level of this class of workers to a relatively higher status than would be expected, as shown in section H following. Moreover, there is a high degree of stability attached to the occupation, which automatically reacts favorably on the general economic and social status of the individuals thus employed, as revealed in section B of this chapter. The education, therefore, and general social status of persons engaged in postal and railway mail service is approximately equal to that of professional workers, the large majority of whom are teachers.

scores made by students whose parents belong to the respective occupational classes.

The purpose of this part of the study is to inquire into the relationships existing between occupational status of parents and certain other background factors operating in the life of Negro students. The topics with which part III will be concerned are: School and college attendance, economic status, intelligence of students, scholastic and vocational interests and activities; extracurriculum interests and activities; brothers and sisters and their education; work for self-support; and education of parents. All these subjects will be treated in terms of the effect which the parental occupation has on them.

A. COLLEGE AND SCHOOL ATTENDANCE

COLLEGE ATTENDANCE

The proportion in which each occupational group is represented in the Negro colleges of the country may be inferred from data shown in table 31. If the miscellaneous occupations are excluded it is seen that the unskilled and farming groups lead in the percent of the total 1,877 students who are attending college, the percent for each being 15. The next in order is the skilled group, and the professional group ranks fourth.

Influences to attend a certain college.—In part I there was a general discussion of the factors which students named as influencing them to attend the college of their choice, and in part II the subject was treated in terms of the apparent influence of the kinds and location of schools attended. Here we shall attack the question with a view to ascertaining the possible relation the parent's occupation has to the factors influencing students to attend a given college.

In table 32 is shown the percent of students belonging to each occupational class who named certain factors which influenced them to attend the particular college in which they were enrolled. The most important fact revealed by this table is the predominance held by "superior quality of work" and "vocational and professional reasons" as influencing factors named by the students in each occupational class. More than a fourth of the students in each of five classes named "vocational and professional" influences, while "superior quality of work" was named by another fourth in three cases and by practically a fifth in each of the others. In this connection it is interesting to note that the clerical group far surpasses all others in the percent of their students who named "superior quality of work" as the factor most strongly influencing them to attend the colleges of their choice, 29 percent having named this factor. The business and the professional classes follow, with 25 percent of students

in each group naming "superior quality of work" as an influencing factor.

More students of the personal and domestic service class than of any others named "vocational and professional" influences. The nearest competitors in this regard are students whose parents are engaged in the skilled occupations, the percentage being 27. Detailed comparison of the different occupational groups in the percent of students naming certain factors may be made by further reference to the table.

ELEMENTARY- AND HIGH-SCHOOL ATTENDANCE

Number of schools attended.—Table 33 presents facts relating to the number of different elementary and high schools attended by students according to the occupation of their parents. As stated in a corresponding section in part II the frequent change of school often has a more or less deleterious effect on pupils. In order to obtain a measure of extent of change by means of which the different occupational levels could be compared the percent of students belonging to each occupational class who said that they had attended a given number of elementary and high schools was computed. The results of this calculation are shown in the table.

TABLE 33.—*Percent of students who attended certain number of high and elementary schools according to father's occupation*

That one single measure might be obtained which would make it easy to compare the occupational groups they were ranked on the basis of the percent of students who had attended 1, 2, 3, and 4 or more schools. The ranking was done by the following procedure: The highest precentage of students signifying attendence upon one school only was ranked 1 as representing the highest degree of desirability, the next highest percentage was ranked 2, and so on, until all

who had attended one school only were ranked. In ranking those who attended more than one school the opposite procedure was employed, namely, that occupational group which had the smallest percent of its students attending 2, 3, or 4 or more schools was considered to possess the highest position of desirability, and consequently was ranked 1; the group whose percentage was next above the lowest was ranked 2, and so on, until each occupational group was ranked in each item, representing the number of schools attended.

From this procedure the following rankings were obtained for the number of high schools attended by the students in each occupational class (the smaller numbers representing fewer schools attended, and hence a greater degree of desirability): Clerical, 1; unskilled, 2; miscellaneous, 3; personal and domestic service, 4; business, 5; skilled, 6; farming, 7; and professional, 8.

The rankings for the fewest elementary schools attended are· Business, 1; miscellaneous, 2; clerical, 3; unskilled, 4; farming, 5; skilled, 6; personal and domestic service, 7; and professional, 8.

Only two groups maintain the same relative positions for both elementary and high schools attended, namely, the professional and business groups; both of which are rather low in the scale, their respective ranks being 8 and 6.

In order to obtain a composite rank for both elementary and high-school attendance combined the composite ranks of each were added and the sums were reranked. On this basis the clerical group is first, followed by the miscellaneous group. The others in their rank order are: Business, 3.5; unskilled, 3.5; personal and domestic service 5; farming, 6.5; skilled, 6.5; and professional, 8.

The accuracy of these rankings was checked by combining the individual ranks of the four items under each kind of school and then reranking the summation of these individual ranks. The relative positions of the groups remain the same except for the fact that the business and unskilled groups both compete for third place and the skilled and farming groups compete for sixth place, which meant that the two former groups were both assigned the rank of 3.5 and the two latter, 6.5.

Kinds of schools attended.—It was shown in part II that the kind of school attended appeared to have very definite relationship to the achievements and certain other factors of students. The extent to which the children belonging to the different occupational classes are represented in the various kinds of elementary and high schools is shown in table 34.

The feature of greatest import, perhaps, to be noted in this table is the change in the percent of students belonging to certain occupational groups who attend a particular kind of elementary school and the same kind of high school.

For purposes of comparison in cases where the percent of students in a given occupational group who attend a given kind of high school is more than the percent attending the same kind of elementary school the change will be designated "positive"; and if relatively fewer students attend a particular kind of high school than attended the same kind of elementary school the change will be designated "negative."

On the basis of this procedure it will be observed that the greatest negative change takes place in the southern rural public schools. In every occupational group the change is negative and in most cases of considerable magnitude. The differentials in percents of students belonging to various occupational classes who attend both public elementary and high school in the southern rural communities range from −2.17 to −26.34. The personal and domestic service group is at the low extreme with only 2.74 percent of the students attending southern rural public high schools as against 4.91 percent who are attending the same kind of elementary school. The group having the highest differential is the farmers, 47.10 percent of whose students attended southern rural public elementary schools but who dropped to a low 20.76 percent who attended the same kind of high school. For all groups combined there is a negative differential of 9.58 percent.

The only other negative change is found in the northern city public schools. This change, however, is quite negligible, amounting to only 0.30 percent for all occupational groups combined. The greatest negative change in this group of schools takes place in the professional class, 11.57 percent of whose students attend city elementary public schools in the North as against 7.81 percent who attend city

[1] Changes in foreign schools disregarded.

NOTE.—Read table thus: 51.65 percent of the students whose parents belong to the professional group attended elementary public schools in Southern cities, while 52.26 percent attended public high schools in Southern cities, 11.57 percent attended elementary public schools in Northern cities and 7.81 percent attended public high schools in the same localities. Where the percentage of students attending high school in a given locality is greater than that attending elementary school in the same locality a plus sign is used; where the change is negative, a minus sign is used.

public high schools in the same section. There is also a slight negative change here in the skilled, business, and miscellaneous occupational groups.

The most pronounced positive change for all groups combined is in the southern private schools or academies, the differential being +7.79 percent. The differentials in the percent of students belonging to various occupational groups who attended both southern private elementary schools and southern private high schools range from +4.45 to +16.46. The personal and domestic workers furnish the low differential here, the respective percents of their children attending southern private elementary and high schools being 9.28 and 13.73, while the farmers are again in the lead, furnishing the high differential with 5.07 percent of their children having attended southern private elementary schools as against 21.53 percent attending the same kind of high school.

In the consideration of the changes taking place in the southern rural public schools and the southern private schools the most notable feature to be observed is the fact that, in every occupational group the changes are respectively negative and positive; that is, each occupational class sent a smaller percent of its children to high schools in the southern rural areas than it sent to elementary schools in the same section. Conversely, every occupational class sent a larger percent of its children to southern private high schools than it sent to southern private elementary schools. The educational and social implications of these facts will be discussed later.

Further analysis of table 34 shows that for the southern city public schools the greatest positive change took place in the farming group, with a differential of +5.65 percent; while the most marked negative change took place in the personal and domestic service class, the differential being −5.19. In the northern city public schools the farming group leads in positive differentials, with +2.44 percent; and the professional class is ahead in differentials of a negative character, the percent being −3.76. The public schools of the Border States show the highest positive differential for children of farmers with a percent of +3.44. The only negative differential in these groups of schools is yielded by the unskilled group, it being the negligible percent of −0.10.

The data in this table suggest several inferences of considerable consequence: In the first place, there is very obvious in every locality an insistent urge on the part of the Negro parents for better educational opportunities for their children. It is vividly revealed by the changes found in the farming group and in the southern rural schools for all groups.

The second inference to which these data point with considerable conclusiveness is the lack of availability of secondary school facilities for Negroes in many sections of the South and particularly in the rural areas. This lack is revealed in a recent study [4] which shows the number of counties with no high-school facilities and those having no 4-year high schools for Negroes; also by a study of the relation between the popularization of secondary education and the availability of high-school facilities.

The present study, by approaching the question from another angle confirms the conclusion of a former study regarding lack of availability of high-school facilities for Negroes. The manner in which the question will be approached here will be to ascertain what kinds of high schools absorb the students who are lost by another kind of high school as shown by negative differentials. If these losses are rather consistently absorbed by schools which either are better or which the parents consider better, our hypothesis may be considered to have been substantiated. (Findings in the National Survey of Secondary Education for Negroes previously referred to, and facts presented in part II of this study prove that schools of different kinds and localities vary in effectiveness of program as shown by the general criteria applied.)

By observing table 34 it is seen that the children of farmers who are lost by the southern rural public schools are absorbed by the schools of the Border States, southern private schools, and southern city public schools. The personal and domestic service group had a negative change in the southern rural and southern city public schools, but had gains in the northern city, southern private, and Border State schools. Most of the children of unskilled workers lost to the southern rural schools were absorbed by southern

[4] Caliver, Ambrose. Secondary Education for Negroes. Op. cit.

private schools; as is the case for the business group. The skilled workers, in changing their children from southern rural schools to others send them predominantly to southern city, southern private, and Border State schools. The clerical group lost students between the elementary and high schools in the southern rural communities, and in the southern cities, but gained in the southern private and Border States schools. The clerical group is the only occupational class having no students enrolled in southern rural high schools.

The decreases in the professional class, most of which were found in the southern rural and northern city schools are largely absorbed by southern private schools, although slight increases may also be found in northern rural public schools, southern city schools, and public schools of the Border States.

This array of evidence seems to be conclusive in substantiating the theory that, in general, changes in the percent of students belonging to the various occupational groups which are represented in the different kinds of communities are due to a lack of secondary school facilities for Negroes and a determination on the part of parents to seek better educational opportunities. In the Biennial Survey of Education [5] it was shown that the greatest migration of Negroes took place in States and localities where educational facilities for Negroes were meager.

The final feature of table 34 to which attention is directed is the extent of migration taking place within the various occupational classes. This is an important factor in the background of students, the educational implications of which should receive greater consideration.

B. ECONOMIC STATUS OF PARENTS

The economic status of families from which students come has been shown to be an element of real importance when the influencing background factors are considered in their relation to subsequent school experience and other achievements. Book [6] found positive relationships between certain

[5] United States. Office of Education. Biennial Survey of Education in the United States. Washington, Government Printing Office, 1931. (Bulletin 1931, no. 20, vol. I, ch. 17)

[6] Book, W. F. Op. cit., p. 209.

phases of economic status of families and the intelligence of students. Other investigators also have found favorable relationships between economic status of families and school achievement of students.[7]

While in the present study correlations were not obtained between economic status of families and scholastic aptitude of students, certain of such factors were related to the occupation of parents, which, in turn, was correlated with the scholastic aptitude of students. Table 35 furnishes data concerning three of these factors, namely, home ownership, ownership of additional property, and monthly income of families.

TABLE 35.—*Number and percent of students whose parents own their own homes, have additional property, and have a given median income, according to father's occupation*

Father's occupation	Parents own home		Parents have additional property		Monthly income of family	
	Cases	Percent	Cases	Percent	Cases	Median

Total	1,361	78	872	53	1,589	94.72

HOME OWNERSHIP

Of the 1,755 students replying concerning home ownership, 1,361, or 78 percent, said their parents owned or were buying their homes. This is considerably above the average for the country as a whole, the 1930 census reporting that 47 percent of all families own homes.[8] Home ownership is an important index of the stability and general social outlook of a family and bespeaks an industry and a perseverance which are valuable assets to students, both as a personal possession and as a family trait. The rank order

[7] Pressey, S. L., and Ralston, Ruth. Op. cit.

[8] The 1930 census indicates that 23.9 percent of all Negro families of the country own their homes.

of the different occupational groups in the percent of parents belonging to them who own or are buying their homes follows: Business, 1; professional, 2; clerical, 3; farming, 4; miscellaneous, 5; skilled, 6; personal and domestic service, 7; and unskilled, 8.

ADDITIONAL PROPERTY

Table 35 also gives the percent of students who said their parents own additional property. Fifty-three percent of the students belong to this group. Detailed percentages for each occupational class are shown in the table.

FAMILY INCOME

Perhaps the most potent factor in determining the economic status of a family is its income; and within certain limits it seems definitely to affect the cultural status of the family and the intellectual status of the children.[9]

Table 35 shows the median monthly income of the families represented by students in the present study, according to occupational groups. The data were secured by listing 11 classes of monthly incomes, for example, (1), $50 monthly or less; (2), $51 to $75 monthly, and so on to more than $300 monthly. Students were asked to check the one item best representing the total income of their families during the previous year (1929). They were told to *guess* if they did not know exactly. They were also told to combine the incomes of the breadwinner and housekeeper if both were working, as well as income from other sources.

The results show a median monthly income of $94.72 for all occupational classes combined. The median income of families belonging to each occupational class in rank order is shown in the table. Nearly a fifth of the students come from families having a monthly income of only $50 or less; more than half of the families represented have a monthly income of less than $100; while only 15 percent have an income of more than $200 a month.

A noticeable feature about these data is the low ranking position of the farming group. The incomes of the professional, clerical, and business groups are more than twice

[9] Book, W. F. Op. cit., p. 211
Counts, G. S. The Selective Character of the American High School, University of Chicago Press, 1922.
Pressey, S. L. Op. ct.

as great as is the income of the farmers, whose median income is $31.22 below the total median.

A more significant fact than the one mentioned, however, is the relatively low incomes of the families in all the groups. That Negro students, whose parents have an economic background represented by so low a range of monthly income as $63.50 to $161.41, manage to enroll and remain in college is one of the enigmas in the Negro's progress. That students find it necessary to attempt to pursue their college education on so narrow a margin of subsistence presents problems which would tax the skill and knowledge possessed by the most effectively organized and administered personnel department. One can well imagine, therefore, what damage is done the educational growth of students where no such assistance is provided, as is the case in most Negro institutions.

RATIO OF ROOMS TO OCCUPANTS OF HOME

Another index of economic status is the ratio of rooms to occupants of a home. How many rooms does the average home in each of the occupational classes possess; and how many persons occupy these rooms? Students were asked the number of rooms in their homes and the number of persons who lived in their homes the previous year (1929). Table 36 shows the answers to these questions in terms of central tendency. Those answering numbered 1,813.

Number of rooms in home.— The occupational groups are listed in rank order represented by the median number of rooms in the homes according to the various occupational classes. The differences between the groups are negligible in most cases. Two hundred and fifty-one students, or 14 percent, live in homes having 9 or more rooms, while 65, or 4 percent, live in homes with only 3 rooms.

Number of persons in home.—Table 36 also shows the number of persons occupying the homes from which students come as answered by 1,780 students. The median for the entire group is between 4 and 5 persons. The differences between the various groups are even less here than in the number of rooms in the homes. Those coming from homes with 9 or more occupants represented 11 percent of the total, while 27 percent are from homes with 3 or fewer occupants.

TABLE 36.—*Median number of rooms in home and median number of persons occupying home, according to parent's occupation*

Parent's occupation	Median number of rooms	Median number of persons
Professional	6.19	4.41
Clerical	6.14	5.08
Skilled	5.51	4.37
Business	6.28	4.34
Unskilled	5.03	4.46
Personal and domestic	5.22	4.11
Farming	5.37	4.73
Other	5.69	4.46
Total	5.6	4.45
Number replying	1,813	1,780

From the facts here shown it is obvious that many families whence Negro college students come live in overcrowded homes. The importance of adequate living quarters and its effect on the study habits and general disposition of high-school students cannot be overemphasized. In light of this fact the data here presented have some bearing on the nature of the intellectual equipment and personality which Negro students bring to college, and suggest certain definite tasks for a personnel program.

MODERN CONVENIENCES

The kind of house in which the families of Negro college students live and the modern conveniences possessed by them are shown in table 37, in terms of percent of students mentioning them.

TABLE 37.—*Percent of students whose parents possess certain modern convenience, according to father's occupation*

Modern conveniences	Father's occupation								Total
	Professional	Clerical	Skilled	Business	Unskilled	Personal and domestic	Farming	Miscellaneous	
1	2	3	4	5	6	7	8	9	10
Furnace	38	60	26	29	18	29	17	34	29
Electric light	78	92	74	81	70	84	30	83	71
Gas	47	62	37	44	30	50	16	48	39
Bath	69	91	57	74	51	68	27	68	58
Toilet	64	88	57	71	48	62	28	62	56
Piano	75	81	60	74	64	66	42	72	65
Radio	19	68	41	61	32	48	13	52	38
Brick house	68	36	11	15	13	22	5	20	28
Frame house	4	55	77	7	81	64	87	67	65
Stucco or stone house	4	4	5	4	1	5	1	3	3
Apartment	1	6	4	2	1	4	3	5	3
Number of cases	254	79	273	128	289	191	290	376	1,880

In determining the rank of the various occupational groups the same procedure as was described in the sections just preceding was followed here, namely, the occupational class with the highest percentage of families possessing a given convenience or type of house was ranked 1, the occupational class possessing the next highest percentage was ranked 2, and so on. In the case of "frame house", however, the opposite method was followed—the highest degree of desirability being represented by the lowest percent. Apartment residence was excluded in this ranking.

The table shows that the clerical group ranks first in 7 of the 10 items, second in 2, and fourth in 1. Some consistency is shown in the skilled class, which has sixth place in 6 of the items and seventh in 2; the unskilled group has seventh place in 6 items and sixth place in 3; while the farmers rank eighth in all items except one in which they are seventh.

In order to obtain an index which would measure all the items combined, the composite ranks were computed. The occupational groups follow, ranked in descending order in terms of the highest percentage of families possessing the various modern conveniences; the sums of the individual ranks are also shown: Clerical, 15; professional, 33; personal and domestic service, 34; business, 35; miscellaneous, 38; skilled, 57; unskilled, 68; farming, 79.

The possession of many of these conveniences is essential to health and the development of that type of refinement and social demeanor demanded in modern society. It should be a subject, therefore, of real concern, not only to educators and social workers, but to statesmen as well.

C. INTELLIGENCE OF STUDENTS

In part II the intelligence of students was analyzed in terms of the kind of school and community from which they came. The present section is an approach to the problem from a more detailed analysis—a comparative study of the intelligence of students in terms of their parents' occupations and their education.

OCCUPATIONS OF PARENTS AND INTELLIGENCE OF STUDENTS

The intelligence of students belonging to each occupational class is shown in figure 15 in terms of mean psychological scores. It is seen that the clerical group leads when considered on the basis of both father's and mother's occupations with mean scores of 104.36 and 115.90, respectively. The professional group is next with scores of 90.56 and 89.49, respectively, on paternal and maternal occupations.

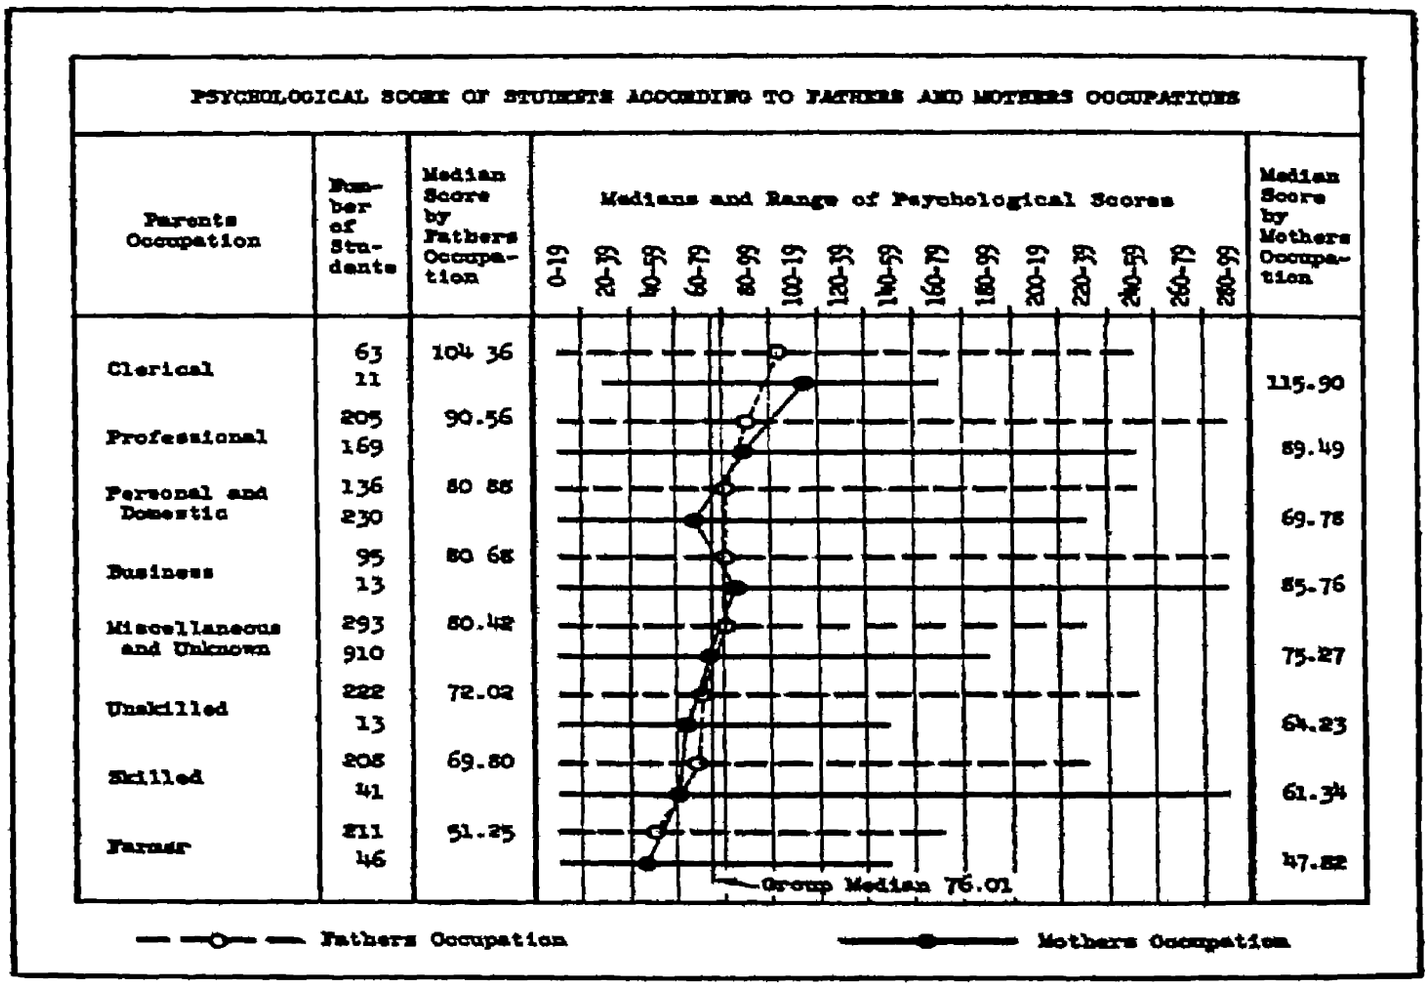

FIGURE 15.—Psychological score of students according to fathers' and mothers' occupations.*

* Wherever "median" is used in this figure the word "mean" should be substituted.

The students whose mothers belong to the clerical and business groups have a higher score than the students whose fathers belong to those same groups.[10] In each of the other occupational classes, however, students whose fathers are following a given occupation have a higher intelligence than those whose mothers follow the same occupations. Before any assumptions can be made concerning the apparent lower intelligence of mothers than fathers who are engaged in farming, unskilled and skilled occupations, more should be

[10] Probably not significant because of the small number of cases.

known of other factors which may operate to effect the differences found in the intelligence of the students.

Figure 15 shows not only the trend in the mean scores of different occupational classes, but also indicates the range and the overlapping of scores. For example, although the mean intelligence of students whose mothers are engaged in skilled occupations is lower than that of students whose fathers are engaged in those occupations, there were some students in the mothers' group who made scores much higher than the highest in the fathers' group. The only case where an occupational group with a mean lower than the preceding group does not have some students who reach or exceed the highest score made in the preceding group is in the case of the farmer.

Distribution of intelligence among occupational groups.—A question of considerable importance from a sociological as well as an educational point of view is the extent to which the occupational classes possess students of the highest and lowest intelligence. Table 38 contains data which answer this question.

Column 3 shows the percent of students in each occupational class reaching or exceeding the mean of the entire group (76.01). The clerical group is far in advance of all the others in this regard with a percentage of 75. The professional group follows with 58 percent. The two groups having relatively the fewest students who reached or exceeded the group mean are the skilled and farming, the respective percentages being 38 and 22.

In order to make a more rigid selection of the groups having the highest percent of superior students the percent making a score of 100 or more was calculated. Column 4 shows these results. Again the clerical group is ahead with 44 percent of its students who made a score of 100 or more. The professional group is also second again with a percentage of 37; while the skilled and farming groups trail in their former respective order with percentages of 24 and 10.

Of equal importance as the foregoing factor is the absence of students with low intelligence from an occupational group. Column 5 of table 38 shows that the occupational class having the fewest students who made a score of 50 or less is the clerical group with a percentage of 14. The next smallest

percentage (28) is represented in the business group. The professional class is fourth in this factor, while the same two groups remain at the bottom as in the two former instances, with the following percentages: Skilled, 42; and farming, 61.

TABLE 38.—*Percent of students reaching or exceeding group mean; those making a score of 100 or more; and those making less than 50, by occupation of father*

Father's occupation	Number of cases	Percent reaching or exceeding group mean	Percent making score of 100 or more	Percent making less than 50
1	2	3	4	5
Clerical	63	75	44	14
Professional	205	58	37	31
Personal and domestic	136	56	29	29
Business	95	51	33	28
Miscellaneous	293	50	28	33
Unskilled	222	44	25	38
Skilled	208	38	24	42
Farming	211	22	10	61
Total	1,433	46	27	37

It is interesting to note that when the occupational classes are compared on the basis of the presence of superior students and absence of inferior ones (by composite ranks) they maintain the same relative ranking as when they were compared on the basis of central tendency, except in the case of the business and personal and domestic service groups.

D. SCHOLASTIC AND VOCATIONAL INTERESTS AND ACTIVITIES

ANTICIPATED COLLEGE MAJOR

In part I the college subject in which students expressed a desire to major was considered in relation to intelligence; in part II the same topic was treated on the basis of the kind and location of high school attended. In this section the subject will be discussed in terms of the father's occupation.

Table 39 indicates that 82, or 5 percent, of all the students wish to major in agriculture; of this number 43 belong to the farming group, which is 16 percent of all students whose fathers are farmers. The business group leads in the percent of students expressing preference for ancient languages as a major, with 3 percent. Only 20, or 1 percent, of the total 1,880 students mentioned this as a desired major.

The following subject-matter fields were mentioned in each case as possible college majors by fewer than 20 students, and in three cases as few as 1, 3, and 5: Architecture, art, botany, geology, journalism, library science, political science, philosophy, psychology, physics, religion, speech or expression, and zoology. The percent of students choosing these subjects ranged from 0.05 to 1. Education, which is the most popular subject, is mentioned by 275, or 15 percent, of the students. Because of the small number of cases no attempt will be made to analyze them on the basis of occupational classes.

TABLE 39.—*Number and percent of students who plan to major in a given subject-matter field, according to father's occupation*

Mother	77	1	3	4	0	1	1	12	

NOTE.—Read table thus: Of the students whose fathers are in the professional group, 78 percent also elected a professional career; less than 1 percent chose a clerical occupation, etc. Of the students whose mothers were in the professional group, 77 of them preferred a professional occupation; 1 percent, clerical, etc.

A feature in this table of special interest, however, is the large percentage of students of the unskilled and farming groups who planned to major in education. The total number of students from these two groups having such an anticipation was 103, or 37 percent, of all who named education as a major. This is a larger ratio than all the students of these two occupational classes bear to the total 1,880 students, their representation being only 31 percent.

If we assume that these students are to become teachers, this preponderance of entrants into the profession from economic strata whose intelligence ranking is relatively low, unless these particular individuals are the highest ranking students in their respective groups—which is improbable, then this fact has wide social implications.

CHOICE OF A CAREER

Equally important as the choice of a major and having more far-reaching significance is the choice of a life career. Do Negro college students show any evidence of diversification in the selections they make? What relation have their choices to the occupations of their parents? These questions are answered in table 40. It is seen that the choices are predominantly professional, for each occupational group and for all combined; and except in the case of the professional class, the occupations of the parents have no apparent influence on the occupational choice of the students. This is true for both mothers and fathers.

Of the fathers, those engaged in business and skilled occupations seem to influence the students most greatly in choosing the occupations in which they are engaged, the respective percentages of students choosing them being 10 and 6. Of the mothers, the farmers appear to have a greater influence than any maternal occupational class, the percentage being 10.

INFLUENCES IN CHOOSING AN OCCUPATION

Although the opinion of an individual is not entirely dependable in matters so subtle as the various influences on his behavior, the students, nevertheless, were asked to designate the factors which they believed influenced them most in making their occupational choices. Table 41 reports these results. "Belief in your ability in field" and "desire to serve" were the two factors most frequently named, the respective percentages of the combined groups naming them being 44 and 36.

Students of the personal and domestic service and clerical classes lead in expressing belief in their ability, with percentages of 51 each, while those in the farming and unskilled groups surpass the others in naming "desire to serve" as a motive in selecting their vocations. Forty percent in each group named this factor.

TABLE 41.—*Percent of students naming factors which influenced their choice of a vocation, according to occupation of father*

Father's occupation	Influencing factors										Number of cases
	Desire to make money	Success of friends	Advice of relatives	Teachers	Desire to serve	Things read	Belief in your ability in field	Father's or mother's occupation	Vocational guidance course or book	Other

E. EXTRACURRICULUM INTERESTS AND ACTIVITIES

This section will deal with the extracurriculum interests and activities of students according to the parents' occupations. The topics to be treated will be of two major kinds—those of an intellectual nature and those of a social nature. The subjects to be discussed under the first are: Books and magazines in the homes of students; books and magazines read by students; and extent and kinds of Negro newspapers taken in homes of students. The social phase of the section will deal with: Organization membership; offices held; hobbies engaged in; cultural experiences; prizes and honors won; travel experience; and religious interests and connections.

INTELLECTUAL INTERESTS AND ACTIVITIES

Number of books and magazines in homes.—Figure 16 shows the number of books in the homes of students according to fathers' occupations, and table 42 gives the number of magazines taken in the homes of students. The median number taken in the homes of the 1,734 students who replied is 2.13. The children of the professional and clerical groups lead both in the number of books and magazines in their homes on basis of father's occupation.

TABLE 42.—*Median number of magazines taken in students' homes, according to occupation of parents*

Parent's occupation	Median father's occupation	Median mother's occupation
Professional	3.2	2.90
Clerical	2.92	1.66
Skilled	1.95	1.82
Business	2.29	1.66
Unskilled	1.84	.66
Personal and domestic service	1.65	1.52
Farming	1.93	2.29
Miscellaneous	2.16	2.18
Total	2.13	2.13
Number of cases	1,734	1,734

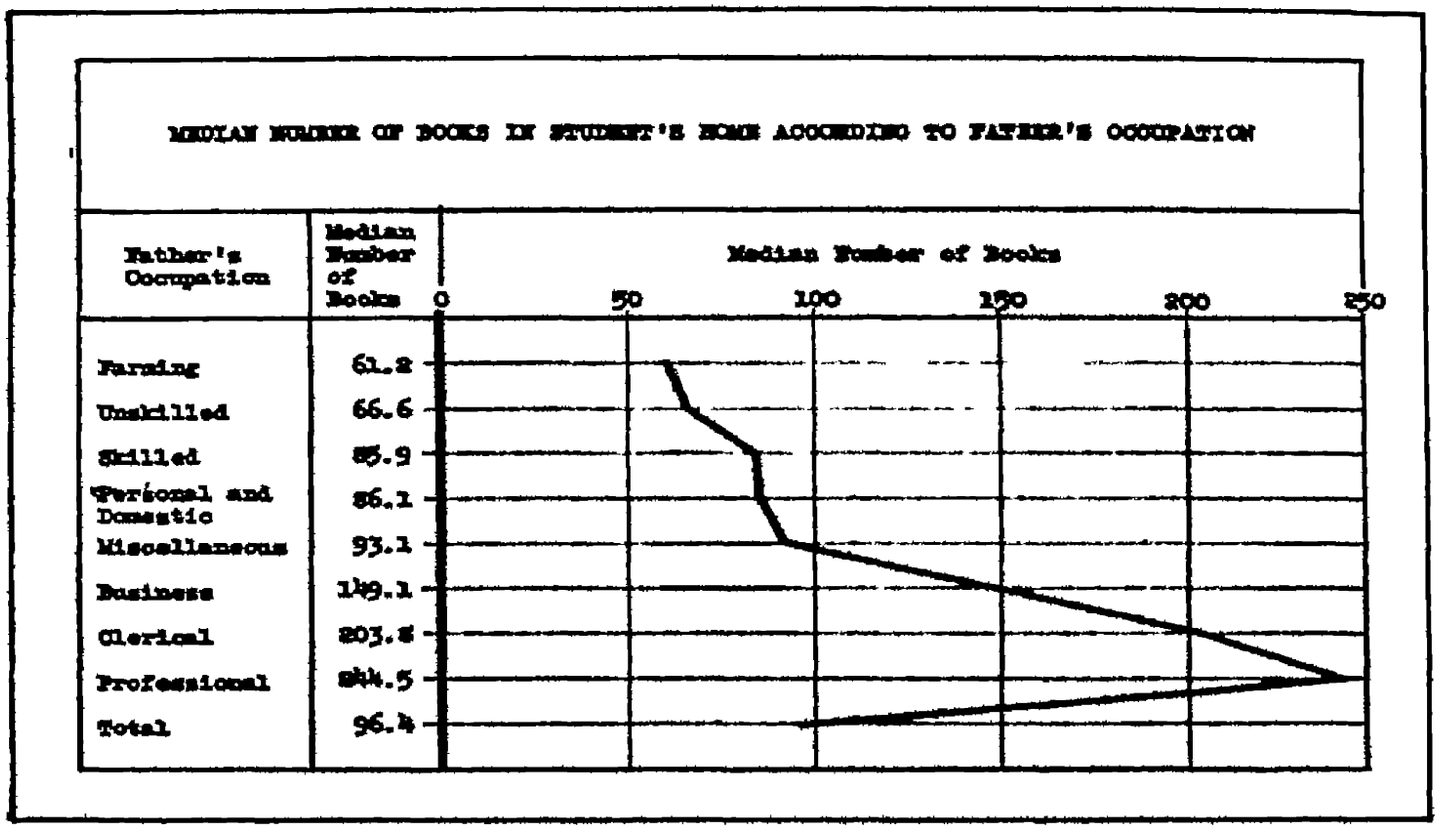

FIGURE 16.—Median number of books in student's home according to father's occupation

Number of books students read.—While the books and magazines found in the homes of students is an important index of the cultural opportunities afforded them, the kind and extent of use are more important factors. In the absence of data, according to parental occupation on kinds of books possessed and read, the extent students read books found in their homes or elsewhere was ascertained by requesting the number of books, excluding regular school assignments, which they voluntarily read during their high

school careers. Table 43 presents the results of this inquiry. The clerical and professional groups are first and second, respectively, on the basis of father's occupation, while the business group ranks first and skilled and professional classes are second on the basis of mother's occupation. The median number of books read by all students combined is 21. The two lowest ranking occupational groups are the unskilled and farming according to the occupations of both fathers and mothers.

Kinds of magazines students read.—Table 44 shows the number and percent of students belonging to each occupational class who read certain kinds of magazines during their high-school careers. Popular and fiction magazines are read most widely by the students of the professional class, and least by those of the farming group. All are about equally interested in current events, the percents ranging from 31 for the personal and domestic service class to 37 for the unskilled.

Detailed analysis regarding only two other kinds of magazines will be made here, namely, literary and Negro. In the first instance the clerical group leads with a percentage of 13, and for the Negro magazines the business group leads with 11 percent. Attention is called in this connection to the level of intelligence of students who read certain kinds of magazines discussed in part I.

Negro newspapers in homes.—In addition to the reading of Negro magazines, mentioned in the section just preceding, the presence of Negro newspapers in the home is an index of race consciousness and race pride.

In order to obtain information concerning this matter students were asked to list the Negro newspapers taken in their homes. Three classifications were then made as follows: National, local, and combination of the two. National Negro newspapers include such weeklies as *The Chicago Defender*, *The Afro-American*, *The Pittsburgh Courier*, etc. Local papers refer to those published in or near the home of the student and which have a more limited circulation than those of a national character. Table 45 gives the number and percent of students in whose homes each kind of paper was taken, and those who had a combination of the two.

The farming and skilled groups lead in subscribing to national Negro weeklies. The farming group also leads in taking local Negro papers. In taking a combination of the two, however, it ranks last. The clerical and professional groups rank lowest in taking national Negro weeklies only, and are at the bottom in taking local Negro papers only; but in subscribing to a combination of the two they rank first. The percent of students reporting both national and local Negro newspapers in their homes for each occupational group is shown in column 7 of the table.

TABLE 45.—*Number and percent of students who come from homes where certain kinds of Negro newspapers are taken according to paternal occupation*

Father's occupation	National		Local		Combination		Total
	Number	Percent	Number	Percent	Number	Percent	
1	2	3	4	5	6	7	8

SOCIAL INTERESTS AND ACTIVITIES

Table 46 presents facts regarding membership in organizations, offices held, hobbies engaged in, and general cultural experiences had by students, according to paternal occupations. In parts I and II the nature and kind of these activities in which students participated were discussed in some detail. Here only the total number of students participating and the median activities engaged in by each student will be treated.

Information concerning each of the four items respectively is shown in columns 2 to 9. In each item the clerical and professional groups rank first, and the farming group ranks lowest.

Prizes and honors won by students.—A considerable shift is noted in the rank order of the different occupational classes when we consider prizes and honors won in the various types

of activities. Table 47 presents data on this point. Students were asked to list the prizes and honors which they won during their high-school careers. The percent of students belonging to each occupational class winning prizes and honors of various kinds is shown in the table.

Travel experience of students.—Distance alone is no criterion of the value of travel experience, but it is one important index. In order, therefore, to ascertain the extent of travel experience of students, they were asked to indicate the greatest distance they had traveled away from home, excluding the trip to college. Table 48 gives the results of this inquiry.

TABLE 46.—*Extracurriculum interests and activities of students according to occupation of father*

Father's occupation	Organization membership		Offices held		Hobbies engaged in		Experiences had	
	Number	Median	Number	Median	Number	Median	Number	Median
1	2	3	4	5	6	7	8	9

TABLE 47.—*Percent of students who won certain prizes and honors during their high-school career, according to father's occupation*

Father's occupation	Kinds of prizes or honors won						
	Sports	Music and arts	Literary and dramatics	Social	Religious and civic	Scientific and mechanical	Number of cases
1	2	3	4	5	6	7	8
Professional	28	4	67	.....	20	4	138
Clerical	31	9	80	.....	6	3	35
Skilled	28	7	25	.....	27	7	146
Business	24	6	54	.....	33	3	63
Unskilled	13	11	68	.....	28	7	133
Personal and domestic	37	16	44	2	22	4	89
Farming	17	7	54	.....	33	7	122
Miscellaneous	29	11	60	.....	19	5	171
Total	25	9	54	.....	24	5	897

TABLE 48.—*Number and percent of students who traveled a given distance from home*

Distance traveled	Number	Percent
1 to 50 miles	54	3
51 to 100 miles	100	6
101 to 150 miles	102	6
151 to 200 miles	146	8
201 to 250 miles	119	7
251 to 300 miles	187	11
More than 300 miles	1,061	60
Total	1,769	

It is interesting to note that practically 60 percent of the total group of students had traveled more than 300 miles; and only 3 percent had traveled as short a distance as 50 miles or less. The professional and business groups surpass the others in the relative numbers of their students who traveled more than 300 miles. The difference between the occupational groups whose students have traveled given distances are not pronounced except in the case of students who traveled more than 300 miles.

Religious activities.— The number and percent of students who attended church and Sunday school with a given frequency according to paternal occupation are shown in table 49. The data here concerning the high percentage of clerical students attending church and Sunday school lead one to wonder why these students did not make a better showing in prizes and honors won in matters of a religious and civic nature.

The denominational affiliation of students is shown in table 50. The Baptist denomination claims 46 percent of all the students; the A.M.E. church is next; followed by the M.E.

The farming and unskilled groups lead in the proportion of students who are Baptists, the respective percents being 63 and 50. The groups having the smallest number of students who are members of the Baptist church are those from the business and clerical groups. It is interesting to note that 1,732, or 95 percent, of all the students claimed church membership.

TABLE 49.—*Number and percent of students who said they attended church and Sunday school while in high school with a given frequency, according to paternal occupation*

F. WORK FOR SELF-SUPPORT

What bearing has the paternal occupational class to which a student belongs on the amount of work he did in high school and the amount he expects to do in college for his self-support? Tables 51 and 52 answer this question.

SELF-SUPPORT IN HIGH SCHOOL

In order to obtain an index by which to compare the different occupational classes in terms of the extent to which students worked for their self-support a composite rank was obtained. Each occupational group was ranked according to the percent of students who said they did not work at all, and according to the percent who said they earned varying amounts of their support. In the first instance—those who earned none of their support—the highest percentage was ranked first, the next highest, second, and so on.

TABLE 51.—*Number and percent of students who earned a given amount of their support while in high school, according to occupation of father*

Percent	37	21	14	12	16	

The opposite procedure was followed in ranking the other items, it being assumed that a low percent of students who had to earn any given amount of his support indicated a high degree of desirability and hence should be ranked first, etc. After each of the columns 2 to 6 was ranked, these ranks were added and their sums were ranked. As a result, the following ranking for each occupational class was obtained: Clerical, 1; professional, 2; miscellaneous, 3; business, 4; personal and domestic service, 5; unskilled, 6; skilled, 7; and farming, 8.

The clerical group, having first ranking in each place, had a composite score of only 5 as compared with 36 for the farming group.

SELF-SUPPORT IN COLLEGE

The same procedure was used here as was used in the foregoing section in determining the extent to which students belonging to the various occupational groups expected to earn their support in college. The clerical group stands first again with a composite score of 6. The next group having

the largest percent of students who do not expect to earn any of their support and the smallest percent who expect to earn varying amounts is the business group whose composite score is 12. The other groups follow in rank order with their composite scores: Professional, 18; miscellaneous, 21; personal and domestic service, 28; unskilled, 30; farming, 32; and skilled, 33.

G. EDUCATION OF PARENTS ACCORDING TO PARENTAL OCCUPATIONS

MEDIAN YEARS OF SCHOOLING OF PARENTS

Replies were received from 1,726 students concerning father's education and from 1,751 concerning mother's education. The various possible levels of training were listed and students were asked to indicate by checking in the appropriate columns the amount of schooling their parents

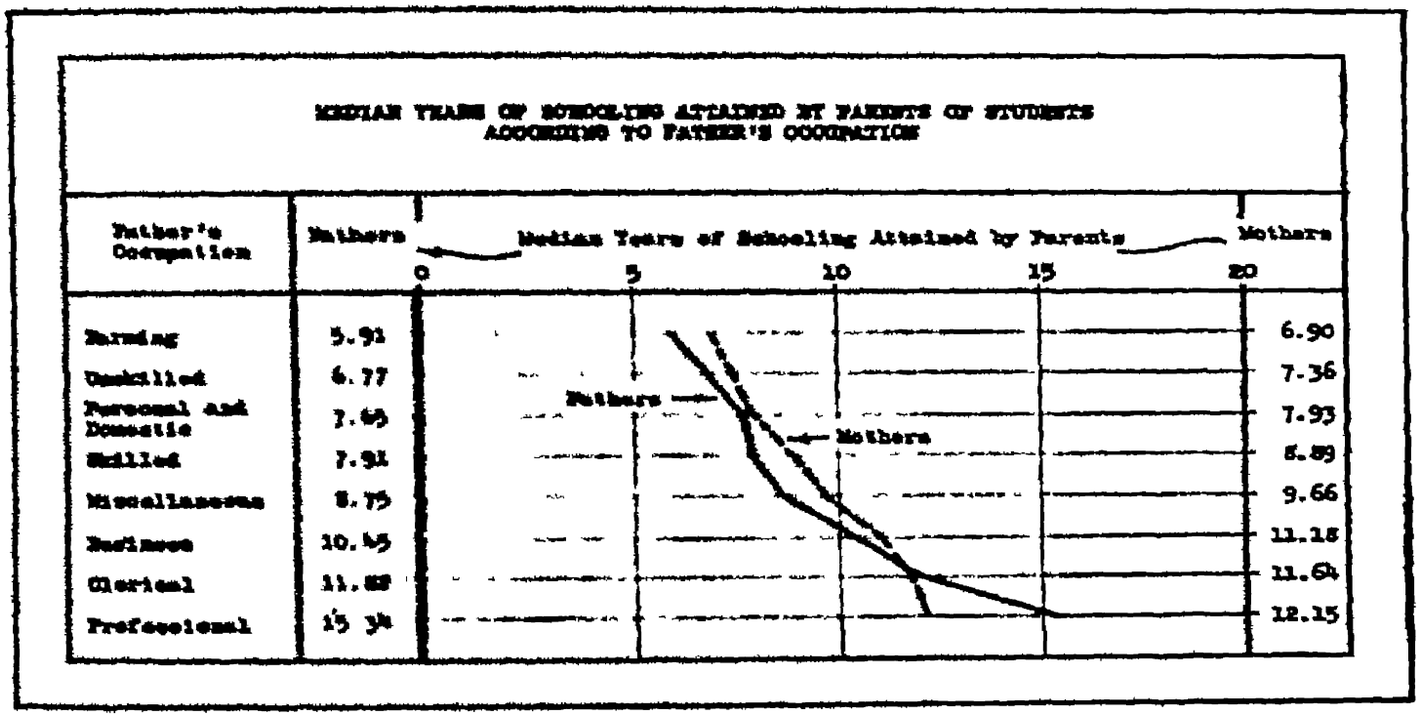

FIGURE 17.—Median years of schooling attained by parents of students according to father's occupation.

had. They were told if the exact amount was not known to estimate it.

Figure 17 shows the median years of schooling attained by fathers and mothers of students according to fathers' occupations. The fathers have more schooling than the mothers in the professional and clerical groups, but in all others the mothers are ahead. The rank order of each occupational

group as may be observed is the same for both fathers and mothers.

Grouped according to mother's occupation, the mothers who are engaged in the various occupational callings have more education than the fathers in all vocational classes except clerical and skilled as shown by figure 18. In the former the schooling of the mothers and fathers is the same, 11.5 years; in the latter the fathers surpass the mothers by the negligible difference of 0.01 of a year. The rank order for both mothers and fathers is the same for all groups except the

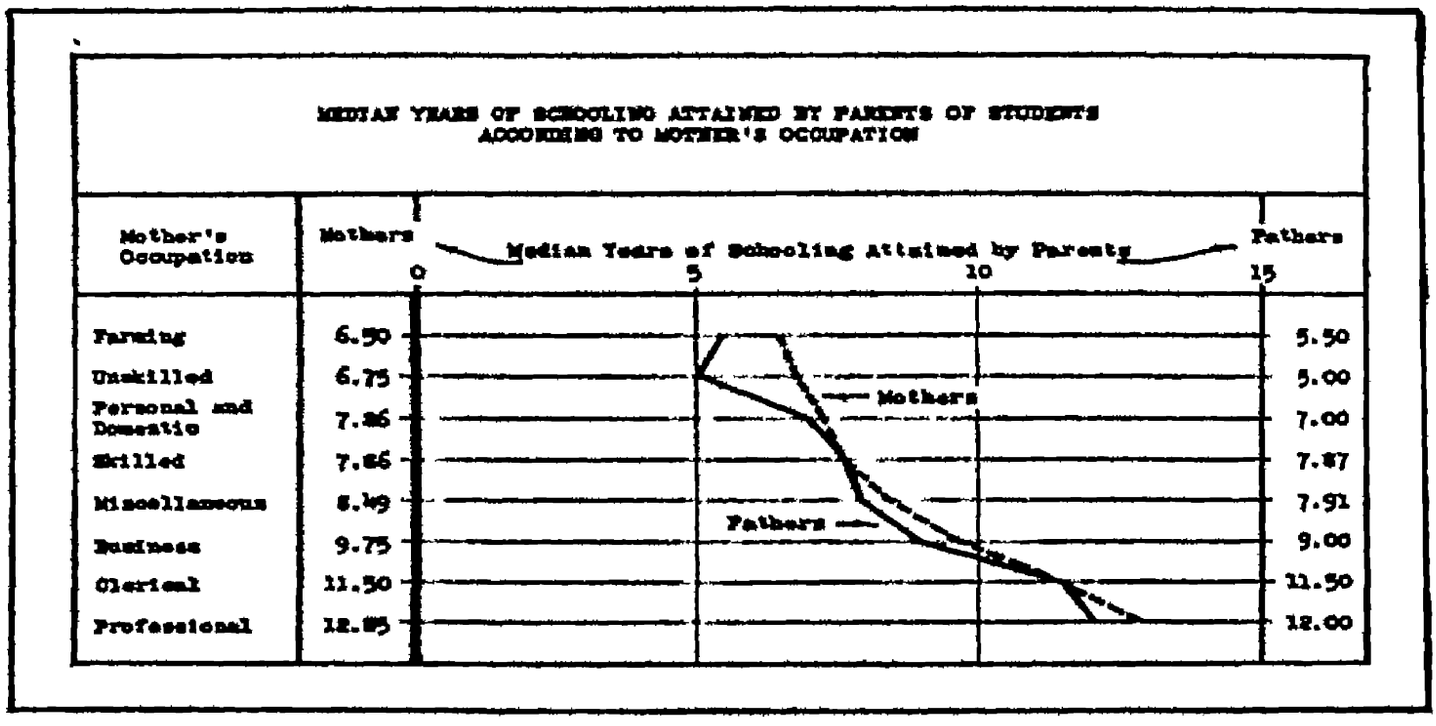

FIGURE 18.—Median years of schooling attained by parents according to mother's occupation.

unskilled and farming; the education of the farming fathers being 0.5 greater than that of the unskilled fathers.

Figure 19 shows the percent of all students combined whose fathers and mothers attained varying amounts of schooling. There are 50 percent of the students whose fathers had from 1 to 8 years of elementary training as compared with 45 percent for the mothers. Students whose fathers obtained from 1 to 4 years of high-school training amounted to 30 percent, while 38 percent of the mothers attained this level. More mothers than fathers had from 1 to 4 years of college training, the respective percents of students reporting this level of training being 15 and 14. However, in graduate and professional training the fathers far surpass the mothers; 5 percent

of the students reporting fathers in this class and only 2 percent reporting mothers.

More fathers than mothers also had 4 years of college training, the percent of students reporting this level of schooling being, respectively, 7 and 6. On the other hand, students reporting mothers who spent 4 years in high school surpassed those reporting fathers with that level of training, with respective percents of 18 and 12.

In general, the data presented in figures 17, 18, and 19 substantiate the conclusions of two other studies.[11] That there seems to be a pronounced tendency for Negro girls to be favored over boys in the proportion who go to school, which

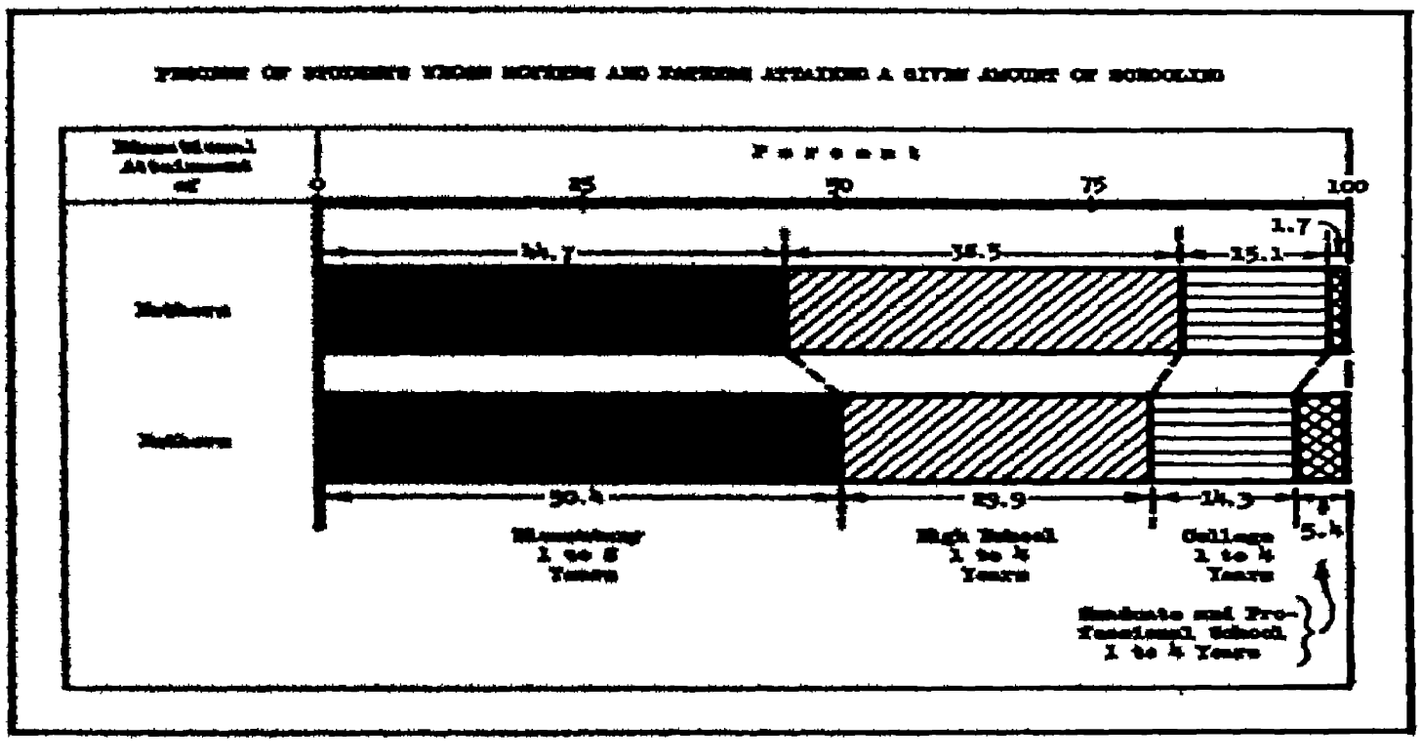

FIGURE 19.—Percent of students whose mothers and fathers attained a given amount of schooling.

fact is reflected in difference of schooling obtained by mothers and fathers.

There are also important sociological implications here if the inference may be drawn, which seems tenable, that a large proportion of Negro women marry men in most occupational levels who have less schooling than they themselves have. The converse is true, however, with respect to the professional and clerical classes.

PART IV: SUMMARY, CONCLUSIONS, AND SUGGESTIONS

The immediate objective of this study was to make a survey of the social, economic, academic, intellectual, and cultural background factors of Negro college students. Its ultimate purpose is to reveal facts, establish trends, and suggest principles which may serve as guides in improving educational conditions, and upon which a program of personnel work may be promulgated.

The treatment of the report has in general centered around the following topics: School and college relations; intelligence of students; scholastic and vocational interests and activities; extracurriculum interests and activities; and general family status. Part I was a discussion of those topics from a more or less personal angle, having to do with the factors and characteristics of students. Part II approached the various subjects in terms of the kinds of schools the students attended. Part III dealt with the topics according to the occupations of parents.

In the consideration of the findings presented here the one outstanding fact which constantly emerges is that of individual and group differences among Negro college students. These differences have not been found to be peculiar to the Negro, however, as similar differences were found to exist among white students. The main difference, as far as the two races are concerned seems to be one of degree rather than of kind; the past and present status of the Negro tending to accentuate his condition, and to cause unfortunate circumstances to affect him more quickly and seriously.

Some of the more important conclusions resulting from our findings are given here, together with a few supporting data.

CONCLUSIONS AND FINDINGS

1. The idea of educating the Negro at public expense is rapidly being recognized and accepted.

The present study shows that nearly three fourths, or 72.9 percent, of the Negro college students come from the public

high schools of the southern and "Border" States; and that 59 percent are enrolled in public colleges. This college enrollment in public institutions indicates a decided trend upward during the past five years (see discussion in part I).

2. Private schools and colleges still have a large responsibility in the education of Negroes.

Although public schools and colleges for Negroes have made tremendous gains, the Negro still looks to the private schools and colleges to fill a need which has so long been neglected. Our data show that nearly seven tenths of the teachers in Negro public high schools are trained in private institutions, the percent being 68.6. This conclusion is also borne out by the fact that the percent of students attending private high schools is much greater than the percent who attended private elementary schools, being, respectively, 15.85 and 6.96; and by the more important fact that 41 percent are finding their opportunity for higher education in private colleges. Furthermore, in analyzing the changes from elementary to high school made by students belonging to the various occupational classes, it was found that in every case the change taking place in the private schools showed an increase.

3. There is a lack of availability in many localities of Negro colleges doing a quality of work commensurate with the needs and ambitions of the race.

Evidence of this conclusion is revealed in the small percent of students who live within a 50-mile radius of the colleges they are attending, and the reasons students give for attending certain colleges.

4. There is a significant difference in the scholastic aptitude of students in the various Negro colleges.

The range of average intelligence of each group of freshmen in the different colleges as shown by the median psychological scores is 26.33 to 131. The students of 13 colleges failed to show a general average as high as the median for all students combined (60.97 [1]). These group differences, as indicated by the central tendency, are significant factors which should command the attention of both school and college authorities.

[1] 1,987 cases.

5. There is serious lack of selectivity in Negro colleges as shown by the heterogeneity of their student bodies.

This dissimilarity is seen in the scholastic aptitude of students. Although there is a consistent and pronounced difference in the median scores made by students of different colleges, practically every grade of intelligence is represented in each college, some of the brightest students being found in many of the colleges having the lowest average scores, and some of the dullest being found in those having the highest average scores.

Our data also show that students who have had academic failures are represented in large numbers, in most of the colleges, along with those who have succeeded academically.

In addition, it is found that every occupational class, a great variety of home conditions, and a rather general cross-section of students with varying amounts of academic preparation and from most levels of cultural and economic status (excepting the high-income group) are represented in most of the colleges.

There seems to be little serious effort on the part of either high school or college to identify the superior student, and assure to him an opportunity for higher education.

6. Colleges need to make some effort to adjust requirements and offerings in terms of the background of students.

The variety of individual and group differences revealed by this study, the differences in communities, schools, and home life from which the students come demand a degree of flexibility in the administration of admissions and curriculum requirements and a closer relationship between the offerings and needs of students.

The fact that the students in general offered the same subjects, in the same amounts for admission to college, probably indicates too much rigid uniformity in college entrance requirements.

7. Apparently, there is a serious lack of adaptation of the high-school program to the varying needs and capacities of students.

There is too much retardation of superior students. This hypothesis is proved by the number of students who had sufficiently high scholastic aptitude to finish the high-school

course in a shorter period than the average student, but who were required to move along at the same slow pace as the others. This is shown not only by the fact that practically all the students spent 4 years or more in high school, but by the advanced age of many of the brightest students at entrance into college.

On the other hand many students are accelerated faster than their abilities would warrant. This is particularly shown by the fact that some students who entered college directly after graduation from high school were extremely young, yet their scholastic aptitude was far below the average.

Failures of students who have superior ability show either a lack of interest due to maladjustment, ill adaptation of abilities to task, or failure to work up to level of intelligence. Such students, as well as many others who never actually fail, should be placed in proper relation to their work in order to assure success rather than failure.

There are three other facts revealed by the present study which indicate a lack of adaptation of high-school program to the varying needs of students. First, is the limited range of subjects which a student may take and the small percent of students taking even this limited range; second, the small number of extracurriculum interests expressed by students very probably indicates limited offerings along this line; third, the expression of choice for so few college majors and occupations shows a paucity of ideas and lack of imagination of students which should be stimulated by the schools.

8. The vocational needs of Negro students are not adequately cared for by high schools.

A study of the program of studies of Negro high schools, the range of courses taken in high school, the limited choices of majors and occupations, the meager vocational experience, and the reasons given for choosing a given life career by students all point to the need of greater attention to their vocational interests and needs.

9. Negro schools are not properly providing for the varied extracurriculum interests of students.

The potential interests of students in activities outside the classroom are not cultivated by an enrichment of the offerings of the schools along this line. The lack of a construc-

tive program in this direction is attested by the meagerness of magazine and book reading done by students, the kinds of activities in which they engage, and hobbies in which they express interests. Extracurriculum activities, if properly organized and directed, may become a powerful ally in the education of students and in the development of character and personality.

10. Negro schools are not fully utilizing their best material.

Both the present study and the National Survey of Secondary Education among Negroes, referred to frequently here, show that in the main the curriculums are uniform for all students, in kind as well as in length. This is revealed by the subjects and the number of units taken and also by the curriculum offerings. Obviously, with the variety of individual differences found in our group of students, many find it unnecessary to work at their full capacity to accomplish the tasks set for them. One of the serious consequences of this is the inculcation of habits of laziness and indifference.

Another indication that schools are not fully utilizing their best material nor all the talents of students is shown in the limited offerings referred to earlier, both in curriculum and extracurriculum activities. Every normal individual has a wide range of talents and interests, much wider than is provided for in the schools. The result is that many talents are not awakened, others not adequately developed, and still others are allowed to atrophy because of disuse.

Perhaps the strongest indictment against the schools, however, in this matter is the fact that the superior students fail as much as the average and inferior students. This shows that in disregarding his strong points he has been assigned to tasks in which he is weak or has no interest, or that because the quantity, quality, and rate of speed of the work are so far below his capacity he loses interest and fails.

It is not enough for schools to identify the superior student; but once found he should be given every stimulus and opportunity to develop to his fullest capacity.

The thesis held here is further substantiated by the major and occupational choices made by students.

11. Negro schools and colleges are not making the most of the masculine resources of the race.

Although, as is shown by a recent study,[2] the enrollment of Negro boys in the first two grades surpasses that for girls, by the time the freshman year of college is reached the ratio has changed in favor of the girls, the percents being 40 for boys and 60 for girls. Schools and colleges should assume the responsibility of finding the cause of this disproportion and should remedy it. Without disparaging what is being done for girls, the continued progress of the race and its future welfare dictate that a larger proportion of our boys and young men be given the opportunity of a higher education.

Of more consequence, however, than mere numbers as represented by enrollments is what we do with the young men we do get. Although there is evidence to show that the men represented in this study are a more highly selected group than the women, with higher intelligence, nevertheless, they fail in much larger proportion.

That so many men with high scholastic aptitude fail and that so many drop out of school before they reach college and that their expression of preference for college majors and occupations and extracurriculum interests are so limited indicate either a lack of adjustment between the school and interests of the boys and young men; or that the school program is better adapted to certain characteristics possessed only by the girls; or that other outside economic factors are operating. However real are the last two factors named, in light of the evidence, the schools cannot escape blame in failing to effect a stronger appeal to the boys.

12. Negro schools and colleges lack definite educational and vocational guidance programs.

Unequivocal evidence of this lack is shown in the student's expression of preference for a college major and a life career; in the intelligence of those choosing certain careers; the reasons given for their choices; the lack of relation between the choice of a major and a life career; and student failures. From our findings it may be inferred that many students choose major subjects which require different types of aptitudes from those which they possess. This is also true in reference to the choice of an occupation. It is generally accepted that different groups of occupations require different degrees of intelligence for the achievement of success, and a

[2] Caliver, Ambrose. Rural Elementary Education Among Negroes Under Jeanes Supervising Teachers. Op. cit.

person falling below a given intelligence rank cannot under any circumstances achieve an outstanding success, and if he falls below another given rank he will be doomed to complete failure.

Every school and college should be able to furnish the students with objective scientific information concerning his probable chances of success in a given curriculum, course, or vocation. This is the least that should be done, if a more comprehensive program of guidance and remedial measures cannot be inaugurated.

13. Negro students enter upon their college careers with a tremendous economic handicap.

This fact is obvious from the low incomes of students' families, and the extent to which students worked during their high-school careers, and the extent they expect to work during their college careers. These factors are calculated to handicap the student seriously. In the first instance he is beset with constant anxiety concerning the improbability of being able to meet his bills, and in the second instance he is deprived of his leisure, which is one of the essentials in the pursuit of a higher education.

14. Negro college freshmen are motivated by high ideals.

This is revealed by the reasons given for attending the college of their choice; reasons given for their choice of occupations; type of hobbies in which they are predominantly interested; and their affiliation with religious interests.

The reasons for attending a particular college most frequently mentioned by students were "high quality of work offered" and "vocational and professional reasons." The factors motivating their choice of an occupation most frequently mentioned by students were "belief in ability in field" and "desire to serve." Hobbies of a more serious and purposive nature have the largest percent of students naming them as first preference. Nearly four fifths of the students attended church and Sunday school regularly during their high-school careers and only 0.38 percent said they did not attend at all. Ninety-five percent of the students claimed membership in a church. This fact should be of special import to Negro colleges in stimulating them to nurture and preserve the high ideals of students.

15. Apparently there is some emotional factor influencing the college major and occupational choices of Negro college freshmen.

That neither the kind of school, its location, nor the occupation of parents is the predominant influence in these choices may be inferred from the findings of this study.

16. The younger the Negro college freshman is, the more likely he is to have high scholastic aptitude.

While our data show conclusively the foregoing statement to be true, it must be recognized that there are certain dangers in the pedantry which often accompanies high scholastic ability in very young persons.

17. The intelligence of Negro students is reflected in their reading interests.

Students who use the library most frequently are more intelligent than those who use it less frequently. The more intelligent students read a larger number of books during their high-school careers. The more intelligent students read a greater number of magazines than the less intelligent, and also tend to read a higher type of magazine.

18. Negro students use libraries when they are available.

Taking the group as a whole or classifying them into kinds and location of schools attended, our data show that libraries are popular among students when they are accessible. This inference is further borne out by the fact that a larger percent of students used the school library regularly than used the public library, while fewer students failed to use the school library at all than was true of those who did not use the public library at all.

19. The occupational status of parents has a significant relationship to the scholastic aptitude of students and to other influencing factors in their lives.

Table 53 shows the rank order of the various occupational groups as they are compared in terms of many different factors.

The sums of the individual ranks are shown in the last row. The clerical group is first, followed by the professional group. These two groups were found to maintain these ranking positions rather consistently. The two lowest

ranking groups are the unskilled and farming, with seventh and eighth places, respectively.

TABLE 53.—*Ranks of occupations of fathers by various criteria*

Criteria	Rank of fathers by occupation							
	Clerical	Professional	Business	Miscellaneous	Personal and domestic service	Skilled	Unskilled	Farming
1	2	3	4	5	6	7	8	9
Influence to attend college:								
Quality of work offered	1	3	2	4	7	5	8	6
Vocational or professional reasons	8	5	7	3	1	2	4	6
To please parents	5	8	3	6	1	7	4	2
Number of high schools attended	1	8	5	3	4	6	2	7
Number of elementary schools attended	3	8	1	2	7	6	4	5
Degree of migration	3	6	5	4	2	7	1	8
Home ownership	3	2	1	5	7	6	8	4
Parents have additional property	3	2	1	4	7	6	8	5
Family income	2	1	3	4	6	5	7	8
Median number of rooms in home	3	2	1	4	7	5	8	6
Median number of persons in home	3	4	2	5.5	1	3	5.5	7
Modern conveniences	1	2	4	5	3	6	7	8
Mean gross psychological score	1	2	4	5	3	7	6	8
Median number of books in home	2	1	3	4	5	6	7	8
Number of magazines subscribed for	2	1	3	4	8	5	7	6
Books read voluntarily	1	2	3	6	4	5	7	8
Subscription to Negro newspapers	1	2	3	7	6	4	5	8
Extracurriculum interests:								
Organization membership	1	2	3.5	6	8	3.5	5	7
Offices held	1	2	4	3	6	5	8	7
Hobbies engaged in	2	1	3	5	7	4	6	8
Experiences had	1	2	5	6	3	4	7	8
Prizes and honors won:								
Sports	2	4	6	3	1	5	8	7
Music and arts	4	8	7	2.5	1	6	2.5	5
Literary and dramatics	1	3	6	4	7	8	2	5
Religious and civic	8	6	1	7	5	3	4	2
Scientific and mechanical	7	8	6	4	5	2	3	1
Travel experience	6	1	2	5	4	3	8	7
Regular church and Sunday school attendance	1	2	8	5	6	7	3	4
Church membership	8	2	3	4	6	7	5	1
Educational level of brothers and sisters:								
Graduated from high school	4	1	2	6	8	3	7	5
Graduated from college	1	3	5.5	5.5	7	2	8	4
Students earning support in high school	1	3	4	3	5	7	6	8
Expect to earn support in college	1	3	2	4	5	7	6	8
Educational level of parents	2	1	3	4	6	5	7	8
Sum of ranks	99	110	122	150.5	169	172.5	194	205

Analysis of this table shows that out of 35 items the clerical group stands first in 14, second in 6, and third in 5. The sum of the individual ranks amounts to 99. The professional group maintains first place in 7 items, second place in 13, and third place in 4. The sum of all individual ranks in the professional class amounts to 110.

The unskilled group which has seventh place in the composite ranks falls seventh in eight of the individual items and eighth in eight of them. The farming group which has eighth place in the composite ranks is eighth on 11 of the individual items and seventh on 6 of them. The sum of the individual ranks of the unskilled and farming groups respectively are 194 and 205.

20. The education of Negro parents and of brothers and sisters is definitely associated with the scholastic aptitude of students.

The psychological scores made by students tend to rise as the education of their parents increases; and, there is a significant difference between the scores made by students who had no brothers and sisters graduating from college and those who did; the difference being in favor of the latter.

21. The kind and location of high school attended have significant bearings on the scholastic aptitude of students.

According to our findings students from the schools of the Northern and "Border" States make a decidedly higher psychological score than those from the South. The ranks of the schools are: Northern city public school, 1; public school of "Border State", 2; northern rural public school, 3; southern city public school, 4; southern private school or academy, 5; southern rural public school, 6; miscellaneous, 7.

22. The changes made by Negro students from school to school and from place to place are tremendous.

These changes take place in elementary schools and high schools; and also from one kind of elementary school to another kind of high school. Many of these changes are from a poorer school to one of a better grade, but often, where the changes are too frequent, deleterious effects are likely to result.

23. Negro parents are earnestly endeavoring to give their children better educational opportunities.

This is shown by the kinds of changes made by students as they transfer from elementary to high school. According to the kinds of changes taking place there seems to be a serious effort to place the student in a better high school than the elementary school from which he transferred.

24. There seems to be a serious deficiency in the availability of adequate public school and college facilities for Negroes in certain sections.

This conclusion is supported by data concerning the kinds of changes made from elementary to high school, and by the enrollments in and distribution of Negro colleges.

A further substantiation of this inference may be found in findings of the National Survey of Secondary Education, frequently referred to in this study.

25. A large number of Negro college students come from broken homes.

In addition to the economic handicap with which students enter college, to which reference has been made earlier, abnormal family relations and broken homes furnish another obstacle calculated to interfere with the student's educational progress. Our data show that 27 percent of the students under investigation had fathers who were deceased; the students whose mothers were deceased constituted 16 percent. Of 445 students reporting some abnormal parental relation 33 percent were from homes where the parents were separated. Those reporting some parental relation other than normal constituted 24 percent.

26. The Negro teaching profession is apparently being entered by many persons of low intelligence.

This is revealed by the average psychological score of students anticipating majoring in "education"; by the proportion of students belonging to the occupational groups of low intelligence levels who anticipate majoring in "education"; and also according to the anticipated majors by kind of school from which the students come.

THE TYPICAL NEGRO COLLEGE FRESHMAN

The typical Negro college freshman is 20 years of age, has a mean psychological score of 76 [8]; and comes from a family of 5 children of which 1 has already graduated from college. His father and mother have respectively, 8 and 9 years of schooling. During his high-school career he read 21 books voluntarily; engaged in 3 hobbies or interests; belonged to 3 organizations and held 2 offices. He comes

[8] American Council on Education Psychological Examination for High-School Graduates and College Freshmen, 1930 ed.

from a home having a monthly income of $95. The home he comes from contains 5 or 6 rooms and is occupied by 4 or 5 persons. His parents have 96 books in their home and take two magazines.

SUGGESTIONS

Personnel work is not offered as a panacea for all the problems revealed by this study. As important as personnel work is with its many ramifications and interrelationships, it cannot be the sole justification for so comprehensive a survey. The study will find its ultimate merit in the contributions it makes to many other phases of education—to teaching, administration, and organization. Neither are its contributions confined to education on the college level. Perhaps its most important suggestions will have to do with education on the secondary and elementary levels, for it is only by beginning a program of personnel research and service in the earlier years of a child's life that the fullest measure of success can be achieved. Although its materials have to do with Negroes the application of the principles herein set forth transcend race, and, hence, need by no means be confined to them.

In view, therefore, of the foregoing considerations, and in light of the conclusiveness of the data and findings presented here, the following suggestions are offered. They should be of interest to every one concerned with Negro education: Public and private school officials, administrators, teachers, parents, and students alike.

1. Negro schools and colleges should make a more careful and objective study of their student bodies; the applicants for admission; and the sources of student supply.
2. The knowledge thus gained should be utilized insofar as present facilities and personnel will permit.
3. Schools and colleges should make special effort to find, cultivate, and conserve the talents of superior students.
4. An endeavor should be made to make the educational program sufficiently rich and flexible to provide for a variety of interests and intellects. Only by so doing can the principle of "equality of educational opportunity", which should apply to individual schools and classes as well as to school systems and States, be preserved.

5. This enrichment procedure should be done in terms of contemporary educational values rather than on the basis of tradition alone. Classics will have a place in such a program as well as cooking.
6. Lacking facilities for the inauguration of a personnel program, the work might well be begun with the introduction of some simple plans for educational and vocational guidance.
7. There should be a closer cooperation between Negro schools of all grades and kinds.
8. More attention should be given to the relation which the location and the constituency of a school bear to the type of service it may render.
9. Schools and colleges in order to promote the development of personnel work should continue to participate in all cooperative research designed to throw light on our educational problems.
10. Every effort should be made to widen the base and lessen the restrictions of vocational opportunities for Negroes in order to assure best results of personnel programs.
11. Schools and colleges should not postpone further the beginning of plans to inaugurate a program of personnel work.

Such a plan may begin by the appointment of a committee to study the field of personnel, to study the local situation so as to make the necessary adaptations, and in light of this study, to recommend the possible steps that should be taken immediately or in the near future. The work of such a committee, to be of greatest value, should be continuing.

In this connection it should be suggested that the person charged with the responsibility of this work should have a broad and thorough academic training balanced by wide experience, sound judgment, and sympathetic understanding of human nature. He should be trained in the use of the scientific method and should be familiar with the procedures of educational research. Above all he should be a coordinator and be able to secure and maintain the cooperation of teachers, administrators, and students. He must be "sold" to his work, and be able to inspire confidence, to secure con-

fidences, and to keep and use them for the good of the individual concerned.

For the benefit of those wishing more detailed suggestions, a selected bibliography is attached.

APPENDIX I

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, November 1930.

To Presidents of Negro Colleges:

The U.S. Office of Education, through its specialist in Negro education, is undertaking a study of the social, economic, and academic backgrounds of Negro college students. It is planned to have the freshmen of a large number of Negro colleges fill out a questionnaire which will cover questions relating to a variety of background factors. Not more than half an hour should be required to complete the blank.

A second feature of this project consists of a simple psychological examination to be used as a supplement to the questionnaire. The one to be used is the Psychological Examination of the American Council on Education, which organization is cooperating with the Office by furnishing copies of the psychological examinations.

As you perhaps know, this examination has been in use for several years and is revised each year on the basis of the findings of the previous year. Over 100,000 students in nearly 300 colleges took the examination last year.

It is hoped that some follow-up study can be made four years from now in order to check the results of the present study against the progress and activities of the students during the four-year period, and as reports of the study are made available we shall be glad to furnish you with copies. The name of the cooperating institution will not be used except where permission to do so is granted.

This promises to be a very significant study, and seems to offer an excellent opportunity to conduct a Nation-wide and cooperative study among Negro colleges. I am writing, therefore, to invite your college to become one of the cooperating institutions.

If you are willing to participate in this project we should like to hear from you at your early convenience; we shall then take up the details with the person whom you delegate to supervise the work. When you answer please state the number of students you have in the freshman class, and also the number of high-school graduates who are enrolled in the first year of departments or courses not included in the regular college work, if there are such.

Yours very truly,

WM. JOHN COOPER,
Commissioner.

B. Name of city or village in which you were born _____

C. Name of college at present attending _____

D. City or village in which school is located _____

19. How far away from this college is your home?

1-( ) Within 10 miles (travel distance)
2-( ) 11 to 25 miles (travel distance)
3-( ) 26 to 50 miles (travel distance)
4-( ) 51 to 100 miles (travel distance)
5-( ) 101 to 150 miles (travel distance)
6-( ) 151 to 200 miles (travel distance)
7-( ) 201 to 300 miles (travel distance)
8-( ) Over 300 miles (travel distance)

20. Where do you live now? Check:

1-( ) In college dormitory
2-( ) Fraternity house
3-( ) Private family in city
4-( ) Where you are working
5-( ) At home
6-( ) Other: Where? _____

21. How old are you? (nearest birthday) Check:

1 ( ) Fourteen years or less
2 ( ) Fifteen years
3-( ) Sixteen years
4-( ) Seventeen years
5-( ) Eighteen years
6-( ) Nineteen years
7-( ) Twenty years
8-( ) Twenty-one years
9-( ) Twenty-two years
x-( ) Twenty-three years
y-( ) Twenty-four years or more

22. How many elementary schools in different communities have you attended, up to and including the eighth grade?_____

23–24. Check in the proper column the place where you received most of your elementary schooling (five years or more); and most of your high school training (three years or more).

	El. Sch.	Hi. Sch.
Southern City Pub. Sch.	1-( )	1-( )
Northern City Pub. Sch.	2-( )	2-( )
Southern rural Pub. Sch.	3-( )	3-( )

Southern Priv. Sch. or Academy	5-( )	5-( )
Northern Priv. Sch. or Academy	6-( )	6-( )
Pub. Sch of "Border" State (Mo., Kans., Ohio, Md., Del., D.C., and Ind.)	7-( )	7-( )
Foreign School	8-( )	8-( )

E. Names of cities or towns and States in which schools were located _____
_____
_____

F. Names of other high schools attended_____
_____

G. Number of years attended high schools named in F _____

25. How many high schools have you attended? _____

26. Check the item which represents time lost due to continuous absence during your high school career.
1–( ) None
2–( ) One month
3–( ) Two months
4–( ) Half a session
5–( ) One year
6–( ) Two years or more

27. What was the cause of this continuous absence from school?
1–( ) Illness
2–( ) Working
3–( ) Helping at home
4–( ) Other: What? _____

28. Check the item below which represents the number of school or community organizations of which you were a member during your high school career.
1–( ) None
2–( ) One
3–( ) Two
4–( ) Three
5–( ) Four
6–( ) Five or more

H. Name them: _____
_____
_____
_____

29. How many offices did you hold in organizations listed above?
_____

I. What offices did you hold?_____
_____
_____

30–31–32 Check in the proper column below that hobby or interest for which you had first, second, or third preference during your high-school career. In case such hobbies or interests are not given, kindly list them in J below.

	1st Pref.	*2nd Pref*	*3rd Pref.*
Athletics	1–( )	1–( )	1–( )
Reading	2–( )	2–( )	2–( )
Playing musical instrument	3–( )	3–( )	3–( )
Painting and Drawing	4–( )	4–( )	4–( )
Singing	5–( )	5–( )	5–( )
School Paper	6–( )	6–( )	6–( )
Movies	7–( )	7–( )	7–( )
Dancing	8–( )	8–( )	8–( )
Scientific or Mechanical Construction	9–( )	9–( )	9–( )
Dramatics	x–( )	x–( )	x–( )

J. In case no item mentioned above constituted your first, second, or third preference, list below the ones which did, and check in the proper columns.

	1st Pref.	*2nd Pref.*	*3rd Pref.*
_____	1–( )	1–( )	1–( )
_____	2–( )	2–( )	2–( )
_____	3–( )	3–( )	3–( )

33. How *many* interests or hobbies did you engage in while in high school?
1–( ) None
2–( ) One
3–( ) Two
4–( ) Three
5–( ) Four
6–( ) Five or more

K. List the names of the magazines you read regularly while in high school.
_____
_____
_____

34. How many books not required in your school work did you voluntarily read while in high school? (Check.)
1–( ) 1 to 9
2–( ) 10 to 19
3–( ) 20 to 29
4–( ) 30 to 39
5–( ) 40 to 49
6–( ) 50 or more

L. List the names of books which you consider most important not required in your school work and which you voluntarily read while in high school.

35. Check the item which represents your attendance upon Sunday School or church during your high school career.
1–( ) Did not attend at all
2–( ) Attended sometimes
3–( ) Attended regularly

36–37 38. Check the item in the proper column which represents the church affiliation of yourself and parents.

	Self	*Father*	*Mother*
Not a member	1–( )	1–( )	1–( )
Baptist	2–( )	2–( )	2–( )
M.E.	3–( )	3–( )	3–( )
A.M.E.	4–( )	4–( )	4–( )
A.M.E.Z.	5–( )	5–( )	5–( )
C.M.E.	6–( )	6–( )	6–( )
Presbyterian	7–( )	7–( )	7–( )
Cong'l	8–( )	8–( )	8–( )
Catholic	9–( )	9–( )	9–( )
Other	x–( )	x–( )	x–( )

39. How much of your support did you earn while in high school? (Check only one.)
1–( ) None
2–( ) One-third
3–( ) One-half
4–( ) Two-thirds
5–( ) All

M. List the kinds of work you did.

40. How much of your support will you have to earn in college? (Check one.)
1–( ) None
2–( ) One-third
3–( ) One-half
4–( ) Two-thirds
5–( ) All

41. How many hours a week do you work for your support now? (Check only one.)
1–( ) None
2–( ) 1 to 3
3–( ) 4 to 6
4–( ) 7 to 9
5–( ) 10 to 12
6–( ) 13 to 15
7–( ) 16 to 19
8–( ) 20 or more

N. What kind of work are you doing now?

42. Check the amount you earn per week now.
1–( ) $1–$2
2–( ) 3– 4
3–( ) 5– 6
4–( ) 7– 8
5–( ) 9–10
6–( ) 11–12
7–( ) 13–14
8–( ) 15 or more

43–44. Check in appropriate column the item below which gives the correct information about your parents.

	Father	*Mother*
Living	1–( )	3–( )
Dead	2–( )	4–( )

O. Check the item below which gives the correct additional information about your parents.
1–( ) Have stepfather
2–( ) Have stepmother
3–( ) Have foster parents
4–( ) Parents separated

45–46–47–48–49–50. Check the item below in the appropriate column which shows the occupation of your parents. If either or both are dead, check occupation followed while living. Also check in appropriate column the occupation which you choose to enter.

	Father	*Mother*	*Your Choice*
Banker	01-( )	01-( )	01-( )

Other. ..... ----	27-( )	27-( )
----------	28-( )	28-( )

55. Check the item below which gives the number of children in your family. Include those dead as well as living.

1-( ) Only child
2-( ) Two children
3-( ) Three children
4-( ) Four children
5-( ) Five children
6-( ) Six children
7-( ) Seven children
8-( ) Eight children
9-( ) Nine children
x-( ) Ten or more children

56–57–58–59. This question is designed to ascertain the number of your brothers and sisters who had a given educational experience. You are asked to check in Column A the number of brothers and sisters who attended high school but did not graduate; in Column B, check those who graduated from high

school or normal school of high-school grade; in Column C those who attended college or normal school of college grade; and in Column D only those who graduated from college.

Number Brothers and Sisters	A Att'd High Sch	B Grad'd fr H S or Nor on H grade	C Att'd Col or Normal of Col grade	D Grad'd from College
None	1 ( )	1 ( )	1 ( )	1 ( )
One	2 ( )	2 ( )	2 ( )	2 ( )
Two	3 ( )	3 ( )	3 ( )	3 ( )
Three	4 ( )	4 ( )	4 ( )	4 ( )
Four	5 ( )	5 ( )	5 ( )	5 ( )
Five or more	6 ( )	6 ( )	6 ( )	6 ( )

R. If you have brothers or sisters working, state on the following lines what each is doing:

_____

_____

_____

S. State briefly the type of work they do _____

_____

_____

_____

60. Check the item which most strongly influenced you to come to this college in preference to others. Check one reason only.

1–( ) Convenience to home
2–( ) To please parents
3–( ) Influence of relatives or friends
4–( ) Less expensive
5–( ) Influence of high school teachers
6–( ) Visit of college representative
7–( ) Superior quality of work offered
8–( ) Vocational or professional reasons
9–( ) Scholarship granted
x–( ) Desire to be with friends
y ( ) Other: What? _____

61-62. In what major course of study do you plan to concentrate? Check one only.

01–( ) Agriculture
02–( ) Ancient Language
03–( ) Architecture
04–( ) Art
05–( ) Astronomy
06–( ) Biology
07–( ) Botany
08–( ) Business Administration
09–( ) Chemistry
10 ( ) Economics
11 ( ) Education
12–( ) Engineering
13–( ) English
14–( ) Geology
15–( ) History
16–( ) Home Economics
17 ( ) Journalism
18–( ) Library Science
19–( ) Mathematics
20–( ) Modern Language
21–( ) Music
22–( ) Philosophy
23–( ) Physics
24–( ) Political Science
25–( ) Psychology
26–( ) Religion
27–( ) Sociology
28–( ) Speech or Expression
29–( ) Zoology
30–( ) Other: What? _____

T. List the courses you are taking at present and amount of credit carried by each.

Subject	*Qr. Hrs Credit*	*Sem. Hrs. Credit*
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

U. State concretely the nature of the occupation you plan to follow: _____
_____

63. What influenced your choice of this occupation most? Check one only.
1–( ) Desire to make money
2–( ) Success of friends
3–( ) Advice of relatives or friends
4–( ) Teachers
5–( ) Desire to serve
6–( ) Things you read
7–( ) Belief in your ability in field
8–( ) Father's or mother's occupation
9–( ) Vocational guidance course or book
x–( ) Other: What? _____

64. Have you had any prolonged illnesses?
(One month or more)?
1–( ) Yes 2–( ) No

V. If so, what were they? _____
_____

65. Were you ill at any time last year?
(Two weeks or more)?
1–( ) Yes 2–( ) No

W. If so, state its nature and duration _____

X. Check the members of your immediate family who were ill for an extended period during your high-school career.

	Number of weeks
1–( ) Housekeeper	_____
2–( ) Breadwinner	_____
3–( ) Brother	_____
4–( ) Sister	_____
5–( ) Other? _____	_____

Y. State what ailments, physical or mental defects you have which you think have interfered or may interfere with your progress in school; also state the length of time you have had them_____
_____
_____

Z. List the prizes or honors which you won during your high-school career.
_____
_____
_____
_____

AA. Name the large cities you have visited _____
_____
_____
_____

66. Check the item below which best represents the total amount of time spent on visits.
1–( ) Spent one to three weeks on visit
2–( ) Spent four to eight weeks on visit
3–( ) Spent 2 to 3 months on visit
4–( ) Visited places mentioned in AA several times for short periods.

BB. Check item below which best represents additional travel experience which you have had.
1–( ) Visited rural town, farm, or village
2–( ) Visited foreign country or countries

67. What is the greatest distance you have traveled away from home, *excluding your trip to college*? (Check only one.)
1–( ) One to 50 miles
2–( ) 51 to 100 miles
3–( ) 101 to 150 miles
4–( ) 151 to 200 miles
5–( ) 201 to 250 miles
6–( ) 251 to 300 miles
7–( ) More than 300 miles

68. Check the item which describes your home status.
1–( ) Parents or guardians own home
2–( ) Parents or guardians rent home

CC. Check the additional items which describe your home status.
1–( ) Furnace heat in home
2–( ) Electric light in home
3–( ) Gas in home
4–( ) Bath in home
5–( ) Toilet in home
6–( ) Piano in home
7–( ) Radio in home
8–( ) Brick home
9–( ) Frame home
x–( ) Concrete, stone, or stucco home
y–( ) Home in apartment house

69. Do your parents or guardians own *additional* real estate?
1–( ) Yes 2–( ) No

DD. Estimate its value.....

70. Check the one item best representing the total income of your family last year; if you don't know, *GUESS*. (Combine income of breadwinner and housekeeper if both are working, and income from other sources.)
1–( ) Up to $50 monthly
2–( ) $51 to $75 monthly
3–( ) $76 to $100 monthly
4–( ) $101 to $150 monthly
5–( ) $151 to $175 monthly
6–( ) $176 to $200 monthly
7–( ) $201 to $225 monthly
8–( ) $226 to $250 monthly
9–( ) $251 to $275 monthly
x–( ) $276 to $300 monthly
y–( ) More than $300 monthly

71. Check the item representing the number of rooms in your home (not including baths or halls).
1–( ) Three
2–( ) Four
3–( ) Five
4–( ) Six
5–( ) Seven
6–( ) Eight
7–( ) Nine
8–( ) Ten or more

72. Check the one item which represents the number of persons who lived in your home last year.
1–( ) Two
2–( ) Three
3–( ) Four
4–( ) Five
5–( ) Six
6–( ) Seven
7–( ) Eight
8–( ) Nine
9–( ) Ten
x–( ) More than ten

73. Estimate the number of books in your home excluding school textbooks. Check one item only.
1–( ) Less than 25
2–( ) 26 to 50
3–( ) 51 to 100
4–( ) 101–200
5–( ) 201–300
6–( ) 301–400
7–( ) 401–500
8–( ) 501–750
9–( ) 751–1,000
x–( ) More than 1,000

74. How many magazines are taken or purchased regularly in your home? Check only one item.
1–( ) None
2–( ) One
3–( ) Two
4–( ) Three
5–( ) Four
6–( ) Five or more

EE. List the magazines taken or purchased regularly in your home·

---

75. Check the item below which represents the newspapers taken in your home. (Check only one item.)
1–( ) No daily newspaper and no Negro newspaper
2–( ) No daily but one or more Negro newspapers
3–( ) Daily and no Negro newspaper
4–( ) Daily and one or more Negro newspapers

FF. List the Negro newspapers taken:

---

76. Did you have access to a public library during your high school career?
1–( ) Yes 2–( ) No

77. Check the item representing your use of the library.
1–( ) Not at all
2–( ) Infrequently
3–( ) Regularly

78. Was there a special room equipped for a library in your high school?
1–( ) Yes 2–( ) No

79. If there was a library in your high school, was a special librarian in charge?
1–( ) Yes 2–( ) No

80. Check the item representing your use of the school library
1–( ) Not at all
2–( ) Infrequently
3–( ) Regularly

GG. Name the important Negro Magazines:

HH. Name four or five important books dealing with Negro life and characters:

II. Name the important philanthropic and civic agencies interested in Negro welfare:

JJ. Check all the items below which you have seen heard, or experienced:
1–( ) Symphony orchestra
2–( ) Oratorio
3–( ) Grand opera
4–( ) Ocean
5–( ) Art museum
6–( ) Historical or natural museum
7–( ) Zoo

8–( ) Building of sky-scraper
9–( ) Mining operations
10–( ) Operation of steel mill
11–( ) Shipyard
12–( ) Stockyard
13–( ) Cotton field
14–( ) Railroad shops
15–( ) Large commercial office
16–( ) Extensive orchard cultivation
17–( ) Yellowstone National Park
18–( ) Name any other significant experiences:

KK. List the subjects in which you failed in high school.

LL. List the subjects which you liked most in high school:

MM. List the subjects which you liked least in high school:

NN. List the subjects in which you received your highest marks in high school:

OO. If you had any deficiencies to make up when you came to college, list them below:

PP. Circle the number representing the amount of time which you devoted to the following subjects in high school:

Subjects	*Number of years or fraction thereof*					
1 English	⅛	½	1	2	3	4
2 Latin	⅛	½	1	2	3	4
3 Modern language	⅛	½	1	2	3	4
4 General Math	⅛	½	1	2	3	4
5 Algebra	⅛	½	1	2	3	4
6 Plane Geometry	⅛	½	1	2	3	4
7 Solid Geometry	⅛	½	1	2	3	4
8 Trigonometry	⅛	½	1	2	3	4
9 History	⅛	½	1	2	3	4
10 Civics	⅛	½	1	2	3	4
11 Sociology	⅛	½	1	2	3	4
12 Economics	⅛	½	1	2	3	4
13 Biology	⅛	½	1	2	3	4
14 Physiol and Hyg.	⅛	½	1	2	3	4
15 Physics	⅛	½	1	2	3	4
16 Chemistry	⅛	½	1	2	3	4
17 Geography	⅛	½	1	2	3	4
18 General Science	⅛	½	1	2	3	4
19 Agriculture	⅛	½	1	2	3	4
20 Stenography	⅛	½	1	2	3	4
21 Typing	⅛	½	1	2	3	4
22 Bookkeeping	⅛	½	1	2	3	4
23 Com. Arithmetic	⅛	½	1	2	3	4

NOTE: Believing that much may be learned from the aid and constructive criticism of many students we are taking this opportunity to invite you to write us a brief letter giving suggestions concerning what you consider to be certain desirable changes in your high school and its course of study. If you could repeat your high school career, what would you do or take to better prepare yourself for your life career or for college, or what would you stress less and what more? What other changes or improvements would you suggest? This letter which may be written at your leisure during the next few days is entirely voluntary and will be considered confidential. Please address it to *Ambrose Caliver, Specialist in Negro Education,* Office of Education, U.S. Department of the Interior, Washington, D.C.

APPENDIX III

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, December 1930.

INSTRUCTIONS FOR BACKGROUND STUDY OF NEGRO COLLEGE FRESHMEN

Dear Sir or Madam:

We are sending you under separate cover the questionnaires and examinations for use in the background study being conducted by our specialist in Negro education, and with which your school has kindly consented to cooperate. The person who is to supervise the study is asked to familiarize himself with the manual of instructions which is enclosed with the examinations, especially pages 7 to 12. We are requesting that each school arrange to have the tests scored immediately after the examination. Schools which desire to have the scores or any data from the questionnaire for their files may transfer them to their records, but they are asked to return all examinations and questionnaires to us as early as convenient.

The background questionnaire to be used is partially precoded, which fact will both facilitate the task of filling it out and of tabulating the results. Although the questionnaire may appear formidable at first, as a matter of fact, it is very simple. The supervisor of the study is requested to familiarize himself with the blank and then to make a general explanation of it to the students. Special explanation might be given of such questions as 13–19, 23–24, 56–59. The examination requires one hour to complete and the questionnaire should be filled out in forty or fifty minutes. In case both tasks are performed at one meeting of the freshmen, *which is highly desirable*, a brief rest period should be allowed between them.

You, of course, realize the importance which personnel studies are taking in our whole educational scheme, and how they are becoming the very foundation upon which programs of education, vocational and personal guidance are being built. It is desirable, therefore, that the background questionnaire be filled out as completely and accurately as possible. It is believed that the information thus furnished, together with the results of the accompanying examination, will give a body of facts which will be inestimable in their value, not only for the education of the Negro, but for education in general. We are extremely grateful, therefore, for your cooperation, and we believe that your school will receive many direct as well as indirect benefits from the study.

If you can arrange to have the examination taken and questionnaires filled out before the rush of the holidays begins, it would be very advantageous. You will find enclosed with the questionnaires and examinations a self-addressed penalty envelope for their return.

Yours very truly,

BESS GOODYKOONTZ,
Assistant Commissioner.

LETTER OF TRANSMITTAL

DEPARTMENT OF THE INTERIOR,
OFFICE OF EDUCATION,
Washington, D.C., June 1933.

SIR: There seems to be an unusual interest in cooperative high-school testing programs. Accordingly our specialist in this field, Dr. David Segel, has made some examination of these plans on both the national basis and the State basis. He finds that on the national basis the College Entrance Examination Board, the Educational Records Bureau, the Cooperative Test Service, and the American Council on Education Psychological Examination are the major efforts. There are also mentioned some tests which have more than a State-wide influence. These are the Kansas Nation-wide Every Pupil Scholarship Test, the National Survey of English Usage, the New York Regents Examination, the Iowa Academic Contest, and the Ohio State University Intelligence Examination.

After checking up on these briefly, the bulletin treats of State testing programs as given in the various States. Many of the States, it will be found, have some testing in progress. The bulletin is finished with suggestions for possible improvements in cooperative programs. It is suggested, first, that achievement tests bear on the application of principles rather than on fact knowledge; second, it is desirable that tests be given throughout the high-school period rather than at the end of the period; third, that tests are so constructed that forms from one year to another are comparable; fourth, that tests from different cooperative programs should be equated on account of geographical regions; and fifth, that the cooperative testing program should include in its scope all pupils in the subject tested.

The bulletin is very suggestive of what may be done with the standardized achievement and aptitude tests, and I recommend that it be published as a bulletin of this Office.

Respectfully submitted.

WM. JOHN COOPER,
Commissioner.

The SECRETARY OF THE INTERIOR.

NATIONAL AND STATE COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

INTRODUCTION

In their constant groping toward achievement standards, the high schools of this country have developed what is known as "cooperative testing." This development is not recent. Cooperative testing dates back further than the standardized testing movement itself. For instance, it has been customary for about 50 years in New York and in certain Western States to conduct State high-school examinations. This type of testing was developed through the desire to standardize and supervise high-school instruction. There also developed at an early date a form of testing designed as a means of determining admission to college. In the last decade, particularly in the last 5 years, cooperative testing has been stimulated through the measurement movement.

There is a reason for the increasing popularity of cooperative testing. It is an advance over the use of tests by individual schools or school systems because in cooperative testing a group of schools, usually in a fairly well-defined geographical area, agree to give the same test under uniform conditions to their students so that the work of the individual students in one school can be compared with the work of the students in all schools. This intimate comparison tends to bring about a better understanding of the achievement and ability of the pupils in a given area. Whereas national norms classify the work of pupils in a general way they have not always been found to fit the achievement of pupils in these various geographical areas as well as results of tests given cooperatively. This is more true for the high-school level than for that of the elementary school because of the differing courses of study in each high-school subject in the different geographical areas.

That geography is a factor in the present development of cooperative testing is evidenced in the fact that the schools

on the plains of our Central States have been very willing to take up the movement. Probably this is true because in the small towns of this great area there is a fair degree of homogeneity of population and a oneness in the purpose of education. The actual variation in achievement among the schools of a Middle Western State is probably less than that of the schools of any fairly good-sized city. This, in turn, may be due to the fact that a city draws all classes of the population in large numbers.

This bulletin is restricted to cooperative testing programs in the United States which are State and national in character. We are not restricting ourselves to programs carried forward by State departments, but include all programs which cover large portions of the Nation or a State regardless of the agency which is sponsoring it. Only programs relating to grades 9 to 12, inclusive, are considered. By a cooperative testing program, we mean one initiated and carried through for the mutual benefit of all concerned and without a commercial aspect.

It so happens that on the high-school level there are no organized cooperative testing programs being pushed by commercial testing companies. This does not mean that such testing companies are not concerned with testing over large areas. Companies publishing tests do encourage testing over wide areas, but it is done through individual solicitation, and the connection of any school system's testing with another is through the use of norms and mutual experience with method of treating test results which are furnished by the company. This service of the testing companies goes along with their regular sales of tests. Insofar as this is true, it is not a cooperative affair, since the service is paid for directly to the testing company by the individual school systems through payment for tests and test materials, and there is no direct contact with other schools.

We consider as high-school testing programs all testing which is done in the ninth, tenth, eleventh, and twelfth grades and testing done after students graduate from high school but before they actually enter college. High-school testing by individual colleges for their own benefit to determine admission is not considered cooperative. By cooper-

ative testing in this regard, we mean programs which are carried out for the benefit of several institutions, be they all colleges or colleges and high schools.

Our definition of cooperative high-school testing programs takes into account among others practically all programs initiated for the determination of college entrance and placement in college. The few exceptions to this may be here noted: (*a*) The American Council on Education psychological examination when given in college; (*b*) the Cooperative Test Service tests when given in colleges; (*c*) the Ohio University psychological test when given in colleges; (*d*) Oklahoma testing program carried on in Oklahoma colleges with English placement and reading tests; (*e*) California mental-educational survey which was carried on in California junior colleges and which since has been carried on to some extent by individual schools.

A good division of testing programs is that into national programs of testing and State programs of testing. The former takes in those programs that have little or no reference to State lines, while the latter is concerned with those programs that are found within the confines of a State. We shall present here as much as we can for each program on the following topics: (*a*) Agency sponsoring the program; (*b*) special cooperating bodies; (*c*) the name of the tests, if standardized and sold commercially; (*d*) person responsible for constructing the tests; (*e*) criterion for the construction of tests; (*f*) extent of program; (*g*) classes tested; and (*h*) purposes of testing program, names of subjects tested, etc.

In describing these programs we assume that they are continuous from one year to another using the same organization and tests except where we note differently. Also the tests used are of the new-type short-answer tests unless otherwise stated. As mentioned it is the development of new-type testing which has made such programs as these possible. The testing set-up for those programs which require subjective analysis of the test papers will be found to be much more complicated than the others.

The programs described, if annual affairs, are usually held some time in the spring. The time of the closing of school,

the time it takes to assemble the results in any particular testing program, etc., in most cases determines the time set for testing. In some programs where the high schools are to use the results in guidance, the tests are given earlier in the year.

NATIONAL COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

Some of the national testing programs are expanded State programs. In other cases where the best classification of a program as a working program is a State program, we shall only mention it in this section.

COLLEGE ENTRANCE EXAMINATION BOARD

The tests of the college entrance examination board are carried on for the benefit of many colleges and high schools by a general agency consisting of (in 1930–31) 39 members representing universities, colleges, and scientific schools, and 11 members representing the interests of the secondary schools. This board carries on a testing program with graduating seniors in the high-school academic subjects and a scholastic aptitude examination. The results on these examinations are accepted by all universities and colleges in the United States. A few universities require the taking of college entrance examination board tests for entrance. Others accept the tests in whole or in part as determining college admission. In 1932, 19,929 students took one or more of the college entrance examination board tests.

The college entrance examination board prepares its own examinations, arranges to have them given at various centers, and appoints persons to score the papers. This is all done independently of any individual institution. Representatives of many different colleges and universities and secondary schools serve on committees appointed to score papers. These examinations have felt the influence of the objective type of examination question, although as yet this type of item has not been introduced to any great extent except in the case of the scholastic aptitude examination.

Students taking the examination are charged at a rate sufficient to defray expenses of the work of the board.

EDUCATIONAL RECORDS BUREAU

The Educational Records Bureau located in New York City is an independent organization of school people which is carrying out testing programs, some of which are on the high-school level. The Bureau is incorporated and chartered by the board of regents of the University of the State of New York. In the main it has served private schools, although its services are in no way restricted to private schools. It is in close touch with the cooperative test service. (See page 6.) The educational records bureau is essentially an organization for carrying on the program of testing whereas the cooperative test service is essentially an organization designed to construct tests.

The educational records bureau services are given according to two plans:

PLAN A. (I) Scoring and reporting service.

(II) Comparative statistics and studies:

1. General comparative reports including distribution of pupil scores and percentile norms on cooperative tests and others used in educational records bureau testing programs for the following classifications:
   - (*a*) Nation-wide.
   - (*b*) State and regional.
   - (*c*) Community, according to size and type.
   - (*d*) School, according to size and type.
   - (*e*) Sex.
   - (*f*) Age.
2. Confidential report to individual schools or individual school systems indicating their rank in one or more of the groups listed under II, 1. The cost of this service is:
   - (*a*) An annual membership fee of $15 per school.
   - (*b*) A per test charge based on service costs.

PLAN B. This plan is similar to Plan A except that the school is expected to score the tests. With this plan the service charge is reduced materially.

The tests recommended by this bureau for testing in high schools for 1933 include the cooperative test form 1933 in the following subjects: English, French, German, Latin, Span-

ish, general mathematics, algebra, plane geometry, soli geometry, trigonometry, biology, chemistry, general science physics, American history, ancient history, European history English history; American council tests in civics and Ameri can Government and in economics; Elwell-Foulkes bookkeep ing test; Engle-Stenquist home economics tests; Detroi mechanical aptitude examination for boys, Detroit mechan ical aptitude examination for girls; stenography test from Blackstone stenographic proficiency tests; typewriting tes from Blackstone proficiency tests. For general scholasti aptitude testing, it recommends the American Council or Education Psychological Examination.

The chief purposes of the work of this bureau are to act (*a*) as an agency for scoring tests and reporting the results and (*b*) as a coordinating center for testing so that results on different tests may be comparable.

The bureau in encouraging the use of tests emphasizes the cumulative record system whereby the results of tests for an individual over a period of years are pictured. It believes that a record of the growth of a pupil as shown by appropriate test results and other records is the best method of obtaining an indication of the future success of the student. In 1932 more than 225 schools held membership in the Educational Records Bureau.

COOPERATIVE TEST SERVICE

The cooperative test service is a service instituted under the auspices of the American council on education and works in close cooperation with the committee on educational testing of the council. The cooperative test service is subsidized by the General Education Board to the amount of approximately $50,000 per year (for 10 years), for the purpose of constructing 10 or more comparable forms of examinations in the fundamental subject matters of the senior high school and junior college level.

The advantages of a comparable series as listed in the announcement of tests of the cooperative test service (August 1932) are as follows:

(*a*) Individual growth in defined types of achievement can be measured year after year, thus making feasible types of educational

guidance and of educational research which would be difficult or impossible with unrelated examinations or with "standardized" tests which exist in two or at most three comparable forms.

(*b*) Each college, school, or school system that uses these tests may set up its own standards for admission, placement, promotion, certification, and graduation, and maintain those standards uniformly from year to year, and at the same time maintain transfer and advanced standing relations with other institutions on the basis of comparable achievement test measurements.

(*c*) The results of subjective and other local examinations can be made closely comparable from year to year by using the results of the cooperative tests as a common denominator, thus taking advantage of the best features and minimizing the weaknesses of both types of examinations.

The cooperative test service is now cooperating with other agencies in the use of their tests in National and State cooperative high-school testing. The State program of testing carried on under the auspices of the Association of Minnesota Colleges among the high schools and that carried on by the educational records bureau are using the tests of the cooperative test service. Other testing programs are considering the use of these tests.

The tests of this service available for senior high schools are those which are given above in connection with the testing program of the educational records bureau.

KANSAS NATION-WIDE EVERY PUPIL SCHOLARSHIP TEST

The Kansas Nation-wide every pupil scholarship test is carried on by the bureau of educational measurements of the Kansas State Teachers College at Emporia, Kans., twice each year. Tests are provided in most of the high-school subjects. The tests are constructed for every new testing by subject-matter specialists in the Kansas high schools under the direction of the bureau of educational measurements of the Kansas State Teachers College. The tests cost the schools 2 cents each. The participating schools score their own tests and send tabulations to the bureau of educational measurements. That bureau tabulates scores on tests by States and makes a report on the results so that each school can compare itself with the national norm on the test and the norm of the schools for those States which have

sufficient numbers taking the test to make satisfactory norms.

In the March 1931 every-pupil scholarship test there were 1,015 high schools in 42 States taking part. Norms were calculated for Kansas, Montana, Missouri, Nebraska, and North Dakota.

These tests are used by the schools for the following purposes: (*a*) For more accurate marking of the pupils in the subjects tested, and (*b*) for picking out students with high scholarship so that motivation for all students takes place. (See State programs for Kansas State testing programs.)

NATIONAL SURVEY OF ENGLISH USAGE

The Psychological Corporation through its Washington, D.C., branch has conducted a national survey of English usage in 1931–32 and has continued it in 1932–33, which covers the high-school grades as well as elementary grades. In 1932–33 it has been made a State program in Pennsylvania and Ohio. Pupils in all the States of the country have participated in this survey.

The purpose of this testing program is twofold: (*a*) To give a general measure of progress in English usage for use in comparing classes, schools, etc., so that the emphasis in teaching English usage may be directed more efficiently, and (*b*) to discover individual pupil weaknesses so that individual remedial instruction may be given. (See also the Pennsylvania program of the English usage survey.)

AMERICAN COUNCIL ON EDUCATION PSYCHOLOGICAL EXAMINATION

The American Council on Education sponsors the construction of an annual edition of a psychological examination for use by colleges and universities in testing college entrants. In some cases these examinations are given to high-school students or students just graduated from high school. Insofar as this is true it comes under our definition of a high-school testing program. The results of these tests are used as an aid in determining entrance to college and for guidance.

There are also State high-school testing programs which have expanded so that schools in other States participate in

their programs. Usually this participation is not as complete in regard to the use of the results as though the school were within the State concerned. In some cases the cooperation is merely that of providing the tests. Such State high-school testing programs which have expanded beyond State lines are: Iowa—Iowa academic contest; New York—Regents' examination; Ohio—Ohio State University intelligence examination.

STATE COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

ALABAMA

The Alabama State Department of Education, with the cooperation of the institutions of higher learning, is sponsoring a testing program with high-school seniors.

The Otis self-administering test, form C, was used in 1932. It is expected that another form of the same test will be used in 1933. Fifty-five hundred high-school seniors took the test last year. Of the 5,500, about 2,000 made scores of 43 or more. These 2,000 were reported in 10 lists. The first list contained 100 students making the highest scores, and the other lists were arranged according to certain score groupings. They were furnished to the higher institutions in January and used by these institutions in their own way in soliciting students for enrollment.

COLORADO

Colorado has two cooperative high-school testing programs. One is the annual State-wide scholarship contest and the other is the scholastic aptitude cooperative testing program. It also encourages schools to enter the every-pupil contests which are held under the direction of the Kansas State Teachers College at Emporia, Kans.

(*a*) The annual State-wide scholarship contest is sponsored by the Western State College at Gunnison, Colo. The contest is held in five centers in the State. The examinations are furnished without charge by the Western State College. These are:

English IX, X, XI, and XII
Algebra I
Algebra III
Plane geometry
Solid geometry
Biology

Chemistry
General science
Physiology
Physics
American history
Constitution
Ancient and Medieval history
Modern and European history
World history
Psychology
Sociology
Social civics
Community civics
Ancient history I and II
Economics
French I and II
Latin I and II
Vergil
Cicero
Spanish I and II
Bookkeeping
Commercial law
Foods
Clothing
Manual training: Woodwork
Mechanical drawing
Agriculture

All regular 4-year high schools of the State are invited to join in this contest. Each high school is entitled to one team of any number of students not exceeding 15. A high school may enter 2 students in each event except current history, which may be entered by any number of the members of the team. A student must be regularly enrolled in a subject or subjects (except a subject completed the first semester) in which he is a contestant, and must be classified in the school grade in which subjects appear in the course of study in the school in which he is a member, except that current history may be written by any member of a team. A student may participate in not more than three events exclusive of current history. Appropriate awards—cups and medals—are awarded to the contestants having highest scores in individual subjects and to winning high schools.

The purpose of this contest seems to be the motivation of individual achievement.

(*b*) Colorado's scholastic aptitude cooperative testing program is promoted by a committee of the Association of Secondary School Principals of Colorado and college registrars and is headed up by the director of personnel of Colorado State Teachers College, Greeley. At present the program consists in giving the American Council on Education psychological examination to high-school seniors. The colleges are using the results for the purpose of determining the student's fitness to do college work and to help guide him after he enters college into that type of work which he

can accomplish. Students below the tenth percentile are advised not to apply for admission to college, while those students with high aptitude are sent letters urging them to attend college. Four thousand four hundred and ninety-six students took the examination in 1932–33.

GEORGIA

A cooperative testing program under the direction of the supervisor of secondary instruction in the State of Georgia is carried on among high-school seniors. In 1932 the Shepherd English test for college freshmen and senior high school was given to 8,000 high-school seniors. This year it is planned to give a general mathematics test prepared by the Cooperative Test Service.

The purpose of the testing is (*a*) to acquaint all high schools with the value of standard tests to supplement the local examination (*b*) to make possible comparisons between classes and schools.

INDIANA

This State has two State high-school testing programs, the senior program centered at Purdue University and the other at Manchester College.

(*a*) The testing centered at Purdue is called the "State testing service" for Indiana high schools. This program is carried on under the auspices of the following State institutions: Ball State Teachers College, Indiana State Teachers College, Indiana University, and Purdue University. This testing program has been an annual affair. The schools may test with any number of tests offered. The schools score the tests and send the results to the division of educational reference at Purdue University. In return the schools receive the averages or norms of performance so as to enable each school to make pupil-to-pupil, class-to-class, and school-to-school comparisons. A large number of the high schools take part in this testing program. The tests are furnished at a cost of 4 cents a copy to the schools. The testing is carried on separately for short-term high schools and the long-term high schools.

The subjects in which tests are offered are:

First-year English [1]
Second-year English [1]
Third-year English [1]
Fourth-year English
First-year Latin
Second-year Latin
First-year Algebra
Advanced Algebra
Plane Geometry
Solid Geometry
Biology
Physics
World History
American History
First-year Typing
Second-year Typing
First-year Shorthand
Second-year Shorthand
First-year Bookkeeping
Second-year Bookkeeping
Second-year French

The tests are constructed by the teachers in the four State institutions under whose auspices the testing program is held under the general direction of the division of educational reference at Purdue University. New forms are made available each year. The tests are based on the Indiana course of study. The purposes of the State testing service for Indiana high schools are for (*a*) motivation of pupils, (b) motivation of teachers, and (*c*) educational and vocational guidance.

The only contest feature in the testing program is that in each of the two length-of-term groups of high schools the names of the 5 or 10 having the highest averages will be published. In 1930–31 a total of 101,597 tests were used by 240 high schools.

(*b*) *Manchester testing program.*—The other Indiana testing program inaugurated this year is the one sponsored by Manchester College. It is on a semiannual testing basis. The tests are prepared by Manchester College subject specialists in cooperation with Elkhart High School teachers of the respective subjects under the general direction of the School of Education of Manchester. The tests which were made available for the end of the first semester cover the following subjects for the first semester only:

English 9
English 10
English 11
United States History
World History
Physics
Latin 9
Latin 10
Civics
First-year Biology

[1] Each consists of two English tests restricted to (1) grammar and the mechanics of writing, and (2) understanding and appreciation of reading in both prose and poetry.

First-year Bookkeeping
General Mathematics
Plane Geometry
First-year Algebra
Ninth-year Home Economics
Eleventh-year Health
First-year Typing
Ninth-year Industrial Arts

The costs of these tests are 2 cents each. Several hundred high-school students (about 30,000 separate tests) were used in the first semester of 1932–33.

IOWA

The Iowa academic contest is held annually under the direction of the college of education and the extension division of the State University of Iowa. It is a testing program offered particularly to the high schools of Iowa (grades 9–12), but which may be participated in by high schools outside the State. Only the Iowa high schools are allowed to compete for awards. There are two phases to the academic contest—the every-pupil contest and the State scholarship contest. The every-pupil contest is held in those individual schools which elect to enter the contest. For schools entering on a competitive basis, all the pupils in the school finishing any of the subjects listed below must take the test. The subjects are:

Ninth-year Algebra
General Science
First-year Latin
English Correctness 9*
Plane Geometry
Second-year Latin
Biology
English Correctness 10*
World History
American History
American Literature
English Correctness 11*
Physics
Economics
American Government
English Literature
English Correctness 12*

For purposes of competition, the State is divided into districts and the schools are classified into size groups. Competition is carried on according to nine districts and four classifications of schools according to size. The classification according to size of school is as follows:

Class A—Enrollment of more than 400.
Class B—Enrollment 126–400, inclusive.
Class C—Enrollment 66–125, inclusive.
Class D—Enrollment 65 and fewer.

* In this subject, the same test is administered in all four grades.

The tests are furnished by the State University and the cost to the schools is 4 cents for each test. The tests are scored in the schools and the results are sent to the director of the contest. The report of the director to the schools includes the placement of the school in each subject and in the composite measure of the school in all subjects tested. The placement of the schools, except for winners, is confidential. The individual principal does not need to disclose the standing of his school unless he sees fit. The tests are constructed by subject-matter specialists under the direction of the director of contests. Every attempt is made to make them test judgment rather than mere information. The tests are revised annually.

In 1932 there were 45,293 pupils in Iowa taking the every-pupil tests. There were in addition many schools outside the State which also gave all or some of the tests. The every-pupil contest is essentially a school-to-school comparison. As such it provides an incentive for the teachers to do better teaching. This purpose is expressed by the director of the contest:[8]

> The every-pupil tests of the Iowa academic contest are constructed with a conscious and deliberate purpose to defeat rote learning. In them an effort is made to avoid the use of textbook language, to call for applications rather than statements of laws and principles, to require the interpretation of diagrams and illustrations rather than the repetition of words, and to require the pupil to draw inferences from or to recognize the implications of facts rather than merely to recall the facts themselves.

An important possibility of the use of the results on these tests is in research in regard to various practices and conditions in the high school, such as size of class, types of school organization, etc. This possibility of use for research is enhanced through the fact that schools partaking in the competitive testing must give the tests to all students in the school taking the respective subjects. This means that there is no selection of good students in one school and poor students in another. Studies based on the results of this testing thus have an added certainty of the validity of the results.

---

[8] Lindquist, E. F. The Iowa Academic Contest Bulletin of the State University of Iowa. New series no. 667, December 1932, pp. 8–9.

It is suggested also that schools use the results of these tests in building up cumulative individual records for use in guidance.

The State scholarship contest is primarily a contest between individual pupils, just as the every-pupil contest is between entire high schools. The State contest has for its purpose the encouragement of scholarship in individuals. The State contest is held at the State university. The highest scoring pupils in each subject in each district are chosen for this contest. For 1933 the number of contestants is expected to be more than 1,000. This is a large number of contestants to be brought together at any one place as contestants in scholarship. The winners in this contest are given appropriate awards.

KANSAS

The bureau of educational measurements of the Kansas State Teachers College sponsors two contests apart from the Nation-wide every-pupil scholarship test described under national cooperative high-school testing programs. The one is called the Kansas State scholarship contest and the other the scholarship contest for high-school seniors.

The Kansas State scholarship contest is conducted annually by the Kansas State Teachers College through the cooperation of contest center chairmen. There are some 20 centers in the State where these tests are given. Any high school giving work in grades 9, 10, 11, or 12, and any junior high school recognized as such by the State department of education is eligible to participate in this contest. There is a registration fee of 25 cents for each pupil entered in the contest. The tests are furnished by the Bureau of Educational Measurements of the State Teachers College. They are returned to the bureau to be scored after the contest.

The contest covers practically all of the subjects by years which might be given in high school. For purposes of this contest the high schools are divided into classes (A, B, C, D, and E, junior high) according to their enrollments. There are more contests possible for the larger schools than for the smaller schools. The maximum number of contests for the different classes runs from 12 to 25, and the maximum

number of contestants each school may enter runs from 24 to 50, or 2 for each contest.

In 1932, 136 schools entered 2,544 contestants at 16 centers.

The tests are all of the new type, constructed by faculty members of the Kansas State Teachers College and by other subject-matter specialists in the State under the direction of the bureau of educational measurements. New forms are constructed each year.

The apparent object of the contest is the attainment of awards by individuals and schools. Thus the contest is a motivating agency for better work among the high-school seniors.

The scholarship contest for high-school seniors is carried on in much the same fashion as the Kansas State scholarship contests. Here the examination consists of a comprehensive examination covering the general fields of high-school work—i.e., those of history, social science, physical science, mathematics, and English. Medals are given the 3 ranking students in each subject group, and cash awards are made to the 10 highest ranking students in the whole contest if they attend a Kansas college the year following the contest.

MAINE

A testing program was carried on under the direction of the University of Maine during the years 1930–31 and 1931–32 involving from one fourth to one half the high schools of the State. This program may be carried on during the present year (1932–33). Tests constructed under the direction of the department of education of the University of Maine are used in a preliminary contest covering many of the high-school subjects. Class and school averages are obtained from this testing. The highest pupils in each school then participate in a district competition. The Sones-Harry achievement test is used with seniors. Individual winners among the seniors in these district contests are awarded scholarships to the University of Maine.

MICHIGAN

The bureau of tests and measurements of the University of Michigan recommends tests to be given by high schools and makes tabulations of the results by schools grouped

according to size. The program for 1931 consisted in the use of the following tests: Kirby grammar test, the Van Wagenen reading scales in English literature, the American Council alpha test, the White Latin test, the Columbia research bureau algebra test, the Columbia research bureau plane-geometry test, the Iowa physics test, the Powers general chemistry test, the Ruch-Cossman biology test, the Ruch-Popenoe general science test, the Brown-Woody civics test, and the Gregory test in American history. The English, Latin, and reading tests were given in all four high-school grades. The other tests were given in the regular classes taking the subjects tested.

The reports of the bureau of tests and measurements back to the schools include State norms based on the results of the testing for each school group so that each school can compare its own work in each subject with that of other comparable schools.

MINNESOTA

There are two programs of testing in Minnesota. One is sponsored by certain colleges and universities and the other by the State department of education.

(*a*) The University of Minnesota inaugurated a college-aptitude testing program several years ago. This program is now administered through the committee on testing established by the Association of Minnesota Colleges.

The University of Minnesota is responsible for carrying out the program. The tests are scored by the University of Minnesota. The cost of the testing is prorated among the colleges according to the number of students entering them from among the high-school seniors tested. The program is extensive, taking in practically all of the graduating seniors in the State, both in public and in private schools. The test which has been regularly used is the Minnesota college-aptitude test (a general intelligence test). In addition a placement test is sometimes given. In 1931 the Iowa English training test was given and in 1932 the Iowa mathematics training test was given to those students who were planning to enter engineering curriculum. The plan for 1933 includes the use of the tests of the cooperative test

service for sophomores in high school so that a cumulative record on the individual pupil may be begun.

The purpose of the Minnesota program is for the guidance into and selection of students for college. The results on the general aptitude tests are used by the University of Minnesota, and probably also by others, as an important factor in advising students to enter or not to enter college. The results are also used by the University of Minnesota for determining classification in some subjects for instructional purposes.

Johnson states in this connection: [4]

> Three levels of ability are recognized in classifying students, and any individual who presents outstanding peculiarities is given individual treatment. The upper half of the class—that is, those entering freshmen whose college-aptitude ratings are above 50—are admitted without any conditions or provisions, and they are permitted to register for any curriculum offered in the College of Science, Literature, and the Arts. Individuals may be advised or required to take the course in "How to study", and all are classified in English on the basis of English training tests and their college-aptitude ratings.
>
> The second group includes roughly those whose college-aptitude ratings are between 26 and 50. These students are classified in English and are advised to select studies that will have immediate value to them if they remain in college only a short time, and to postpone laboratory courses and languages.
>
> What is only advice for the second group becomes positive direction for the third group.

The ratings on the college-aptitude test are also sent to the high schools involved so that they can be made use of by the principals and teachers in advising pupils. Also, whenever a student applies to any specific college for admission the college-aptitude rating and its interpretation is sent to the student and his parents.

(*b*) The State department of Minnesota conducts examinations among its high schools in connection with its annual testing program which includes the elementary schools as well as high schools. These examinations are compulsory for high schools which are designated by the State high-school inspector and voluntary for other high schools.

---

[4] Johnson, J. B. Advising College Students. Journal of Higher Education, 1: 317–318, June 1930.

Examinations are offered in the following high-school subjects:

English I
English II
Grammar and composition
English III
English IV
Modern history
Ancient history
Introduction to social science
Reading (1 hour)
Elementary algebra
Plane geometry
Solid geometry
Elementary American history
German I
German II
French I
French II
Elementary citizenship
General physical science
General biological science
Chemistry
Physics
Latin I
Latin II
Bookkeeping
General business education
Geography
Economic geography
Higher algebra
High-school American history
Elementary hygiene and sanitation
Arithmetic
Commercial law
Spelling (1 hour)

Students of all classes in high school take the examinations. In 1932 there were 193,939 examinations given in these subjects. The greatest number taking any examination was 16,894, which was in the first year of high-school English.

The examinations are furnished free by the State department to the public high schools of the State. Private schools of high-school grade may also use these tests upon proper application. The tests are scored by the local school and sent to the State department. The State department will return all papers for use by individual schools.

The tests are constructed by various subject-matter and testing specialists in the State. The State department sets down the general rules for the construction of these examinations. These rules state that—

> Tests should be as comprehensive as possible. Each test should contain 150 questions or test items. For testing pupils' knowledge of factual material, the objective types of test questions should be used as far as possible. The essay type of test question, however, should not be eliminated.

The tests are in the main objective. The validity of the tests has been checked against standardized intelligence and

achievement tests. The State department states further that—

> Each year test item validity is made and the good questions are picked out for a reservoir which we hope to have built up to a thousand questions for each subject within a period of years.

The questions are based upon the Minnesota State High-School Syllabi.

The tests are used by the State department as a supervisory instrument to check on the instruction of the high schools of Minnesota. Individual schools use the results for purposes of improving instruction. The results on these tests are used by students in unaccredited high schools to satisfy the entrance requirements of the university and other colleges.

MONTANA

The Montana scholarship contests are held annually under the direction of Montana State College. A contest is first held in districts composed of one or more counties. Winners of the district contests meet at Montana State College at Bozeman for the State contest.

District organizations are formed to carry on the district contests. There were 19 districts in 1932. The district organization is responsible for holding the contest in the district and for scoring the test papers and reporting the district winners.

A testing committee of the college is (beginning in 1933) constructing the tests on the basis of the high-school course of study of the State. The contest in the district is for the purpose of getting individual student winners and not school winners. In the State contest the three highest schools in the academic subjects and vocational subjects, respectively, are given awards as well as the winners in all subject contest and the general pentathlon contest. Any accredited 4-year high school in the State is entitled to participate in this contest. A student must be regularly enrolled in the subject or subjects in which he is a contestant and must be classified in the school grade in which the subject or subjects regularly appear in the course of study of the school of which he is a member.

The list of subjects to be tested are as follows:

Academic

Algebra I
Plane geometry
General science
Biology
Physics
Chemistry
English
American literature
English literature
Latin I
Latin II
American history
Civics
Current history
World history

Vocational

Bookkeeping
Junior shorthand
Senior shorthand
Home economics I
Home economics II
Art

A student may enter a contest in a subject belonging to a higher grade than his own, but not in a lower grade unless he is taking this subject for the first time and unless he is interested in the pentathlon—the case when a student is competing to get the highest average rating in at least five subjects.

The district organization determines for itself the number of representatives to be sent to the district contest by each school. Each district may be represented at the State contest by one pupil in each subject or event, but the representative in each subject must have won first place in the district contest, except that first and second place winners in the pentathlon may be candidates to the State contest. In addition to this district representation, each school may have two additional representatives chosen in such a manner as each school shall determine. Scholarships, cups, and medals or ribbons are awarded the individual and school winners.

The motivation of individual pupils seems to be the chief purpose of the Montana scholarship contests.

NEW HAMPSHIRE

The State Board of Education of New Hampshire conducts annually a testing program consisting of a general intelligence test and one or more achievement tests. The testing for 1932 was restricted to the senior class. Practically all the high schools in the State cooperate in this testing program. The following tests were given in 1932:

Otis self-administering test of mental ability, higher examination 4-A

A spelling test of 25 words selected from the second and third thousand words of the "Sixteen Spelling Scales."

The Iowa placement examination—series ET-1, revised (English training), Form A.

The tests are furnished free by the State board of education. The schools score the tests and send the results to the State department. In the case of the intelligence test, the raw scores are sent to the State board. The State board is responsible for the calculation of the I.Q's from these raw scores.

Each year the results on all the tests are sent to the dean of freshmen at the University of New Hampshire, who has charge of admissions. The dean uses the results of these tests in considering entrance and guidance during the first years in the university. The test results are also used by the elementary school agent of the State board of education in making her recommendations on students asking for admission to the State normal schools.

A report is made to the principal of the high school showing the placement of his school in relation to that of the other schools. The results on the achievement tests are used as a check upon high-school instruction.

NEW YORK

The University of the State of New York (the State education department) has two divisions having to do with testing work throughout the State of New York. One is the division of educational research and the other is the division of examinations and inspections.

(*a*) The division of examinations and inspections is in general charge of the New York regents examinations. The general use of the regents examinations is required under the powers given to the regents of the University of New York by the legislature, section 21 of the regents rules reading as follows:

S-21—general requirements. * * * No secondary school shall receive such apportionment unless it (1) shows for the school year an academic attendance of not less than 1,000 days; (2) has a charter from the regents or has been admitted to the university; (3) makes general use of the regents academic examinations or those set by the

college entrance examination board in the third and fourth years of the secondary course.

The examinations themselves are in general of the new type, although a certain amount of essay type material is used. These examinations are given three times a year, at the end of each of the two regular semesters and also at the end of the summer in recognized summer high schools.

The examinations are issued by the State department without cost to the schools. The examinations are given by local school authorities according to a very definite set of directions. The scoring of the papers takes place first at the individual schools by the principal or under his direction. Those papers which are thought to be passing are then sent to the State department, where the papers are again examined and the final decision as to the worth of the papers is made.

The main responsibility for the construction of these tests falls on a certain committee made up of instructors in the various high schools and colleges of the State, and including the State supervisors of the special subject fields. Tests so constructed are passed on to a general committee known as the "board of revision" which considers the various tests and makes what revision is thought necessary. The items in these examinations are made with the deliberate intention of testing power as well as knowledge. In this they follow the trend of the course of study and method of teaching, presenting situations which train reason and judgment, the sensing of cause-and-effect relationship, etc.

The regents' examinations cover practically all the work which can be taken in a New York high school. Examinations held for third- and fourth-year subjects, if passed, carry credit for the first and second year of work.

The results on these examinations are used in a variety of ways. They are used by the State department to establish a State standard of achievement. They are used therefore in comparing the efficiency of different schools in the State. They are used as final examinations by the participating high schools, thus eliminating the necessity for individual schools to make up examinations. Such local examinations would vary in standards and effectiveness. Credits

earned through these examinations are of equal value in the State-wide competition for the State tuition-paid scholarships in Cornell University and for the 750 university scholarships awarded annually.

The examinations, although not made with the purpose of providing material on which eligibility for college entrance is to be judged, are nevertheless used for such purposes.

(*b*) The educational research division of the State education department has cooperated in one testing program. A ninth-grade civics test, constructed and given because of the need of a supervisory standard on the part of individual schools, was offered for use.

Also, the results of the testing with group intelligence tests in the high schools of the State of New York were brought together. The analyses of these results were brought together in a bulletin showing the levels and ranges of ability in New York State high schools.

NORTH CAROLINA

The North Carolina college conference fosters and finances the North Carolina high school senior examination each year. This examination is given annually to all high-school seniors of the State through the cooperation of the State department of education. The tabulating and scoring is handled by the bureau of educational research of the school of education of the University of North Carolina, Chapel Hill.

The examination is a comprehensive one containing English language, English literature, reading; literature, reading, history, modern times, and civics; general science and mathematics.

The results of the examination are used by the colleges and universities of North Carolina for purposes of classification and guidance of students after entrance.

NORTH DAKOTA

The State department of public instruction offers examinations in all high-school subjects twice a year which are required to be taken by pupils in nonaccredited high schools. All the pupils who successfully pass are issued completion

certificates which they may present to institutions of higher learning as credit so that entrance examinations need not be taken.

OHIO

Ohio has two distinct State high-school testing programs—the educational testing program carried on by the State board of education and a general scholastic aptitude testing program carried on by the Ohio State University in connection with the Ohio College Association.

(*a*) The educational testing program sponsored by the State board of education to be described here may be divided into two parts—the every-pupil test and the general scholarship test for high-school seniors. The every-pupil test is a testing program covering both elementary and high-school subjects carried on twice a year. For the high school, 1932–33, the following subjects are to be tested:

Algebra
American History, grade 12
Chemistry, first year
English Usage, grades 9–12
General Science
Physics
Plane Geometry

These tests are offered free to the high schools of the State. Practically all schools of the State outside the large cities have availed themselves of the opportunity. The principal, superintendent, or teachers give the tests in their respective schools, score the test papers and tabulate the results, and send them to the State department. The State department of education makes a final report back to the schools so that each school can compare its own average score and the score for each of the pupils in the distribution of scores for the whole State. The tests furnished are constructed by subject-matter specialists under the general direction of the director of scholarship contests. The tests are based upon the courses of study and textbooks used in the State.

The purpose of the every-pupil tests is that of motivation and improvement of instruction. The report to the teacher of each class in the contest includes the percentile of the final distribution of scores for each test so that a teacher may compare the scores of the members of her class with the scores made by all pupils who took the test. This gives each

teacher and each pupil an opportunity to compare results with the State-wide results. Also since there are two testing programs in a year, each class and each pupil can compare the rank in the first test with that in the second. Analyses of errors in different tests of the contest are made by the State Department. Also directions are issued so that the teacher can analyze the items in the test papers of her class. Thus diagnosis and remedial instruction are made possible.

The other educational testing program is the general scholarship test for high-school seniors. This test is administered annually by the State department of education with the cooperation of Ohio University, Ohio State University, Bowling Green State College, Kent State College, and Miami University. Each high school of the State may pick not more than 25 percent of the graduating seniors to take part in this testing contest. In picking out these contestants from each school, faculty members are urged to take into consideration, in addition to scholastic endeavor, the student's future promise, attitude, ideals, and behavior. The students chosen to represent these schools come together at the county seat of each county where the scholarship tests are given under the direction of the county superintendent of schools. The tests cover the essentials of the high-school course of study. There are five subject groups. The subject matter of these five subject groups is as follows:

1. Mathematics: Arithmetic (⅛), Algebra (⅛), Geometry (⅛).
2. English: Fundamentals (½), American and English Literature (½).
3. History: United States History (½), World History (¼), Ohio History (¼).
4. Science: Physics (¼), Chemistry (¼), General Science (¼), Biology (¼).
5. Social science: The World Today (Current Events).

The purpose of this contest, according to the State department, is to stimulate continuous scholastic endeavor during the 4 years of high school and to select seniors of high standing and putting these students into contact with the Ohio colleges and universities that the students desire to enter. In addition, there are many scholarships awarded by the colleges and universities to the pupils having high standing. County awards: Certificates of award are presented to the

highest three pupils in each county, while the highest 25 percent receive honorable mention certificates. District awards: The State is divided into five districts. Each of the 25 students who place in the highest group will receive a certificate of award. A certificate of award (honorable mention) will be presented to each of the other contestants who place in the highest 10 percent in each district. State: All additional students who place in the highest 5 percent will receive honorable mention certificates.

(b) The statistics and college personnel division of the department of psychology of the Ohio State University, cooperating with the Ohio College Association, has been giving each year to practically all of the high-school seniors of the State a general scholastic aptitude test known as the "Ohio State University psychological examination." Beginning in 1932–33 the sophomores were also asked to take the test in order to make it eventually a sophomore testing program. A different form of examination is usually constructed for use for each academic year. The individual high schools pay the cost of testing. The tests are scored at Ohio State University and the results are reported to the various high schools.

These test results are used for the following purposes:

(1) The State department uses the test results in determining the entrance of students into Ohio teacher-training institutions. Toops* states: "The tests are accepted by the State department of education in fulfillment of the State statute requiring a minimum test score for entrance to the teacher-training institutions in Ohio. A minimum score for unqualified entrance to a teacher-training institution in Ohio is a 26-centile rank score on the Ohio College Association freshman basis; i.e., that 26 percent of all freshmen in Ohio applying for entrance to Ohio institutions would be denied entrance into the teacher-training institutions of Ohio. A student failing the first test is allowed a second chance on an alternative form of the test (this is form 15 O.S.U. intelligence test), but must attain to at least a score of 31-centile mark in order to be entitled to unqualified admission. A student failing both may, at the option of the college, be entitled to probationary admission. Our own institution does not avail itself of this provision.

* In a letter to the Office of Education dated Feb. 21, 1933.

(2) The test results are used by high schools in the guidance of pupils. With the test being given in the tenth grade, this function of the tests will be still more emphasized. Many directions regarding the interpretation of scores are given to the schools by the personnel division of Ohio State University.
(3) The test results are being used extensively in research on the prediction of scholastic success. The results of these studies are circulated among the high-school principals so that much of such research is immediately translated into practice.

Ohio has also participated in the Nation-wide survey of English usage conducted under the auspices of the Washington, D.C., branch of the Psychological Corporation. (See national programs and Pennsylvania programs for details of this program.)

PENNSYLVANIA

There are two cooperative high-school testing programs being carried forward in Pennsylvania.

(*a*) The Pennsylvania testing program in high schools is now being carried on by the bureau of educational records and research located at the University of Pittsburgh. This is an independent bureau designed in part to carry on the testing program which was initiated by the Carnegie Foundation for the Advancement of Teaching in cooperation with the joint commission of the Association of Pennsylvania College Presidents and the State department of public instruction.

The Pennsylvania testing program instituted under the subvention of the Carnegie Foundation was for the purpose of investigating the articulation of high schools and colleges. It was thought that testing the ability and achievement of pupils over a long period of time would give information which would serve as a foundation for a smooth transfer from high school to college. The testing instituted under the Pennsylvania study covered the junior high school year and the college period as well as the high school. This study began the testing in the fall of 1928 with seventh grade and in the spring of 1929 with seniors about to graduate from high school. The Pennsylvania study is following

the progress of the 12,000 seventh grade pupils who were tested in 1928. Upon the graduation of a large group of these pupils in the spring of 1934, an evaluation of the testing program over a period of years can be ascertained.

The Bureau of Educational Records and Research of Pittsburgh recommends tests to be used in following the plan of the Pennsylvania study and other tests. It plans to provide testing service at cost. It follows closely the plan of the Educational Record Bureau of New York City, and cooperates closely with this bureau and with the Cooperative Test Service.

The fall program of testing is for immediate diagnostic and placement purposes rather than for guidance, although some of the tests may be used for other purposes, whereas the spring program is mainly for getting accurate student achievement records. The main tests used in the fall and spring testing programs for 1931–32 for grades 9–12 were as follows:

	Pupils
Shank reading tests	501
Kuhlmann-Anderson intelligence	1,035
Ohio State psychological test, form 16	1,976
Cooperative English test	375
Cooperative French test	119
Cooperative Latin test	84
Cooperative algebra test	115
Cooperative plane geometry test	58
Cooperative chemistry test	49
Cooperative American history test	87
Commercial employment tests	481

The testing program takes particular care in recommending tests for the grade in which the 1928 seventh graders are found.

The purpose of the testing work of this bureau is to encourage the use of good tests (*a*) for cumulative records which in turn increase the accuracy of guidance, particularly guidance for college entrance; (*b*) for securing comparable measurement of abilities and achievements of pupils so that the effectiveness of instruction may be noted; (*c*) for purposes of research; and (*d*) for the diagnosis of individual

strengths and weaknesses. The bureau makes reports on all phases of the testing results to the participating schools.

(*b*) The Pennsylvania cooperative English study is being made in cooperation with the Psychological Institute, Washington, D.C., branch of the Psychological Corporation. The plan for the use of these tests in Pennsylvania is about the same as for the Nation as a whole.

The study in Pennsylvania is being carried on through the cooperation of various school people of the State, together with the Bureau of Educational Records and Research of Pittsburgh and the State department of education.

This study is designed to increase the effectiveness of English-usage courses of study and in improving methods of teaching English usage. The Nation-wide study of English usage is planned for a 5-year period, but each year can be considered separately or in connection with the results of the previous years. Tests are given in the fall and again in the spring. Teachers score the papers and make a tabulation of the errors. The teachers keep one tabulation and send one of the others to the organization which is sponsoring the program in that immediate neighborhood, and the other is sent to the Psychological Institute at Washington, D.C.

The following extracts from the manual provided by the Psychological Institute show these main uses for the results of the testing program:

1. To determine for a given class (1) the extent to which each phase of usage has been mastered to preceding grade and (2) on which of the phases of usage that are to be drilled to that grade major emphasis must be placed to meet the needs of individual pupils and of the class as a whole.

2. To measure progress in mastering, from grade to grade, each phase of usage.

These English tests are furnished tc schools for 2 cents each.

TEXAS

The State department of education each spring sends out examinations to high schools, upon request, on the regular school subjects. The questions are prepared and the returned papers graded by the State department. According to the

available information, these tests are not of the objective type. Credit obtained by means of these examinations is honored by the State University and all other institutions of higher learning in Texas.

WISCONSIN

The Wisconsin College and secondary schools cooperative testing program is carried on by a committee appointed to study the relation of secondary to higher education in Wisconsin. This committee is composed of superintendents and college officials. The program consists of testing the graduating high-school seniors for college aptitude through the use of general intelligence tests. The cost of the program is borne in the main by cooperating colleges of the State in the ratio of the number of freshmen admitted to each institution from Wisconsin and in part by the high schools.

The Ohio University psychological examination was used in 1929 and the American council on education psychological examination has been used since. In 1932–33 it is planned to use the Henman-Nelson test of mental ability in the tenth year of the high school. Practically all the high schools of the State have cooperated in these testing programs. Holt writes:[6]

> Every high school in the State of Wisconsin which is a public high school and a considerable number of private and parochial secondary schools are testing their seniors. Over 99 percent of the secondary schools are testing their sophomores.

The program for Wisconsin was begun because of the belief that there was much waste taking place in Wisconsin in that many inferior students attempted college work and that many superior students did not attend college. It was felt that a State-wide testing program using a standardized general scholastic aptitude test would secure such additional information as would make individual educational planning more efficient. The program in Wisconsin is definitely a guidance program having for its objective a better college student body for the college with consequently less failure in the freshman year.

---

[6] Holt, F. O., registrar and director, Bureau of Guidance and Records, in a letter to the writter dated Dec. 18, 1932.

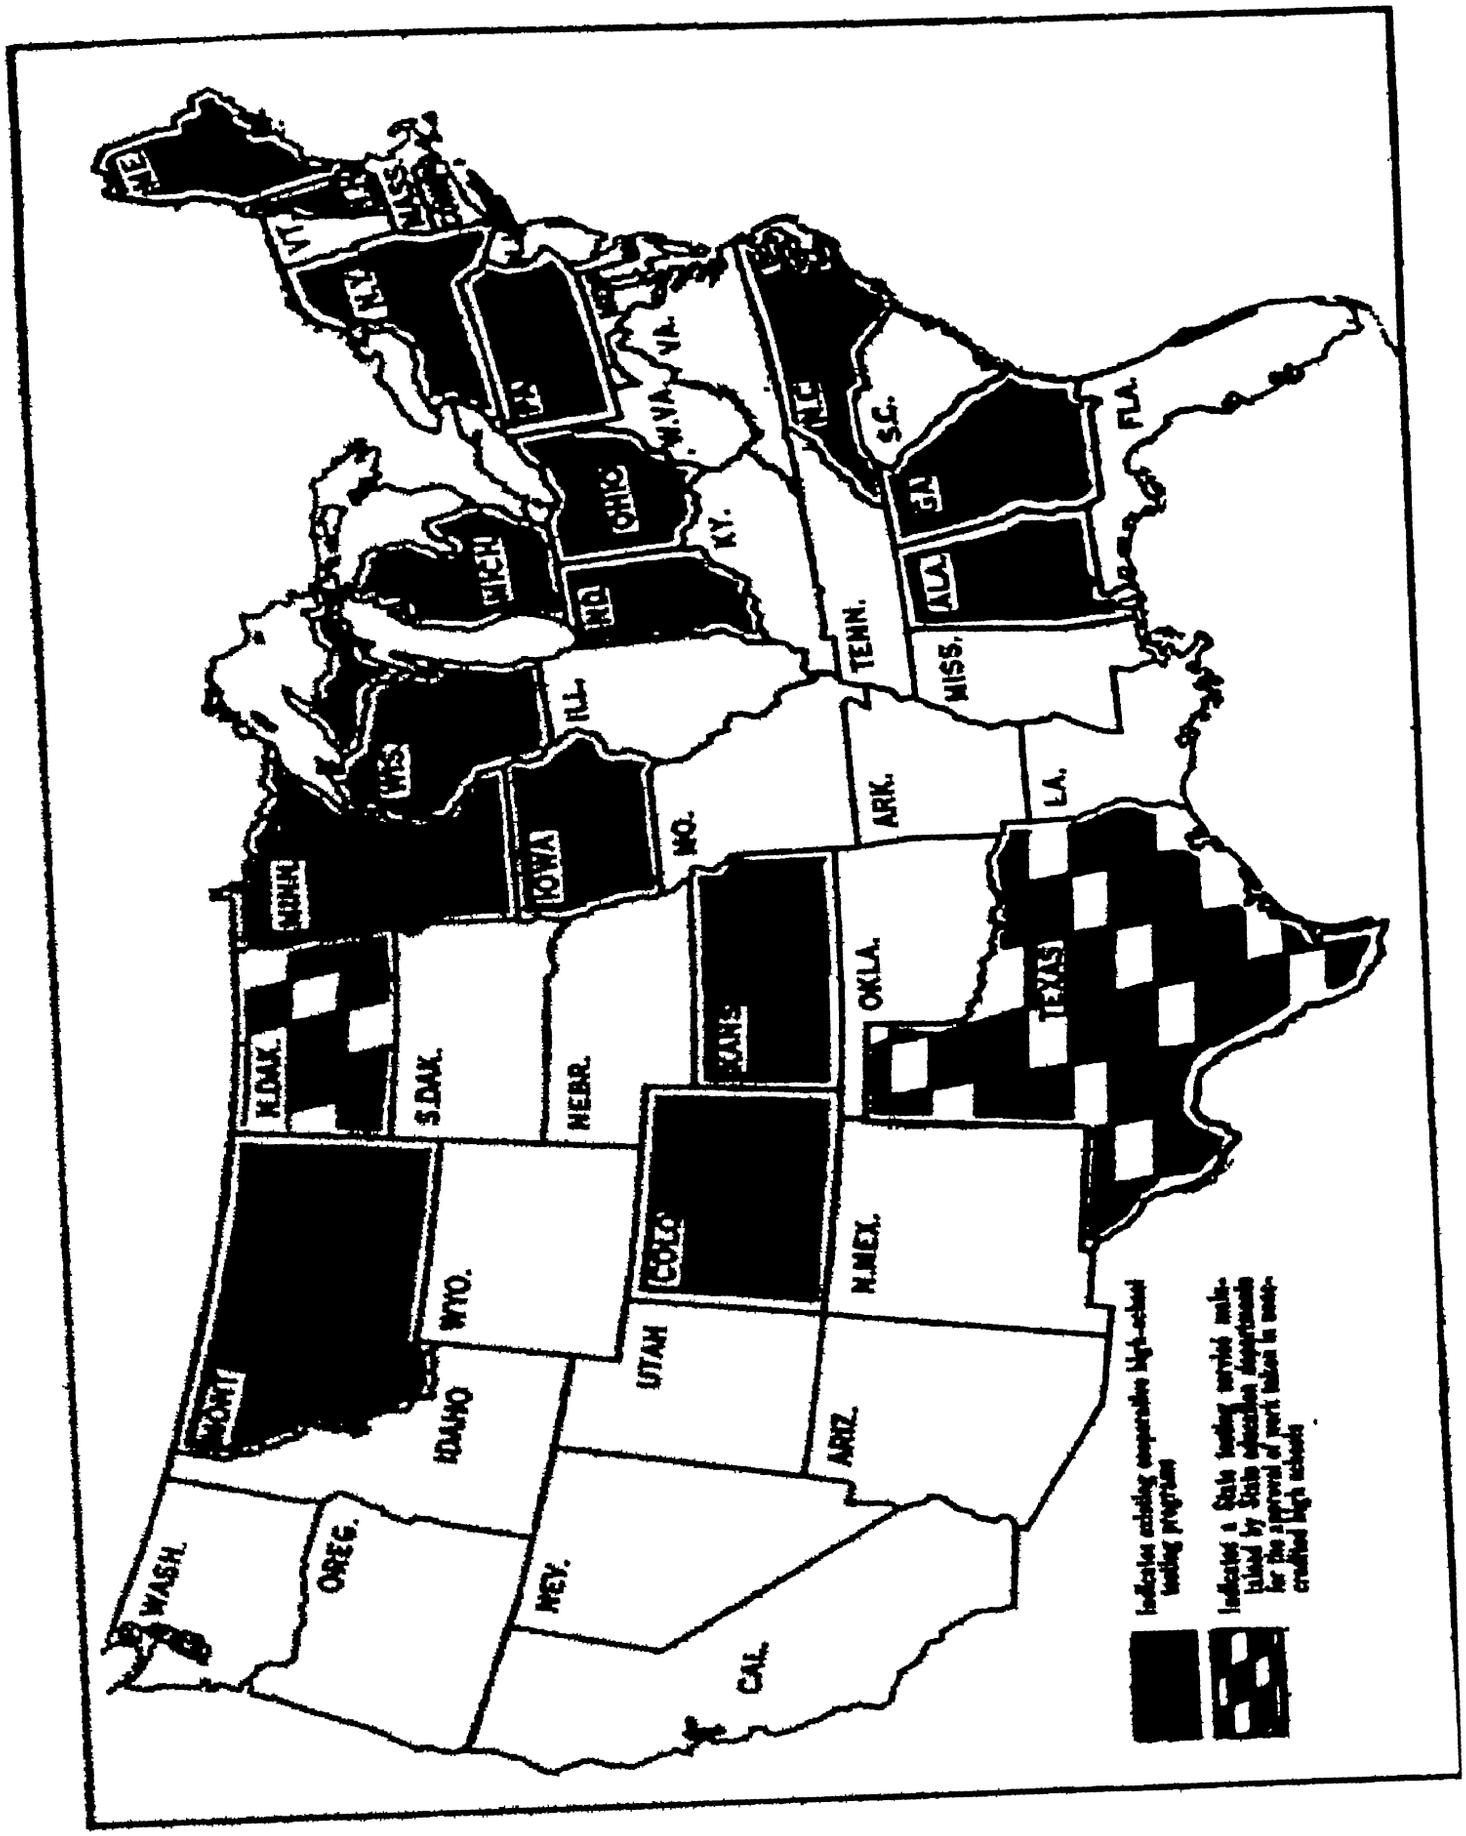
Each college is left free to use the results in any way which seems best for purposes of admission and guidance. The results are also sent to each of the cooperating high schools together with suggestions for use. A special letter is sent to all seniors who ranked above the 75 percentile but who had not indicated any intention of entering a Wisconsin college. The exact records on these tests represented by the percentile scores are not given to individual students.

Some States have had testing programs at some time or other but have found it necessary to discontinue them for one reason or another. These are:

Arkansas.—This State offered a testing program to graduating seniors in high school in 1930 and 1931 consisting of the American Council on Education psychological examination, an English examination, a mathematics examination, and the Iowa foreign-language aptitude examination. The purpose of the program was to aid in the guidance of students in choosing their college course.

Nebraska.—Testing program discontinued.

Idaho.—Testing program discontinued.



Among States which are planning high-school cooperative testing programs are Arizona, Kentucky, and Mississippi.

ANALYSIS OF COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

GEOGRAPHICAL DISTRIBUTION AND DIFFERENCES IN TESTING PROGRAMS

The accompanying figure shows the distribution of the State cooperative testing programs. The figure does not show States that have discontinued programs or those States which are planning the establishment of programs. The States indicated by the cross-hatching—North Dakota and Texas—have testing programs which are not considered to be as truly cooperative as the other State programs since they are used mainly for the approval of the individual student's work.

There seems to be certain geographical differences in the type of testing programs offered. Montana, Colorado, Kansas, Iowa, Indiana, and Ohio, through their own State-wide programs and Nebraska, South Dakota, Missouri, and Illinois through the extension of the programs in Kansas and Iowa, promote individual and school competition in high-

school subject-matter fields. The Minnesota, North Carolina, and Wisconsin programs, on the other hand, have consisted of general scholastic aptitude testing for the benefit, in large part, of cooperating colleges and universities. The senior of the two testing programs of Ohio has also been of this character. In the East and far South—Maine, Vermont, New York, Georgia, and Alabama, and to a degree in Pennsylvania, the general purpose has been that of supervision of high-school instruction, both as an inspectional service and for the direct improvement of instruction.

THE OBJECTIVE MEASUREMENT MOVEMENT AS A FACTOR IN THE ESTABLISHMENT OF COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

The general factor which has made cooperative testing possible is the trust school people have put in objective testing. Practically all cooperative testing programs are made up of examinations consisting of new-type questions. It is only in some of the longer established programs that we find the essay type of question used and even in those programs it holds ever less and less a dominating position. Also in these examinations we find more often than not the essay type of question framed in such a way that those who score the papers are very apt to agree.

Cities have to some extent been able to carry on the work of testing in high schools for purposes somewhat similar to those associated with cooperative testing. It is not surprising therefore that a detailed study of cooperative testing programs shows that many of them have been confined largely to the smaller cities and towns. There is now a general demand for the use of new type tests by all schools. Cooperative testing in the high schools satisfies this demand in part. In the elementary school the curriculum has been more static as far as fundamental content is concerned. For this reason, tests such as have been standardized and are sold by test publishing companies have more nearly satisfied the urge for measurement in the elementary field.

PURPOSES OF COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

In considering the various purposes of these testing programs, it should be kept in mind that the stated purposes of a testing program may or may not be fulfilled. In some cases, also, the most important uses that are expected by

the promoters of the program may not be emphasized in asking for cooperation because the sponsors believe emphasis on some other purpose will bring more schools into cooperation. In some cases new uses for tests are found after the program has been in existence for some time. For instance, the regents examinations in New York State have been held primarily as an agency of supervision or standardization of the work of New York State high school. However, the results on these examinations have been used more and more as evidence by New York high-school graduates in applying for entrance into institutions of higher learning. Through experience, colleges have learned to regard these test results as valuable for predicting success or failure in colleges.

The different values of the cooperative high-school testing program will be analyzed in turn.

1. *Motivation through competitive examinations in school subjects.*—Many cooperative testing programs have this purpose as the prime reason for their existence. Such testing programs have arisen, in part, through the feeling of school people that attention should be given to scholastic endeavor in somewhat the same fashion as attention is centered on physical competition of various sorts between schools. Some of these testing programs include all the students in a school or class, but often only a small proportion of the students take part in the testing program. Competition is brought about by the awarding of appropriate honors to schools and individual contestants. Scholarships in college are often awarded to individual winners.

The value of this type of testing lies in the general effect on teachers and pupils. It can be seen that the greatest effect on both teachers and students will come about if all the pupils in a class or school are tested. If only a few pupils in a class are tested, the value of testing for the teacher is reduced because the general standing of the pupils in the class is not ascertained and the value for the pupils is reduced because only a few pupils expect to have any contact with the testing. The marking of pupils in high school on the results of tests is considered one aspect of motivation. Incidentally the marking is thus made much more accurate.

2. *The emphasis of the tests upon reasoning rather than upon factual knowledge in a given field.*—Some of the examinations in the testing programs which cover high-school subject matter emphasize the applications of principles to the solution of new problems and the general aspects of the field rather than specific bits of facts which could be learned through simple force of memory. Where a testing program measures the effect of instruction on entire classes, the teacher will be influenced by the type of examinations. The result is, when examinations are of the progressive type mentioned, a freeing of the teacher from too great dependence upon the textbook, which will make the method of instruction freer and easier. The teacher, if she realizes that specific facts are not considered the most important aspect of the course of study in her subject, will naturally turn to the more general development of the thinking of her students on the subject concerned, since it is power that is tested by the examinations. Some programs are consciously trying to fulfill this aim of cooperative testing.

3. *Testing for college entrance (immediate guidance).*—Many private eastern colleges have for years depended upon the college entrance examination board's results in determining eligibility for entrance. Other colleges and universities, and especially State institutions, have more recently begun to use general scholastic aptitude tests (general intelligence tests) for this purpose. Usually the results on such tests are used in conjunction with other data, such as marks made in high-school subjects in determining admission. Also some students, who might otherwise not attend college, are encouraged to do so because of their high standing in these tests.

4. *Guidance.*—In addition to the examination or examinations given at the end of the high-school course for the immediate and expressed purpose of determining college entrance, testing programs are tending strongly toward periodic testing through the high-school years with the attendant cumulative record keeping. It is felt that a record of the growth of an individual over a comparatively long period of time will furnish a better means of predicting success in

school or in different curriculums in schools than we have hitherto had. The Cooperative Test Service, the Educational Records Bureau of New York, and the Bureau of Educational Records and Research located at Pittsburgh are active in encouraging the development of cumulative records. A simple form of this long-range guidance is found in the testing of the first- or second-year high-school students with scholastic aptitude tests as is being advocated in the Wisconsin and the Ohio scholastic aptitude testing program.

The advantage of a continuous program of testing is readily apparent. The worry of a student incident to the taking of a single college-entrance examination can be thus eliminated. The continuous check-up on achievement is a motivating power. These are incidental values compared to the two following: (*a*) The increased accuracy of prediction which can be obtained from a record of growth as shown by objective measures; and (*b*) the plans for the further education or the vocational plans of an individual which can be determined somewhat in advance.

5. *Supervision and standardization of high schools by agencies outside the high school.*—The cooperative testing programs carried out by State departments of education are apt to be for the purpose of supervision and standardization. The accrediting of high schools by State departments is influenced by the results on tests. The New York regents' examination is the best example of the use of cooperative testing as a standardizing agency. The supervision of high-school work by test results is accomplished through analyzing the results on tests to show the strengths and weaknesses of individuals in certain fields of work so that redirection of instruction may take place.

6. *Research.*—An important purpose of cooperative testing programs is the opportunity for research which they afford. It is only through continuous research that increased efficiency of the testing work will be established. Research work on the results of tests as guidance possibilities are carried on in a few places. Studies of different methods of instruction, different textbooks, size of class, etc., are also suggested for solution through cooperative testing.

POSSIBLE IMPROVEMENTS IN COOPERATIVE HIGH-SCHOOL TESTING PROGRAMS

Cooperative high-school testing programs are finding an important place in the modern educational scheme. Through testing programs a much better picture of the achievement and educational possibilities of the students is brought about than is otherwise possible. Although it may seem at first glance that there is a great variation in the kinds of cooperative testing programs, actually the differences are not fundamental except, perhaps, in the accuracy of the results obtained. The different programs represent different attacks on the problem. The ultimate possibilities in the different programs are much the same. All tests of subject matter, whether fairly specific or comprehensive, can be used for guidance, supervision, research, and motivation. It is suggested that the various possibilities be pointed out to high schools cooperating in such testing programs.

It seems probable that certain developing procedures in cooperative testing may lead to even more efficiency, both in the tests themselves and in the method of administering them. Some of these possibilities are as follows:

First. It is important that attention be given in the construction of the achievement tests used in these programs to the application of principles or reasoning rather than to mere factual knowledge. Examinations constructed with this in mind are more valuable because: (*a*) Such an emphasis corresponds with the new emphasis in secondary education—that of growth in general culture and ability to solve new problems, thus making the examinations more valid for the individual school; (*b*) items thus constructed are less specific and will make the examinations more valid from the standpoint of the group of schools cooperating. In using an examination containing many detailed bits of factual knowledge there is some chance that by accident one school will have happened to dwell on the details found in the examination and that another school did not; (*c*) this emphasis in the examinations will influence the teachers not to depend upon the mere memorization of the course material.

Second. It is desirable that tests be given throughout the high-school period rather than just at the end of the high-

school course. This distribution of testing for each individual over a long period of time makes it possible to begin planning the post high-school educational career while he is still in the first or second year of high school. This foresight will aid in determining whether or not a pupil should continue on in a college preparatory course or switch to some other course. It also makes the guidance at the end of the high-school course more accurate since there are several measurements made over a long period of time recorded for each pupil.

Third. Tests should be constructed so that forms for 1 year after the other are comparable. This means that the material in the examinations should cover the same general ground and that the scores should be equated. The main value of this is in the increase of accuracy of the measurement of the achievement and ability of pupils over a period of years. It makes possible the accurate picturization of the growth of the individual student and the comparison of each student's achievement and ability with students of previous years. If comparable tests are used in different high schools over a period of years, colleges can more accurately determine the chances of success of an entering student because the relationship between the test scores and college success will be known.

Fourth. Tests from different cooperative test programs should be equated so that students transferring from one geographical area to another during their high-school career or in entering college would continue to have the benefit of wise counseling and direction. Tests made for national testing programs should be of considerable use in this regard.

Fifth. The cooperative testing program should include, at least in its initial stages, all the pupils in the subject tested, or all the pupils in a school if it is a general mental ability test or general achievement test. This is true because (*a*) in this way only will the full force of the testing from a motivating standpoint be ingendered into both pupils and teachers, and (*b*) only with such a procedure will experimentation and research be made possible from the results of testing, since unselected samples are necessary for experimentation and research.

APPENDIX

This appendix gives the name of the person, if known, in charge of each testing program, and the references describing the programs. Information regarding testing programs was obtained from these references and through correspondence with the persons in charge of the testing programs. The references given do not constitute an exhaustive list. Information is given herein concerning all testing programs considered or mentioned in this bulletin regardless of whether or not they are active programs.

NATIONAL TESTING PROGRAMS

College entrance board examinations:

Thirty-second Annual Report of the Secretary, 1932. Including the Seventh Annual Report of the Commission on Scholastic Aptitude Tests. College Entrance Examination Board, 1932. New York City. (431 West One Hundred and Seventeenth Street.)

College Entrance Examination Board. Definition of the requirements. College Entrance Examination Board, 1932. New York City.

The Work of the College Entrance Examination Board, 1901–1925. Boston, Mass., Ginn & Co., 1926.

Examination Questions, June and September 1930. Boston, Mass., Ginn & Co., 1931.

Brigham, Carl C. A Study of Error. A Summary and Evaluation of Methods Used in Six Years of Study of the Scholastic Aptitude Test of the College Entrance Examination Board. New York City, College Entrance Examination Board, 1932.

Cooperative Test Service

In charge of Ben D. Wood, professor of collegiate research, Columbia University, New York City.

Announcement of cooperative tests, August 1932.

(See reports in the Educational Record.)

Educational Records Bureau

In charge of W. B. Stephens, acting director; Eleanor Perry Wood, associate director.

The Educational Achievement and Intelligence of Independent School Children, 1927–28. New York City, Educational Records

Bureau, 437 West Fifty-ninth Street. (Educational Records Bulletin No. 2.)

The Educational Achievement and Intelligence of Independent School Children, 1929–30. New York City, Educational Records Bureau. (Educational Records Bulletin No. 6.)

Measuring of Academic Aptitude and Reading in Independent Schools, fall 1932. New York City, Educational Records Bureau. (Educational Records Bulletin No. 9.)

Psychological Corporation, Washington, D.C., branch Nation-wide Survey of English Usage.

In charge of L. J. O'Rourke, director of scientific research in personnel and administration, United States Civil Service Commission.

(See also under Pennsylvania programs.)

American Council on Education Psychological Examination

In charge of L.L. Thurstone, professor of psychology, University of Chicago.

(See reports in the Educational Record.)

Kansas—See Kansas programs.

STATE PROGRAMS

Alabama

In charge of W. L. Spencer, director of secondary education, State Department of Education, Montgomery, Ala.

Arkansas

In charge of J. R. Gerberich, research associate, professor of education, University of Arkansas, Fayetteville, Ark.

Gerberich, J. R. Validation of a State-wide Educational Guidance Program for High-School Seniors. School and Society, 34: 879, October 31, 1931.

Mimeographed Circulars of the University of Arkansas

Gerberich, J. R. College Entrance of Arkansas High-School Graduates Who Participated in the 1930 Arkansas Educational Guidance Survey.

——— Prediction of College Scholastic Success by the Students Entering Arkansas Institutions of Higher Education in September 1930.

——— The Second Annual Arkansas Educational Guidance Survey, Spring 1931.

Arizona

Information obtained from the State Department of Public Instruction, Phoenix, Ariz.

California

Eells, Walter C. California Junior College Mental-Educational Survey, State Department of Education, Division of Research and Statistics, Sacramento, California State Printing Office, 1930. (Bulletin No. J-3.)

Colorado

(*a*) State-wide Scholastic Contests.

In charge of John J. Dynes, Western State College of Colorado, Gunnison, Colo.

Tenth Annual State-wide Scholarship Contest, Scholarship Bulletin No. 5 (March 25, 1933), Western State College of Colorado.

(*b*) Cooperative Testing Program of the Colorado High Schools and Higher Institutions of Learning.

In charge of J. D. Heilman, director of personnel department, Colorado State Teachers College.

Heilman, J. D. Report on the 1932–33 Cooperative Testing Program. Colorado State Teachers College, Greeley, Colo. February 14, 1933.

Georgia

In charge of J. S. Stewart, professor of secondary education, University of Georgia.

Indiana

(*a*) Manchester College Testing Program.

In charge of J. C. Meyer, dean, School of Education, Manchester College, North Manchester, Ind.

(*b*) State Testing Service for Indiana High Schools.

In charge of H. H. Remmers, director of division of educational reference, Purdue University.

Remmers, H. H. The Achievement of Our High Schools—Results of the State High-School Testing Program, 1930–31. Studies in Higher Education XVIII, Bulletin of Purdue University, vol. XXXII, no. 2, October 1931, Lafayette, Ind.

——— *and* Trimble, O. C. The Validity of the Indiana High-School Accrediting Criteria. Studies in Higher Education XX, Bulletin of Purdue University, vol. XXXIII, no. 2, October 1932, Lafayette, Ind.

Iowa

In charge of E. F. Lindquist, associate professor of education, University of Iowa.

Lindquist, E. F. Statistical Summary of Results on Every-Pupil Tests With Norms of School and Individual Achievement for the Every-Pupil Contest of May 10, 1932. University of Iowa, Iowa City, Iowa.

——— The Iowa Academic Contest Bulletin of the State University of Iowa, New Series No. 667 (December 23, 1932), University of Iowa, Iowa City, Iowa.

Kansas

In charge of H. E. Schrammel, director bureau of educational measurements, Kansas State Teachers College, Emporia, Kans.

Wood, E. R. *and* Schrammel, H. E. The 1928 Kansas State Scholarship Contest. Kansas State Teachers College, Emporia, Bulletin of Information No. 56 (July 1928), Emporia, Kans.

Ten Years of Scholarship Contests in Teaching, Kansas State Teachers College, Whole No. 85 (December 1931), Emporia, Kans.

Report of the Seventeenth Nation-wide Every-Pupil Scholarship Test. Kansas State Teachers College of Emporia, Bulletin of Information No. 118 (February 1933), bureau of educational measurements, Kansas State Teachers College, Emporia, Kans.

Kentucky

In charge of J. J. Oppenheimer, dean, University of Louisville.

Maine

In charge of J. R. Crawford, assistant professor of education, University of Maine.

Michigan

In charge of Clifford Woody, director of bureau of educational reference and research, University of Michigan.

Bergman, Walter G. Results of Achievement Tests Given in 1926-27 in the Elementary and High Schools of Michigan. Bureau of Educational Reference and Research Bulletin No. 110 (Dec. 31, 1927), University of Michigan, Ann Arbor, Mich.

Woody, Clifford. Results of the May Testing Programs in the Elementary and High Schools of Michigan 1929. Bureau of Educational Reference and Research Bulletin No. 126 (Nov. 30, 1929), University of Michigan, Ann Arbor, Mich.

——— Results of the May Testing Programs in the Elementary and High Schools of Michigan 1931. Bureau of Educational Reference and Research Bulletin No. 140 (Aug. 30, 1931), University of Michigan, Ann Arbor, Mich.

Minnesota

(*a*) State department high-school examinations.

Information furnished by T. J. Berning, statistician for the State department of education.

(*b*) The Association of Minnesota Colleges high-school testing program.

In charge of J. B. Johnston, dean school of science, literature, and the arts, University of Minnesota.

Johnston, J. B. Predicting Success in College at the Time of Entrance. School and Society, 23: 577, January 16, 1926.

——— Advising College Students. Journal of Higher Education, vol. I, no. 6, June 1930.

——— Who Should Go to College? University of Minnesota Press, Minneapolis, 1930.

Montana

In charge of Leora M. Hapner, department of education and psychology, Montana State College.

Report of the Ninth Annual State High School Scholarship Contest (Apr. 27 to Apr. 30, 1932), Montana State College, Bozeman, Mont.

Scholarship Bulletin No. 1, Division of Scholarship Contests, Montana State College, Bozeman, Mont.

New Hampshire

In charge of Walter M. May, deputy commissioner of education, State of New Hampshire.

Results of tests in intelligence, place geography, and English forms in 1931, and a study of the graduates of 1930. New Hampshire State Board of Education, Concord, N.H.

Results of tests in intelligence, spelling, and English forms in 1932, and a study of the graduates of 1931. New Hampshire State Board of Education, Concord, N.H.

New York

(*a*) Regents' examinations.

In charge of Avery W. Skinner, director division of examinations and inspections, State department of education, Albany, N.Y.

How Regents' Examinations are Made. Bulletin of the University of the State of New York, vol. 12, no. 2 (Oct. 1, 1925).

Skinner, A. W. What are Regents' Examinations? Reprint of radio address on February 10, 1932.

Statistics of regents' academic examinations in the approved secondary school for January and June 1932. University of the State of New York, Albany, N.Y.

Handbook No. 3. The University of the State of New York. Examinations and inspectional division. September 1932. University of the State of New York, Albany, N.Y.

(*b*) Other State examinations.

In charge of W. W. Coxe, director educational research division, State department of education, Albany, N.Y.

Coxe, W. W. Levels and Ranges of Ability in New York State High Schools. State department of education, Albany, N.Y.

North Carolina

Information submitted by J. Henry Highsmith, director division of instructional service, State department of public instruction, Raleigh, N.C.

North Dakota

In charge of John A. Page, director of secondary education, department of public instruction, Bismarck, N.Dak.

Ohio

(*a*) Scholastic aptitude (intelligence) test program.

In charge of Herbert A. Toops, department of psychology, Ohio State University, Columbus, Ohio.

Mimeographed Bulletins of the Ohio College Association

Ridenour, Alice L., *and* Toops, H. A. The Use of High-School Scholarship and Intelligence Scores in Affording Guidance of High-School Pupil to College. O.C.A. Bulletin No. 59.
